SUBJECT-MATTER INDEX.

	Page.
Abandoned application, applicant serving in United States Army during war, under section 6 Nolan act of March 3, 1921, may renew irrespective whether serving abroad or in this country, *ex parte* Giller	571
Ruling of appellate court reversing prior practice, applicant not entitled to revive because delay not unavoidable, *ex parte* Weber, Sr	392
Appeal to the court of appeals, interference, question of patentability not considered, claim of abandonment may be adjudicated in interference proceedings, * Snelling *v.* Whitehead, Commissioner of Patents	393
British laws and practice, proof of meeting conditions of reciprocity of Nolan Act must be sufficient, *ex parte* Hackett, Smith, and Southall	795
Construction of statutes, Nolan act of March 3, 1921, reciprocal privileges must be proved, *ex parte* Hackett, Smith, and Southall	795
Ex parte Rechnitzner	572
Extension of rights of priority defined under the act of March 3, 1921, *ex parte* Hackett, Smith, and Southall	795
Fees, extension of time for paying under the Nolan Act, *ex parte* Hackett, Smith, and Southall	795
Foreign applicants to benefit under Nolan Act, March 3, 1921, must prove applicable foreign law granting reciprocal privileges, *ex parte* Rechnitzner	572
Forfeited and abandoned applications, foreign applicant under new law may pay final fee or renew, providing his country grants reciprocal privileges, *ex parte* Karnet	571
Ex parte Mosbacher	571
Under Nolan act not reinstated automatically, applicant must take necessary action or pay required fee, *ex parte* Rechnitzner	572
Injunction not to be issued to control conduct of interference proceedings by Commissioner of Patents, * Snelling *v.* Whitehead, Commissioner of Patents	393
Will not issue where there is adequate remedy by appeal in interference proceedings, * Snelling *v.* Whitehead, Commissioner of Patents	393
Interference, appeal, priority awarded senior party on two counts on which interference dissolved, * Kirby *v.* Replogle	393
Claims given broadest construction, disclosure sufficient, * Dewson and Brown *v.* Tomlinson	189
Party not permitted to defeat opponent by showing outside party real inventor, * De Forest *v.* Miller	189
Right to make claim, * Sharp *v.* Gamage	573

	Page.
Laches, applicability of rule not dependent on intervening rights because of delay in filing application for reissue, *ex parte* Holland	391
Nolan Act, March 3, 1921, construed, proof of foreign law may be by affidavit of competent authority, once proved sufficient for all applications, *ex parte* Hackett, Smith, and Southall	795
Priority of invention, award, * Halbleib *v.* Bendix and Conrad. Same *v.* Bendix, Bijur, and Conrad. Conrad *v.* Bendix and Halbleib. Same *v.* Bendix, Bijur, and Halbleib. Bijur *v.* Bendix, Conrad, and Halbleib. Same *v.* Bendix	191
Reduction to practice, test to be successful must show actual reduction to practice, * Halbleib *v.* Bendix and Conrad. Same *v.* Bendix, Bijur, and Conrad. Conrad *v.* Bendix and Halbleib. Same *v.* Bendix, Bijur, and Halbleib. Bijur *v.* Bendix, Conrad, and Halbleib. Same *v.* Bendix	191
Reissue application delayed more than three years after original to broaden claims, not excused on ground of applicant's ignorance of patent matters, *ex parte* Holland	391
Delay in filing application, question of sufficiency of excuse within discretion of the Commissioner of Patents, * *in re* Holland	393
Inadvertence, accident, or mistake, negatived where claims sought in reissue substantially same as those canceled from original, *ex parte* Holland	391
Trade-marks, fee filed with petition to revive abandoned application transferable to new application filed under act of March 19, 1920, *ex parte* Pratt Food Co	189
Unavoidable delay must be shown to revive abandoned application under new law, *ex parte* Pratt Food Co	189

DIGEST

OF THE

DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS.

APRIL, 1921.

[Decisions of the Court of Appeals of the District of Columbia are indicated by a star (*).]

ABANDONED EXPERIMENTS.

ACTUAL REDUCTION TO PRACTICE—TEST.

Where an engine-starter was constructed by Bijur with a view to securing the business of the Packard Company and in 1912 was put on a car furnished by this company and tested, the result being that it broke frequently during the test, although witnesses claimed that it was successful, explaining that it was broken because purposely subjected to a destructive test, and immediately following the test the Packard Company adopted a different kind of starter, and the Bijur Company, although engaged in the business, did not put such construction on the market, but prepared in 1913 to supply a different device, and Bijur filed ten applications relating to starters, but made no attempt to commercialize the device tested until he saw an exhibit of his rival, *Held* that the conclusion must be drawn that the inventor himself did not regard the test in 1912 as successful and that it was no more than an abandoned experiment.

[*Halbleib *v.* Bendix and Conrad. Same *v.* Bendix, Bijur, and Conrad. Conrad *v.* Bendix and Halbleib. Same *v.* Bendix, Bijur, and Halbleib. Bijur *v.* Bendix, Conrad, and Halbleib. Same *v.* Bendix, 191.

AMENDMENTS.

See Revival of Abandoned Applications, 2.

APPEAL TO THE COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

See Priority of Invention, 2.

CLAIM OF ABANDONMENT CAN BE ADJUDICATED IN INTERFERENCE PROCEEDING.

While the question of patentability will not be considered by the court of appeals in an interference appeal, the question of abandonment by one applicant is always available as affecting his right to priority.

[*Snelling *v.* Whitehead, Commissioner of Patents, 393.

COMMISSIONER OF PATENTS.

See Construction of Statutes, 1, 4; Interference, 2; Priority of Invention, 2.

CONSTRUCTION OF CLAIMS.

INTERFERENCE ISSUE—COUNTS GIVEN THEIR BROADEST CONSTRUCTION.

Giving the counts of the interference issue the broadest interpretation of which they are susceptible, the universal rule in interference cases, *Held*, that T.'s disclosure is sufficient to sustain the issue, and priority awarded to him.

[*Dewson and Brown *v.* Tomlinson, 189.

CONSTRUCTION OF STATUTES.

See Abandonment of Applications; Revival of Abandoned Applications.

1. CONDUCT OF INTERFERENCE PROCEEDING BY COMMISSIONER OF PATENTS CANNOT BE CONTROLLED.
Under Revised Statutes, section 4904, (Comp. St., sec. 9449,) providing for the declaration of an interference by the Commissioner of Patents, and the other statutes and rules having the force of statute, prescribing the procedure on interference, an injunction to restrain the Commissioner of Patents from further proceeding with an interference and to require the striking of certain orders made therein would control actions of an executive officer in matters committed by law to his discretion, and injunction will not issue for that purpose.
[* Snelling *v.* Whitehead, Commissioner of Patents, 393.

2. NOLAN ACT — FOREIGN APPLICATION FORFEITED AND ABANDONED—RIGHT TO PAY FINAL FEE OR RENEW.
A foreign applicant whose application became forfeited on September 7, 1919, and abandoned on March 7, 1921, may now, under section 2 of the act of March 3, 1921, either pay the final fee or renew the application, provided the laws of the country of which he is a citizen or subject grant substantially reciprocal privileges to citizens of the United States, and where a renewal fee was paid it may be applied as a part of the final fee should applicant so elect. [*Ex parte* Karnet, 571.

3. SAME—SAME—SAME.
A foreign applicant whose application became forfeited on December 5, 1914, was renewed and again forfeited within two years from the original notice of allowance, may now, under section 2 of the act of March 3, 1921, either pay the final fee or file a second renewal, provided the laws of the country of which he is a citizen or subject grant substantially reciprocal privileges to citizens of the United States.
[*Ex parte* Mosbacher, 571.

4. SAME—REINSTATEMENT OF APPLICATION.
The act of March 3, 1921, does not automatically reinstate an application, nor has the Commissioner any authority to reinstate it upon a mere request of the applicant for reinstatement; but the action which is appropriate to the condition of the case must actually be made in order to change its status. It is the time when applicant makes the necessary action or pays the required fee that determines his rights under the law.
[*Ex parte* Rechnitzner, 572.

5. SAME—RECIPROCAL PRIVILEGES—PROOF OF THE APPLICABLE FOREIGN LAW.
Relief of foreign applicants under section 2 of the act of March 3, 1921, being conditional upon the granting to citizens of the United States by the country of which the foreign applicant is a citizen or subject of substantially reciprocal privileges, it is necessary that applicants seeking benefits under the act shall prove the applicable foreign law in the absence of knowledge by the Office of such law received from other sources. [Id.

6. SAME—EXTENSION OF RIGHTS OF PRIORITY.
The rights of priority provided by section 1 of the act of March 3, 1921, will be extended up to the extreme limits set therein in favor of citizens of the United States and citizens or subjects of foreign countries which extend rights of priority to the limits set in the Berne Convention or to the limits set by Great Britain in ratifying that Convention.
[*Ex parte* Hackett, Smith, and Southall, 795.

7. SAME—EXTENSIONS OF TIME FOR PAYING FEES—NOLAN ACT CONSTRUED.
Since under section 2 of the act of March 3, 1921, no extensions may confer privileges on the citizens or subjects of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country on the citizens of the United States, fees past due must be paid or actions required to be done in the past must be performed at such time, on or before March 3, 1922, that the period between the due date and the date when such fee is actually paid or action is actually taken is not longer than the maximum period allowed by the laws of such foreign country to citizens of the United States for similar actions. [Id.

8. SAME—PROOF OF FOREIGN LAW—PROOF NOT NECESSARY IN EACH APPLICATION.
For purposes of administration of the Nolan Act, (act of March 3, 1921,) as it applies to foreign applicants, the privileges conferred on citizens of the United States by the laws of a foreign country may be proved by the affidavit of an expert in such law or by a statement from the competent authorities of that country. When the law is once proved, it will be sufficient for all applications filed by citizens or subjects of that country.
[Id.

9. SAME—PROOF OF BRITISH LAWS AND PRACTICE INSUFFICIENT.
Proof of the laws and practice of Great Britain alleged to meet the conditions of the Nolan Act as to reciprocity examined and found insufficient. [Id.

INJUNCTION.

See Construction of Statutes, 1; Interference, 2.

INTERFERENCE.

See Appeal to the Court of Appeals of the District of Columbia; Construction of Claims; Construction of Statutes, 1; Priority of Invention.

1. INVENTION BY THIRD PARTY.
A party to an interference cannot defeat his opponent by showing that another party not a party to the proceeding was the real inventor, although the successful party might have to meet this question *ex parte* after the termination of the interference proceeding.
[* De Forest *v.* Miller, 189.

2. INJUNCTION WILL NOT ISSUE WHERE THERE IS ADEQUATE REMEDY BY APPEAL.
An injunction to control the Commissioner of Patents in interference proceedings will not issue where plaintiff's claim is based on alleged abandonment by another party to the interference, so that there is an adequate remedy at law by appeal in the interference proceeding.
[* Snelling *v.* Whitehead, Commissioner of Patents, 393.

3. RIGHT TO MAKE CLAIM.
An applicant whose application discloses a dust-guard for car-axle boxes consisting of a plate having a lower edge which is square, with the corners cut off in circular form, leaving a flange extending straight across the bottom between the parts where the corners are clipped off, *Held* not entitled to make a claim calling for a plate having a flange extending around a semicircular lower edge. [* Sharp *v.* Gamage, 573.

INTERNATIONAL CONVENTION FOR THE PROTECTION OF INDUSTRIAL PROPERTY.

See Construction of Statutes, 6.

INTERVENING RIGHTS.

See Laches.

INVENTION BY THIRD PARTY.

See Interference, 1.

LACHES.

DELAY IN FILING APPLICATION—RULE NOT RELATED TO INTERVENING RIGHTS.
Applicability of the rule of laches in the filing of an application for reissue is not dependent upon whether there are intervening rights. (*Mahn* v. *Harwood*, 112 U. S., 354.) [*Ex parte* Holland, 391.

PRIOR PRACTICE.

See Revival of Abandoned Applications, 1.

PRIORITY OF INVENTION.

See Abandoned Experiments; Appeal to the Court of Appeals of the District of Columbia; Construction of Claims; Construction of Statutes, 6.

1. DILIGENCE—EXPERIMENTING TO PERFECT ONE FEATURE OF THE INVENTION.
Where Bendix conceived and disclosed the invention in 1910, and the record of the interference proceedings is replete with evidence of his activities in experimenting from March to November, 1913, when he filed his application, with one of the features of the invention to which the parties financing his operations made objections, *Held* that he is entitled to an award of priority over one later to conceive who reduced the invention to practice in May, 1913.
[* Halbleib *v.* Bendix and Conrad. Same *v.* Bendix, Bijur, and Conrad. Conrad *v.* Bendix and Halbleib. Same *v.* Bendix, Bijur, and Halbleib. Bijur *v.* Bendix, Conrad, and Halbleib. Same *v.* Bendix, 191.

2. SENIOR PARTY AWARDED PRIORITY ON TWO COUNTS ON WHICH INTERFERENCE WAS DISSOLVED.
Where the Commissioner of Patents awarded priority of invention to Replogle as to two counts of the interference, but dissolved it as to other counts, holding two of said counts not patentable over the issue of another interference to which Replogle was a party and in which priority of invention was decided against him, *Held* that where both interferences were appealed and Replogle was successful in both cases he was entitled to an award of priority upon said two counts, as well as upon the others. [* Kirby *v.* Replogle, 393.

PROOF.

RECIPROCAL PRIVILEGES.

See Construction of Statutes, 2, 3, 5, 6, 7, 8, 9.

REDUCTION TO PRACTICE.

See Abandoned Experiment; Priority of Invention, 1.

REGISTRATION OF TRADE-MARKS.

See Trade-Marks.

REINSTATEMENT OF APPLICATIONS.

See Construction of Statutes, 4.

REISSUE APPLICATIONS.

See Delay in Filing Application for Reissue.

1. DELAY OF MORE THAN THREE YEARS IN FILING APPLICATION—EXCUSE INSUFFICIENT.
Delay of more than three years in filing an application for reissue containing broadened claims may not be excused on the ground that applicant was ignorant of patent matters, particularly the meaning of claims; that an attorney conducted the proceedings to obtain the patent who unduly restricted the claims; that applicant lived in a country remote from any patent lawyer, and that the restricted scope of the claims was not discovered until parties who became interested therein directed attention to the defect, when steps to obtain a reissue were promptly taken.
[*Ex parte* Holland, 391.

2. INADVERTENCE, ACCIDENT, OR MISTAKE—EFFECT OF CANCELING CLAIMS FROM ORIGINAL APPLICATION.
The fact that claims of substantially the same scope as those sought in a reissue were canceled from the original application after rejection negatives the assertion of inadvertence, accident, or mistake in failing to secure them in the original patent. [Id.

REJECTION OF APPLICATIONS.

See Trade-Marks.

REJECTION OF CLAIMS.

See Reissue Applications, 2; Revival of Abandoned Applications, 1.

RENEWAL OF FORFEITED APPLICATIONS.

See Construction of Statutes, 2, 3, 4, 5.

REVIVAL OF ABANDONED APPLICATIONS.

See Appeal to the Court of Appeals of the District of Columbia; Construction of Statutes, 2; Trade-Marks.

1. "UNAVOIDABLE" DELAY—EFFECT OF RULING OF APPELLATE COURT REVERSING PRIOR PRACTICE.
Where the claims of an application copied from a patent are rejected on the ground of estoppel by reason of delay in copying them for more than one year after the date of the patent and the application, standing under such rejection, is allowed to become abandoned, applicant is not entitled to revive the same after a decision of the Supreme Court in another case holding that the basis of rejection was not warranted, the delay in taking action not being "unavoidable" under section 4894, Revised Statutes. [*Ex parte* Weber, Sr., 392.

2. APPLICATION ABANDONED WHILE APPLICANT WAS SERVING WITH THE FORCES OF THE UNITED STATES.
Under section 6 of the act of March 3, 1921, a citizen of the United States whose application became abandoned while he was serving with the forces of the United States during the war upon filing a responsive amendment is entitled to proceed with the prosecution of his case, irrespective of whether he was serving abroad or in this country. [*Ex parte* Giller, 571.

RIGHT TO MAKE CLAIMS.

See Interference, 2.

SECOND RENEWAL OF FORFEITED APPLICATIONS.

See Construction of Statutes, 3.

TEST.

See Abandoned Experiments.

TRADE-MARKS.

1. ABANDONED APPLICATION—ATTEMPT TO REVIVE AND CONVERT INTO APPLICATION UNDER NEW LAW—UNAVOIDABLE DELAY.
A petition accompanied by a filing fee of ten dollars to revive an application for the registration of a trade-mark filed under the Trade-Mark Act of 1905, which had become abandoned for failure to take in time an appeal from a final rejection, and to convert it into an application under the act of March 19, 1920, denied where no showing was made of unavoidable delay.
[*Ex parte* Pratt Food Co., 189.

2. SAME—TRANSFER OF FEE FILED WITH PETITION TO REVIVE TO NEW APPLICATION.
Where a petition accompanied by a filing fee of ten dollars to revive an abandoned application filed under the Trade-Mark Act of 1905 is denied on account of lack of showing of unavoidable delay and a new application under the act of March 19, 1920, is filed, the fee accompanying the petition to revive may be transferred to the new application. Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., March 17, 1921.

Hatfield-Bernhard Co., Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Sunset Paint Company, 627 South Main street, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered May 21, 1912, No. 86,590, to the Hatfield-Bernhard Co., Inc., 112 Second avenue south, Seattle, Wash., and a notice of such declaration sent by registered mail to said Hatfield-Bernhard Co., Inc., at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Hatfield-Bernhard Co., Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., March 17, 1921.

Marshall & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Belding Bros. & Co., 902 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered December 11, 1894, No. 25,626, to The Willimantic Linen Company, Willimantic, Conn., and trade-mark registered November 4, 1884, No. 11,614, to Marshall & Co., Leeds, England, and a notice of such declaration sent by registered mail to said Marshall & Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Marshall & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

The notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,201,270.

On January 18, 1921, a decision was rendered that Lee de Forest was not the first inventor of the subject-matter covered by claims 5 and 6 of his Patent No. 1,201,270, subject, "Oscillating-current generators," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,281,952.

On February 24, 1921, a decision was rendered that Ford W. Harris was not the first inventor of the subject-matter covered by claims 1 and 4 of his Patent No. 1,281,952, subject, "Process and apparatus for dehydrating emulsions," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,309,812.

On March 3, 1921, a decision was rendered that Walter Proulx was not the first inventor of the subject-matter covered by claims 3, 5, 6, and 8 of his Patent No. 1,309,812, subject, "Pulling-over machines," and no appeal having been taken within the time allowed such decision has become final.

Changes in Classification.

(ORDER NO. 2,646.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., March 31, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 242, Winding and Reeling, (Division XXI,) abolish the following subclass, with its definition:

Reeling and unreeling—
Reels—
Fishing-rod type—
84.2. Signal.

The patents formerly contained in this subclass have been placed in class 43, Fishing, Trapping, and Vermin-Destroying, subclass 17, Fishing, Signal devices, and class 242, Winding and Reeling, subclasses 84.1, Reeling and unreeling, Reels, Fishing-rod type; 84.4, Reeling and unreeling, Reels, Fishing-rod type, Line-traverser, and 84.5, Reeling and unreeling, Reels, Fishing-rod type, Brake and drag.

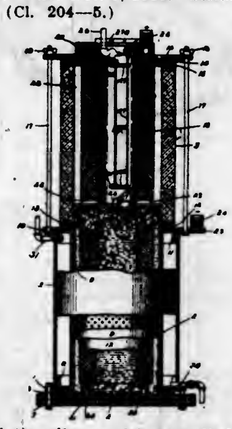
M. H. COULSTON,
Commissioner.

4698

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business March 26, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders....	Nov. 13	Nov. 26	931
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Aug. 3	Sept. 27	1,327
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 4	Aug. 6	636
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	May 11	Jan. 5	1,463
167	5. Book-Making; Books, Strips and Leaves; Harvesters: Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Aug. 9	Sept. 13	605
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Sept. 9	Dec. 28	701
312	7. Games and Toys; Optics; Photography; Velocipedes	Nov. 11	Dec. 1	1,123
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Jan. 18	Feb. 2	477
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Aug. 16	Feb. 5	626
235	10. Land-Vehicles; Land-Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Sept. 26	Jan. 18	1,001
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Jan. 6	Jan. 20	438
222	12. Machine Elements	Aug. 9	Jan. 5	981
229	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	June 16	Dec. 13	1,430
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	July 6	Feb. 4	805
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	June 19	Aug. 18	1,157
111	16. Radiant Energy; Telegraphy; Telephony	July 1	Aug. 14	1,354
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Feeding or Delivering; Type Setting.	Sept. 20	Jan. 3	662
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	July 31	Oct. 18	1,360
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	July 12	Nov. 1	699
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Dec. 1	Dec. 8	904
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Sept. 7	Jan. 20	490
249	22. Aeronautics; Firearms; Ordnance—Ammunition and Explosive Devices	Nov. 6	Jan. 25	357
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	July 26	Jan. 8	844
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Aug. 25	Jan. 3	726
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Feb. 12	Feb. 11	236
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Aug. 17	Nov. 3	770
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Nov. 8	Jan. 4	822
225	28. Internal-Combustion Engines	Mar. 19	Dec. 15	1,063
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Aug. 4	Jan. 14	650
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Sept. 2	Feb. 9	883
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas; Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	June 10	Aug. 31	1,731
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	July 1	Dec. 10	1,076
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Oct. 1	Oct. 23	685
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	Feb. 4	Feb. 19	197
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	Feb. 19	Feb. 9	396
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Oct. 23	Oct. 11	1,472
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Sept. 19	Oct. 8	1,507
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Oct. 26	Oct. 20	865
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	May 3	June 5	1,507
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Aug. 14	Dec. 8	1,428
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Aug. 9	Dec. 14	813
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	July 23	Oct. 1	1,668
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	June 26	Aug. 2	1,162
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	July 31	Jan. 28	469
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	July 29	Oct. 4	980
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Oct. 22	Dec. 4	627
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	July 20	Oct. 11	1,060



Oldest new case, Mar. 19; oldest amended, June 5.

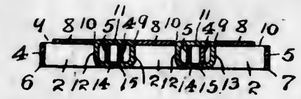
PATENTS

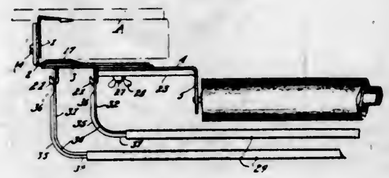


GRANTED APRIL 5, 1921.

1,373,394. ELECTROLYTIC CELL. EDWARD A. ALLEN and HERBERT I. ALLEN, Portland, Me., assignors to Electron Chemical Company, Portland, Me., a Corporation of Maine. Filed Dec. 9, 1919. Serial No. 343,491. 17 Claims. (Cl. 204—5.)

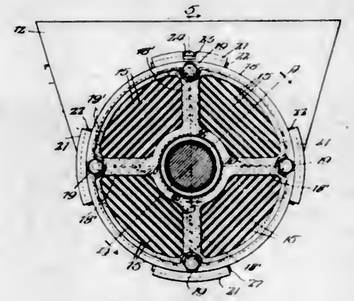
1. An electrolytic cell comprising a cylindrical cathode, a cylindrical diaphragm covering the inner active face of the cathode, and a cylindrical tubular anode occupying the space within the cathode and diaphragm.

1,373,395. CHAIN ADAPTED AS LINK-BRACELET AND THE LIKE. THOMAS ALLSOPP, Newark, N. J., assignor to Allsopp & Allsopp, Inc., a Corporation of New Jersey. Filed Aug. 2, 1920. Serial No. 400,631. 2 Claims. (Cl. 59—80.)



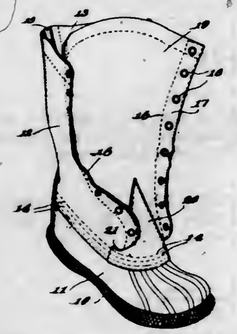
2. A flexible chain adapted for use as a link-bracelet, comprising a plurality of main link-members and intermediate connecting link-members, each main member consisting of a pair of longitudinally extending side-members, a pair of laterally extending end-members, and a top-plate extending across said side-members and of such width so as to provide with said end-members a pair of receiving openings, and each connecting link-member consisting of a top-plate and a pair of downwardly extending side-edge members, each side-member projecting downwardly into and through a receiving opening above-mentioned and having a bent portion extending above a side-member of a main link-member, all arranged for articulated or pivotal connection of the various connecting link-members with the various main link-members.

1,373,396. DRYING APPARATUS. BERNARD R. ANDREWS, Braintree, Mass. Filed July 8, 1920. Serial No. 394,715. 14 Claims. (Cl. 34—48.)



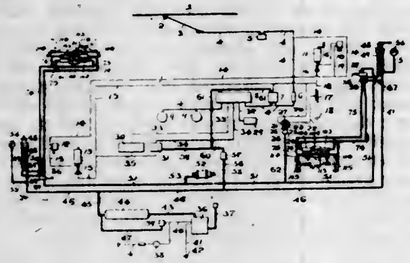
1. In apparatus for drying sheet material, the combination with means for holding sheet material, of means to heat one side of said sheet material, and means to take heated air from said side of the sheet material and deliver it onto the other side thereof.

1,373,397. WINDOW-BRACKET. JOSEPH P. ARNTZ, Canal Fulton, Ohio. Filed Mar. 22, 1920. Serial No. 367,763. 2 Claims. (Cl. 156—24.)



2. A bracket for the finishing board of a window frame or the like comprising an attaching plate having an inturned angular portion at one vertical edge, an angular member adjustably connected thereto, said attaching plate and angular member being arranged to embrace opposite sides of the same edge portion of the finishing board, a square projection formed upon the attaching plate, a curtain rod supporting plate having a square projection formed therein, and adapted to receive the square projection upon the attaching plate, said curtain rod supporting plate being provided with attaching prongs to connect a curtain rod thereto, a shade fixture provided with a channel portion slidably mounted upon the square projection of the curtain supporting plate and provided with an elongated slot, and a bolt located through the square projections of the attaching plate and curtain rod supporting plate for holding the curtain rod supporting plate in fixed relation to the attaching plate and allowing longitudinal adjustment of the shade fixture.

1,373,398. CUTTING DEVICE FOR FRUIT-DISINTEGRATING MACHINES. LELAND A. BABCOCK, Chicago, Ill., assignor to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1919. Serial No. 318,640. 13 Claims. (Cl. 146—11.)

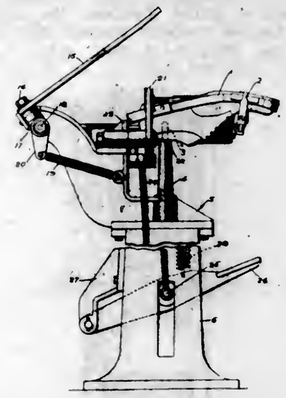


1. A cutting device of the class described comprising a sectional stationary cutting element, each section of said cutting element comprising a frame and a plurality of spaced knives; and means for forcing the material to be cut through said cutting element.

1,373,399. TONGUE AND TOP REINFORCEMENT FOR SHOES. LEON L. BEAN, Freeport, Me. Filed June 11, 1920. Serial No. 388,294. 4 Claims. (Cl. 36—54.)

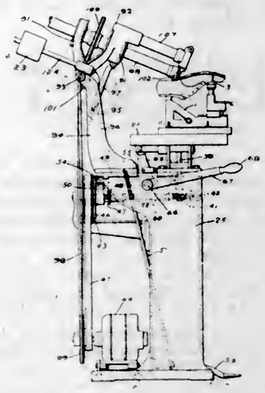
1. In a shoe, the combination with a vamp, sides, and a tongue, of a reinforcing piece having lateral ears, said piece stitched to the bottom of said tongue and vamp, the lateral ears overlying the sides and stitched thereto, to permit the forward ends of said sides to overlie the tongue throughout its length.

1,373,400. COMBINED ELECTRIC AND PNEUMATIC SYSTEM FOR CARS AND THE LIKE. HERSHEL A. BENEDICT, East Orange, and EDVARD M. MOLLER, Jersey City, N. J. Filed Apr. 24, 1920. Serial No. 376,316. 14 Claims. (Cl. 180—82.)



1. In combination with an electric system for operating cars, or the like, a make and break means in said system, a pneumatic system for actuating said make and break means, and a pneumatically controlled door-operating mechanism connected and coöperating with said pneumatic system, primarily for maintaining a locked arrangement of the car-door or doors while the car is running, and secondarily for opening the car-door or doors when the car has stopped.

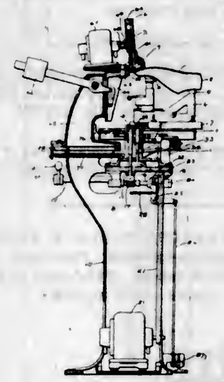
1,373,401. CURTAIN-ROD AND SHADE-ROLLER SUPPORT. JOHN BENYEI, Cleveland, Ohio. Filed Mar. 26, 1920. Serial No. 368,912. 2 Claims. (Cl. 156—24.)



2. In a support for curtain rods and shade rollers, means for attaching said support to a window, adjustable curtain rod supporting means, a shade roller supporting member having an opening therein, and a resilient member curved back on itself at its extremity, and integral with and bent forwardly from said support, the end of said resilient member being arranged normally to close the upper end of the opening in said shade roller supporting member.

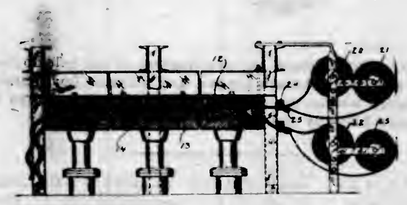
1,373,402. SHANK-LASTING MACHINE. CHARLES C. BLAKE, Brookline, Mass. Filed Apr. 14, 1915. Serial No. 21,425. 22 Claims. (Cl. 12—7.)

1. A lasting machine, having, in combination, a wiper, and means for operating the wiper to wipe the upper into lasted position against the edge face of the insole, substantially as described.



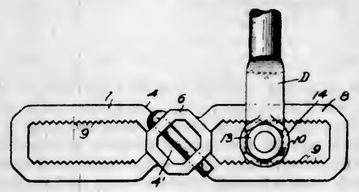
1,373,403. VAMP-TRIMMING MACHINE. CHARLES C. BLAKE, Brookline, Mass. Filed May 8, 1915. Serial No. 26,742. 29 Claims. (Cl. 12—83.5.)

5. A machine for preparing a welted shoe for the sole laying operation, having, in combination, a rotary cutter, and a guard therefor mounted to turn automatically under the pressure of the work about the axis of the cutter, substantially as described.



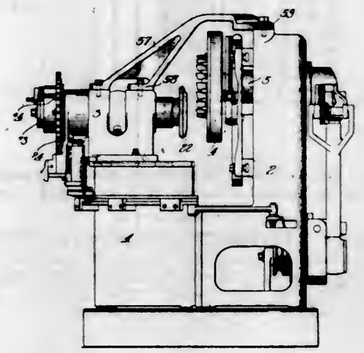
1,373,404. SOLE-ROUNDING MACHINE. CHARLES C. BLAKE, Brookline, Mass. Filed Nov. 4, 1915. Serial No. 59,655. 33 Claims. (Cl. 12—25.)

1. An insole rounding machine, having, in combination, a work support for a last having its bottom separated from its upper-shaping surface by an abrupt shoulder and having a roughly died out insole attached thereto, a cutter,



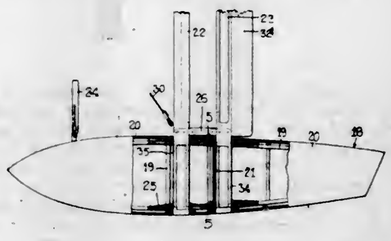
and means for relatively actuating the support and cutter to trim the edge of the insole around the last to the edge of the last bottom, substantially as described.

1,373,405. METHOD OF CURING AND SHAPING ARTICLES OF RUBBERIZED FABRIC. FRANK A. BROWN, Indianapolis, Ind., assignor to G. & J. Tire Company, a Corporation of Indiana. Filed Sept. 14, 1920. Serial No. 410,222. 3 Claims. (Cl. 18—53.)



1. That method of curing and shaping vulcanizable fabric reinforcing members which includes interconnecting a series of the laminated fabric members, introducing the members successively while interconnected in a press for individual curing, and vulcanizing the member.

1,373,406. SWITCH-ARM. WILLIAM MILTON BROWN, EDWARD B. ENTWISLE, and HENRY C. STIFF, Johnstown, Pa. Filed Jan. 6, 1921. Serial No. 435,363. 8 Claims. (Cl. 246—404.)

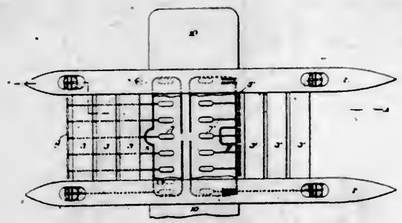


1. The combination with a switch stand having a vertical shaft, of a crank arm secured to the lower end thereof, having a plurality of serrations thereon, and a switch rod link adjustably clamped to said arm.

1,373,407. BRACE FOR GEAR-CUTTING MACHINES. EDWARD W. BULLOCK, SCHUYLER H. EARL, and GEORGE H. BRYAN, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Original application filed Nov. 30, 1917, Serial No. 204,686. Divided and this application filed May 8, 1920. Serial No. 379,719. 7 Claims. (Cl. 90—11.)

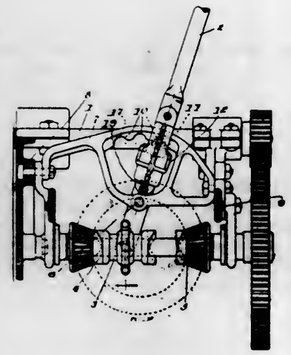
1. In a gear cutting machine, the combination with a blank support and a cutter support, of a brace, the ends of which are attached to the blank and cutter supports and the central portion of which extends around the area occupied by the gear blank and cutter.

1,373,408. PONTOON-MOUNTING FOR HYDROAEROPLANES. WILLIAM STARLING BURGESS, Marblehead, Mass., assignor to Curtiss Aeroplane and Motor Corporation, a Corporation of New York. Filed July 12, 1918. Serial No. 244,651. 7 Claims. (Cl. 244—2.)



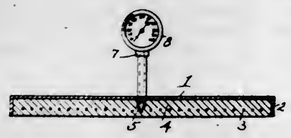
1. In an airplane, a fuselage comprising an inside framework and an outer covering within which the framework is inclosed, a pontoon mounted beneath the fuselage and having a rigid hydroplaning surface, and a mounting for the pontoon including a supporting strut deeply embedded in the fuselage at one end and deeply embedded in the pontoon at its opposite end, the first mentioned end of the strut being fastened to the fuselage framework and the opposite end directly fastened to the hydroplaning bottom surface of the pontoon.

1,373,409. AIRCRAFT. CHARLES H. CASPAR, Philadelphia, Pa. Filed Aug. 28, 1919. Serial No. 320,358. 16 Claims. (Cl. 244—18.)



1. In an aircraft, the combination of a movable casing, a propeller arranged adjacent said casing and adapted to direct a current of fluid therethrough, a plane within

said casing fixed at one end with respect thereto, and means whereby the opposite end of said plane may be

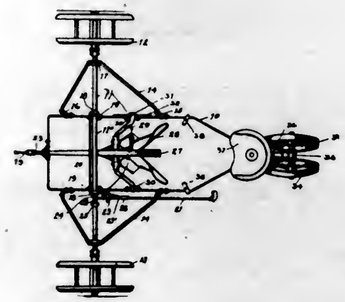


moved to cause said plane to assume a position in angular relation to the normal direction of flow of said current.

1,373,410. LEVER MECHANISM FOR CLUTCHES. EDWARD SANFORD CHARLES, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed July 10, 1915. Serial No. 39,140. 2 Claims. (Cl. 74—39.)

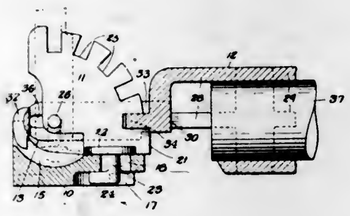
1. In a control mechanism, the combination of a member having rounded notched portions, a pivotally mounted control lever associated therewith and movable in a single plane, a guide member secured to said lever and having slots therein, and a spring-pressed member slidably mounted in said guide member having a roller in one end thereof to engage the rounded notches and having lateral extensions movable within the slots in the guide member.

1,373,411. CONTROLLING DEVICE. WARREN F. CLARK, Cleveland, Ohio, assignor to The Steam Electric Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 7, 1919. Serial No. 302,400. 5 Claims. (Cl. 219—37.)



2. An apparatus of the character described, a plate, an electric heating coil coöperating with the under surface of said plate, a temperature responsive device directly cooperating with the under surface of said plate, a body of non heat conducting material embedding the said coil and the said temperature responsive device, a pair of contacts and means operated by the temperature responsive device for moving one of said contacts.

1,373,412. ADHESIVE WATERPROOFING AND SIZING COMPOSITION. AUGUSTUS E. CRAVER, Cliffside, N. J. Filed June 8, 1920. Serial No. 387,383. 19 Claims. (Cl. 134—20.)

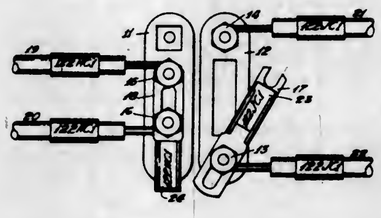


1. A composition of matter, comprising a proteid, an aqueous solvent therefor, and a formaldehyde liberating substance.

1,373,413. LISTER-PLOW. SAMUEL K. DENNIS, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed July 8, 1919. Serial No. 309,387. 8 Claims. (Cl. 97—36.)

1. In a lister plow, the combination of an axle formed with a vertical arcuate portion and a frame horizontally positioned within the arcuate portion and mounted to be shiftable laterally thereon.

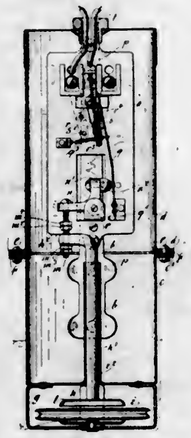
1,373,414. ADJUSTABLE FLAGSTAFF-HOLDER. ALEXANDER C. ELPHINSTONE, West Orange, N. J. Filed May 7, 1920. Serial No. 379,434. 3 Claims. (Cl. 248—37.)



3. An adjustable flagstaff holder comprising a bracket member adapted to receive one end portion of a flagstaff, one end portion of said bracket member being provided with an elongated aperture, a member mounted in said elongated aperture and upon which said bracket member is radially and rotatably movable, said last named member being provided with a plurality of spaced apertures and said bracket member being provided with a part adapted to engage said recesses to retain said bracket member in any desired position of adjustment on said last named member, and means for guiding said bracket member in its radial movement.

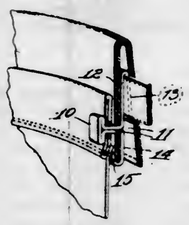
1,373,415. FLUID-PRESSURE MOTOR. FRED A. ENGH, Johnstown, Pa. Filed Jan. 15, 1919. Serial No. 271,324. 5 Claims. (Cl. 121—34.)

1. In a motor of the class described, a casing, a cylindrical fluid pressure chamber eccentrically located therein, a revoluble shaft with reduced end portions mounted therein, a rear bearing therefor comprising a disk seated within the chamber, serving as a closure for the portion therebelow, a central perforation in said disk in which the rear reduced end of the revoluble shaft is journaled and exposed to the incoming fluid pressure, and a forward bearing comprising an accentric bushing provided with a flange concentric with the fluid pressure chamber.



1,373,416. TAG AND TERMINAL-STRIP. EDWARD A. EVERETT, New York, N. Y. Filed Jan. 12, 1920. Serial No. 350,838. 4 Claims. (Cl. 40—16.)

1. In combination, an electrical conductor having a designation, a plurality of binding posts, a metallic link connecting said posts, a groove formed by turning over the edges of said link, a tag placed in said groove and having a designation corresponding to said conductor, means at one end of said groove for preventing the passage of said tag and one of said binding posts preventing the passage of said tag from the other end of said groove when said link is connected to said binding posts.

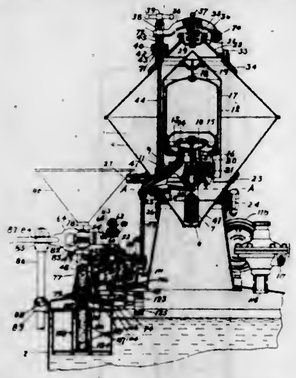


1,373,417. CONTROLLER FOR HEATING SYSTEMS. EDWARD E. GOLD, New York, N. Y., assignor to Gold Car Heating & Lighting Company, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1919. Serial No. 321,310. 5 Claims. (Cl. 200—140.)

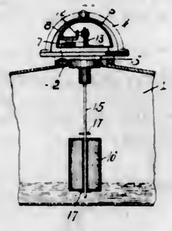
1. In a controller for heating systems, in combination with electrical control devices, a support for said devices, a thermostatic expansible vessel to actuate said control devices, operative connections between said vessel and the control devices, and means to support said vessel removably in operative relation to said connections, said means

comprising a U-shaped strap secured to the support for said electrical control devices and a second U-shaped strap rotatably mounted in the first named U-shaped strap.

1,373,418. COMBINED COLLAR-BUTTON AND NECK-TIE-GUIDING DEVICE. ALBION M. GOLDSTEIN, St. Louis, Mo. Filed July 30, 1920. Serial No. 400,190. 2 Claims. (Cl. 24—61.)



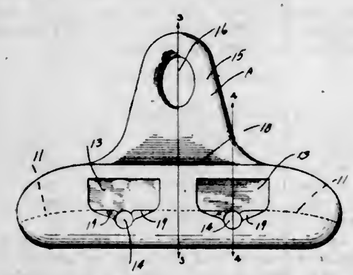
1. A combined collar button and necktie guiding device constructed from a single strip of metal bent to form a head, a shank portion extending laterally from said head, an inverted U-shaped portion extending upwardly from said shank portion, and a U-shaped portion depending from said shank portion, with the outer leg of said U-shaped portion disposed beneath and on the same side of the device with the shank portion and the head.



1,373,419. ACETYLENE-GENERATOR. NELSON GOODYEAR, deceased, New York, N. Y., by Katharine F. Goodyear, administratrix, New York, N. Y., assignor, by mesne assignments, to The Pneumatic Acetylene Generator Corporation, a Corporation of New York. Filed Apr. 21, 1917. Serial No. 163,654. 25 Claims. (Cl. 48—53.3.)

10. In an acetylene generator, a generator tank, a carbid receptacle having a feed orifice in its bottom, a feed valve for said orifice, a flexible diaphragm to which said valve is connected, said diaphragm having one side exposed to the pressure of the gas in said carbid receptacle, means for closing said valve when the pneumatic pres-

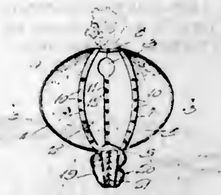
sures on opposite sides of said diaphragm are approximately equal, and means for causing a difference in pressure on the sides of said diaphragm in opposition to said means sufficient to open said valve.



1,373,420. LOW-LIQUID ALARM. WILLIAM GRAH, Waterville, Ohio. Filed Dec. 6, 1920. Serial No. 428,448. 2 Claims. (Cl. 116—110.)

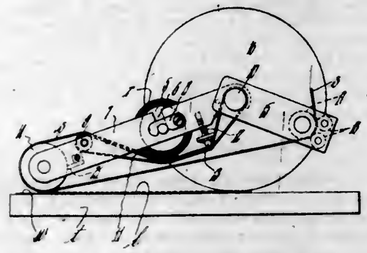
1. In combination, a liquid container, a resonant member carried by the container, a striker for said member, mechanism for imparting striking movements to the striker and including a rack-bar extending into the container, and a float carried by the rack-bar within the container and adapted to reciprocate the rack bar when the float is reciprocated, the float being carried by the rack-bar for limited movements longitudinally thereof whereby the float is permitted to gather momentum in its movement before imparting movement to the bar.

1,373,421. SUSPENSION-CLAMP FOR CABLES. WALTER A. GRAHAM, Salisbury, N. C. Filed June 11, 1920. Serial No. 388,383. 3 Claims. (Cl. 248—31.)



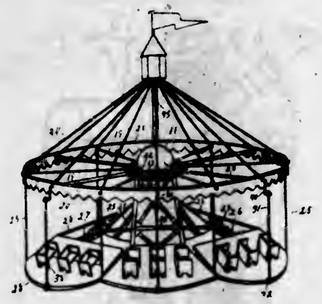
1. In a suspension clamp for cables, the combination of a cable supporting body having a longitudinal groove therein for the reception of a cable and having openings in the face thereof, bolts carried by said supporting body having relatively broad hooked heads thereon to engage a cable in the longitudinal groove and adapted for free insertion through the openings in the face of the supporting body, said bolts having relatively long threaded portions projecting through the opposite side of the supporting body, and nuts carried by said threaded portions and adapted for adjustment thereon to clamp or unclamp the cable without disconnection of any of the parts of the suspension clamp.

1,373,422. COIN-TESTER FOR COIN-CONTROLLED VENDING-MACHINES. ALBERT D. GROVER, Malden, Mass., assignor, by mesne assignments, to Autosales Corporation, a Corporation of New York. Filed July 25, 1913. Serial No. 781,072. 17 Claims. (Cl. 194—97.)



1. In a coin-controlled machine having a coin-slot for receiving a coin edgewise, washer-catching mechanism having a yieldable part adapted to engage in the opening of a partially inserted washer to lock the same against full entrance into the slot, and a second yieldable part extending across one end of said coin-slot to be thereby actuated by the entering washer and control the operation of said locking part, said mechanism permitting ready removal of the locked washer to clear the coin-slot, said second yieldable part engaging an entering good coin on the edge thereof and thereby snapping it through said slot.

1,373,423. COMEDIAN'S SUIT. IRVIN W. GRUHL, Los Angeles, Calif. Filed Dec. 29, 1919. Serial No. 348,245. 4 Claims. (Cl. 46—70.)

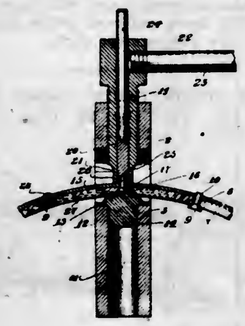


1. A comedian's suit comprising an inflatable ball having therethrough an opening for the user's body, said ball also having arm holes leading from said body receiving opening.

1,373,424. DEVICE FOR APPLYING METALLIC LEAF. LEON M. HARWOOD, Springfield, Mass. Filed Nov. 29, 1920. Serial No. 427,078. 6 Claims. (Cl. 41—7.)

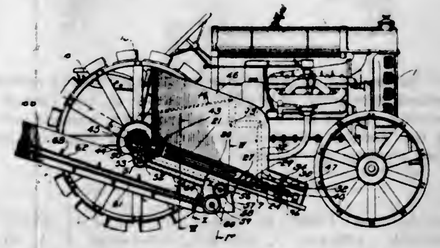
4. In a device for applying metallic leaf, a receiving roll for the leaf having a surface partially capable of being electrified to hold the leaf by electric attraction in position on the roll

1,373,425. AMUSEMENT DEVICE. CHARLES AUSTIN HOADLEY, Louisville, Ky. Filed Mar. 8, 1920. Serial No. 364,090. 4 Claims. (Cl. 46—27.)



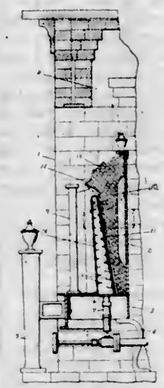
2. In a device as characterized, a tower, a depending structure rotatably mounted thereon, means for rotating said structure, floor sections carried by the structure and forming a continuous floor and means for rocking said sections independently and laterally relative to the travel of the structure.

1,373,426. MACHINE FOR TREATING HIDES, SKINS, AND LEATHER. HENRY A. HOLDER, Lynn, Mass. Filed Mar. 28, 1918. Serial No. 225,266. 7 Claims. (Cl. 149—16.)



1. In a machine of the character described, in combination, a pair of rotatable rolls having helically arranged blades or vanes which interlock in the operative position of said rolls, one of said rolls having its blades or vanes provided at their outer or working surfaces and between the ends and sides thereof with working edges which extend transversely of said working surfaces at an angle to the length of the same.

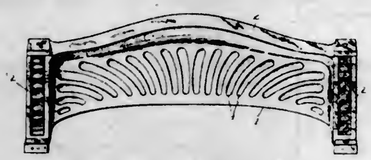
1,373,427. RIVETING-MACHINE. ORVILLE E. HOUSER, Chillicothe, Ohio. Filed May 24, 1920. Serial No. 383,656. 3 Claims. (Cl. 78—46.)



1. A riveting tool comprising a substantially U shaped frame having a pair of spaced upper and lower arms, a die head carried by the lower of said arms, said head being provided with a rivet forming extension capable of receiving and shaping the head of a rivet, a screw adjustably carried by the upper arm and situated in vertical alinement with said die head, said screw being capable of pressing work into clamped engagement between its lower end and said die head, and to cause the extension of said die head to be embedded in such work and a plunger slidably mounted in a bore provided in said screw and capable of engaging rivet shanks projecting from said work.

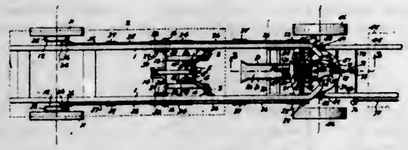
1,373,428. CORN-PICKER. JOHN T. HUGHES, Wakenda, Mo. Filed Dec. 7, 1918. Serial No. 265,729. 3 Claims. (Cl. 56—18.)

1. In combination with the power axle of a tractor, a drive shaft connected to the power axle of the tractor, a frame swingingly mounted upon the drive shaft, a harvesting mechanism on said frame, a conveyer carried by the frame and counter-balancing the harvesting mechanism, and means for adjustably tilting said frame.



1,373,429. GAS-HEATER. ALFRED H. HUMPHREY, New York, N. Y., assignor to General Gas Light Company, Kalamazoo, Mich. Filed May 2, 1918. Serial No. 231,991. 3 Claims. (Cl. 126—86.)

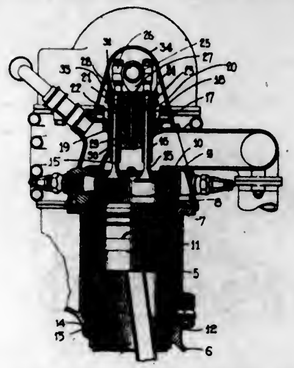
1. In a structure of the class described, the combination with a fireplace, of a gas heater disposed therein comprising a fireback of earthy material having a forwardly inclined face with an overhang at its top, the top of the fireback projecting substantially above such overhang and being of substantial body and rearwardly inclined so that in use it becomes heated and produces a back draft current in the products of combustion above the fire back, tubular foraminated radiating elements dis-



posed with their upper ends below but adjacent to said overhang of said fireback, and burners disposed below said radiating elements.

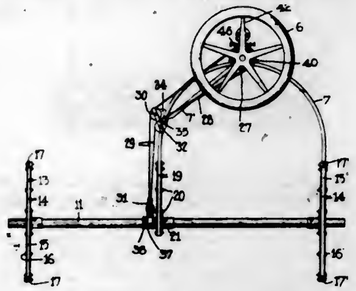
1,373,430. METHOD OF FINISHING METAL SURFACES. ALFRED H. HUMPHREY, New York, N. Y. Filed Dec. 31, 1918. Serial No. 269,139. 6 Claims. (Cl. 41—18.)

3. The method of finishing metal surfaces having raised portions consisting of applying enamel to the surface, removing enamel from the raised portions, and subjecting the surfaces to an electroplating bath whereby the raised portions are plated.



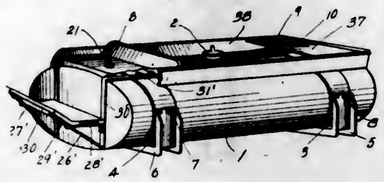
1,373,431. AUTOMATIC TRAILER-COUPLING MECHANISM. CHARLES J. JOHNSON, Bloomfield, N. J., assignor of one-half to Gustav A. Johnson, Newark, N. J. Filed Mar. 4, 1920. Serial No. 363,122. 11 Claims. (Cl. 280—33.1.)

1. The combination with a trailer chassis and a tractor chassis of a transverse shaft mounted at the forward end of said trailer chassis, tracker rollers mounted on said shaft, a forwardly projecting coupling yoke connected with said trailer chassis forward of said shaft and its rollers, a turn table mounted upon said tractor chassis to swivel in a horizontal plane, an automatic self locking coupling mechanism mounted on said turn table engageable with said coupling yoke by bumping contact therewith, and an inclined plane fixed to the rear end of said tractor chassis with the upper forward end of which said turn table is normally alined, said tracker rollers of said trailer chassis being adapted to ride upwardly over said inclined plane on to said turn table thereby lifting the forward end of said trailer chassis and guiding said coupling yoke into operative engagement with said automatic coupling mechanism.



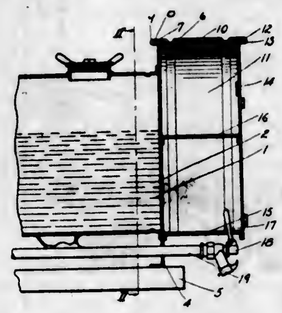
1,373,432. VALVE-OPERATING MECHANISM. CHARLES B. KIRKHAM, Buffalo, N. Y., assignor to Curtiss Aeroplane and Motor Corporation, a Corporation of New York. Filed Aug. 10, 1917. Serial No. 185,518. 4 Claims. (Cl. 123—90.)

1. A valve mechanism for internal combustion engines comprising a valve cage structure having valve stem openings formed therein with recessed mouths, flanged valve stem bushings in said openings with their flanges seated in said recesses, a pair of similarly characterized valves having their stems projecting through said bushings, a recess in said cage structure intermediate said valves having a flanged mouth, a flanged follower bushing seated in said recess with its flange bearing on the head of the recess flange, a T-headed follower having its shank guided by said follower bushing and bearing by its head on said valve stem, and a cam engaging the head of said T-follower at an intermediate point together



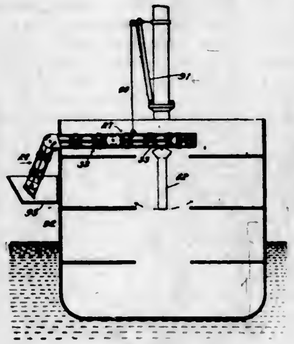
with yielding means engaging the valve stem bushings to retain the valves upon their seats.

1,373,433. CONTROL-COLUMN. HENRY KLECKLER, Hempstead, N. Y., assignor to Curtiss Aeroplane and Motor Corporation, a Corporation of New York. Filed May 13, 1918. Serial No. 234,192. 6 Claims. (Cl. 244—29.)



1. A bridge control for aircraft, comprising an elongated shaft, a walking beam fixed to one end thereof and consisting of a pair of sheet metal clamping plates with an intermediate filler of strengthening material, a control bridge mounted upon the other end of the shaft, said control bridge consisting of a pair of sheet metal clamping plates fixed to said shaft and an intervening filler of strengthening material, and cable connections between said walking beam and said bridge and the control surfaces for the purposes set forth.

1,373,434. TANK CONSTRUCTION. ANDREW A. KRAMER, Kansas City, Mo. Filed Dec. 22, 1919. Serial No. 346,713. 6 Claims. (Cl. 280—5.)

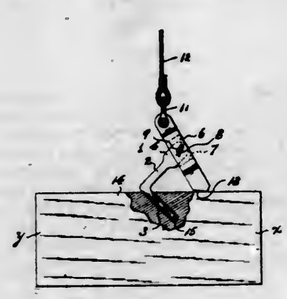


6. In a tank construction, a tank, a band about the tank, a seat on the tank, means for securing the seat to the band, a foot board support, means for securing the foot board support to the band, and a bolster beneath the tank and having upwardly extending portions connected to the band.

1,373,435. CAN-RACK. ANDREW A. KRAMER, Kansas City, Mo. Filed Apr. 30, 1920. Serial No. 377,794. 3 Claims. (Cl. 280—5.)

1. A tank having an end sheet projecting beyond the perimeter of the tank body, the lower portion of the sheet being bent to form a bolster, the upper portion of the sheet being bent at right angles to form a flange, and a can rack resting against the sheet and having a bent-over portion to form a groove receiving the flange.

1,373,436. APPARATUS FOR COALING SHIPS AND THE LIKE. LOUIS LOMBI, North Bergen, N. J. Filed July 17, 1919. Serial No. 311,444. 5 Claims. (Cl. 193—3.)

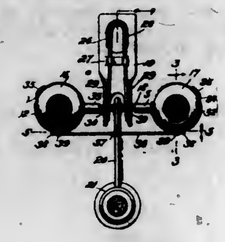


1. Apparatus for coaling ships and trimming the bunkers thereof comprising, in combination with such ship, movable conveyer apparatus therefor of the character described and means on the ship for supporting said apparatus and permitting of the positioning thereof with regard to the trimming of the bunkers, said apparatus comprising a main horizontal frame extending inwardly from the side of the ship into the interior thereof, a depending elevator-leg frame pivotally connected with the outer end of said horizontal frame and hanging over the side of the ship, means for locking said leg in fixed adjustment and relation to said main frame, a continuous flooring subdividing said main frame into upper and lower sections and said leg frame into outer and inner sections in continuation of said upper and lower sections, pairs of sprocket-wheels mounted in said frames, a pair of sprocket chains mounted on said wheels extending continuously through both of said frames, means for driving said chains, cheek-pieces closing the sides of said upper main-frame section and the sides of said outer leg-frame section, and scrapers secured to said chains and having transverse members adapted to engage the coal at the lower end of said leg frame and move it upwardly on said flooring through said leg frame and thence along said horizontal frame to the point of discharge.

1,373,437. LID OR CLOSURE FOR RECEPTACLES. VICTOR LOUGHEED, San Francisco, Calif. Filed Aug. 21, 1919. Serial No. 318,877. 12 Claims. (Cl. 184—91.)

10. A closure for receptacles comprising a hingeless cover, a projection from the inner surface of the cover adapted to support the cover upon the edge of the receptacle, and a fulcruming member adapted to bear against the inner wall of the receptacle at a point offset from the support, whereby it resists closing movement, and at a point adjacent the support, whereby it limits outward tipping movement of the cover; said fulcruming member being symmetrically extended on a plurality of sides of the support; and said cover having a spring tending to hold it in position.

1,373,438. SELF-LOCKING LIFTING DEVICE. JOHN MCDOWELL, Newark, N. J. Filed June 25, 1920. Serial No. 391,801. 3 Claims. (Cl. 294—89.)

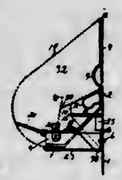


1. A self-locking lifting device for the purposes described, comprising an anchor member having a lateral extension at one end for engagement in an angularly disposed opening provided in the side of the material to be lifted, and a gripping lever member pivoted intermediate its ends to the opposite end of said anchor member, the upper free end of said lever member being adapted to be connected with a hoisting means, while the lower end of the same engages the upper surface of the material to be lifted.

1,373,439. DOLL'S HEAD AND EYES THEREFOR. SAMUEL MARCUS, Brooklyn, N. Y., assignor to F. & M. Novelty Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 16, 1920. Serial No. 374,258. 13 Claims. (Cl. 46—40.)

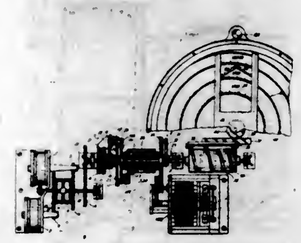
1. An eye-set for dolls and the like comprising a pair of globular eye-shells bearing the representation of the iris, means connecting said shells comprising metallic

bands encompassing the shells and adapted to be closely secured thereto, means for preserving the alinement of



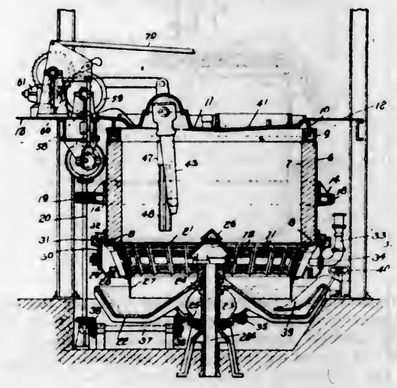
said bands on the shells, and means for effecting the rolling of the eyes on the movement of the doll.

1,373,440. DOLL'S HEAD AND EYES THEREFOR. SAMUEL MARCUS, Brooklyn, N. Y., assignor to F. & M. Novelty Co. Inc., New York, N. Y., a Corporation of New York. Filed May 19, 1920. Serial No. 382,569. 9 Claims. (Cl. 46—40.)



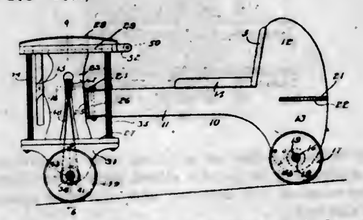
1. An eye-set for dolls and the like comprising a pair of globular eye-shells bearing at the front thereof a representation of the iris and having rearwardly extending integral necks, thimbles fitting over said necks and having spring fingers entering said necks, means securing the thimbles on said necks, a bridge connecting said thimbles, means for effecting a rolling action of the eyes on the movement of the doll and hangers secured within the head of the doll and having stirrups engaging the surfaces of the eye-shells and permitting of the movement of the same therein.

1,373,441. SANITARY FLYTRAP. HUGH E. MARTIN, Madison, Wis. Filed Apr. 14, 1920. Serial No. 373,903. 1 Claim. (Cl. 43—119.)



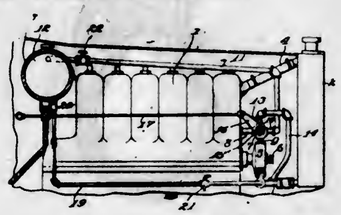
In a device for catching flies, a back plate, a wire frame attached to the same, brackets secured to the back and frame, a cage formed by wire screen secured to the back and frame, a detachable bottom pan, and means for closing the cage when the bottom is removed, separate entrances for flies to enter the cage, all of them concealed from view of the cage.

1,373,442. RANGE-INDICATOR. ELEMER MEITNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 15, 1915. Serial No. 61,480. 23 Claims. (Cl. 177—351.)



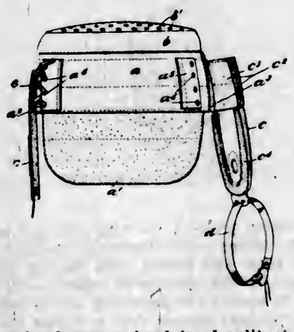
23. In combination, a movable member of a range finder having variable displacements for uniform changes in range, a member having uniform displacements for uniform changes in range and a mechanical driving mechanism interposed between said members for converting the variable movement of said first named member into a uniform rotary movement.

1,373,443. GAS-PRODUCER. JAMES C. MILLER, Pittsburgh, and ANDREW ISLES, Swissvale, Pa., assignors to The W. R. Miller Company, a Corporation of Pennsylvania. Filed June 14, 1919. Serial No. 304,323. 6 Claims. (Cl. 48—85.1.)



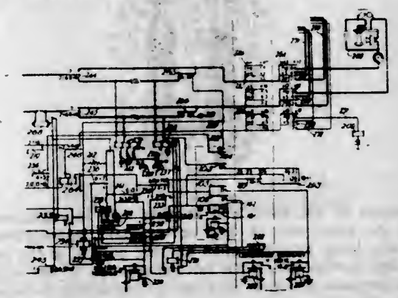
6. In a gas producer, a cylindrical body portion, means for rotatably mounting said body portion, an inwardly inclined grate carried by said body portion, an ash pan below said grate, means for rotatably supporting said ash pan, a stationary bustle pipe surrounding said grate, water seal troughs for sealing the joints between said bustle pipe and the revolving body portion, blast devices extending through said bustle pipe, and means for revolving said body and said ash pan in the same direction and at the same speed.

1,373,444. AIRPLANE-VELOCIPEDE. GEORGE H. NOBBS, Quincy, Mass., assignor to The Phonoharp Company, East Boston, Mass., a Corporation of Maine. Filed Oct. 31, 1917. Serial No. 199,456. 21 Claims. (Cl. 208—165.)



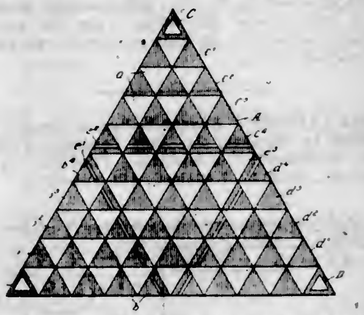
2. A child's velocipede comprising a body, a seat thereon, a front structure having a transverse member simulating the plane of an aeroplane, a pivotal connection between the said front structure and said body, and supporting wheels for said body and front structure.

1,373,445. WATER-COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. AARON M. PEREIRA, Marinette, Wis. Filed Apr. 12, 1920. Serial No. 373,283. 6 Claims. (Cl. 123—174.)



6. An internal combustion engine and its water-jacket, in combination with a water-supply tank for the jacket, a pump, a valve, and communicating connections between the tank, jacket, pump and valve, the valve being adapted to normally establish communication between the jacket and the discharge side of the pump and to abnormally establish communication between the pump and drain and between the jacket and the suction side of the pump, the pump being operable both to supply the jacket from the supply-tank and to drain both the jacket and the supply tank of their water.

1,373,446. HEADGEAR FOR ATHLETES. HOWARD MADISON PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Sept. 22, 1920. Serial No. 411,917. 3 Claims. (Cl. 2—192.)

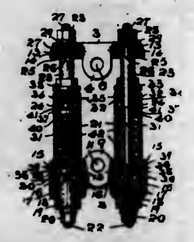


1. In a head gear a head band split at one side, an ear flap secured to the head band at one side of the split section and means carried with the ear flap to draw it over the split section adjustably and secure its free end to the head band.

1,373,447. TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1920. Serial No. 358,173. 5 Claims. (Cl. 179—18.)

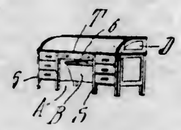
1. In a telephone system, a plurality of selective switches for establishing telephone connections, a multiposition register, means for sending series of current impulses, impulse mechanism responsive to one of said series of impulses for variably setting said register, means controlled by said register when in its set position for selecting one of said switches, said impulse mechanism being responsive to another series of impulses for again setting said register, and means controlled by said register in accordance with its subsequent setting for operating the selected switch.

1,373,448. GAME. ALEXANDER S. PRECINAUSKAS, Waukegan, Ill. Filed May 3, 1920. Serial No. 378,382. 3 Claims. (Cl. 46—64.)



1. A game comprising a triangular board having a triangular space at each corner and parallel rows of triangular spaces extending inwardly from the corners, the corner spaces having a different appearance from the other spaces, and the alternate spaces in the rows being of a color contrasting with the color of the intermediate spaces in the rows, and a plurality of sets of reversible men, the men of each set being distinguishable from those of the other sets and one side of each man corresponding in appearance to the corner spaces on the board.

1,373,449. DOUBLE-ACTING ELASTIC SHACKLE. VALDEMAR F. REICH, Pittsburgh, Pa., assignor to Nathaniel Elin, Newark, N. J. Filed Oct. 1, 1919. Serial No. 327,770. 13 Claims. (Cl. 267—19.)



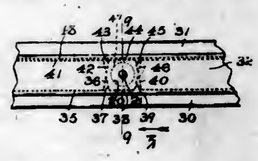
2. A shock-absorbing means comprising a cylinder, stem-receiving guides connected with the respective ends

of said cylinder, a load-carrying stem movable through said cylinder and said guides in a reciprocatory manner, a spring encircling said stem, a disk in engagement with one end of said spring, said disk being mounted upon one portion of the stem and moving therewith for compression of the spring in one direction with a corresponding

movement of the stem, and another disk in engagement with the other end of said spring, said last-mentioned disk also being mounted upon another portion of the stem and also moving therewith for compression of the spring in an opposite direction with the corresponding movement of the stem.

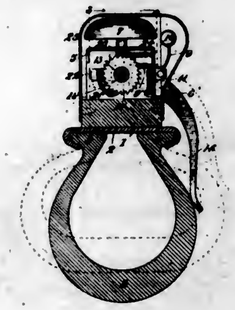
1,373,450. WASTE-PAPER BAG. ARCHIE D. ROBINSON, Westfield, Mass. Filed Mar. 22, 1920. Serial No. 367,735. 6 Claims. (Cl. 45—90.)

2. A receptacle for waste or the like, comprising a bag of flexible material and of generally rectangular shape designed to lie within the space between the spaced uprights of a desk or the like, and a bar-like handle for each of two opposite side walls of the bag and each elastically connected at its ends to its side wall adjacent the corners of the bag.



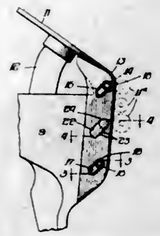
1,373,451. AIR-GUN. ERNEST S. ROE, Plymouth, Mich., assignor to Markham Air Rifle Company, Plymouth, Mich., a Corporation of Michigan. Filed Dec. 20, 1920. Serial No. 431,811. 7 Claims. (Cl. 124—10.)

1. In an air gun, the combination with a pair of sections pivotally connected to each other, of a link pivotally connected to said sections and adapted to hold the same in alinement, the pivot between said sections being to one side of the line between the link pivots when said sections are in alinement.



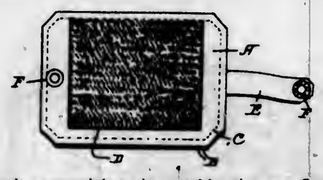
1,373,452. FASTENER STRIP OR FLY FOR GARMENTS. LEO ROSENMAN, Newark, N. J. Filed June 30, 1917. Serial No. 178,018. 3 Claims. (Cl. 2—58.)

1. A fastener-strip or fly for garments in the form of a piece of fabric comprising a face-member and a rear-member, said face-member being provided with suitably disposed holes or perforations, fastener-members disposed between said face and rear members, the locations of said fastener-members corresponding to the holes or perforations in said face-member, and stitching for securing said members together, said stitching comprising a longitu-



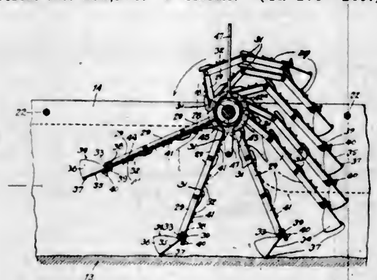
dinally extending line of stitching and transversely extending stitching to provide closed pockets in which said fastener-members are disposed and concealed against removal and loss.

1,373,453. AUDIBLE SIGNAL FOR PNEUMATIC TIRES. OTTO FRED SCHROEDER, Santa Ana, Calif. Filed Dec. 13, 1920. Serial No. 430,228. 5 Claims. (Cl. 116—34.)



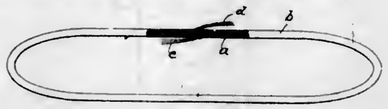
1. A tire alarm device comprising a base for attachment to a wheel, a bell secured thereto, a bell clapper associated with the bell and provided with a pawl integral therewith, a toothed wheel coöperating with the clapper for operating the same, a lever disposed to extend adjacent to the side wall of a vehicle tire, a pawl coöperating with the teeth of said wheel and connected with said lever to actuate said clapper in accordance with the degree of movement of the lever.

1,373,454. AUXILIARY TRACK FOR PRINTING-PRESSES. JOHN H. SCHUSSLER, Chicago, Ill. Filed Feb. 14, 1919. Serial No. 276,896. 5 Claims. (Cl. 101—340.)



1. In a printing press of the type specified, auxiliary tracks for the inking rolls adjustably mounted on the frame of the press and having slots toothed along one edge, said frame having openings in register with the said toothed slots to receive and position a key in coöperative relation with the said toothed slots to adjust the tracks, and means for securing the tracks in the adjusted position.

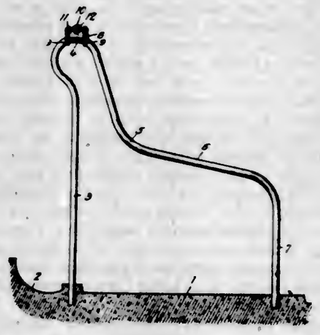
1,373,455. BRUSH. JOSEPH AUGUST SKOGLUND, St. Paul, Minn. Filed Jan. 15, 1920. Serial No. 351,716. 1 Claim. (Cl. 15—28.)



A brush, comprising, in combination, a flexible back having bristles on its under side, a strap forming a handle portion above the back and having an attaching tab freely extended from one end of said back, the handle portion of said strap being attached at its extremities near the ends of the back, a fastening member on the extremity of said handle portion opposite the tab and a companion fastening member on the free end of said tab, said strap serving both as a handle and as an encircling medium to secure the back in folded relation.

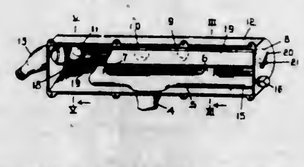
1,373,456. COMBINED WATER-WHEEL AND DAM. CHARLES W. SMITH, Chicago, Ill. Filed Sept. 16, 1918. Serial No. 254,270. 9 Claims. (Cl. 170—100.)

1. A combined water wheel and dam for rivers, streams and the like, comprising spaced abutments having opposed faces, a horizontal power shaft and a series of paddles mounted on said shaft each adapted to span the space between the faces of said abutments and said paddles having plates binged to their outer ends and adapted to contact with the river bottom, whereby a head of water is maintained above the wheel, such as described.



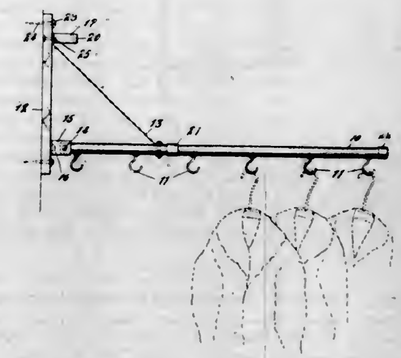
1,373,457. POWER-TRANSMISSION BELT. MANNING J. SMITH, Philadelphia, Pa. Filed Oct. 3, 1919. Serial No. 328,231. 5 Claims. (Cl. 74—63.)

1. An endless compound power transmission belt comprising an inner flat webbing and an inclosing tubular webbing, the ends of the flat webbing being secured together and positioned between the ends of the tubular webbing and the ends of the tubular webbing being secured together and positioned between the ends of the flat webbing.



1,373,458. STALL CONSTRUCTION. CHARLES M. STEVENSON, Rockford, Ill., assignor to Iowa Gate Company, Cedar Falls, Iowa, a Corporation of Iowa. Filed Aug. 3, 1917. Serial No. 184,254. 4 Claims. (Cl. 119—27.)

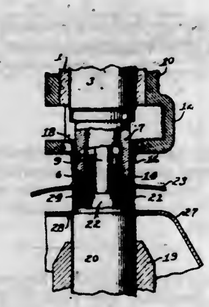
1. The combination of a plurality of similar units, each consisting of a partition bar bent down at each end to constitute supporting legs, the bend at one end at the juncture of the bar and leg constituting a semi-circular



loop, a bar extending across said units at one of the ends thereof above the bent down leg at said loop, and means for rigidly fastening said units and bar together.

1,373,459. GAS-ENGINE MANIFOLD. JAMES W. STIRTON, Detroit, Mich. Filed June 28, 1917. Serial No. 177,481. 7 Claims. (Cl. 123—122.)

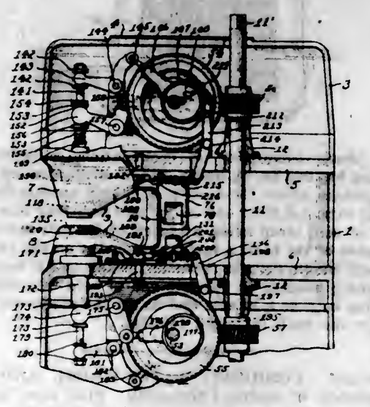
1. A multiple intake internal combustion motor, an exhaust manifold embodying a manifold enveloping the intake, and a vane disposed in the exhaust manifold transversely of the incoming exhausts for dividing the inflow therefrom.



1,373,460. CLOTHES-HANGER. ROBERT C. STRIKER and CLARENCE C. STRIKER, New York, N. Y. Filed May 24, 1918. Serial No. 236,287. 1 Claim. (Cl. 45—13.)

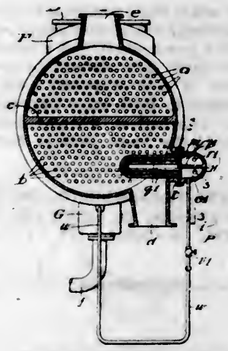
A foldable garment hanger comprising a single portable unit embracing a member for attaching said hanger to a supporting surface, a socket member extending from the

lower end of the attaching member and comprising a back secured to said attaching member, side walls and a bottom, a cylindrical hanger arm having one end inserted in said socket member, a pin passing through the side walls of said socket member and the ends of said hanger at a point substantially forwardly of said attaching member for allowing the movement of said arm about said pin in a vertical plane to a position wherein the weight of said arm tends to hold said arm in folded position, hooks on said arm for carrying garments thereon whereby said garments in the folded position of said hanger assuming positions wherein the garments lie one on the other with the greater part of the weight thereof carried by said hooks, a chain flexibly supporting said arm from said attaching member in the extended position of said arm, and means for automatically locking said hanger member in the folded position comprising a spring member having a back secured to said attaching member, and spring jaws integral with and extending from said back, each of said springs jaws being convex toward each other at their extremities and concave toward each other for the remainder thereof, and a cylindrical metallic spring engaging, protecting ring on said hanger arm of larger diameter than said arm for entering said spring member with a minimum of friction and for spreading the springs to cause them to exert pressure on said ring after the entry of said ring between said spring.



1,373,461. DIE FOR SETTING GROMETS AND EYELETS. JOHN LENARD STUART, Oakland, Calif., assignor to Stuart Machine Co., San Francisco, Calif., a Corporation of California. Filed May 4, 1920. Serial No. 378,901. 14 Claims. (Cl. 218—14.)

12. Die mechanism for setting a gromet and a coöperating washer comprising means for holding the gromet and washer in axial alinement; a pair of reciprocating members adapted to pass through the gromet and washer respectively and to coact to punch the gromet receiving hole in the work; an expansible tubular guide member, having a normal diameter less than that of the washer, for guiding said washer from said holding means into setting position with relation to the gromet and the work; and a pair of reciprocating annular dies surrounding said punch members and adapted to coact to set the gromet and washer in the work, one of said die members being further adapted to force the washer through said tubular guide member.

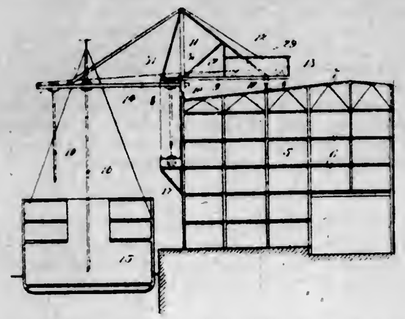


1,373,462. GROMET MAKING AND SETTING MACHINE. JOHN LENARD STUART, Oakland, Calif., assignor to Stuart Machine Co., San Francisco, Calif., a Corporation of California. Filed May 4, 1920. Serial No. 378,902. 16 Claims. (Cl. 218—14.)

16. In a machine for the described purpose, means for forming a gromet; means for forming a coöperating washer therefor; means for setting said gromet and washer; carrier members for transferring the gromet and washer from their respective forming means to the setting means; and devices for automatically removing

the set gromet and washer from the sphere of action of said setting means.

1,373,463. CONDENSING APPARATUS. ROBERT SUCZEK, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 17, 1919. Serial No. 271,622. 19 Claims. (Cl. 257—24.)

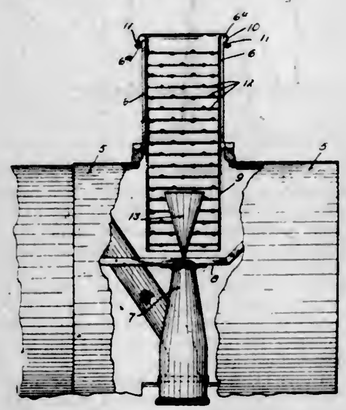


15. The combination with a surface condenser, of an ejector and a condenser receiving the discharge therefrom disposed in said surface condenser and cooled by the cooling medium thereof.

16. The combination with a surface condenser, of an ejector, and a condenser receiving the discharge therefrom disposed in said surface condenser and cooled by the cooling medium thereof before it reaches heat transfer relation with the condensable fluid therein.

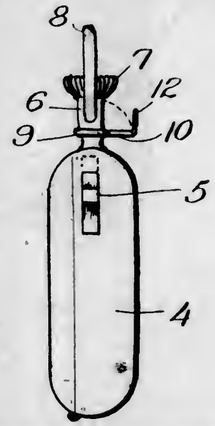
17. The combination with a surface condenser, of an ejector mounted thereon, and a condenser receiving the discharge therefrom disposed in said surface condenser and cooled by the cooling medium thereof.

1,373,464. APPARATUS FOR FREIGHT TRANSFERENCE. GEORGE E. TITCOMB, Brooklyn, N. Y. Filed Apr. 24, 1920. Serial No. 376,221. 7 Claims. (Cl. 212—15.)



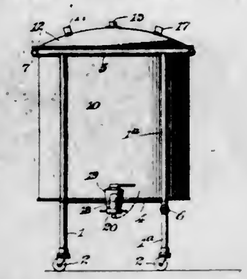
1. The combination with a building having a plurality of floors, of freight-handling devices comprising a movable floor-extension and power-operated means for delivering loads thereto and for moving the same horizontally and vertically along the walls of the building.

1,373,465. DOUBLE-TUBE RETURN-BEND. CHARLES HENDERSON TRUE, Hammond, Ind., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed May 24, 1919. Serial No. 299,623. 4 Claims. (Cl. 29—157.6.)



1. The process of making double-pipe return bends comprising the steps of connecting the ends of two pipes by an incomplete return bend, connecting the ends of two smaller pipes to form a complete return bend, inserting the latter into the former so that the two are substantially coaxial, and then finishing the incomplete bend.

1,373,466. SPARK-ARRESTER. JOHN A. TWEIT, Appleton, Minn. Filed Aug. 14, 1920. Serial No. 403,597. 5 Claims. (Cl. 110—121.)

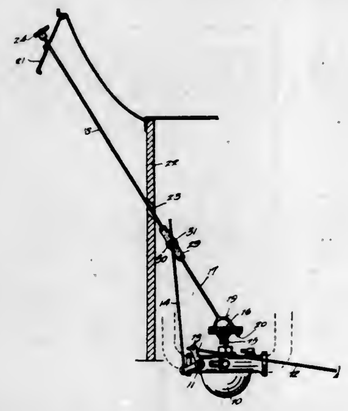


5. In a locomotive comprising a smoke box and an exhaust nozzle and a stack in alinement with said exhaust nozzle, a spark arresting device having in combination an open-ended shell supported in said stack and extending downwardly into the smoke box adjacent to the exhaust nozzle, parallel layers of transverse rods extending at right angles to each other carried by said shell, the rods in various layers being arranged to afford a staggered mesh, and an inverted cone supported in the lower end of said shell directly over said exhaust nozzle.

1,373,467. SAFETY ATTACHMENT FOR STOP-WATCHES. HARRY E. VON KERSBURG, New York, N. Y., assignor to R. H. Macy & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 23, 1920. Serial No. 425,984. 7 Claims. (Cl. 58—74.)

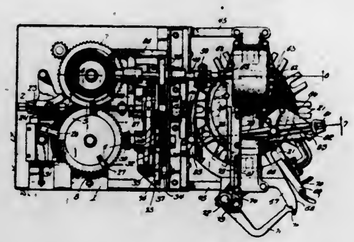
1. A stop watch, and a device adapted to prevent accidental re-setting thereof, substantially as set forth.

1,373,468. COOLING APPARATUS. MANFRED WAHL, Philadelphia, Pa. Filed July 26, 1919. Serial No. 313,543. 3 Claims. (Cl. 267—189.)



2. In cooling apparatus, the combination of a receptacle, oval in cross section, a support upon which the said receptacle stands, a tubular member of oval shape surrounding the said receptacle adjacent its upper edge, said member being provided with perforations upon its inner, lower side, and means for supplying a cold liquid to the said member, said liquid being adapted to escape through the said perforations onto the surface of said receptacle.

1,373,469. CARBURETER CONTROL. WILLIAM D. WARNER, Columbus, Ohio. Filed Jan. 29, 1920. Serial No. 354,789. 2 Claims. (Cl. 137—144.)



1. A device for use in connection with an automobile having a carbureter provided with a mixture regulating valve and an air supply having a choker valve, said device

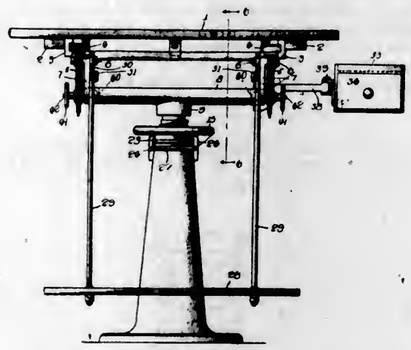
comprising control rods one of which is directly connected at one end to the said choker valve and the other of which is connected at one end to said regulating valve, the control rod of the regulating valve having a control button at its opposite end and being in two axially alined sections slidable relatively to one another and constrained to

simultaneous rotation, a yoke having extensions through which said rod sections are rotatable, a sleeve within the yoke around the adjacent ends of the rod sections and connected to one of the rod sections to engage and move the yoke when the rod section is shifted in the direction of its length, and a swiveled connection between the other end of the choker valve rod and the said yoke as described.

1,373,470. BAG-TYING MACHINE. ROGERS M. WARWICK, Chicago, Ill., assignor to General Wire Tie Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1919. Serial No. 288,424. 8 Claims. (Cl. 140—93.)

1. In a machine of the kind specified, the combination with mechanism for forming a loop of wire about an object to be tied, of means for tying said loop comprising a rotatable element equipped with means for engaging the ends of the wire loop, gearing for effecting rotation of said head through a predetermined number of revolutions, and stop mechanism associated with said gearing including a projection on one of the gear elements, a spring-held dog normally positioned in the path of travel of said projection for holding the same against movement in one direction, and means associated with said gearing including a rocking lever and a spring-held projection carried thereby adapted to be moved into the path of travel of said propection at regular intervals for preventing movement thereof in the other direction, said last-named projection normally bearing upon the first-named propection to hold the same engaged with said dog.

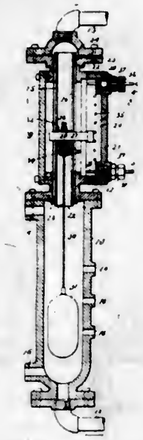
1,373,471. PROCESS OF SINTERING PHOSPHATIC MATERIALS. FRANK S. WASHBURN, Rye, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed July 23, 1920. Serial No. 398,552. 8 Claims. (Cl. 204—31.)



1. The process of extracting phosphoric acid which consists in providing a mixture of phosphatic particles and silicious particles of the run of the mine sizes, sintering the constituents of said mixture together to form a porous mass; charging said mass with carbon into an electric furnace; subjecting said porous mass to a temperature sufficient to evolve the phosphorous present; and recovering said phosphorus, substantially as described.

1,373,472. MOLDED RUBBER ARTICLE. HARRY WEIDA, Highland Park, N. J., assignor to India Rubber Company, a Corporation of New Jersey. Filed Nov. 19, 1915. Serial No. 62,343. 4 Claims. (Cl. 204—29.)

1. A rubber battery vent having a one-piece socketed and threaded body, and a diaphragm, said body being shaped to frictionally grip and retain said diaphragm, and both said body and diaphragm having one or more unobstructed apertures permitting escape of gases at all times.

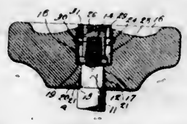


1,373,473. DRAWING-BOARD TABLE. FRANK OSCAR WEYDELL, Chicago, Ill. Filed Dec. 12, 1919. Serial No. 344,371. 15 Claims. (Cl. 45—110.)

4. The combination with a pedestal and a vertical post carried thereby, of means for clamping together the post and pedestal, a nut engaging the threads of the post to adjust it vertically, a crossbar supported by the post and having lateral arms, segments pivoted to said arms, respectively to rock on a common horizontal axis and provided with slots concentric with the segment pivots, a rod carried by the crossbar, passing through the slots and carrying devices for locking it therein, and a drawing-board supported by the segments.

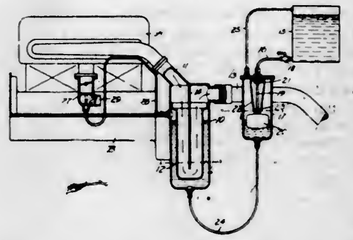
15. The combination with a pedestal, of an axial externally screw threaded post clamped in the pedestal, a board-supporting framework above, and a socket, forming part of the framework, passed over the top of the post and drawn down into rigid connection therewith by a screw.

1,373,474. ELECTRICAL RECORDING OR INDICATING APPARATUS FOR BOILERS. JAMES M. WIGHT, Lakewood, Ohio, assignor, by mesne assignments, to The United Banking & Savings Company, trustee, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1917. Serial No. 153,610. 3 Claims. (Cl. 200—84.)



2. In a water level recording or indicating apparatus for boilers, a float chamber including a portion adapted to receive contacts, a conducting member on the interior of, and extending lengthwise of said portion of the chamber and insulated therefrom, a float, a movable contact adapted to engage and to be moved lengthwise of said insulated conducting member, a stationary contact adapted to be engaged by said movable contact, one of said contacts extending through an opening in said insulated conducting member, and means for making an electrical connection with said member.

1,373,475. LIFTING-JACK. LE ROY WILLOUR, Ashland, Ohio, assignor to The Ashland Products Company, Ashland, Ohio, a Corporation of Ohio. Filed Sept. 12, 1919. Serial No. 323,271. 5 Claims. (Cl. 254—111.)

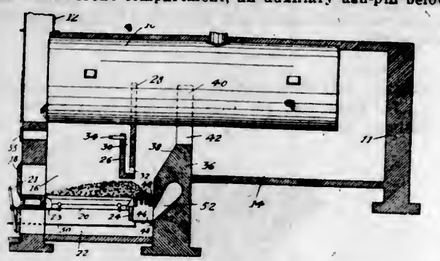


1. In a lifting jack, a standard, a lifting bar mounted for vertical reciprocation therein, a ratchet adapted to actuate said bar, a shaft mounted on said standard, a handle receiving socket pivoted upon said shaft and having a pair of spaced arms, a pawl pivoted upon said shaft intermediate said arms, a pin mounted in said arms, a second pawl pivotally mounted upon said pin a spring engaging said pawls and tending to force them into engagement with said ratchet, a reverse lever pivoted to said socket and normally engaging said pawls and withdrawing them from engagement with said ratchet and means for withdrawing said lever from engagement with said pawls.

1,373,476. VALVE-HANDLE. JOHN G. ZOLLEIS, Newark, N. J. Filed Jan. 19, 1921. Serial No. 438,309. 12 Claims. (Cl. 16—171.)

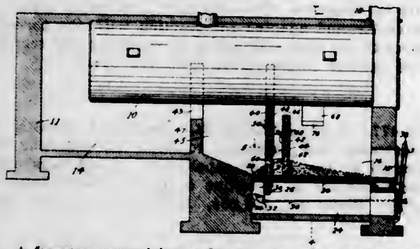
1. A handle adapted for a standard valve stem having a shank of angular cross section and a threaded element for receiving the handle, said handle comprising a body portion provided with a bore, the walls of which are adapted to fit the valve stem shank and provided with a cavity in alinement with said bore, a securing means in said cavity and adapted for coaction with the threaded element of the stem and means for retaining said securing means against displacement from the cavity.

1,373,477. GAS-GENERATOR. DONALD J. ANGUS, Indianapolis, Ind., assignor to John W. Esterline and Donald J. Angus, Indianapolis, Ind., Copartners under the firm-name of Esterline & Angus. Filed June 12, 1916. Serial No. 103,264. 1 Claim. (Cl. 48—102.)



In a gas generator the combination of a fuel containing chamber fed at the bottom from a supply chamber, said fuel containing chamber having a heating chamber therein open at the top and spaced from the walls of said fuel containing chamber, a baffle extending into and partitioning the heating chamber, means for introducing hot gases on one side of the baffle and discharging them on the other after said gases have twice traveled the length of the heating chamber, said supply chamber being located above the said fuel containing chamber to feed the fuel thereto under an appreciable head, a liquid fuel reservoir located to the deliver fuel to said supply chamber under an appreciable head, automatically operated means within the supply chamber for initially maintaining the liquid fuel therein at the same level with that in said fuel containing chamber, said automatic control being also operable to check the feed of liquid from the reservoir upon the generation of back pressure in the fuel-containing chamber, and a vapor outlet from the fuel-containing chamber to a carbureter.

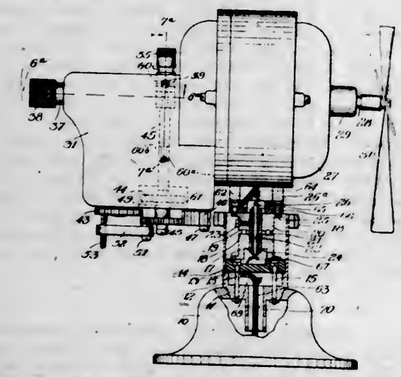
1,373,478. SMOKE AND GAS BURNING FIREBOX. CHESTER E. BETCHER, Minneapolis, Minn. Filed Aug. 21, 1918. Serial No. 250,774. 2 Claims. (Cl. 110—65.)



1. A furnace comprising a fire-box, a wall member dividing said fire-box into front and rear compartments, said wall member being spaced above the bottom of the fire-box and provided with flues leading from said front

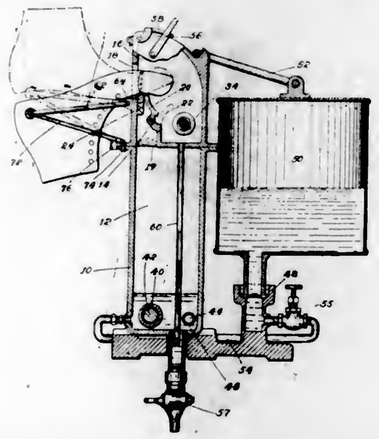
compartment to said rear compartment, a main ash-pin below said front compartment, an auxiliary ash-pin below

said rear compartment and means for supplying preheated air to said auxiliary ash-pit.



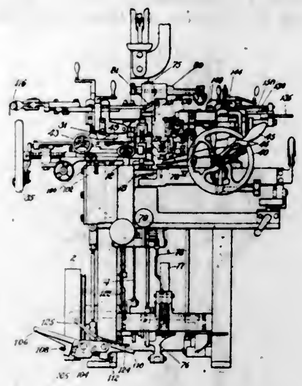
1,373,479. SMOKE AND GAS BURNING FIREBOX. CHESTER E. BETCHER, Minneapolis, Minn. Filed Sept. 6, 1918. Serial No. 252,834. 4 Claims. (Cl. 110—65.)

1. A furnace comprising a fire-box, two fire walls in said fire-box, said fire walls being spaced apart and the front fire wall being shorter than the rear fire wall whereby a passage is provided over the front fire wall leading under the rear fire wall, said fire walls being provided with horizontal flues for supplying preheated air to support combustion and means for delivering fresh air to said flues.



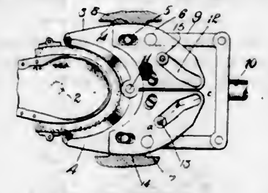
4. A furnace comprising a fire-box having a stationary bar extending across the bottom thereof, two fire walls in said fire-box, said fire walls being spaced apart and the front fire wall being shorter than the rear fire wall whereby a passage is provided over the front fire wall leading under the rear fire wall, and blocks supporting the center of each of said fire walls, said blocks resting upon said stationary bar.

1,373,480. FAN. KENNETH BRAINERD, Rochester, N. Y. Filed Nov. 17, 1919. Serial No. 338,427. 10 Claims. (Cl. 230—1.)



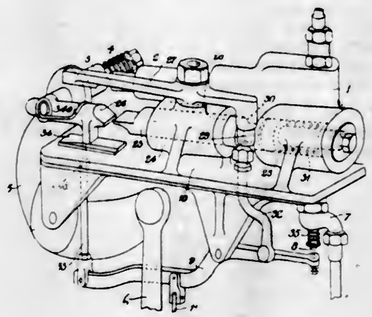
10. The combination with a blower, of a support therefor, a frame for the blower movable therewith on the support, and gears carried by said frame and shiftable to positively rotate or oscillate said blower.

1,373,481. TOE-SOFTENING MACHINE. MATTHIAS BROCK, Boston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 28, 1917. Serial No. 151,587. 19 Claims. (Cl. 12—1.)



1. A shoe-treating apparatus comprising a treating device having a vaporizing chamber, vaporizing means arranged therein below the treating locality, and means arranged to heat the vapor rising from said vaporizing means to the treating locality.

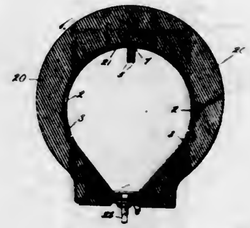
1,373,482. LASTING-MACHINE. MATTHIAS BROCK, Boston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 11, 1917. Serial No. 161,341. 55 Claims. (Cl. 12—14.)



1. In a lasting machine, the combination with toe lasting mechanism, of means for supporting a shoe comprising a toe rest having a shoe engaging member extending transversely across the shoe, mountings therefor permitting said member freely to turn about a vertical axis to adapt itself to an inclination rearwardly toward the right or toward the left of the top face of a right or a left crooked last respectively, and means to hold the rest normally in centralized position.

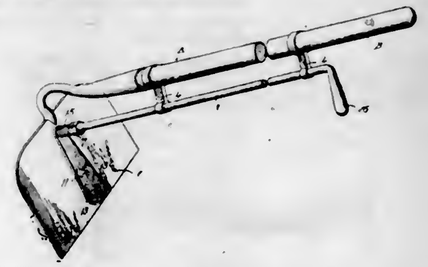
1,373,483. METHOD OF END-LASTING. MATTHIAS BROCK, Boston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 11, 1917. Serial No. 185,693. 17 Claims. (Cl. 12—145.)

1. The improvement in methods of end lasting which consists in folding over the edge of a last bottom the margin of upper materials extending around the end of the last and wiping them radially inwardly approximately to the tacking line and then, without substantially relaxing the wiping pressure on the folded over stock, wiping the margin of the upper in a direction substantially lengthwise of the last.



1,373,484. MEANS FOR REVERSING INTERNAL-COMBUSTION ENGINES. HERBERT BROOKS, Yeovil, England, assignor to Petters Limited, Yeovil, England. Filed July 19, 1920. Serial No. 397,247. 6 Claims. (Cl. 123—41.)

1. The method of reversing the direction of rotation of internal combustion engines of the kind in which liquid fuel is supplied to an engine cylinder by means of a fuel pump and plunger operated from the crank shaft of the engine, which consists in diverting the charge supplied by the fuel pump so as to prevent the charge from entering the combustion chamber of the cylinder in order to reduce the engine speed previous to reversal, then rendering inoperative the means employed for the said diversion of the fuel so as to permit the fuel to again enter the combustion chamber of the cylinder, and supplying an earlier and abnormally large injection into the cylinder to effect the reversal.

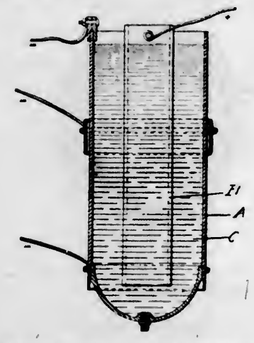


1,373,485. INNER TUBE FOR TIRES. OWEN T. BUGG, Poughkeepsie, N. Y., assignor, by mesne assignments, to Canvas Inner Tube Company, a Corporation of Delaware. Filed Aug. 4, 1920. Serial No. 401,161. 4 Claims. (Cl. 152—13.)

1. An inner tube for pneumatic tires comprising a pair of annular members of non-stretchable, flat, flexible material united at their inner edges to form an air-tight joint, and united at their outer circumferences to form in the finished tube a movable joint adapted to move against the

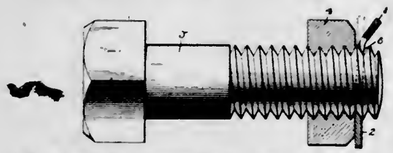
inner surface of the casing, when the tube is being inflated, substantially as described.

1,373,486. HOE-CLEANER. LEROY CARLSON, Hancock, Minn. Filed July 19, 1920. Serial No. 397,258. 8 Claims. (Cl. 55—146.)



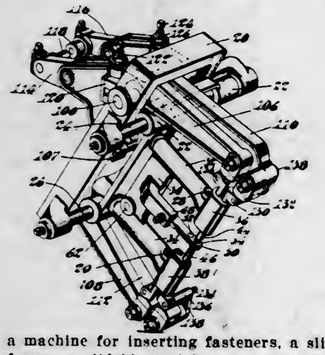
1. A cleaning device for ground working implements comprising laterally swingable cleaning members, and means for actuating the cleaning members operable from a point adjacent the grip portion of the handle of a ground working implement.

1,373,487. THREAD-GUIDE. FREEMAN CASS, Brooklyn, N. Y., assignor to Mitchell-Bissell Co., New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1919. Serial No. 276,993. 5 Claims. (Cl. 242—157.)



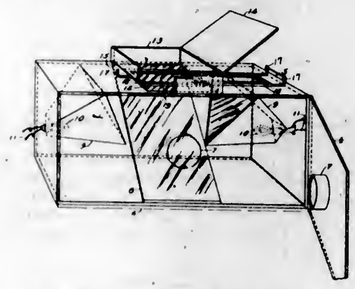
1. In a thread guide for textile machines, the combination with a cylindrical vitreous body having an axial thread opening and a slot extending from said opening to the periphery, of a holder comprising a wire or strip of substantially uniform cross section doubled on itself midway of its length into substantial parallelism to form a stem of predetermined length, and having the portions beyond said stem toward the free ends symmetrically and oppositely bent in semicircular form with the projecting ends beyond said semi-circular parts bent outwardly from each other to form means for engaging and holding said body, and a shank having an open end socket to receive and fit laterally around said stem to support it and prevent spreading.

1,373,488. PLATING. CHARLES H. CHANDLER, Newport, R. I. Filed June 26, 1919. Serial No. 307,000. 4 Claims. (Cl. 204—8.)



1. The method of lining a torpedo flask or the like, consisting in gradually electrolytically depositing on it as a cathode a progressive increasing alloy of lead and tin as a dense coating from an electrolyte progressively built up from a lead salt of hydrofluosilicic acid and a solder anode.

1,373,489. NUT-LOCK. CHARLES ROYAL COCHRAN, Vale, Oreg. Filed Nov. 29, 1919. Serial No. 341,364. 5 Claims. (Cl. 151—30.)



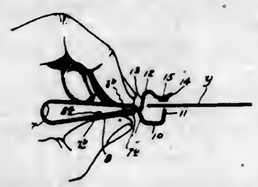
2. A nut lock comprising a ring or washer internally threaded to engage the bolt upon which the nut is to be locked, said lock having a thickness equal to half the thickness of the base of the thread of the bolt, and having inwardly extending teeth opposite the point where the thread of the lock makes a groove obliquely across the inner edge of the lock, said teeth being of greater height than the height of the thread, and being adapted to be moved into and out of engagement with the threads of the bolt by the bending laterally of that segment of the lock to whose base the bases of the teeth are attached, said lock having a segment thereof bent obliquely to the body, said segment having its base at the base of the teeth.

1,373,490. MACHINE FOR INSERTING FASTENERS. JOHN F. DAVEY, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 22, 1917. Serial No. 197,888. 16 Claims. (Cl. 218—15.)

3. In a machine for inserting fasteners, a slidable supporting frame, a slidable tool-frame carried thereby and arranged to slide relatively thereto along lines at right-angles to the lines of movement of the supporting carriage, oppositely disposed tools carried by and movable relatively to said tool-frame, an abutment also carried by said tool-frame to coöperate with said tools between the latter, and mechanism for reciprocating said frames along their respective lines of movement as aforesaid to locate the tools for operation on the work and to feed the latter.

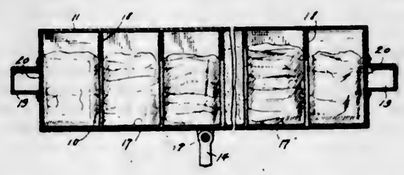
1,373,491. PICTURE-PROJECTOR. FRANK J. DETWILER and MELVIN H. BURKHOLDER, Parkersburg, W. Va. Filed July 25, 1919. Serial No. 313,251. 2 Claims. (Cl. 88—26.)

1. In a picture projecting apparatus, a casing, said casing having a central opening formed in the upper surface thereof, a reflector plate positioned within the casing, the reflector plate being arranged at an angle with relation to the upper surface of the casing, and disposed directly under the central opening, a frame surrounding the central opening, said frame having a recessed portion, a picture supporting frame adapted to move under the first mentioned frame and through the recess, means for operating the picture supporting frame, and a cover for the first mentioned frame.



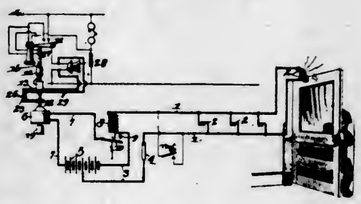
1,373,492. SAMPLE-TAKING DEVICE. REDUS D. DODDS, Houston, Tex. Filed Nov. 14, 1919. Serial No. 338,134. 1 Claim. (Cl. 255—72.)

A device of the character described including a drill stem, provided with a side opening, a core forming shoe attached to the lower end thereof and provided with an opening to permit the passage of the core therethrough, a core barrel within said stem and provided with side slots, dogs working through said slots, a tubular member within the stem around said barrel to the lower end of which the dogs are connected, means for locking said member in a fixed position in the stem, means for releasing said locking means to permit said tubular member to face against the dogs to force them into engagement with the core, said means when in active position sealing said



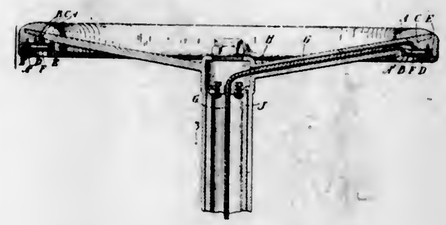
member against the passage of water downwardly therethrough, a valve controlling the side opening in said stem, means normally holding said valve closed, said tubular member acting to open the valve when released.

1,373,493. FILM-CLIP. GLEN M. DYE, Minneapolis, Minn. Filed Sept. 6, 1919. Serial No. 322,079. 4 Claims. (Cl. 24—259.)



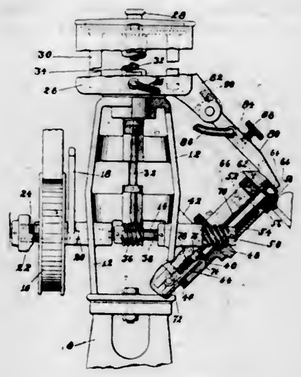
1. A film clip having coöperating jaws, the one jaw having pointed barbs and the other having laterally offset tubular bosses, into the offset sides of which bosses said barbs are arranged to enter in the clip-holding action, whereby the film will be perforated and positively held by engagement therewith only in the immediate vicinity of the points of perforation.

1,373,494. WASHING-MACHINE. WILLIAM B. FINK, New York, N. Y., assignor of one-half to George F. Hullings, New York, N. Y. Filed July 29, 1920. Serial No. 399,915. 1 Claim. (Cl. 68—21.)



A washing machine comprising a fluid-tight receptacle pivotally supported intermediate its ends for a rocking movement longitudinally, means for rocking the receptacle, a plurality of clothes holders seating in the receptacle and occupying the space between the ends, the sides, and the top and bottom thereof, the walls of said holders being reticulated, and baffle plates between the holders for closing unoccupied portions thereof.

1,373,495. BURGLAR AND FIRE ALARM. LE ROY STEWART FOLTZ, Fort Collins, Colo. Filed Feb. 4, 1919. Serial No. 274,879. 11 Claims. (Cl. 179—5.)

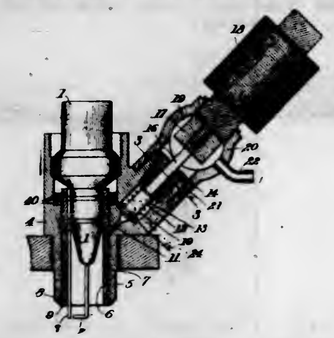


2. The combination in a burglar and fire alarm, of a receiver hook, an operatively associated electrical circuit with closable contacts, and an electro-motively and screw-actuated plunger, extensible by operation of the motor and screw to lift the hook while the receiver is on, upon energization of said device by the closure of a contact.

1,373,496. ELECTRICALLY-OPERATED HORN FOR MOTOR-VEHICLES. GEORGE FRECHEVILLE, London, England. Filed Sept. 1, 1920. Serial No. 407,545. 7 Claims. (Cl. 200—59.)

1. A vehicle steering wheel, comprising a rim having circumferentially extending members projecting therefrom, said rim and members presenting a circumferentially extending channel, a fixed contact plate secured in said channel, a movable contact plate normally separated therefrom and held in position by said members, and electrical connections for said plates.

1,373,497. BLACKING-MACHINE. FREDERICK M. FURBER, Revere, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 22, 1917. Serial No. 143,799. 21 Claims. (Cl. 12—31.)

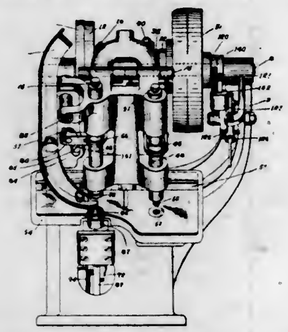


12. In a blacking machine, means for applying blacking to the sole of a shoe comprising a brush having therein a chamber for blacking, means for supplying blacking to said chamber comprising a nozzle, said nozzle and applying means being relatively movable laterally with respect to said applying means, means for yieldably forcing the nozzle and applying means into engagement, and means operating during the lateral movement for automatically controlling the flow of blacking through the nozzle.

1,373,498. LIQUID-FUEL-FEEDING DEVICE. THOMAS T. GAFF, Washington, D. C. Filed July 13, 1917. Serial No. 180,475. 8 Claims. (Cl. 123—131.)

8. In a fuel-feeding device for explosion engines, a measuring-chamber having exit and inlet openings, a valve for controlling said openings, a fuel conduit connected to said chamber, an armature connected to said valve and within said conduit, an electro-magnet mounted

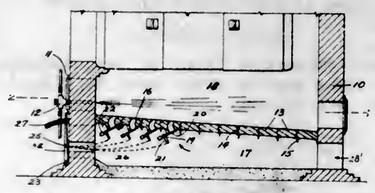
on said conduit and having a pole-piece extending therethrough into proximity to said armature, and means for



adjusting the air gap between the armature and poles of the magnet without disturbance of the valve adjustment.

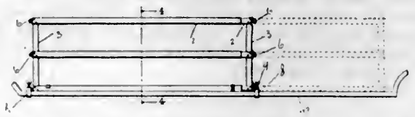
1,373,499. FUMIGANT PAINT. HENRY A. GARDNER, Washington, D. C. Filed Dec. 27, 1920. Serial No. 433,396. 6 Claims. (Cl. 134—40.)

1. A fumigant coating composition containing a chlorinated benzol derivative.



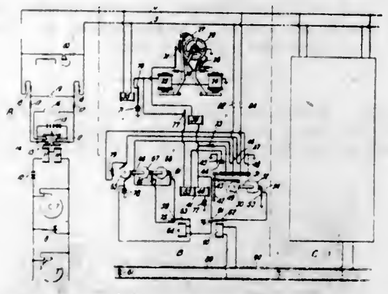
1,373,500. GROMET-SETTING MACHINE. PERLEY R. GLASS, Brookline, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 16, 1916. Serial No. 103,994. 19 Claims. (Cl. 218—15.)

19. A machine of the character described comprising a unitary frame, work-punching mechanism and fastener-setting mechanism both arranged in said frame so as to provide an unobstructed straight course from one to the other in which a piece of work may lie in operative position relatively to both said mechanisms simultaneously and so that a portion of the work may follow a substantially straight course from the punching position to the fastener-receiving position, a work table arranged to support the work in operative position relatively to both said mechanisms, and two disconnectible clutch mechanisms arranged in said frame so as to operate the first two said mechanisms respectively.



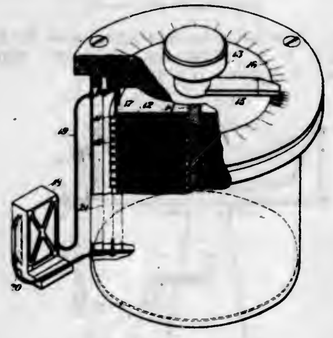
1,373,501. AIR CONTROL FOR OIL-BURNING FURNACES. GEORGE C. G. GRAY, Philadelphia, Pa. Filed Oct. 20, 1919. Serial No. 332,040. 7 Claims. (Cl. 158—4.)

1. Apparatus of the character stated comprising a furnace having a combustion chamber and an air chamber, a floor of refractory material separating said chambers, a plurality of air ducts forming means of communication between said chambers, a movable closure for each duct,



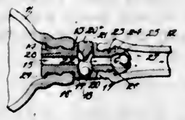
operating means common to all of said closures for controlling the passage of air through a selected number of air ducts and a burner for heating said furnace.

1,373,502. ADJUSTABLE LUGGAGE-CARRIER. JOHN R. GREEN, Girard, Tex. Filed Nov. 5, 1917. Serial No. 200,270. 1 Claim. (Cl. 224—29.)



The combination in an adjustable luggage carrier for automobiles of four upright members forming a rectangular space, two pairs of horizontal members connected to the upright members at each end to form ends of the carrier, two pairs of horizontal members connected to said upright members to form the side next the automobile and three pairs of horizontal members in front, the upright members next the automobile being shorter than those in front, all said horizontal members slidably arranged one on the other and adapted to increase or decrease the width and length of said carrier, and a spring means for locking said horizontal members in position.

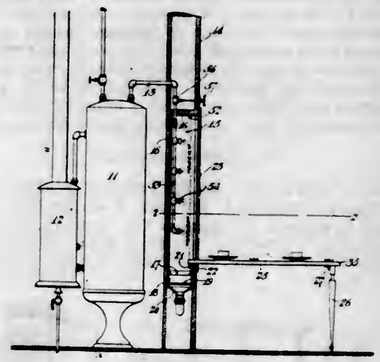
1,373,503. RAILWAY SIGNALING SYSTEM. JOHN BRAYTON HARLOW, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 9, 1915. Serial No. 20,221. 7 Claims. (Cl. 246—5.)



1. In a railway signaling system, a receiving station, a railroad track divided into sections, a line circuit extending from said receiving station along said railroad track, a signal sending device at each of a plurality of said sections, an operating circuit therefor, an electromagnet controlling said operating circuit and the connection of said signal sending device with said line circuit, a selectively operated device controlled over said line circuit from said receiving station, a track controlled device, and an energizing circuit for said electromagnet jointly controlled by said selectively operated device and said track controlled device.

1,373,504. ELECTRICAL MEASURING APPARATUS. HARRY W. HITCHCOCK, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 11, 1918. Serial No. 253,651. 7 Claims. (Cl. 250—41.)

1. In electrical condensers, the combination of two groups of plates, one movable relative to the other, the plates of each group being arranged for interposition between and insulated from the plates of the other group, a fixed capacity condenser having one side fixedly connected with the plates of the fixed group, and a connecting device fixedly joined with the other side of the said fixed capacity condenser and making a slidable contact directly with one plate of the movable group, whereby the said fixed condenser may be automatically connected in parallel with the said variable condenser.

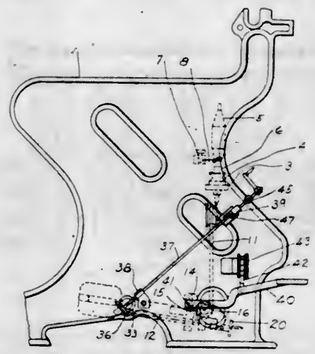


1,373,505. VALVULAR COUPLING. JAMES J. HOLLAND, Philadelphia, Pa. Filed May 7, 1919. Serial No. 295,316. 6 Claims. (Cl. 277—61.)

1. A valvular coupling of the character described including a casing having a longitudinally extending passage and a transversely extending passage communicating with said first passage; a stop plug in said transverse passage located at one side of the longitudinal passage, said transverse passage having a valve seat located at the side of said longitudinal passage opposite said plug; a valve located to move freely between the inner end of said plug and said valve seat, the portion of said valve casing including one end of said longitudinal passage being shaped to provide a coupling to which an air pumping bulb may be attached, said longitudinal passage at the opposite side of said transverse passage having a valve seat located inwardly from its end; and a valve interposed between said latter valve seat and said latter end of the longitudinal passage so that when air is forced through said first end of the longitudinal passage and outwardly through the opposite end thereof, said first valve, due to the pressure of said air, will be moved into engagement with its seat, and when suction is established in said first end of the longitudinal passage, said first valve will be opened thereby and permit air to enter said first end of the longitudinal passage through said transverse passage; substantially as described.

1,373,506. TABLE DISH-WASHING DEVICE. JESSE D. HOYT, Los Angeles, Calif. Filed Mar. 13, 1920. Serial No. 365,613. 5 Claims. (Cl. 141—9.)

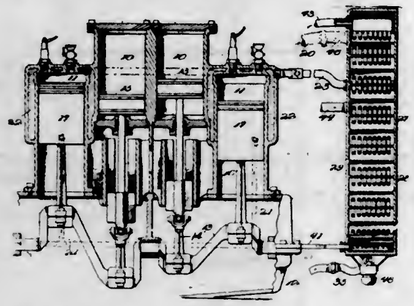
2. In combination, a closet, a table pivotally mounted at one side of the closet arranged to close the closet when in elevated position, means on the table for securing dishes thereon, and means in the closet for directing water



against the dishes on the table when the table is in elevated position.

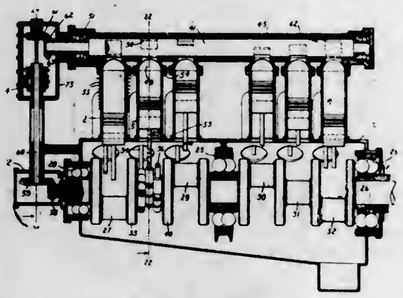
1,373,507. FASTENING DEVICE. FRANK HYDE, Sioux Falls, S. D. Filed Mar. 17, 1920. Serial No. 366,478. 3 Claims. (Cl. 24—87.)

1. In combination in a fastening device, two members arranged face to face and slidable lengthwise in relation to each other, a loop carried by each member and embracing the other member and slidable thereon, one of said members having a series of notches and the other member having an extension beyond its loop with its longitudinal axis in line with the main body of the member, the end of said extension being adapted to engage the notches to hold the two members in different positions to which they may be adjusted, substantially as described.



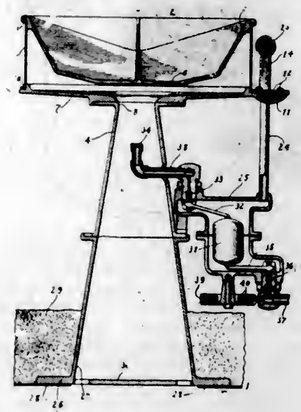
1,373,508. BUILDER-MOTION. JESSE JEFFERS, Uxbridge, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Nov. 11, 1918. Serial No. 262,100. 1 Claim. (Cl. 242—43.3.)

In apparatus of the class described containing the following instrumentalities, viz: a plurality of spindles, a traverse member, yarn guiding means installed thereon, a cam controlling the movements of the traverse member,



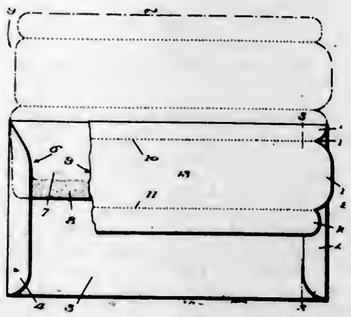
a builder lever actuated by the cam, bearings on the lever, a take-up shaft supported in the bearings, means for imparting an intermittent rotary motion to said shaft, a chambered stud serving as a fulcrum to the builder lever, an auxiliary shaft rotatable in bearings formed in the chambered stud, connecting gearing between the auxiliary shaft and take-up shaft, a manually operated "wind-down" shaft transmitting motion to the auxiliary shaft, means to maintain the "wind-down" shaft in or out of connection with the auxiliary shaft and locking means for the same.

1,373,509. COMBINED GAS AND STEAM SYSTEM FOR ENGINES. THOMAS A. KILLMAN, Nashville, Tenn., assignor to Killman Development Co., Nashville, Tenn., a Corporation. Filed Sept. 11, 1917, Serial No. 190,844. Renewed Jan. 6, 1921. Serial No. 435,534. 3 Claims. (Cl. 60—14.)



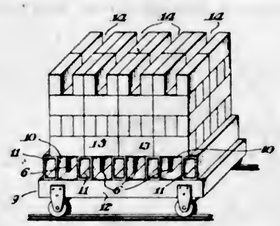
1. In a motor, the combination with firing cylinders having water jackets, and steam cylinders, of a combined boiler and radiator including a casing and a conveyer within the casing, means for maintaining a constant water level in the conveyer, means including the lower portions of the conveyer for maintaining a circulation of water through the water jackets, means for leading exhaust gases from the firing cylinders into the upper portions of the casing to heat the water within the conveyer, means for leading steam from the upper ends of the conveyer to the steam cylinders, and means for conducting the exhaust steam from such cylinders to the interior of said casing at a point adjacent the water level of the same.

1,373,510. MULTICYLINDER EXPLOSIVE-ENGINE. ERIC B. KRAMER, Brooklyn, N. Y. Filed Aug. 27, 1917. Serial No. 188,378. 5 Claims. (Cl. 123—55.)



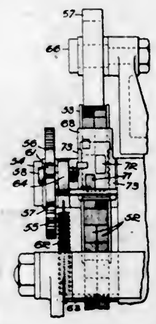
1. In a multi-cylinder explosive engine the combination of a base, a crank shaft journaled in said base, a plurality of cylinders in three lengthwise rows on said base, said cylinders being arranged in sets of three transversely of said crank shaft and radiating therefrom, the pistons of each transverse set of cylinders being connected with one crank pin on said shaft, and valves for admitting an explosive mixture to said cylinders respectively, said valves being so timed that the explosion in any given two cylinders whose pistons are connected with one crank pin have the explosion in a cylinder whose piston is connected with another crank pin interposed therebetween.

1,373,511. LIQUID-FUEL BURNER. ERIC B. KRAMER, Brooklyn, N. Y. Filed Oct. 15, 1918. Serial No. 258,138. 8 Claims. (Cl. 158—71.)



4. In a liquid fuel burner the combination of a cylindrical burner head in which the cylindrical wall is perforated for the exit of the gasified fuel, an inverted frustoconical upper wall transverse said head, a flat lower wall transverse said head, whereby an annular funnel shaped chamber is formed in said head, a fuel pan outstanding from the periphery of said lower wall for a portion of its circumference, and an arcuate generator detachably supported on said pan.

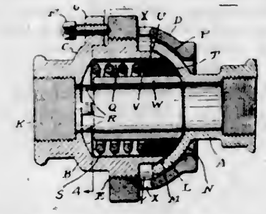
1,373,512. RETURN-ENVELOP. JOHN KUHHORN, New York, N. Y. Filed Nov. 29, 1919. Serial No. 341,474. 9 Claims. (Cl. 229—73.)



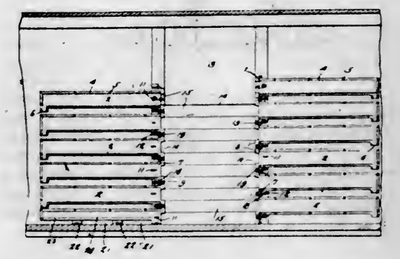
1. An envelop having initial and reserve closure flaps, the reserve flap being foldable on the exterior in open position against one side of the envelop, the initial closure flap being attachable to said side beyond the reserve flap, and means on the exterior of said side for receiving the reserve flap and retaining it in such position independent of the initial flap and protecting the reserve flap from being torn off when an envelop opener is inserted under the initial flap.

1,373,513. METHOD FOR HANDLING BRICKS. JAMES B. LADD, Ardmore, Pa. Filed Sept. 14, 1917. Serial No. 191,333. 1 Claim. (Cl. 294—63.)

The method of handling bricks which consists in forming stacked units with the top course arranged to form parallel channels, the channel forming bricks suitably spaced to form a support for a similar superimposed unit and at the same time to provide recesses for receiving lifting elements beneath said superimposed unit when resting upon said channel forming layer, and for permitting the withdrawal of said elements therefrom, and translating said stacked unit by inserting the lifting elements into said channels beneath the unit and moving same.



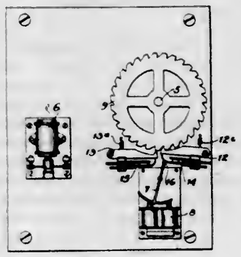
1,373,514. PATTERN OR COLOR INDICATING MECHANISM FOR CHENILLE OR OTHER MACHINES. CHARLES LEA, Boston, Mass., assignor, by mesne assignments, to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a Corporation of New York. Original application filed Nov. 2, 1916, Serial No. 129,072. Divided and this application filed Oct. 23, 1919. Serial No. 332,781. 15 Claims. (Cl. 139—40.)



1. A textile organization employing warp threads, and transversely extending threads having distinguishing characteristics and interconnected therewith, said organization having means to introduce and to interconnect said threads, and indicating means for such characteristics including a surface having colors indicated thereon in a predetermined order, and coacting feeding means to feed said color indicating surface.

1,373,515. UNIVERSAL PIPE-JOINT. EVARTS G. LOOMIS, Newark, N. J. Filed Oct. 11, 1918. Serial No. 257,701. 5 Claims. (Cl. 285—95.)

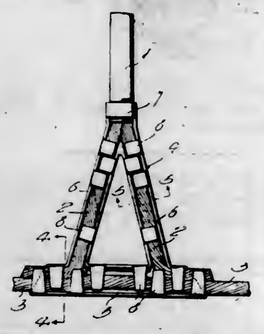
5. A universal pipe joint comprising in combination a swinging, tubular, casing member having a flange with concentric inner and outer spherical surface portions, a main casing comprising a tubular recessed section and a holding section that surrounds the recessed section and that is engaged by the outer spherical surface portion of the flange, a packing located in the recess of the recessed section, a washer, and means for forcing the washer against the recessed section and against the inner spherical surface portion of the flange, there being in the holding section openings leading from the space which is defined by the outer edge of the flange, the recessed section and the holding section.



1,373,516. DOOR FOR BOX-CARS. GEORGE LAWSON MCCALLUM, Crosby, Pa. Filed Feb. 24, 1919. Serial No. 278,862. 4 Claims. (Cl. 20—22.)

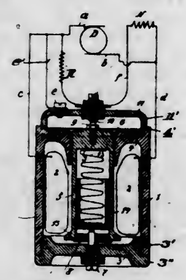
1. A door of the class described, comprising a plurality of slidable members, shields or casings mounted at opposite sides of a door opening, those at one side being located in staggered relation to those at the opposite side, said shields being adapted to receive said slidable members, and coöperating means carried by said slidable members and shields for locking said members in door-opening position, the adjacent shields having flanges at their inner ends spaced apart to provide slots for receiving said coöperating means carried by the slidable members.

1,373,517. ELECTRIC CLOCK. PAUL MANSEL, Charlottenburg, near Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, Germany, a Corporation of Germany. Filed Apr. 4, 1918. Serial No. 226,792. 6 Claims. (Cl. 58—27.)



1. In a secondary clock, in combination, a minute hand arbor, an electromotor adapted to drive said arbor, a ratchet wheel on said arbor, pawls in engagement with said ratchet wheel, a main clock electric circuit, switch gear actuated by said main clock circuit, and two pairs of contact springs fixed to said pawls and coöperating with said wheel and said switch gear to open and close the motor circuit.

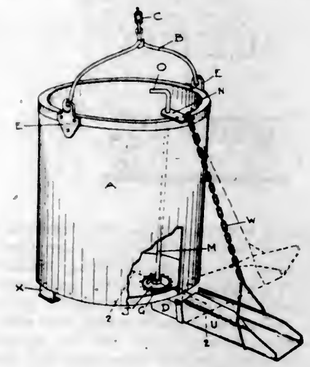
1,373,518. CASEIN GLUE. ADOLPH U. MESSMER, Minneapolis, Minn. Filed July 2, 1918. Serial No. 242,994. 3 Claims. (Cl. 87—17.)



1. A glue composition comprising natural soured or lactic acid casein, anhydrous trisodium phosphate, calcium hydroxid, sodium chlorid, a resin and an oil.

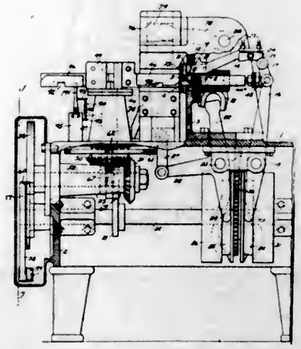
1,373,519. LIGHTNING-ROD CONNECTOR. GEORGE MEYER, Vandyne, Wis. Filed Apr. 1, 1920. Serial No. 370,587. 2 Claims. (Cl. 173—31.)

1. A lightning rod connector comprising a body member, including a base section, from which diverging connected side sections extend, thus forming an open triangular frame, each of said sections being of channel formation in cross-section and provided with malleable tongues to be bent over the wires which are placed in them, and a screw-threaded attaching eye at the connecting point of the side sections.



1,373,520. VOLTAGE-REGULATOR FOR ELECTRIC DYNAMOS. FRIEDRICH MÜNZ, Stuttgart, Germany. Filed May 4, 1920. Serial No. 378,913. 7 Claims. (Cl. 171—229.)

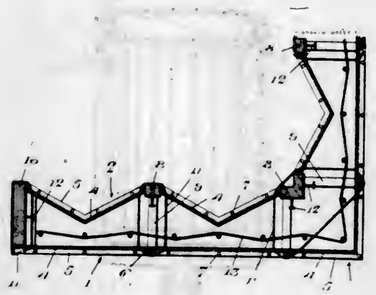
1. In a device of the class described, a cylindrical casing, a voltage coil within said casing, a hollow iron core of cylindrical form movable centrally within said coil and outward of one end of said casing, a diaphragm supporting said core in operative position, a stationary contact, a second contact in alinement with said stationary contact and movable with said core, a resistance connected between said stationary contact and said movable contact, adjustable means for tensioning said core against normal magnetic influence of said coil, and means within the hollow center of the iron core for damping the movements thereof.



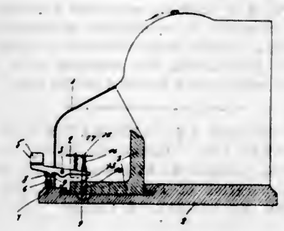
1,373,521. SWILL-DISTRIBUTER. ALBERT H. NELLER, Fairfield, Iowa, assignor to Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Nov. 28, 1919. Serial No. 341,190. 10 Claims. (Cl. 221—19.)

1. In swill distributers, a container, a spout connected to and entering the bottom of the container, a rotatable valve on the inner face of the spout, and a vertically disposed rod within the container having its lower end connected to the valve and its upper end extended to the upper edge of the container, whereby the valve may be opened and closed by rotating the rod from its upper end.

2. In swill distributers, a container, a spout connected to and entering the bottom of the container, a rotatable valve on the inner face of the spout, a vertically disposed rod within the container having its lower end connected to the valve and its upper end extended to the upper edge of the container, and a bracket attached to an upper portion of the container to support the rod and permit its rotation to open and close the valve.



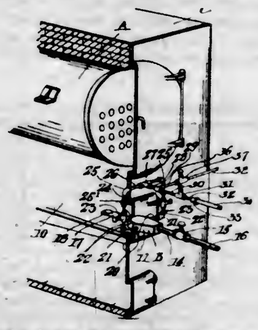
1,373,522. MACHINE FOR FORMING ARMATURE-COILS. FREDERICK C. NICKOL, Dayton, Ohio, assignor to City Machine & Tool Works, Dayton, Ohio, a Co-partnership consisting of Frederick C. Nickol and Oscar M. Poock. Filed Mar. 1, 1920. Serial No. 362,578. 31 Claims. (Cl. 153—6.)



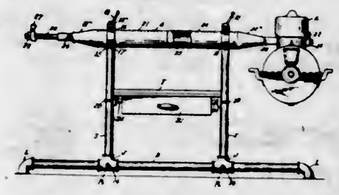
1. In a mechanism of the character described, bending devices, means to support a bar of metal in a position to be operated on by said bending devices, a plurality of bending dies arranged to be moved successively into a position adjacent to said bar supporting means and said bending devices, and means to intermittently actuate said bending dies and to cause said bending devices to operate during the intervals between the movements of said bending dies.

1,373,523. CONCRETE-BUILDING FORM. OLEY GLEN NICHOLAS, Sioux City, Iowa. Filed Oct. 15, 1919. Serial No. 330,892. 4 Claims. (Cl. 25—131.)

4. A concrete building form comprising sections at opposite sides, the sections at one side being V-shaped to form channels in one side of the finished product, and having their edges spaced apart, bars between said edges of said sections and having portions to be embedded in the concrete, stays between said bars and the sections at the other side, and wires threaded inwardly and outwardly through the opposite sections and passing around said bars to tie and clamp said section, bars and stays together.



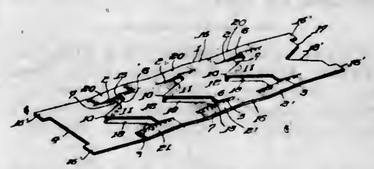
1,373,524. CARRIAGE-SHIFTING DEVICE FOR CALCULATORS. VALENTIN JAKOB ODHNER, Gottenborg, Sweden. Filed Aug. 14, 1919. Serial No. 317,542. 2 Claims. (Cl. 235—63.)



1. In a shifting device for the carriage in calculating machines the combination with a key provided on the carriage for the moving of the same in a certain direction, a locking part movable in the carriage, a stationary part of the machine, with which the said locking part cooperates, the said locking part being disengaged by the key, when depressed, of a stationary toothed bar or the like, extending along the path of the carriage and so located, that the key, when depressed, engages the bar and, as the carriage together with the key is moved, is positively raised by the said bar, so that the locking part is disengaged and thus capable of stopping the carriage in its new position and locking the same.

1,373,525. OIL-BURNER. WILLIAM FRANKLIN PAYNE, Stratford, Ontario, Canada. Filed Mar. 15, 1920. Serial No. 366,024. 1 Claim. (Cl. 158—74.)

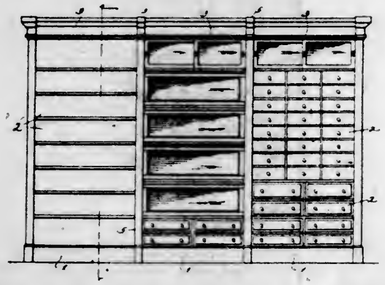
A burner comprising a mixing chamber having a center conduit, a pair of diverging conduits extending from the center conduit through the lateral walls of the mixing chamber, a discharge nozzle connected to one end of the center conduit and provided with a constructed flat opening, an air pipe connected to the other end of the center conduit, pipes connected to the diverging conduits and extending above the mixing chamber and connected together, valves in the said pipes, a pipe extending from the said pipes between the said valves, a valve on the last said pipe, a pipe connected to the last said pipe intermediate of the first said pipe and the last said valve, and a valve on the last said pipe, as and for the purpose specified.



1,373,526. STAND FOR FORD ENGINES. CHARLES CALLOWAY PRICE and DOUGLASS VALENCIA BRIDWELL, Dumas, Ark. Filed Nov. 26, 1919. Serial No. 340,870. 7 Claims. (Cl. 29—89.)

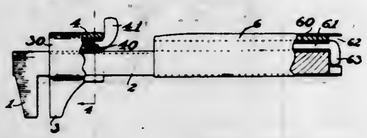
1. A stand for supporting engines comprising, a frame, a beam comprising sections telescopically associated with each other, clamps carried by said frame and engaging certain of the sections for locking the same in adjusted positions, and adjustable brackets carried by the the clamp engaged sections.

1,373,527. DEVICE FOR ENHANCING THE RESILIENCY OF VEHICLE-SPRINGS. THOMAS J. PRIESTLEY, Jr., Philadelphia, Pa. Filed Feb. 1. 1921. Serial No. 441,540. 6 Claims. (Cl. 267—47.)



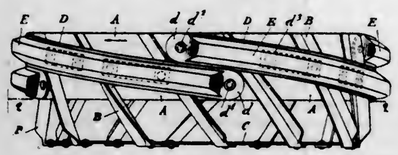
4. A device of the class described comprising an integral sheet metal plate, said plate being cut and slotted to define a plurality of sections arranged longitudinally of the plate and adapted to lie between the leaves of a spring, said, plate having marginal edges disposed on opposite sides of the sections and having portions connected to each of the respective sections and portions unconnected thereto, said last mentioned portions being disposed in angular relation to said connected portions.

1,373,528. SECTIONAL FURNITURE. WILLIAM E. ROBERTS, Portland, Oreg. Filed May 6, 1919. Serial No. 296,644. 6 Claims. (Cl. 45—78.)



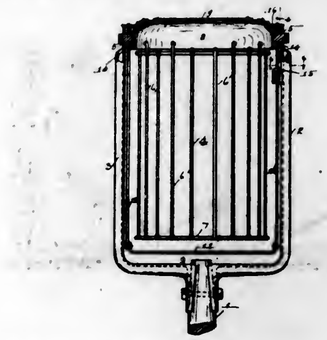
1. In sectional furniture of the character referred to, top and bottom sections for adjacent tiers of intermediate

sections, and intermediate sections one upon the other between the top and bottom sections, adjacent top and adjacent bottom sections resting against each other, end to end, and intermediate sections spaced apart to provide a space between the intermediate sections and between the top and bottom sections, and a pilaster over the joint



between adjacent tiers and having a shorter portion projecting between the ends of the intermediate sections and constituting fastening means in said space securing adjacent top sections together and securing adjacent bottom sections together, substantially as shown and described.

1,373,529. QUICK-ADJUSTING WRENCH. WILLIAM F. ROTERMUND, Seattle, Wash. Filed Mar. 30, 1920. Serial No. 369,998. 6 Claims. (Cl. 81—162.)



2. A wrench having a shank bar provided with a jaw at one end and its back edge provided with rack teeth, a complemental jaw formed by bending a plate about the shank and securing its ends, the back edge of the sleeve thus formed being threaded to match the teeth on the shank and a threaded bolt extending within said sleeve and engaging with the threads of both sleeve and shank and having one flattened side adapted when turned in proper position, to free the shank and permit sliding of the sleeve upon the shank.

1,373,530. DETACHABLE TIRE FOR TRACTOR-WHEELS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed July 21, 1920. Serial No. 397,953. 3 Claims. (Cl. 301—39.)

1. A detachable tire for tractor wheels provided with gripping devices, characterized by a series of elements consisting preferably of metal arcs on which are vulcanized rubber tires, and which form bridges over the gripping devices, and which are attached to the wheel rim at their ends that are bent over for this purpose, while they receive intermediate points of support on the said wheel rim by means of liners or attached intermediate projections.

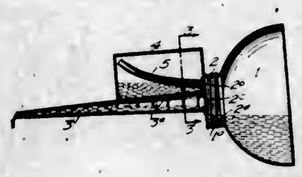
1,373,531. FRUIT-PICKER. THEODORE C. SCHULTZE, Grand Rapids, Mich., assignor to Herman Lucas, Grand Rapids, Mich. Filed Jan. 10, 1920. Serial No. 350,596. 6 Claims. (Cl. 56—332.)

1. In a device of the character described; a support; a container having fruit-picking means, and comprising an open-bottom body member swingable on the support and a bottom member swingable with said body member and also relatively thereto.

1,373,532. METHOD OF FINISHING GLASS. LEE SHOWERS, Charleroi, Pa., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 10, 1915. Serial No. 7,441. 2 Claims. (Cl. 51—278.)

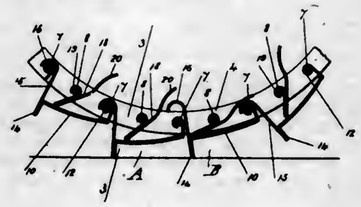
2. The method of finishing smoothed relatively opaque glass which consists in employing polishing members with a polishing powder approximating in color that of the glass and maintaining the members at a degree of drying such as will cause a burning of the glass.

1,373,533. PROCESS AND APPARATUS FOR SEVERING SHEET-GLASS. HARRY G. SLINGLUFF, Mount Vernon, Ohio, assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 12, 1920. Serial No. 373,211. 6 Claims. (Cl. 219—29.)



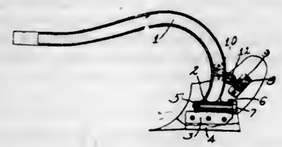
1. A process of severing a continuously formed sheet of glass which consists in applying a pair of electrically heated transversely extended members to the opposite sides of the sheet at the same time.

1,373,534. OIL-CAN. ALLEN SMITH, Jr., San Diego, Calif. Filed Jan. 12, 1920. Serial No. 350,918. 3 Claims. (Cl. 221—33.)



1. An oil can, including a body, a spout secured thereto and an oil receptacle secured on one side of said spout communicating with the interior of said spout.

1,373,535. OIL-CAN. ALLEN SMITH, Jr., San Diego, Calif. Filed Apr. 30, 1920. Serial No. 377,769. 4 Claims. (Cl. 221—33.)

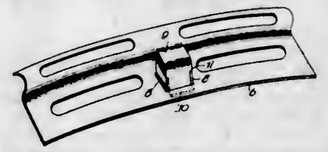


1. An oil can, including a body, a spout secured thereto, an auxiliary reservoir secured to one side of and communicating with said spout and a conducting tube extending into said auxiliary reservoir and communicating with said body.

1,373,536. TRACTION-WHEEL. FRANKLIN B. STORK, Rock Island, Ill. Filed May 19, 1920. Serial No. 382,588. 5 Claims. (Cl. 301—51.)

4. In a traction wheel, spaced side plates, pins extending between the side plates, traction plates pivoted at one end on alternate pins and provided at their free ends with outwardly projecting spurs, and lever devices having their middle parts pivoted on the intervening pins and engaging operatively with the traction plates next in front of them and next behind them, and operating to press the spurs outwardly one after another.

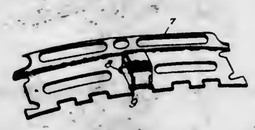
1,373,537. PLOW. HOWARD M. SWEET, Detroit, Mich. Filed Oct. 15, 1917. Serial No. 196,601. 4 Claims. (Cl. 97—21.)



1. In a plow, a plow beam, a plow share, mold-board and land-side, the plow share and mold-board and land-side being secured in fixed relative position pivotedly supported to the beam to swing on a horizontal axis to vary the angle of the land-side relative to the vertical, the construction permitting the positioning of the base of the land-side on either side of a vertical plane for the purpose described, and an adjusting device for securing the unit in the desired position.

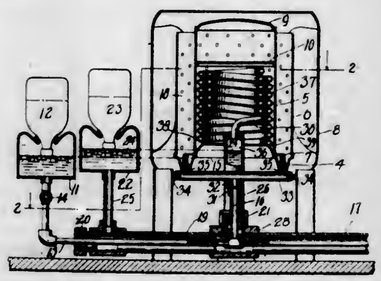
2. In a plow, a plow beam, the plow having a mold board and land side in fixed relative position and adjustable as a unit about a horizontal pivot, and means for adjusting the angle of the mold board and land side relative to the beam.

3. In a plow, a plow beam having an aperture at the rear end extending parallel with the beam, a frog adapted to receive the apertured end of the beam, a bolt securing the beam and frog in pivotal relation, the land side, mold board and plow share of the plow being fixedly attached to the frog, and a turn buckle secured to the beam and mold board adapted to hold the mold board, land side and share in adjustable relation with the beam.



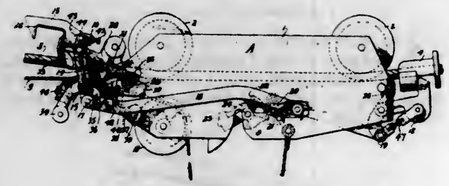
4. In a plow, a frog, a mold board and land side secured thereto in relative fixed relation, a beam, the frog being secured to the beam to swing on a horizontal axis, and an adjustable member for varying the angle of the mold board and land side relative to the vertical.

1,373,538. BRAKE-SHOE. JAMES S. THOMPSON, Pelham, N. Y., assignor to The American Brake Shoe & Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 17, 1919. Serial No. 345,530. 14 Claims. (Cl. 188—248.)



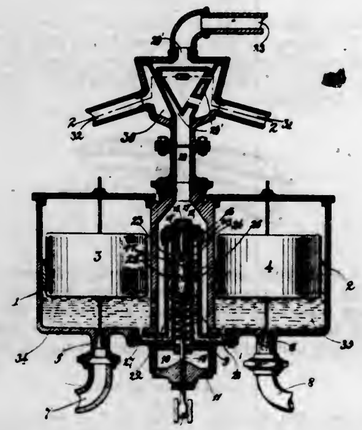
1. A brake shoe having a reinforcing back and a fastening lug with open ends extending transversely of the back, parts of the back being arranged at the open ends of the lug and extending across said open ends to engage a brake head and reduce the wear on the brake head by preventing the ends of the lug from engaging with the brake head.

1,373,539. BRAKE-SHOE. JAMES S. THOMPSON, Pelham, N. Y., assignor to The American Brake Shoe & Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 17, 1919. Serial No. 345,531. 10 Claims. (Cl. 188—248.)



1. A brake shoe having a reinforcing back and a fastening lug, and a support separate from the back and the lug and interposed therebetween and forming brond bearing surfaces at the open ends of the lug to engage the brake head and reduce the wear of the lug on the brake head.

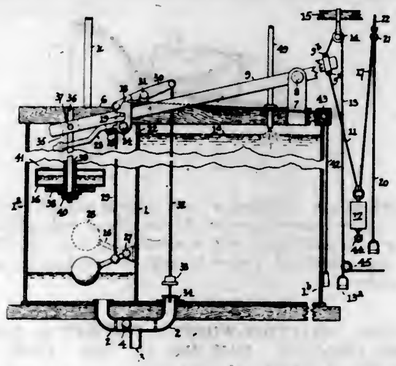
1,373,540. OIL-STOVE. GARRY P. VAN WYE, New York, N. Y. Filed Jan. 30, 1920. Serial No. 355,097. 7 Claims. (Cl. 158—95.)



1. In an oil stove having a generating device, an oil duct leading to said generating device, and a water jacket forming a boiler surrounding a part of said duct, for the purpose set forth.

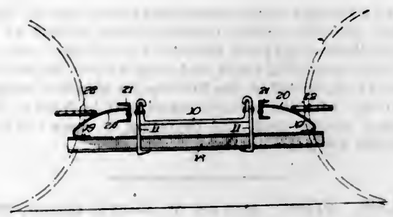
1,373,541. CABLEWAY-CARRIAGE MECHANISM. WILLIAM MAYO VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed June 8, 1920. Serial No. 387,323. 6 Claims. (Cl. 212—98.)

1. A cableway carriage mechanism comprising in combination, a stop on the cable, a latch on the carriage adapted to engage and to be disengaged from said stop, means operating the latch, and movable means adapted to contact with the stop to actuate said latch operating means.



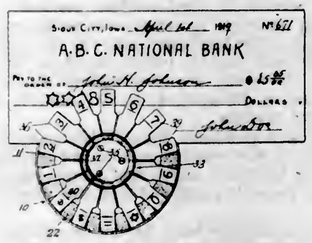
1,373,542. CARBURETER. PHILIP VIVIANO, St. Louis, Mo. Filed Feb. 8, 1918. Serial No. 216,127. 4 Claims. (Cl. 261—18.)

1. A carbureter comprising a plurality of supply tanks, a valve casing having spaced ports communicating with the said tanks, said valve casing being also provided beyond the ports with a discharge outlet, and a combined rotary and reciprocating valve operating within the valve casing and through its reciprocation controlling the discharge outlet, whereby the volume of flow is regulated, said valve being provided with a beveled face adapted to be carried to and from the said ports by the rotary movement of the valve for controlling the said ports.



1,373,543. WINDMILL-CONTROL MECHANISM FOR TANK-SUPPLY. JOHANN EDUARD WALTROWICZ, Gerang, Victoria, Australia. Filed Nov. 3, 1919. Serial No. 335,277. 8 Claims. (Cl. 103—86.)

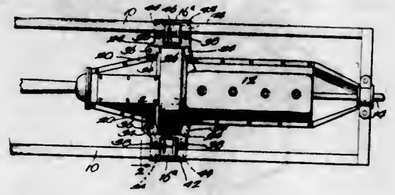
1. The combination with a bulk tank, a float tank, a tubular connection between the tanks having a discharge opening, and a valve in said connection controlling the communication between the two tanks and the said opening, as described, of a float in the float tank and connections between said float and a wind wheel tail op-



erating to stop or start the wind wheel according to the water level in the float tank.

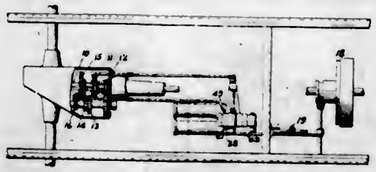
1,373,544. SAFETY-GUARD AND LEVELING DEVICE. LOREN L. WHITNEY, Hammond, Ind., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Original application filed Feb. 13, 1918, Serial No. 217,008. Divided and this application filed Aug. 28, 1920. Serial No. 406,633. 4 Claims. (Cl. 188—210.)

1. In a railway car truck, the combination of a brake beam having compression and tension members, a safety bar underlying same, and a member connected to the compression member slidably engaging the safety bar and upon which the tension member rests.



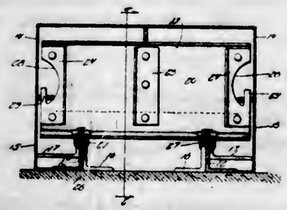
1,373,545. POCKET CHECK-PROTECTOR. FLOYD A. WIEGMAN, Sioux City, Iowa. Filed Oct. 13, 1919. Serial No. 330,380. 9 Claims. (Cl. 101—20.)

1. A pocket check protector comprising a circular base plate, impression platens, arcuately spaced on said base plate, segmental inking devices on said base plate between said platens, an impression plate rotatively mounted with



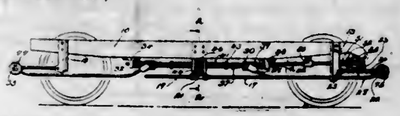
respect to the base plate, said impression plate including a plurality of radial resilient arms, each carrying an impression member adapted to engage with an associated impression platen or an associated inking device, and means for limiting the rotative movement of the impression plate on said base plate so that said impression member will register either with the platens or with the inking devices.

1,373,546. ENGINE-SUPPORT CLAMP. GOTTLIEB F. ZUCKER, Chicago, Ill. Filed Dec. 20, 1919. Serial No. 346,424. 5 Claims. (Cl. 180—64.)



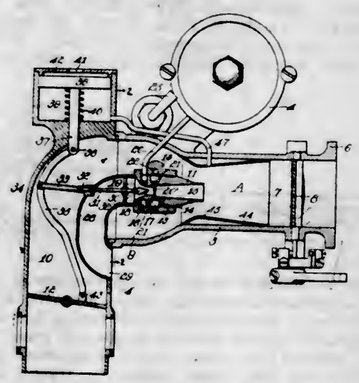
1. In combination with an automobile or engine frame member, an engine adjacent thereto, and a normal supporting device from the engine to the frame, a clamping element comprising coöperating members extending between the engine and frame and each embracing the normal supporting device, and means for drawing said members together.

1,373,547. CHANGE-SPEED GEARING. FRANK BEEMER, Philadelphia, Pa., assignor to Vulcan Motor Devices Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1913. Serial No. 793,993. 4 Claims. (Cl. 74—58.)



1. The combination with a shaft and variable speed transmission mechanism therefor, including a plurality of sets of power transmission elements, of means for placing each set of said transmission elements in and out of driving relation with the shaft at selected times, and mechanism by which each set of transmission elements may be selected for subsequent operation while one set of transmission elements is in operation.

1,373,548. COLLAPSIBLE FORM FOR CONCRETE CONSTRUCTIONS. HARRY E. BILGER, Monmouth, Ill. Filed Apr. 12, 1920. Serial No. 373,144. 15 Claims. (Cl. 25—131.5.)



4. In a form of the class described, the combination with a plurality of form centers, base members whereon said form centers rest, said base members when moved independently of the form centers adapted to permit the form centers to drop to positions lower than the positions normally occupied thereby, hooks at the lateral edges of the form centers, and side cover plates provided with flanges apertured to receive said hooks, said side cover plates arranged to hold the form centers stationary when the base members are moved as aforesaid, said hooks arranged to disengage the said cover plates when the form centers drop.

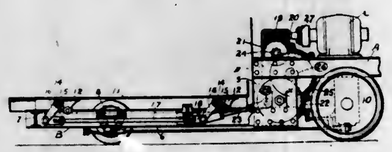
1,373,549. AUTOMATIC JACK FOR VEHICLES. CARL F. BRINKMAN and ADOLPH BRINKMAN, Milwaukee, Wis. Filed Dec. 6, 1920. Serial No. 428,778. 8 Claims. (Cl. 180—83.)

8. In combination with the chassis and wheels of a motor vehicle, brackets depending from one end of the chassis, arms pivotally mounted in said brackets, a bumper carried on the ends of said arms, said arms being of such length that the wheels will be raised from the ground when the arms and bumper are swung underneath their pivot, a latch for holding said bumper outwardly beyond the end of said vehicle, means for stopping said bumper above the ground when said latch is released, means for subsequently moving said bumper underneath said pivot to raise the wheels from the ground, said last named means being operable manually or from the motor as desired.

1,373,550. CARBURETER. MILFORD G. CHANDLER, Chicago, Ill., assignor, by mesne assignments, to Lynn A. Williams, Evanston, Ill., and Curtis B. Camp, Chicago, Ill., trustees. Filed May 12, 1917. Serial No. 168,325. 8 Claims. (Cl. 261—72.)

1. In a carbureter, a primary venturi, a constant level float controlled fuel chamber, a low level source of fuel supply, a conduit directly connecting the low level source and the fuel chamber, a passage connecting the lower part of the fuel chamber and the throat of said venturi, a second passage from a point near the throat of said venturi but anterior to the fuel delivery opening therein to the upper space of the fuel chamber for maintaining a vacuum in the upper part of the fuel chamber, a movable regulating device for regulating the velocity of air past the said vacuum maintaining opening in said venturi for regulating the suction at said opening, and means for automatically moving said regulating device to different positions dependent upon the quantity of air drawn into the carbureter.

3. A carbureter comprising an induction passage, a fuel chamber, a fuel inlet in said induction passage, a conduit communicating with and extending between the induction passage and the upper spaces of the fuel chamber, means for changing the flow of air through the induction passage at both the fuel inlet and the point of communication of said conduit with said induction passage, and further automatic means for maintaining the velocity of air past the point of communication of said conduit with the induction passage substantially constant.

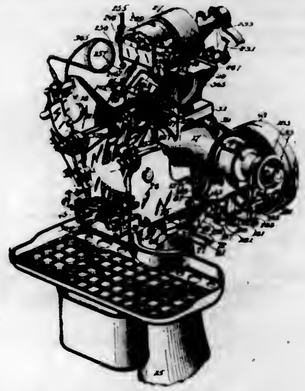


8. A carbureter comprising a fuel chamber and mixing chamber, an air passage communicating with said mixing chamber, a fuel duct leading from said fuel chamber and discharging into said air passage, a second duct leading from the upper spaces of said fuel chamber and discharging into said air passage, and automatic means for varying the velocity of flow of air past the discharge end of said fuel duct without materially changing the velocity of flow of air past the discharge end of said second duct.

1,373,551. PROCESS OF MANUFACTURING GLANDULAR EXTRACTIVE PRODUCT. ALPHONSO MORTON CLOVER, Detroit, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 3, 1913. Serial No. 751,957. 5 Claims. (Cl. 167—7.)

1. The process of obtaining the active principle of the infundibular lobe of the pituitary gland in the form of a solid which consists in making a water extract of said lobe, and precipitating the active material therefrom by saturating it with a freely soluble, non-toxic, alkaline metal salt having a neutral or slightly acid reaction.

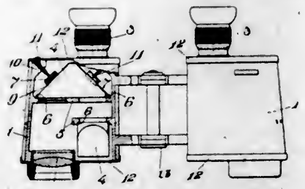
5. The process of obtaining the active principle of the infundibular lobe of the pituitary gland in the form of a solid which consists in making a water extract of the gland with hot acidulated water, removing the insoluble residue, and precipitating the active material from the remaining solution by saturating it with sodium chlorid.



1,373,552. ELEVATING MECHANISM FOR SHOE-TRUCKS. WALTER C. DYER, Chicago, Ill., assignor to Buda Company, a Corporation of Illinois. Filed Feb. 21, 1918. Serial No. 218,454. 3 Claims. (Cl. 254—10.)

1. In an elevator truck, the combination of a truck body comprising spaced side frame members, a liftable load receiving platform, means for raising and lowering the platform, gearing mounted on one side frame member at the forward end of the truck, a crank device mounted on the other side frame member, a transverse shaft geared at the ends to said gearing and said crank device, a connecting rod for operating the said means for raising and lowering the platform connected to the crank device between the same and the said gearing, and a motor for driving said gearing, said motor being mounted on the top of the frame.

1,373,553. MACHINE FOR OPERATING ON SHOE-BOTTOMS. EDWARD ERICKSON, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 4, 1917. Serial No. 172,658. 46 Claims. (Cl. 12—67.)



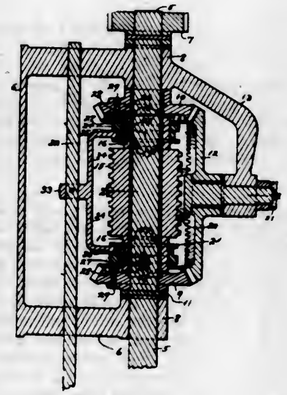
1. A machine for operating on welted, unsoled shoes, having, in combination, connected welt butting and upper tacking mechanisms, and a single actuator connected to the welt butting mechanism for operating both of said mechanisms, one from the other.

12. A welt butting machine, having, in combination, a cutter slide, a cutter carrier having a cutter, and a link connection between said parts constructed and arranged to permit the carrier to rock on the slide.

20. A welt butting machine, having, in combination, a cutter carrier, a welt butting cutter sustained thereby, and a combined welt presser and tack puller sustained on the carrier in advance of the cutter.

1,373,554. PRISMATIC BINOCULAR. MITSUZO FUJII, Mita, Shiba-ku, Tokyo, Japan. Filed Jan. 16, 1917. Serial No. 142,672. 3 Claims. (Cl. 88—33.)

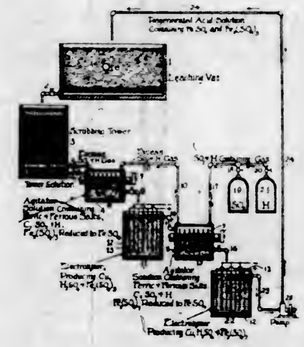
1. The combination in an optical instrument, a seat, a prism arranged on the seat and having two angularly-arranged faces and parallel sides, a separate independent curved resilient plate for each of the angularly-arranged faces extending transversely across and out of contact with each of the angularly-arranged faces, the ends of each of said plates extending at angles to the body of the plate and engaging the parallel sides only of said prism, and adjusting means engaging the central portions of said plates for shifting and holding said prism on its seat.



1,373,555. PLIERS. EDWARD M. GRAHAM, Chicago, Ill. Filed Aug. 8, 1919. Serial No. 316,010. 4 Claims. (Cl. 7—3.)

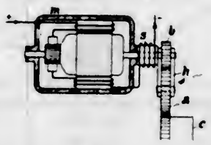
1. In pliers, the combination of a pair of pivotally connected members each having a gripping jaw, a handle and a recess extending in the plane of one of its outer side faces, substantially flat cutter blades removably secured

and disposed in said recesses, the edges of said recesses and blades being conformably and outwardly convergent so that the edges of the recesses will act as shoulders to resist the outward stresses upon the blades and being formed to permit the blades to be removed transversely from or placed transversely into the recesses while the members are in connected relation, and means for removably securing the blades in the recesses.



1,373,556. POWER-TRANSMITTING MECHANISM. LEE B. GREEN, Cleveland, Ohio, assignor to The Federal Machine Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 31, 1920. Serial No. 355,518. 6 Claims. (Cl. 74—59.)

1. The combination, with a shaft, and a worm loose on said shaft and employable in transmitting motion from said shaft, of two bevel-gears which are mounted on said shaft adjacent opposite ends respectively of the worm and face each other and are the one operatively connected with and the other loose on the shaft, an intermediate bevel-gear meshing with the first-mentioned gears, and two clutches adjacent opposite ends respectively of the worm and each controlling operative connection between the worm and the adjacet gear of said first-mentioned gears, each clutch comprising a member carried by the adjacent gear of said first-mentioned gears and a member which is supported from the worm and shiftable independently of the worm longitudinally of the aforesaid shaft and in its mid position is out of operative relation to the associated clutch-member, the clutch-members carried by the worm being adapted to be in their mid position simultaneously and shiftable in either direction from said position, and the relative arrangement of the parts being such that only the one or the other of the last-mentioned clutch-members is rendered operative according as they are shifted from their mid position simultaneously in the one or the other direction longitudinally of the aforesaid shaft.



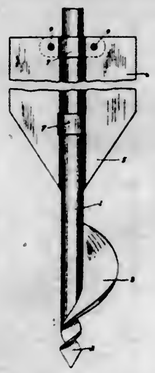
1,373,557. ELECTROLYTIC PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Mar. 22, 1920. Serial No. 367,962. 14 Claims. (Cl. 204—15.)

1. An electrolytic process which consists in treating ores of copper with an acid solution to dissolve the copper, electrolyzing the resulting copper solution containing salts of the variable valent elements to deposit the copper, applying sulfur dioxid as a reducing agent to the electrolyte through the intermediary of finely divided charcoal to reduce the variable valent salts from a higher to a

lower valency, and agitating the electrolyte in the presence of the charcoal and the sulfur dioxid.

1,373,558. APPARATUS FOR STARTING MOTORS, MORE PARTICULARLY HEAT-MOTORS. HEINRICH GÜTTINGER, Baden, Switzerland, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland. Filed Apr. 9, 1917. Serial No. 160,675. 3 Claims. (Cl. 290—38.)

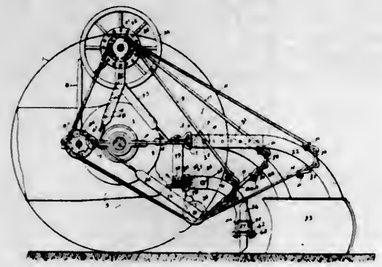
1. An apparatus for starting an engine, comprising in combination an electric starting motor, a toothed wheel on the engine shaft, a toothed pinion rotated by said motor, an intermediate toothed wheel in mesh with said pinion, means supporting said intermediate wheel for swinging movements about the axis of the pinion to carry said wheel into and out of engagement with the first mentioned wheel, and means for magnetizing said intermediate wheel to a degree sufficient to convert it into an electromagnet armature attracted toward said first-mentioned wheel and into driving engagement therewith.



1,373,559. PLATEN-RENEWER. JAMES T. HACKING, Pawtucket, R. I. Filed Oct. 5, 1920. Serial No. 414,918. 4 Claims. (Cl. 134—1.)

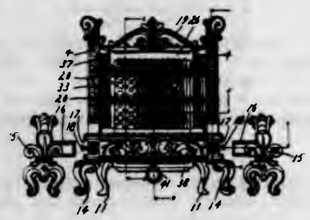
1. A preparation for restoring the surface of a platen, which consists of a mixture of alcohol and resin oil.

1,373,560. FENCEPOST. WILLIAM A. HOLLAND, London, Ohio. Filed June 22, 1917. Serial No. 176,265. 2 Claims. (Cl. 189—30.)



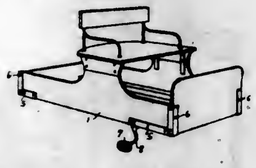
1. In a fence post adapted to be driven into the ground, a stabilizer slidably mounted thereon comprising a plate

having its center portion concaved to present a longitudinal post engaging groove, and a supplemental clamp



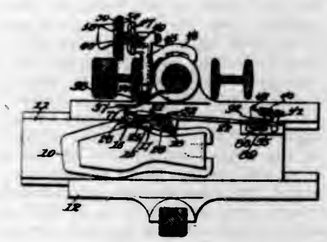
structure in coöperation with said groove to complete the attachment of the stabilizer to the post.

1,373,561. SCARIFYING AND GRADING DEVICE FOR TRACTORS. CHARLES W. HOWE, Dayton, and JOSEPH L. GARVER, Hamilton, Ohio. Filed Oct. 21, 1919. Serial No. 332,288. 8 Claims. (Cl. 37—7.)



1. In a device of the type described, the combination with a tractor, of a scraper, means for hingedly securing the scraper to the tractor, a pair of winding devices, a cable on each winding device whose free ends are connected to a respective side of the scraper, and means convenient for operation by the driver, for turning each winding device independently of the other, to raise one or both sides of the scraper or draw one or both sides of the latter into the ground.

1,373,562. GAS-STOVE. ALFRED H. HUMPHREY, New York, N. Y., assignor to General Gas Light Company, Kalamazoo, Mich. Filed Oct. 16, 1917. Serial No. 196,861. 12 Claims. (Cl. 126—127.)

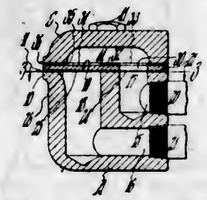


1. In a gas stove, the combination of rear and side walls, corner uprights secured to the front edges of the side walls, a front bar secured to the lower ends of said uprights, a supporting plate having burner openings therein disposed within and mounted on said walls and uprights, radiating elements mounted on said plate above said burner openings, a fireback mounted on said plate at the rear of said radiating elements, said plate being provided with retaining and positioning members for said radiating elements and fireback, a top bar disposed on said walls and secured thereto and to said corner uprights to engage the top of said fireback and having lugs projecting downwardly at the front thereof, and a burner supported within said walls below said plate and provided with burner tips alined with said burner openings.

1,373,563. COMBINED BRACE AND ANGLE-BAR FOR VEHICLE-BODIES. ROBERT L. KILPATRICK, Hempstead, Tex. Filed Mar. 10, 1920. Serial No. 364,800. 1 Claim. (Cl. 296—30.)

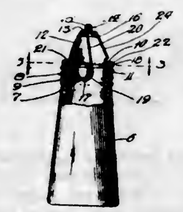
The combination with a vehicle body of a brace secured to each corner thereof, each brace being formed of angle iron having a rectangular piece of metal cut therefrom the same width as the width of that side of the metal and then bent at right angles so as to close said cut-out portion, one of the flanges of said angle iron fitting under the bottom and against the end of the body at each corner, said flange extending back beyond the step brace and the other flange of each brace fitting against the adjacent side of said body and securing bolts passing through said brace and body for securing said brace to said body and making same rigid.

1,373,564. MACHINE FOR OPERATING UPON SHOE-SOLES. RALPH F. KNIGHT, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 30, 1917. Serial No. 204,637. 12 Claims. (Cl. 12—21.)



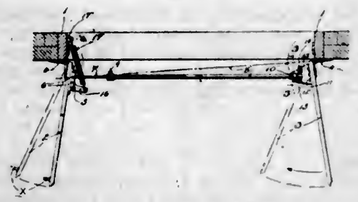
1. A sole molding machine comprising a sole supporting mold and a gage having three separated points of contact adapted to simultaneously contact with the curved contour of the sole edge at one side and locate the sole both laterally and longitudinally in a predetermined position.

1,373,565. ATOMIZING-BURNER. HANNIBAL ALEXANDER KUNITZ, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 8, 1920. Serial No. 350,153. 5 Claims. (Cl. 158—75.)



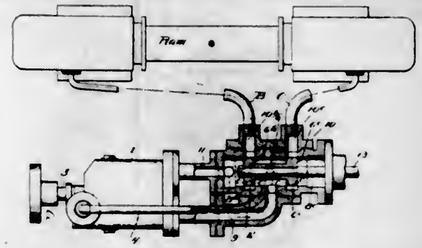
1. In a burner having a body portion provided with inlets for fuel and an atomising fluid formed therein and

lying in a single plane, a cap provided with a recess the longitudinal axis of which is located in the same plane as the plane of the inlet passages, a spacing plate between the body and cap, nozzle-plates of similar construction located upon opposite sides of said spacing plate and each provided with a recess formed in one edge thereof and extending inwardly into communication with one of said inlet passages and said recess in the cap, respectively,



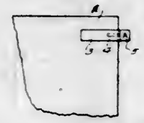
said nozzle-plates and spacing plate each being provided with openings formed therein in communication with the opposite end of said recess in the cap plate from that with which the recess in the edge of one of said nozzle-plates communicates whereby the recess in the cap plate may be in constant communication with one of said inlet passages, and means for securing the body and cap together with said plates clamped therebetween.

1,373,566. COMBINED DISPENSING-RECEPTACLE AND SPREADER. PETER NEUKIRCHEN, Chicago, Ill., assignor to Columbia Fastener Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1919. Serial No. 286,140. 5 Claims. (Cl. 91—67.4.)



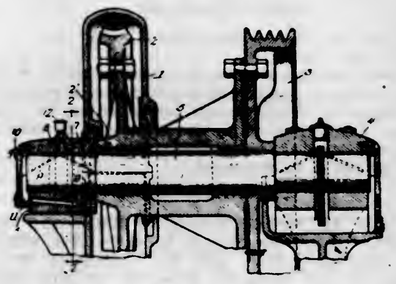
1. As a new article of manufacture, a container and a cap therefor, having a centrally apertured end portion, and an annular groove, a valve having a tip protruding from the container, and a flaring skirt, for closing the aperture, and a spring support for seating said valve around the aperture, said support having an annular base portion seated in said groove and held there by its own elasticity.

1,373,567. DOUBLE-DOOR-ACTUATING DEVICE. OLE P. OVERLIEN, Black River Falls, Wis. Filed Mar. 6, 1920. Serial No. 363,875. 2 Claims. (Cl. 268—9.)



1. The combination of oppositely swinging hinged doors, brackets for the doors secured to the same near their hinges, a closing spring for one door, a link having a pivotal connection to the bracket of said door and also to the bracket of the other, the link being of such length that the latter pivotal connection crosses the dead center line passing through the adjacent hinge and the other pivotal connection when the doors are opened or closed.

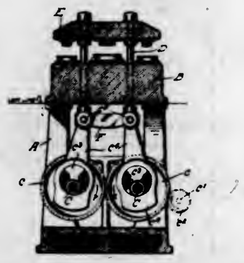
1,373,568. HYDRAULIC POWER TRANSMISSION. CECIL E. PAINE, Bath, Me. Filed June 14, 1920. Serial No. 388,930. 5 Claims. (Cl. 138—23.)



1. In combination, a driven motor, a continuously operable variable stroke pump for supplying motive fluid to operate said motor, a reversing valve for reversing the flow of fluid between the pump and motor, and means for by-passing the liquid around said reversing valve when the latter is in neutral position.

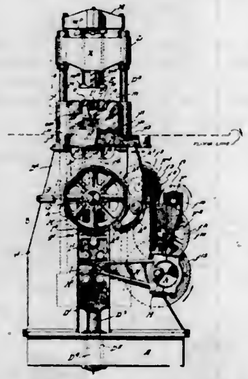
1,373,569. MARKER. GROVER PERRY, Chicago, Ill. Filed Aug. 1, 1919. Serial No. 314,656. 4 Claims. (Cl. 40—23.)

1. An index for a page of a book comprising a strip of material folded to form an interior approximately U-shaped body and bent backwardly and outwardly to form exterior substantially parallel side members extending beyond the U-shaped body one of the side members being provided with an approximately L-shaped extension forming an outer U-shaped portion and overlapping the other side member.



1,373,570. SELF-OILING BEARING FOR ELEVATOR-MACHINES. JACOB D. SCHAKEL, Chicago, Ill., assignor to Elevator Company of America, Chicago, Ill. Filed Dec. 12, 1918. Serial No. 266,411. 9 Claims. (Cl. 64—24.)

1. A machine of the character described comprising a gear wheel having a hub, an oil housing therefor, a shaft

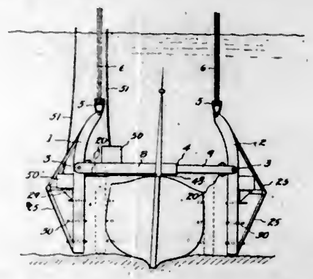


and bearing for the gear, and an oil duct leading from the bearing to a point above the gear hub and in line with the outer circumferential surface thereof so as to act as an oil conductor from the surface of the gear hub to the bearing.

1,373,571. DRAWING-PRESS. GEORGE M. SMITH, Canton, Ohio, assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed May 24, 1920. Serial No. 383,964. 8 Claims. (Cl. 113—38.)

1. In a drawing press, a bed and a reciprocating head upon which the complemental die members of the press are mounted in a plurality of sets, actuating means for imparting a parallel motion to said members with respect to each other, and straining rods dividing the area of the bed and head into spaces for the reception of the die members of each set.

1,373,572. DRAWING-PRESS. REUBEN STANLEY SMITH, BIRGER T. ANDREN, and HENRY MILLER, Milwaukee, Wis.; said Andren and said Miller assignors of their whole right to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Feb. 7, 1920. Serial No. 356,985. 39 Claims. (Cl. 113—38.)



1. In a drawing press, a reciprocating punch, a relatively stationary matrix with which the punch coöperates, continuously rotating shaft for actuating the punch through one portion of its movement, and an intermittingly rotating shaft for actuating the punch through the other portion of its movement.

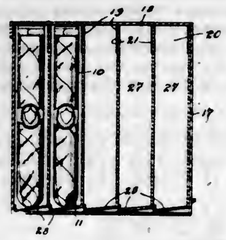
1,373,573. METHOD OF TREATING STEEL AND IRON PARTS. JAMES SORENSON, Clintonville, Wis., assignor to Four Wheel Drive Auto Co., Clintonville, Wis., a Corporation of Wisconsin. Filed Dec. 30, 1919. Serial No. 348,471. 7 Claims. (Cl. 75—198.)

1. The method of treating scale bearing iron and steel parts for the removal of scale, consisting in subjecting the metal surfaces to the action of an acid and raising their temperature to the scaling point while acid is in contact with the material.

1,373,574. SHIP-RAISING APPARATUS. JESS SWANEY, Seattle, Wash. Filed May 4, 1920. Serial No. 378,749. 6 Claims. (Cl. 114—51.)

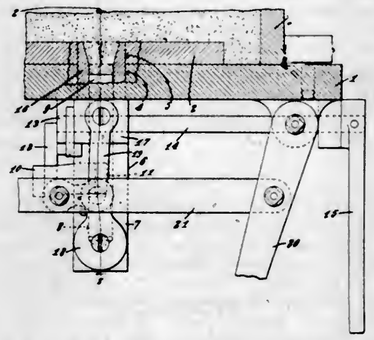
1. A ship raising device of the character described, comprising a telescoping cross beam, vertically disposed lifting arms pivotally fixed intermediate their ends to opposite ends of said beam, means for adjusting the beam sections to move the lifting arms toward or from each other, and means at the upper ends of said arms for attachment to hoisting cables, for the purpose set forth.

1,373,575. SAFETY-HANGER FOR BRAKE-RODS. JOHN J. TATUM, Baltimore, Md. Filed Feb. 14, 1918. Serial No. 217,127. 5 Claims. (Cl. 188—205.)



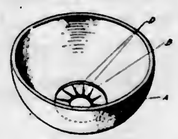
1. A safety hanger for brake rigging secured to a part of a truck, and having a bearing near its lower end for the brake rod, to embrace the lower brake rod and hold it therein against accidental displacement under service conditions.

1,373,576. ELECTRIC INSULATOR. PERCY H. THOMAS, Upper Montclair, N. J. Original application filed May 16, 1913, Serial No. 767,995. Divided and this application filed Dec. 17, 1917. Serial No. 207,452. 6 Claims. (Cl. 173—318.)



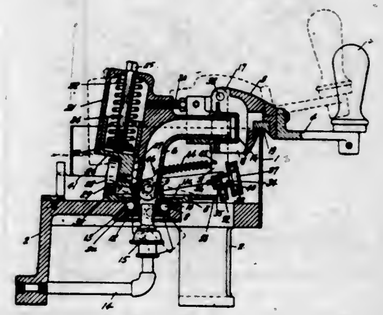
1. A line insulator including an external attachment and an insulating member of vitreous material having three portions, a central portion subjected to the tension load carried by the insulator and insulating the metal parts of one end of the insulator from the metal parts on the other, and two end portions each provided with means for receiving and distributing the tension stress from the external attachment, said means consisting of a group of metallic rods inserted in and secured to each end portion, said groups of rods being symmetrically arranged around a circle thus submitting the full cross section of the insulating member to a substantially uniformly distributed mechanical tension stress, together with means for distributing the external mechanical load among the rods of each group.

1,373,577. CIGAR-PACKAGE. EUGENE VALLENS, New York, N. Y. Filed Aug. 21, 1919. Serial No. 319,013. 2 Claims. (Cl. 206—41.)



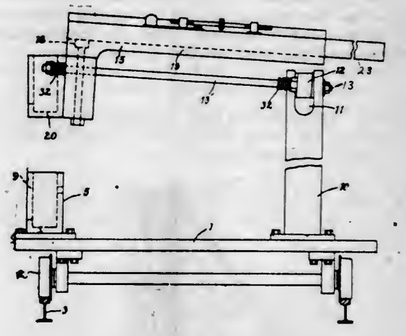
1. In a tobacco package a receptacle, partition elements therein to form a multiplicity of compartments, one series of the partition elements including tongue parts between the other series, the tongues being inclined at their inner parts from a line spaced from the bottom of the receptacle and extended to rest upon the bottom of the receptacle in abutment with the next adjacent opposite side of the compartment.

1,373,578. CORE-FORMING DEVICE. RAYMOND PRESCOTT VIAR, Lynchburg, Va., assignor of one-half to Charles W. McWane, Lynchburg, Va. Filed July 23, 1919. Serial No. 312,700. 6 Claims. (Cl. 22—10.)



1. In a core forming device the combination with a structure for supporting a flask and a pattern, of a sleeve member slidably mounted in the pattern and its supporting structure and constituting a core pattern, and means for withdrawing said sleeve member from the pattern and away from the formed core therein, prior to the removal of the mold from the pattern.

1,373,579. ARTIFICIAL EYE. WILLIAM WENDTLAND, New York, N. Y. Filed June 22, 1920. Serial No. 390,847. 8 Claims. (Cl. 46—40.)

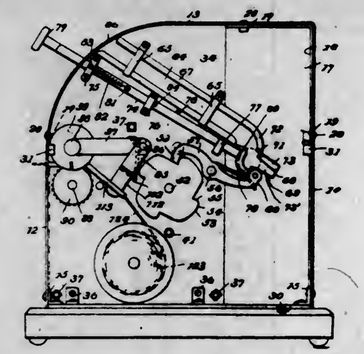


1. An artificial eye embodying a shell corresponding to the eyeball and provided with an interior depression corresponding to the iris, the base of which depression is recessed in the pupil portion thereof, and is further provided with grooves radiating from the recess therein, and coloring matter positioned in said recess, in the grooves and covering the base of the depression.

1,373,580. COLLAR-IRONING MACHINE. ROSS P. WRIGHT, Erie, Pa., assignor to Reed Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 21, 1917. Serial No. 176,084. 21 Claims. (Cl. 68—9.)

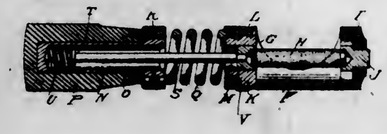
3. In a collar ironing machine, the combination of the ironing members, a former and an iron; means for moving one of the members into and out of engagement with the other and for moving one of the members along the other; means for separating the members by moving one of the members in a direction along the edge of the former; and mechanism for automatically throwing said last-mentioned means into and out of operative position as the members are moved relatively to each other.

1,373,581. TAPPING AND RAVELING APPARATUS FOR STEEL-FURNACES AND THE LIKE. EARL H. WURST, Elyria, Ohio. Filed June 23, 1919. Serial No. 306,017. 7 Claims. (Cl. 266—42.)



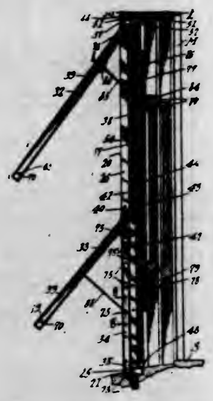
1. In apparatus of the class described, a reciprocating carriage, a support therefor, a clamp on said carriage adapted to receive a tapping rod and means for attaching a furnace peel to reciprocate said carriage.

1,373,582. VENDING-MACHINE. EUGENE BABER ADAMS, Ironton, Ohio. Filed Oct. 10, 1918. Serial No. 257,625. 3 Claims. (Cl. 194—57.)



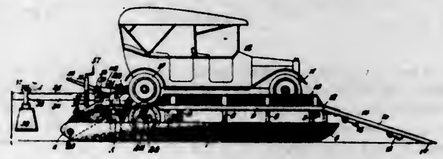
1. A vending machine including dispensing mechanism, and actuating mechanism for said dispensing mechanism, said actuating mechanism including a driven escapement wheel, a coin chute above the escapement wheel and deflected beyond the same to form a coin pocket and having an open-bottom restricted throat beyond said pocket, a latch having one end normally restraining the escape-

ment wheel and its other end normaly blocking the throat, and means adapted to force a coin from the coin pocket



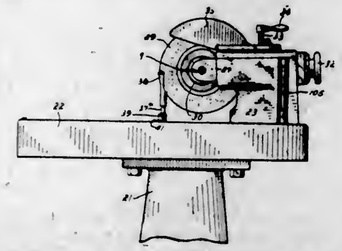
across the end of the latch in the throat whereby the latch will be released from the escapement wheel and the coin discharged through the bottom of the throat.

1,373,583. CIGAR-LIGHTING DEVICE. FRANK A. ADAMS, Rochester, N. Y., assignor to Shur Products, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 20, 1919. Serial No. 318,800. 9 Claims. (Cl. 219—32.)



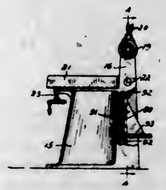
1. The combination with an electrical heating unit, of a handle portion independent of the heating unit, and a coil separate and independent from the handle portion and connecting the handle portion and said unit.

1,373,584. SHUTTER-FRAME. JOSEPH M. ARMSTRONG, Alexandria, Va. Filed Nov. 1, 1919. Serial No. 335,200. 10 Claims. (Cl. 20—59.)



1. A device of the class described including a frame, a stationary guide member carried by the frame, a movable guide member pivoted to the frame and coöperating with the stationary guide member to form a continuous guideway, a shutter mounted to slide along the said guideway, means for locking the shutter in selected positions along the guideway and for locking the shutter to the pivoted guide member to permit the pivoted guide member and shutter to move independently of the stationary guide member, means for moving the pivoted guide member and shutter about the pivot of the pivoted guide member, and means for locking the pivoted guide member in selected positions in its path of movement about its pivot.

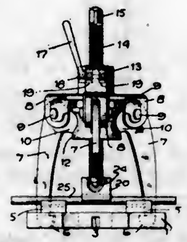
1,373,585. AUTO-JACK AND POWER-PLANT. DAVID B. BAKER, Hoquiam, Wash. Filed Apr. 24, 1919. Serial No. 292,518. 15 Claims. (Cl. 74—106.)



12. A structure for the purpose described, comprising a support, a power shaft and rollers thereon, with the rollers in position to be engaged by the drive wheels of an automobile when on the support, levers mounted on the support and each provided with jaws for engaging the rear axle of the automobile, one of the jaws being fixable on the lever, and means for moving the other jaw toward the first jaw to grip the axle between them, said means comprising a slide on each lever connected to the movable jaw, and rack and pinion adjusting means for the slide.

1,373,586. MACHINE FOR GRINDING FORMED CUTTERS. WILLIAM O. BARNES, Leominster, Mass. Filed Oct. 25, 1919. Serial No. 333,161. 16 Claims. (Cl. 51—100.)

1. A machine for grinding irregular profiles comprising a table, an upright support fixed thereon, a transverse slide carried by said support and provided with a pair of forwardly projecting arms, a screw for adjusting said slide in said support, a shaft carried by said arms, and a grinding wheel rotatably mounted on said shaft between said arms.

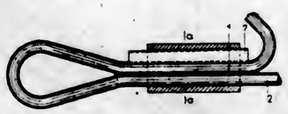


1,373,587. MACHINE FOR GRINDING FORMED CUTTERS. WILLIAM O. BARNES, Leominster, Mass. Filed Oct. 25, 1919. Serial No. 333,162. 16 Claims. (Cl. 51—100.)

1. A machine of the character described comprising a table, means for supporting the work above said table,

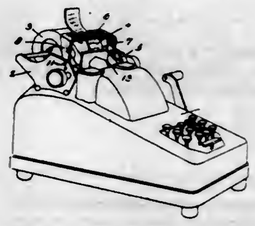
a templet in fixed relation to said table, a portable grinder, and a guide pin in fixed relation to and movable with said grinder, said grinder being movable over the surface of said table with said guide pin in engagement with said templet, and said portable grinder and guide pin being in vertical alinement, whereby said work is ground to the shape of the templet.

1,373,588. ARBOR-PRESS. CHARLES P. BEACH, Littleton, N. H. Filed Feb. 24, 1919. Serial No. 278,813. 3 Claims. (Cl. 153—38.)



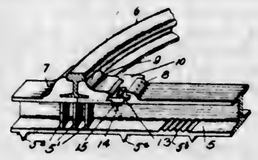
1. In an arbor press, a base plate having a central aperture and a plurality of grooves adjacent the periphery of said member, in combination with detachable power-applying means comprising a supporting member, a plurality of gripping members pivoted to said supporting member, an operating member associated with said supporting member, means associated with said supporting member and actuated by the same for causing said gripping members to approach each other, and means for detachably locking said gripping members in position in the grooves of the base plate.

1,373,589. PROCESS OF SEASONING STEEL ARTICLES. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1920. Serial No. 381,188. 12 Claims. (Cl. 263—13.)



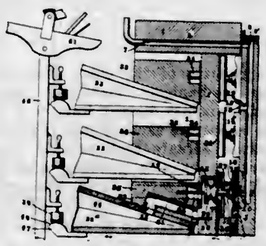
1. The herein described process of seasoning steel articles after hardening, which consists in placing the articles in a liquid bath, slowly heating the bath with the articles to a relatively high temperature, permitting the bath with the articles to slowly cool to normal temperature, and then alternately dipping the articles a large number of times in hot and cold baths at temperatures respectively above and below the normal temperature.

1,373,590. COUPLING FOR TENSION MEMBERS. GOTTFRIED BODMER, Küsnacht, near Zurich, Switzerland, assignor to Hans Meier, Villmergen, Aargau, Switzerland. Filed Apr. 30, 1919. Serial No. 293,714. 4 Claims. (Cl. 24—136.)



3. A coupling for over-lapping tension members, comprising a sheet of metal having an arcuate bend at its middle at one edge of said coupling and two V-shaped bends at the opposite edge of the coupling, a separate spacing piece for arrangement between the over-lapping portions of the tension members to be connected, and a wedge for insertion between said V-shaped bends and one of said tension members.

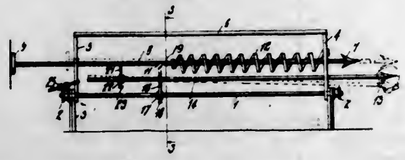
1,373,591. MEMORANDUM DEVICE. JOHN B. BRADY, Somerset, Md. Filed July 21, 1919. Serial No. 312,276. 5 Claims. (Cl. 281—12.)



3. An attachment for machines having means for supporting a paper strip, said attachment comprising a flat extended portion and side members integral therewith and adapted to be secured to said machine, and means for guiding said paper strip continuously against said flat extended portion to permit the making of pencil notations on said strip, substantially as described.

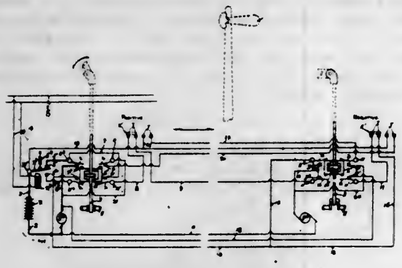
1,373,592. RAIL-CLAMP. JOHN J. BRANAGAN, McKees Rocks, Pa. Filed Dec. 8, 1920. Serial No. 429,108. 6 Claims. (Cl. 238—65.)

1. The combination with a rail, of a tie, and means for securing the rail to the tie, said means including a rail engaging clamp, a wedge plate coöperating with means on the tie for holding the clamp in position, means removably carried by said wedge plate for engaging one edge of the tie to hold said wedge plate against removal, and other means on said removable means for preventing the accidental removal thereof.



1,373,593. ACTION FOR PNEUMATIC MUSICAL INSTRUMENTS. GEORGE P. BRAND, New York, N. Y. Filed Mar. 28, 1917. Serial No. 158,044. 7 Claims. (Cl. 84—50.)

1. In an action for pneumatic musical instruments, a chamber having a back and a front board one of which is removable and forming therebetween a suction chamber, one of said boards having valve chambers therein, removable plates on said last-named board having ports affording communication between said valve chambers and the



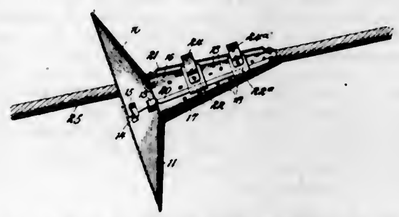
suction chamber, the other board having ducts, diaphragm pneumatics and their chambers formed independently of and located between said boards and communicating with said ducts, valves in said valve chambers, and fixed guide stems for said valves.

1,373,594. ANIMAL-TRAP. PHILIP JENNINGS BREWINGTON, Temple, Tex. Filed May 14, 1920. Serial No. 381,392. 6 Claims. (Cl. 43—79.)

6. In a device of the class described, the combination of a frame composed of an upper bar and a lower bar, standards connecting the ends of said bars, a spear rod slidably mounted in said standards, means for normally urging said spear rod forwardly, a bait rod, a trigger having a collar encircling said lower bar, a set screw provided in said collar for fixing same tightly to said lower bar, said trigger provided with a slot intermediate its ends for pivotally carrying said bait rod, and having its upper end sharpened so as to engage a notch in said spear rod, and means provided on said bait rod for engaging said spear rod so that when said bait rod is pivoted said spear rod will be lifted out of engagement with said trigger.

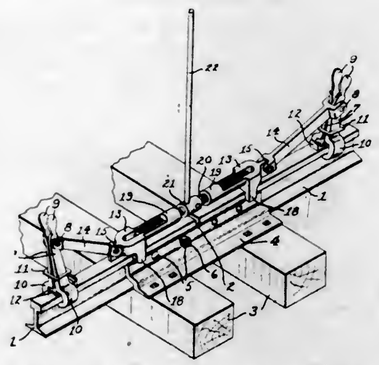
1,373,595. ELECTRICALLY-ACTUATED TRACK-TRIP. CLAYTON A. BROOKS, Girard, Pa. Filed Oct. 29, 1920. Serial No. 420,367. 14 Claims. (Cl. 246—202.)

1. In an apparatus of the class described, a pair of shiftable trip mechanisms positioned adjacent to the railroad track, at points distant from each other, mechanism adapted to operate each of said trip mechanisms, an electric motor to actuate each of said mechanisms, an electric generator, electric conductors connecting said generator and each of said motors, and circuit changing switches adapted to be operated by said trip operating mechanisms so that when one of said trips is moved to a vertical position the other will be moved to a horizontal position.



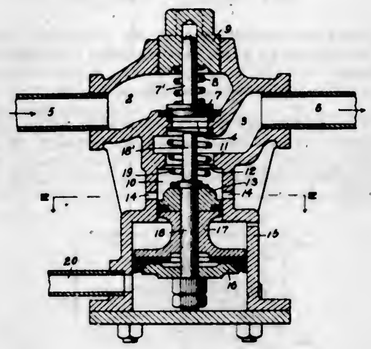
1,373,596. SECURING-PIN. OSCAR E. BURKHOLDER, San Francisco, Calif. Filed Jan. 20, 1920. Serial No. 353,086. 6 Claims. (Cl. 132—51.)

1. A securing pin comprising a pair of tubular members connected at one end and having the outer surfaces of the opposite ends curved inwardly and apertured; and a pair of pins slidably mounted within the tubular



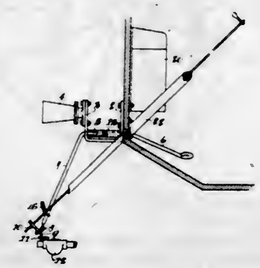
members and arranged to be moved by said curved ends to cross each other when projected beyond said ends.

1,373,597. RAT-GUARD. WILLIAM P. CAREY, New Orleans, La. Filed July 24, 1920. Serial No. 398,842. 16 Claims. (Cl. 114—221.)



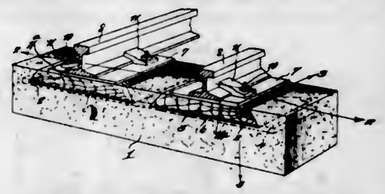
1. A rat guard for ships' ropes comprising a pair of hingedly connected disk sections together forming a flattened cone, means to clamp said sections upon a rope, and means for locking the sections together comprising a tongue struck out from the edge of one section near the center of the guard, the edge of the second section being received between said tongue and the first section, a perforation in the second section near the outside of the guard, and a bendable prong extending from the first section and adapted to enter the perforation.

1,373,598. RAIL-JOINT-ADJUSTING DEVICE. FRANK V. CARMAN, Oakland, Calif. Filed July 6, 1920. Serial No. 394,099. 5 Claims. (Cl. 254—43.)



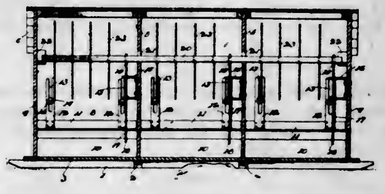
1. A rail-joint adjusting device comprising a pair of oppositely disposed clamps for engaging the alined rails, one on each side of the joint; a pair of oppositely disposed heads lying between the clamps; a link connecting each head with its corresponding clamp; and means coacting with said heads for forcing them apart and drawing them together, whereby the rails are moved to adjust their joint.

1,373,599. CONTROLLING-VALVE. CHARLES H. CLARK, Dormont, Pa. Filed Jan. 18, 1917. Serial No. 143,083. 1 Claim. (Cl. 137—139.)



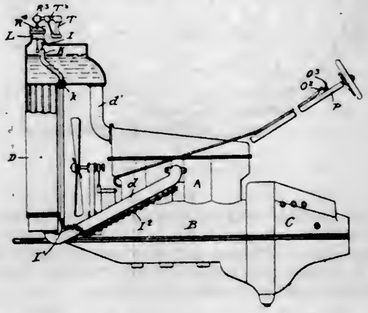
A control casing inclosing a cylinder having an atmospheric vent port formed therein, a receiving chamber, and a discharge chamber normally communicating with said vent port, a valve for controlling communication between said chambers, a spring for normally closing said valve, a differential piston located in said cylinder and movable, in response to fluid pressure delivered to said cylinder, to close said vent port, a stem carried by said piston for engaging said valve to open the same after said vent port is closed, and a spring between a stationary portion of the casing and said piston for accumulatively resisting the valve opening movement of said piston independently of the position of said valve.

1,373,600. ACCELERATOR CONNECTION. HERBERT CORFIELD, Duncan, British Columbia, Canada. Filed Dec. 30, 1919. Serial No. 348,366. 2 Claims. (Cl. 74—39.)



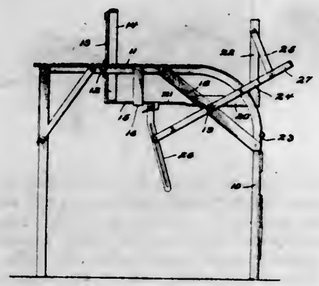
1. An accelerator connection, comprising in combination a crank rod rockably mounted on the dash board to turn on an axis substantially parallel to the medial line of the car, one end of which rod is bent to form a pedal, and the other end turned down for direct connection to it of the carbureter control rod, means for flexibly connecting the throttle control lever to the same control rod, and means for normally holding the control rod in the closed position.

1,373,601. CEMENT TIE AND RAIL-FASTENER. ADAM LEONODES CRANE, Fort Mill, S. C. Filed Nov. 22, 1920. Serial No. 425,797. 4 Claims. (Cl. 238—89.)



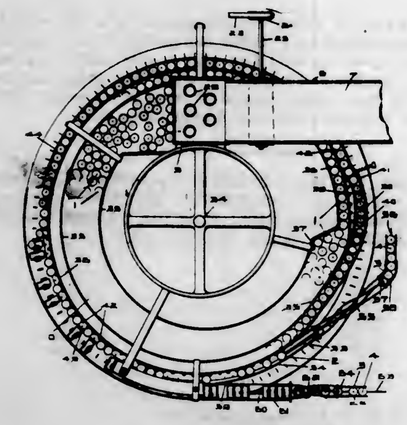
1. In a tie, a plastic tie body having dovetail recesses in its upper face, insert wooden blocks removably dovetailed in said recesses, plates resting upon the blocks, rails engaging said plates, rail fastening plates diagonally disposed on opposite sides of the rails, and bolts passing upwardly through the blocks and the rail supporting and fastening plates to hold said parts in position, a metallic plate embedded in the tie body and having its upper face forming the bottom of the recesses and constituting a bed for the insert blocks.

1,373,602. STOCK-FEEDER. LILLIAN D. DONALDSON, New Washington, Ohio. Filed Dec. 31, 1919. Serial No. 348,520. 3 Claims. (Cl. 119—53.)



1. In a stock feeder, the combination of a bin, an agitator bar mounted for sliding movement therein, agitator fingers carried by said bar, and a rock shaft mounted within the bin and having its upper end offset and engaged in the agitator bar and its lower end provided with a crank to be actuated by a feeding animal.

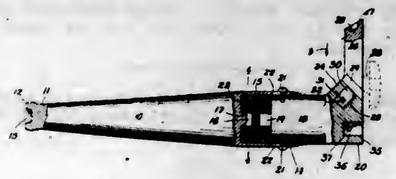
1,373,603. DEVICE FOR SUPPLYING HEATED VAPOR TO INTERNAL-COMBUSTION ENGINES. BEVERLY DOUGLAS, Baltimore, Md. Filed Dec. 23, 1919. Serial No. 346,919. 9 Claims. (Cl. 123—25.)



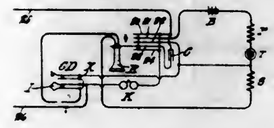
1. In a device for supplying hot vapor to internal combustion engines, the combination with a carbureter, an air intake pipe to the carbureter, a vapor supply pipe opening into said air intake pipe to the carbureter, and a valve in said air intake pipe on the outer side of the vapor supply pipe opening.

1,373,604. APPARATUS FOR INVERTING BOTTLES. RALPH H. DYER, Providence, R. I. Filed Aug. 29, 1919. Serial No. 320,596. 6 Claims. (Cl. 214—1.)

1. In apparatus of the class described, in combination, a frame, a platform pivoted to the frame adapted to receive an open ended receptacle containing bottles, a second platform also pivoted to the frame at a point apart from the pivotal point of the first platform and adapted to support an open ended empty receptacle and lever mechanism supported on the frame and connected to the respective platform, whereby they may be rotated about their respective pivotal points to transfer the bottles from the first receptacle to the second and simultaneously invert them.



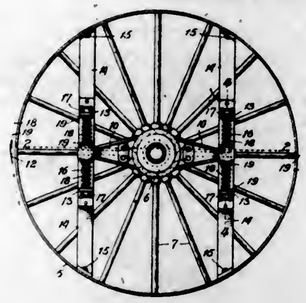
1,373,605. CAN-HOLDING MECHANISM. SYLVESTER EBERLY, Toledo, Ohio, assignor to David A. Yoder, Toledo, Ohio. Filed Oct. 21, 1919. Serial No. 332,269. 16 Claims. (Cl. 193—1.)



1. Can handling mechanism embodying a conveyer, an up-ending device to which the conveyer delivers, and a sorter for cans of different end structures including mechanism for moving cans of one end structure-up away from cans having a different end structure-up.

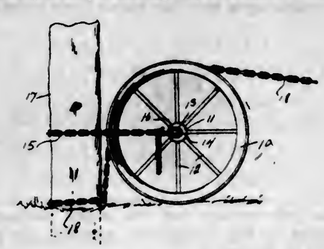
1,373,606. DOLLY-BAR. AMSIH J. ELIAS, New York, N. Y. Filed Oct. 23, 1919. Serial No. 332,593. 5 Claims. (Cl. 78—53.5.)

1. A device of the class described comprising a body portion one end of which is tubular in form, a plunger mounted in said tubular end portion, means for limiting the inward and outward movement of the plunger, tensional means for normally holding the plunger in its outermost position, and a finger bar detachably connected with said plunger.

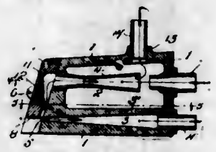


1,373,607. SUBSTATION TELEPHONE SET. JOHN ERICKSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1916. Serial No. 130,528. 13 Claims. (Cl. 179—81.)

6. In a substation telephone set, the combination with a hook switch, of a listening circuit, and a talking circuit controlled by said hook switch, said hook switch having three positions, means for moving said hook switch from first to second position to close said listening circuit and for moving said switch hook from second to third position to render said listening circuit inoperative and to close said talking circuit.



1,373,608. TRACTOR. JOHN B. FOOTE, Oak Park, Ill. Filed Oct. 7, 1919. Serial No. 329,103. 4 Claims. (Cl. 64—100.)

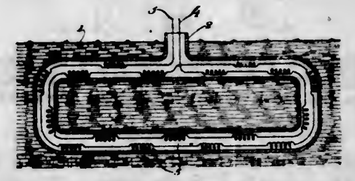


1. The combination with a traction wheel comprising a rim, a hub and spokes, of a live axle supported in said wheel, a driving-member comprising a hub fixed on the axle and a rigid arm thereon, a substantially straight bar having its ends secured to the rim and spring connections between the outer end of the arm and said bar.

1,373,609. POST-PULLER. VICTOR HUGO FRIER, Wakonda, S. D. Filed July 14, 1920. Serial No. 396,148. 4 Claims. (Cl. 254—135.)

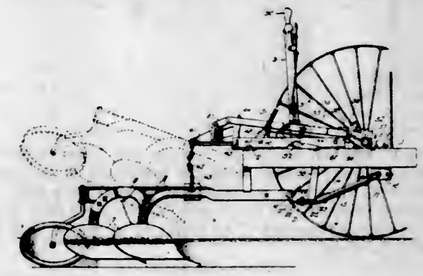
1. In a post puller a drum pulley embodying the usual apertured hub, a shaft extending through the aperture of the hub, a flexible element adapted to be passed about the post and having one end secured to one end of said shaft, means for adjustably securing the free end of said flexible element to the other end of said shaft and a flexible element extending over said drum and adapted to be secured to the post adjacent the ground.

1,373,610. BURNER. JOSÉ E. GONZÁLEZ, Unión de Reyes, Cuba. Filed Apr. 14, 1920. Serial No. 373,813. 3 Claims. (Cl. 158—78.)



1. A burner for liquid fuel comprising a box provided with two chambers, an upper and a lower one, and inside the upper chamber a pipe widened at its ends and reduced at its center leading from the interior of the chamber toward the exterior thereof, in combination with means for introducing the fuel in the upper chamber above the inlet of said pipe, means for introducing a hot fluid in the upper chamber in front of the inlet of said pipe, means for leading the mixture of fuel and hot fluid toward an outlet in the lower chamber, and means for introducing a pressure fluid in the lower chamber.

1,373,611. PORTABLE ELECTRIC LIGHT. DAVID L. GRAFF, New York, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Apr. 25, 1918. Serial No. 230,649. 21 Claims. (Cl. 240—8.5.)

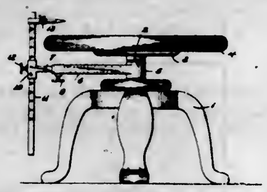


5. A portable electric light comprising a casing having a front opening, a back capable of being opened and closed and a flexible handle-loop fastened at its ends and adapted to be folded on itself, and then down against said casing and being equipped with snap-fastener members for securing it in its folded-down position, a non-conducting block within said casing disposed between the top and bottom thereof and intermediate the ends of the casing and with said ends forming parallel chambers for battery-cells, a sleeve secured to the front of said block and positioned with respect to the front opening in the casing, a reflector and lamp entered within said sleeve, a lens and lens-ring applied to said sleeve and exposed at the front opening in the casing, battery-cells in the aforesaid parallel chambers, a manually operative switch on said casing, and conductors for the circuit through the lamp and batteries to the switch terminals to be connected by the switch.

1,373,612. UNDERGROUND LOOP-ANTENNA. EARL C. HANSON, Washington, D. C. Filed Mar. 19, 1919. Serial No. 283,517. 3 Claims. (Cl. 250—33.)

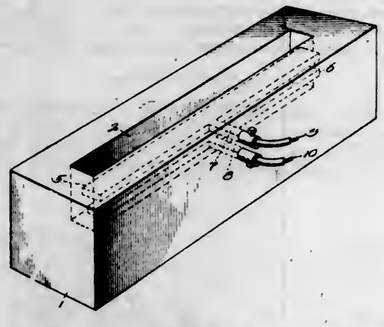
1. An underground antenna system for radio signaling comprising a looped coil inclosed in a conduit and arranged perpendicularly to the surface of the earth, and means electrically connected in the convolutions of the loop for substantially eliminating response to strays.

1,373,613. TRACTOR-PLOW. HENRY J. HEIDER, Carroll, Iowa, assignor to Rock Island Plow Company, Rock Island, Ill., a Corporation of Illinois. Filed July 27, 1917. Serial No. 183,114. 2 Claims. (Cl. 97—54.)



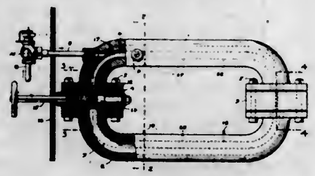
1. The combination of a power-propelled tractor having rear supporting wheels, an axle therefor and a frame, a vertically swinging lift-arm pivotally mounted on said tractor frame to the rear of said axle, a plow beam pivotally connected on the tractor frame and connected to said lift-arm to be raised thereby, a ratchet wheel on the tractor axle, a rotary arm loosely mounted on said axle and directly connected with said lift arm for actuating said lift-arm, a pawl carried by said rotary arm, lever mechanism for connecting the pawl with the ratchet wheel, an automatic device for disconnecting said pawl from the ratchet wheel, means for locking said beam in raised position, and means for releasing said locking means to thereby permit said beam to be lowered by gravity.

1,373,614. SKIRT-MARKER. HATTIE LOUISE HIBBS, Princeville, Ill. Filed Apr. 6, 1920. Serial No. 371,697. 1 Claim. (Cl. 33—9.)



A garment marker including a stool, a rotary platform provided with a depending screw having a threaded lower portion and a smooth upper portion, the threaded portion being mounted in the stool, a hollow horizontal arm located between the stool and the platform and provided at its upper end with a sleeve arranged on the smooth portion of the screw, a horizontally adjustable rod telescoping into the hollow arm and provided at its outer end with a vertical sleeve, a graduated vertical rod adjustably mounted in the vertical sleeve, a horizontal

marking device located above the platform and having a collar adjustably mounted on the upper portion of the



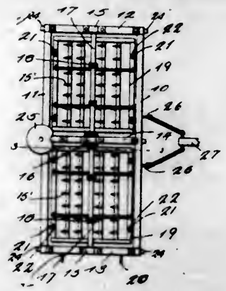
graduated rod, and means mounted on the hollow arm and the vertical sleeve for clamping the horizontal rod and the graduated vertical rod in their adjustment.

1,373,615. CIRCUIT-CONTINUING HEATING-RECEPTACLE. CHARLES F. JACOBS, Chicago, Ill. Filed Mar. 20, 1919. Serial No. 283,716. 4 Claims. (Cl. 219—76.)

1. A heating receptacle having an inner electrode and an outer electrode upon the same side of the receptacle with the inner electrode and projecting within the receptacle beyond the inner electrode to serve as a guard to prevent engagement of an object to be heated with the inner electrode.

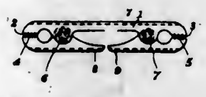
1,373,616. GAS GENERATOR AND BURNER. GEORGE L. N. JOHNSON, Watsonville, Calif., assignor to C. P. Rood, Watsonville, Calif. Filed Aug. 1, 1916. Serial No. 112,508. 1 Claim. (Cl. 158—53.)

A burner and generator including two members, each provided with an oil channel and a vapor channel in parallel relation, secured together by blocks to form a continuous elongated ring, a fourway valve in one of said blocks adapted to connect adjacent passages to said channels, said vapor channel being provided with burner nozzles adapted to direct a flame against the ring to heat the same.



1,373,617. STUD-BOLT DRIVER. JAMES P. JOHNSON, Cleveland Heights, Ohio. Filed Apr. 12, 1920. Serial No. 373,266. 5 Claims. (Cl. 81—183.)

1. A stud-bolt driver comprising a rotatable body member provided with a barrel, a socket member adapted to receive the bolt to be acted upon, operative within said body member, said socket member being provided with cavities which open into the socket; and means coacting

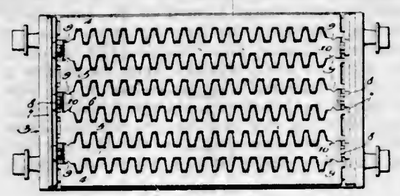


with the body member and the socket member through the opening in the cavities for gripping the bolt when the device is rotated.

1,373,618. HARROW. AUSTIN E. KING, Cole, S. D. Filed Jan. 10, 1917. Serial No. 141,600. 1 Claim. (Cl. 55—88.)

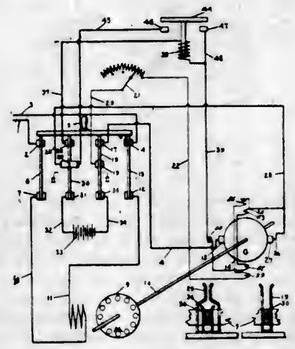
In a harrow, the combination with a main supporting frame, means for attaching the draft thereto, a shaft journaled across said frame transverse to the line of draft, and means for adjusting the shaft in its bearings; of a plurality of harrow frames subjacent to the main frame and each carrying teeth inclined to the rear and trailing as the structure is drawn, and combined draft and adjusting chains wound on and depending from said shaft and branched to the front and rear corners of the respective harrow frames and constituting their only connection with the main frame, said shaft being midway between the front and rear ends respectively of the frames, for the purpose set forth.

1,373,619. COLLAR-CLASP. FREDERICK KOHN, New York, N. Y. Filed Oct. 7, 1920. Serial No. 415,242. 2 Claims. (Cl. 24—81.)



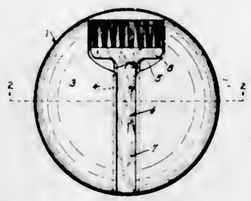
1. In a clasp, the combination with opposed jaws having overlapping side portions provided with pivotally engaging protuberances and depressions integral therewith, and a spring for pressing the jaws together, said spring having a coiled bearing portion centered on said pivoting parts of the jaws.

1,373,620. STEWART GRATE CONSTRUCTION FOR SINTERING-MACHINES. AUGUST L. LARSON, Kellogg, Idaho. Filed Aug. 20, 1920. Serial No. 404,778. 11 Claims. (Cl. 266—21.)



1. In a grate for ore carriers or pallets, a series of relatively fixedly held grate irons and other grate irons

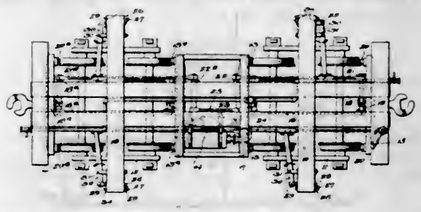
coöperative with the fixedly held irons and movably mounted with respect to the said fixedly held irons and



having a limited outward drop relatively to the fixedly held arms, as the pallet or carrier is inverted.

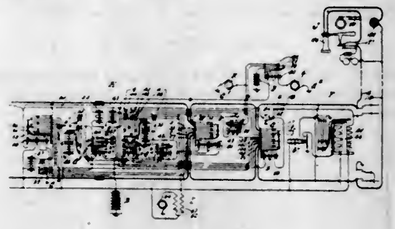
1,373,621. SAFETY CHARGING DEVICE FOR BATTERIES. JAMES F. LINCOLN, Cleveland, Ohio. Filed Mar. 21, 1917. Serial No. 156,382. 8 Claims. (Cl. 171—314.)

7. A battery charging dynamo electric machine having shunt, supplementing series and interpole field windings, a prime mover for actuating the machine, and solenoid means for short-circuiting the series field windings in maintaining the machine operation as a generator.



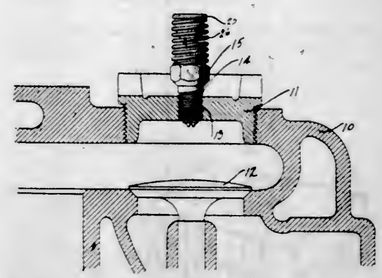
1,373,622. BOX AND ATTACHMENT THEREFOR. EDWIN C. J. LLOYD, Jeannette, Pa. Filed June 4, 1920. Serial No. 386,624. 2 Claims. (Cl. 220—85.)

2. In combination, a box including a cover provided with a dove tail groove and a recess communication therewith, and a brush including a stem fitting snugly in said groove, the head of the brush fitting within the recess and the brush being positioned within the outline and below the plane of the upper face of said cover.



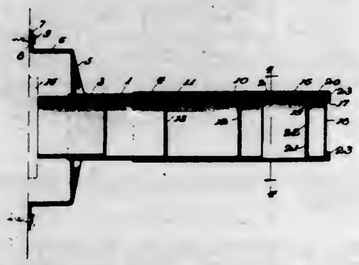
1,373,623. UNLOADING ATTACHMENT FOR CARS. CHARLES D. MACK, Cooley, Ariz. Filed June 24, 1920. Serial No. 391,274. 3 Claims. (Cl. 105—384.)

1. The combination with the brake actuating mechanism of a car, of a plurality of pivotally mounted car stakes on opposite sides of the car, means for locking said stakes in upright position, and connections between said



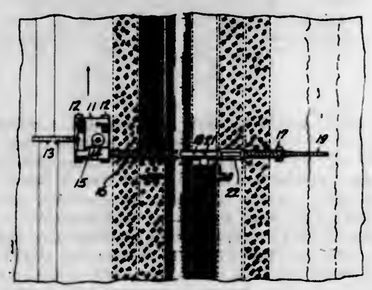
locking means and brake mechanism for releasing said locking means.

1,373,624. AUTOMATIC TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1916. Serial No. 96,495. 22 Claims. (Cl. 179—18.)



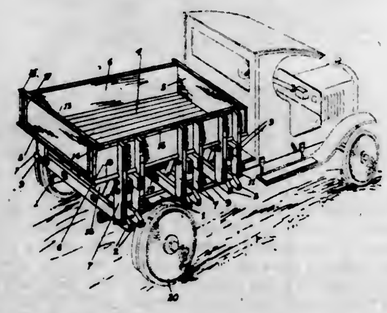
1. In a telephone system, a calling line, a called line, a plurality of progressively movable switches, any one of which will serve the purpose of the calling line for establishing a connection to said called line, a signal for the called line, a source of current for operating said signal, a circuit individual to one of said switches, a circuit common to said switches, means for connecting said source over said individual circuit to operate said signal and for then connecting said source over said common circuit to said signal to operate the same, and means for interrupting said common circuit to intermittently operate said signal.

1,373,625. PRIMING-CUP. STANLEY A. MARTINEK, Amarillo, Tex. Filed May 28, 1920. Serial No. 384,972. 5 Claims. (Cl. 123—187.5.)



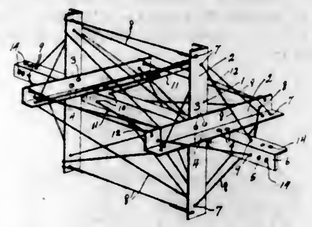
1. A priming cup comprising a body portion having a through opening and provided with a depending threaded shank for engagement through a cylinder wall, a cup slidably mounted upon the upper end of the body portion, a valve controlling the through port at the lower end of the body portion and having connection with the cup, and a spring arranged about the upper end of the body portion and about the cup for normally urging the latter upward to seat said valve.

1,373,626. VIGNETTING ATTACHMENT FOR MULTIPLE-EXPOSURE CAMERAS. SELEST E. MOINE, Lubbock, Tex. Filed Nov. 3, 1919. Serial No. 335,382. 6 Claims. (Cl. 95—65.)



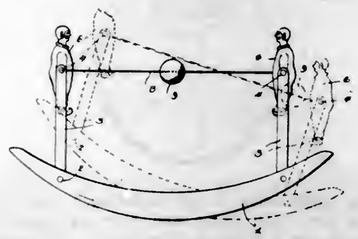
1. In an attachment of the class described, telescopic tubular members, means for attaching one of said members to a camera front, and a plurality of spaced light ray interrupting means within one of said members.

1,373,627. SYSTEM OF HANDLING PEAT. ERNEST V. MOORE, Montreal, Quebec, Canada. Filed Aug. 29, 1918. Serial No. 251,985. 8 Claims. (Cl. 44—29.)



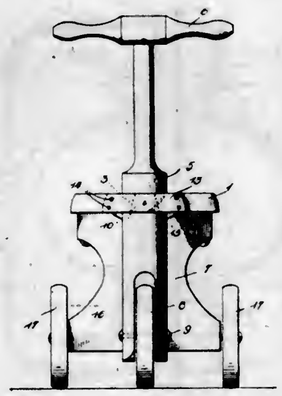
1. A method of handling peat which comprises simultaneously excavating peat, spreading the peat for drying, cubing the dry peat, and gathering and stacking the dry peat by means of a single apparatus advancing continuously over a working area.

1,373,628. BODY FOR DUMPING-TRUCKS. GEORGE G. NELSON, Turlock, Calif. Filed Nov. 24, 1919. Serial No. 340,363. 3 Claims. (Cl. 298—18.)



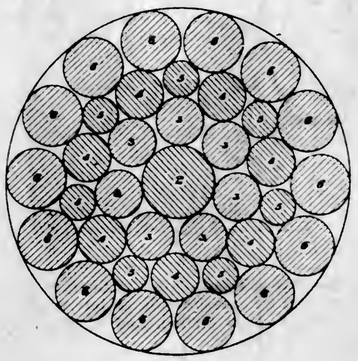
1. A dumping body for vehicles comprising a floor portion flexibly mounted to the frame of the vehicle lengthwise thereof, rigid end boards on the floor, latches on the end boards, side boards adapted to rest in a vertical position adjacent the end boards and be held by the latches thereon, vertical beams secured to the side boards and pivoted to the floor, rods mounted in the frame of the vehicle longitudinally thereof and on which the beams normally rest, and means whereby when the latches on one side are released the potential energy of the load will cause the vertical beams on that side to move away from contact with the rods and the side board to swing outwardly to lie in a plane parallel to the floor and the latter to be simultaneously tilted at a downward angle on that side.

1,373,629. JETTY. CARL NOHLEN, Cleburne, Kans. Filed Oct. 15, 1920. Serial No. 417,126. 1 Claim. (Cl. 61—3.)



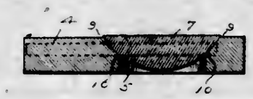
In a silt-bar forming-device, a frame adapted to be placed in moving water, said frame comprising two pairs of angle bars crossing each other at right angles, a longitudinally extending angle bar secured in the corresponding crotches of the two pairs of bars, means for fastening the bars of each pair together, reinforcing ties connected to the longitudinally extending bar at points between the two pairs of bars, and at points adjacent the ends of the longitudinally extending bar and converging outwardly and in turn connected to the corresponding ends of the right angle crossing bars, and reinforcing ties connecting the corresponding ends of the crossing bars, certain of the reinforcing ties which connect the outer ends of the right angle bars intersect each other, thereby additionally reinforcing the frame.

1,373,630. ROCKING TOY. HARRY G. NORWOOD, Baltimore, Md., assignor to William Fuld, Baltimore, Md. Filed Aug. 12, 1920. Serial No. 402,983. 3 Claims. (Cl. 46—40.)



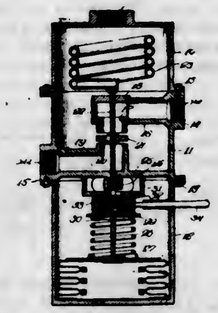
1. A rocking toy comprising a pair of spaced rockers, means connecting the opposite ends of said rockers, arms carried by said connecting means, means connecting the outer ends of said arms, figure toys pivotally mounted on said last referred to means, spacing collars mounted on said arm, connecting means between said figure toys and said arms, a rod connecting said figure toys, and a weight slidable upon said rod, substantially as hereinbefore described.

1,373,631. CHILD'S VEHICLE. HARRY G. NORWOOD, Baltimore, Md., assignor to William Andrew Fuld, Baltimore, Md. Filed Oct. 8, 1920. Serial No. 415,633. 2 Claims. (Cl. 208—165.)



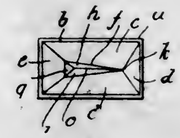
1. A child's vehicle comprising a seat portion having a slot at its front end, the rear end of said slot having a curved bearing portion, a one-piece steering head at the inner end of said slot, a bearing block slidable in said slot and having its rear end formed with a complementary bearing for said steering head, and means for holding said block from vertical and longitudinal movement.

1,373,632. WIRE ROPE. FREDERICK S. PHELPS, Sausalito, Calif., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Aug. 25, 1920. Serial No. 405,956. 5 Claims. (Cl. 28—5.)



1. A wire rope or strand formed of round wires and comprising a core, an inner layer of wires wound helically around said core, an intermediate layer of wires surrounding said inner layer, the wires in said intermediate layer being double the number in said inner layer and having alternate wires lying in the interstices between the wires of said inner layer, and an outer layer of wires surrounding said intermediate layer and having the wires in said outer layer lying in the interstices between the wires of said intermediate layer.

1,373,633. METHOD OF MAKING BIFOCAL LENSES. PURL C. PLASTERER, Dayton, Ohio. Filed Oct. 29, 1919. Serial No. 334,132. 9 Claims. (Cl. 49—82.1.)

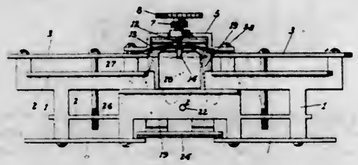


1. The process of eliminating bubbles from composite blanks of ophthalmic lenses while uniting the elements thereof which consists in providing a vent for the air, gas, or moisture through one of the lens elements.

1,373,634. FLUID-MIXER. DONALD J. POWERS, Dobbs Ferry, N. Y., assignor to The Powers Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1920. Serial No. 391,780. 7 Claims. (Cl. 236—12.)

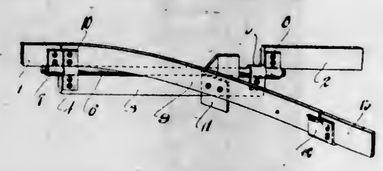
1. In a thermostatically controlled hot and cold fluid mixer, the combination of a casing having a mixing chamber and provided with inlets for hot and cold fluid and an outlet for the combined fluids, a valve for controlling the entrance of the hot and cold fluids, a container for a thermostatic liquid located within the mixing chamber, an expansible and collapsible chamber located exteriorly of the mixing chamber and also adapted to contain thermostatic liquid, a conduit connecting said chambers, and a connection between the expansible and collapsible chamber and said valve for operating the valve, substantially as described.

1,373,635. RECORDING-STYLUS. KARL RAMMELSBERG, Cassel, Germany. Filed Mar. 9, 1916. Serial No. 83,105. Renewed Sept. 27, 1920. Serial No. 413,160¼. 2 Claims. (Cl. 274—38.)



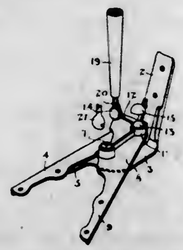
1. A stylus for recording apparatus, comprising a supporting member, and a member extending therefrom, said latter member being substantially in the shape of a wedge having a receding front face and two tapering converging side faces.

1,373,636. RAKER-GAGE. GUSTAVE A. REINKE, Stockton, Calif. Filed June 1, 1920. Serial No. 385,577. 6 Claims. (Cl. 33—202.)



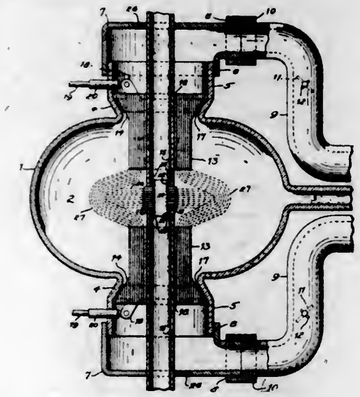
1. A raker-tooth gage comprising a vertical frame having transverse top and bottom plates extending length-

wise thereof, a peg adapted for vertical movement relative to the top plate and to project beyond the under face thereof, a support for the peg, a slotted plate parallel



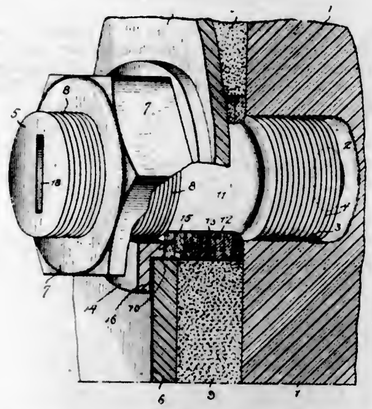
to the bottom plate, and adapted for vertical movement relative thereto, and means whereby the peg and slotted plate may be moved in such vertical relation simultaneously and at a uniform rate of speed.

1,373,637. REVERSIBLE SWITCH-RAIL. ROYAL N. RIBLET, Spokane, Wash., assignor of one-half to Byron C. Riblet, Spokane, Wash. Filed Apr. 27, 1920, Serial No. 376,992. Renewed Feb. 15, 1921. Serial No. 445,229. 1 Claim. (Cl. 104—101.)



The combination in a reversible switch member with the adjoining ends of the alined track sections having fixed bangers, of a rock bar journaled in said hangers beneath the track sections, a straight rail section normally alined with the track sections, a bracket fixed on said bar and straight rail section, a normally lower diverging frog section, a second bracket attached to said straight section, bar, and diverging section, a bracing plate connecting the straight section and frog section, a switch rail, and a socket member on said switch rail to receive and support the end of the diverging frog section when the switch member is inverted.

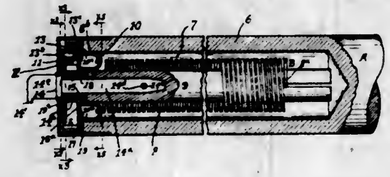
1,373,638. SHEARS. CALEB ROACH, Toronto, Ontario, Canada. Filed Oct. 21, 1918. Serial No. 259,041. 3 Claims. (Cl. 30—13.)



1. In a pair of shears, a blade having an upturned lug at the butt end, a handle rigidly secured to said lug, an arm pivotally secured intermediate of its length to the aforesaid handle and having its lower end arranged to swing above said rigid blade, a blade pivotally mounted intermediate of its length on the upper side of the rigid blade, and a link having a universal joint connection at each end and connecting the butt end of the upper blade with the lower end of the swinging arm.

1,373,639. PROCESS FOR THE ELECTRIC FIXATION OF GASES. GEORGE T. SOUTHGATE, New York, N. Y. Original application filed Apr. 11, 1918, Serial No. 227,975. Divided and this application filed Nov. 22, 1920. Serial No. 425,600. 3 Claims. (Cl. 204—31.)

1. The herein described process of fixing atmospheric nitrogen which consists in passing streams of gas or gases through porous electrodes simultaneously with the passage of an electric arc between said electrodes.

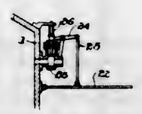


1,373,640. BOLT AND ITS INSTALLATION. JOHN TAYLOR, Brooklyn, N. Y. Filed Sept. 24, 1919. Serial No. 325,889. 13 Claims. (Cl. 85—1.)

10. For use in a bolt installation of the type described, a bolt threaded at its opposite ends, an intermediate plain shank of reduced cross section, and a spacer packing wound on said shank.

1,373,641. SHADE-ROLLER. FRANK E. WILLIAMS, Alhambra, Calif. Filed June 24, 1918. Serial No. 241,471. 5 Claims. (Cl. 156—36.)

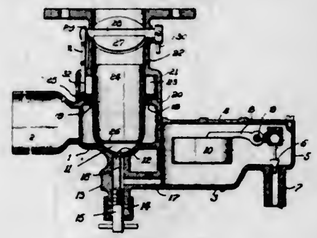
1. A shade roller comprising a rotatable body member, a spring supporting rod extending into said body member and adapted to be held against rotation, a spring connected with said body member and said rod, means for rotatably mounting said member, a series of elements rotatable with said body member and adapted for pawl actuation, a pawl held against rotation with said body member and adapted to normally lie against elements of said series, and a second series of elements rotatable with said body member and against which the pawl is projected by an element of said first named series at high rate of speed of body member rotation; said pawl engaging an element of said first named series to hold



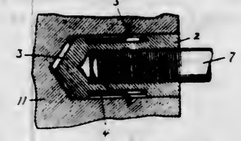
the body member against rotation under influence of the spring at slow rate of speed of body rotation; and the leading and following edges of each of the elements of said first named series being disposed at different radial distances from the center of rotation.

1,373,642. UMBRELLA. WALTER EMMETT AIREY and JOHN POMFRET, Manchester, England. Filed Dec. 30, 1919. Serial No. 348,369. 2 Claims. (Cl. 135—28.)

2. In an umbrella, a notch provided at its interior with a plurality of longitudinal channels, and also provided with a plurality of radial slots, said notch being exteriorly threaded for a portion of its length, and an interiorly threaded ferrule secured to said notch and provided with a plurality of radial openings, the longitudinal channels and radial slots of the notch communicating with the interior of the ferrule.



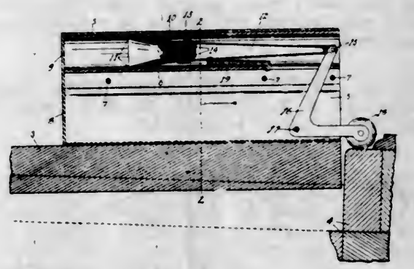
1,373,643. APPARATUS FOR REFLOATING SUNKEN VESSELS. MURAJI ARIURA, Tokyo, Japan. Filed Jan. 24, 1920. Serial No. 353,835. 2 Claims. (Cl. 114—52.)



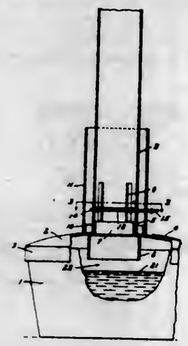
1. In an apparatus for raising sunken objects, a floating tank provided with a water inlet pipe and air discharge ports, spring actuated valves for closing said ports, wings hinged to said tank and projecting horizontally therefrom, and means for connecting said valves to said wings.

1,373,644. CARBURETER. JESSE BALDWIN, Detroit, Mich., assignor to B. C. Case, Detroit, Mich. Filed June 7, 1919. Serial No. 302,478. 1 Claim. (Cl. 261—52.)

A carbureter of the type described comprising a body having an air intake connection and a fuel basing, a throttle in said body, a manifold connection having a lower large end seated on said body, a sleeve-like valvular member slidable in said body and said manifold connection and having a lower contracted end adjacent the bottom of said basin to control the supply of air to said manifold connection, said valvular member coöperating with said manifold connection in providing an annular chamber communicating with the manifold connection above said valvular member and adapted to have a partial vacuum produced therein, a peripheral flange on said valvular member in said annular chamber adapted to raise said valvular member when there is a partial vacuum in said chamber, and a rod extending into said annular chamber and connected to said throttle outside of said body and adapted to engage the flange of said valvular member to lower said valvular member and also limit the forward movement thereof.

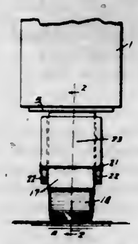


1,373,645. ANCHORING DEVICE. ERICH A. M. BANDOLY, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,442. 5 Claims. (Cl. 85—32.)



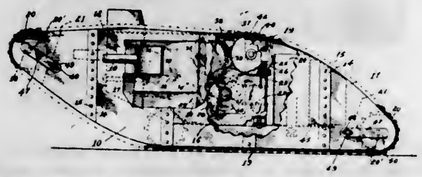
1. A self-anchoring nut or the like comprising a main member equipped intermediate its ends with a peripheral groove, and a collar seated in the said groove and having outwardly projecting tongues formed therefrom and all extending in the same direction longitudinally of the collar.

1,373,646. DOOR-CHECK. ENEVOLD BANG, Minneapolis, Minn. Filed Jan. 18, 1921. Serial No. 438,245. 4 Claims. (Cl. 16—77.)



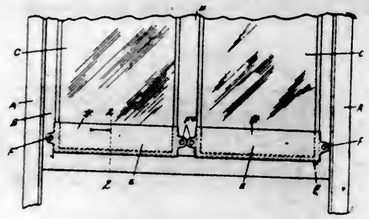
2. A door check consisting of a cylinder adapted to be secured to a door, a plunger slidably mounted in the cylinder, said plunger being cupped at its forward end, a suitably mounted bell crank lever having one arm operatively connected with said plunger, and a roller mounted on the other arm of said bell crank lever, said roller being adapted to co-act with the door frame.

1,373,647. ORCHARD-HEATER. GEORGE L. BLANCHARD, Pomona, Calif. Filed June 11, 1919. Serial No. 303,464. 9 Claims. (Cl. 158—91.)



1. An orchard heater comprising a closed receptacle adapted to contain oil having an adjustable draft opening, a stack extending upwardly from the top of the receptacle communicating with its interior and having perforations in the lower end above the top of the receptacle, and a perforated diaphragm rotatably mounted transversely in the stack and positioned with the stack perforations above and below the diaphragm and a casing surrounding the stack for preheating the air entering through said slots.

1,373,648. SELF-ADJUSTING CASTER. WALLACE K. BRADFORD, Los Angeles, Calif. Filed Jan. 3, 1921. Serial No. 434,627. 8 Claims. (Cl. 16—164.)

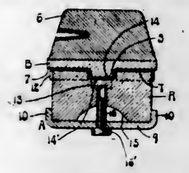


7. In a caster the combination of a frame for a roller, and a supporting plate received through the same and arranged for lateral twist relative to said frame, said frame having a pintle adapted to abut against one face of said plate and a wedge received between the opposite face of said plate and said frame so as to bind the parts when twisted.

1,373,649. TOY TANK-CAR. ROBERT POTTER BREESE, New York, N. Y. Filed Feb. 14, 1918. Serial No. 217,085. 5 Claims. (Cl. 46—48.)

1. A toy tank car comprising two substantially oblong shaped vertical side pieces, tractor chains mounted on the periphery of said side pieces, means comprising an electric motor within said frame for driving said chains, and means for guiding and keeping said chains taut.

1,373,650. FLYTRAP. ALDER G. CARLSON, Moose Lake, Minn. Filed Sept. 20, 1920. Serial No. 411,580. 1 Claim. (Cl. 43—119.)

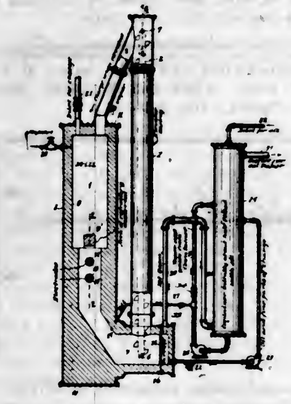


In combination with a window sash, a trough adapted to contain a poisonous liquid therein secured to the lower part of the sash adjacent the pane therein, said pane having a thin coating of poisonous liquid on the surface adjacent said trough.

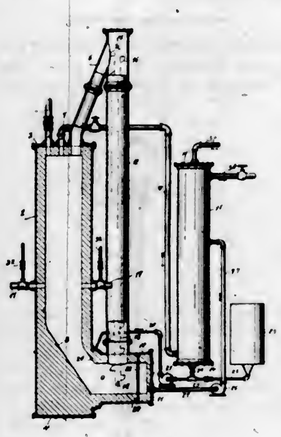
1,373,651. FOOD PREPARATION AND PROCESS OF MAKING SAME. HARRY STUDDERT CULLEN, Wellington, New Zealand, assignor of one-half to Guy Leslie Fulton, Wellington, New Zealand. Filed Jan. 12, 1918. Serial No. 211,481. 2 Claims. (Cl. 99—11.)

1. An egg substitute, comprising casein, sodium bicarbonate, hot water and fresh eggs, mixed together in the approximate proportions by weight respectively of 15 parts, 1 part, 65 parts, and 30 parts.

2. The process of making an egg substitute which consists in grinding and mixing together approximately 15 parts by weight of casein, and 1 part of sodium bicarbonate, pouring the mixture into 65 parts of hot water, whipping the hot mixture for approximately five minutes, adding thereto 30 parts of fresh eggs, and whipping to a creamy mass.



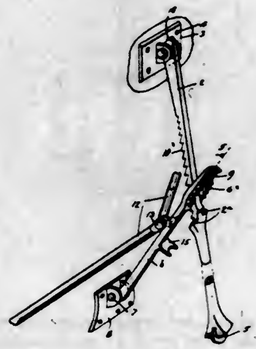
1,373,652. RESILIENT WHEEL. JAMES CUNNINGHAM, St. Louis, Mo., assignor to Demountable Spring Tire Company, New York, N. Y., a Corporation of Missouri. Filed June 30, 1919. Serial No. 307,619. 3 Claims. (Cl. 152—36.)



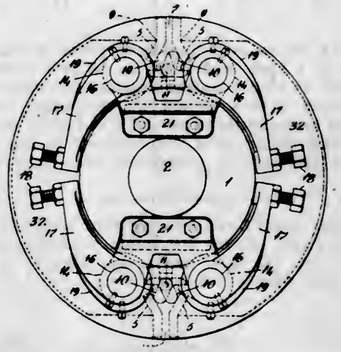
1. In a resilient wheel, the combination of an inner rim, an outer rim surrounding said inner rim, one of said rims being provided with an annular track facing the other rim, an annular retaining rib extending from said annular track, and an annular row of resilient expanding clutches arranged circumferentially of said annular track and interposed between said rims to form a yielding frictional connection which allows one of said wheel members to turn faster than the other, said resilient clutches being adapted to creep along said annular track, and said clutches being provided with recesses for the reception of said annular retaining rib, whereby the clutches are retained on said annular track.

1,373,653. PROCESS FOR THE PRODUCTION OF GASOLENE FROM CRUDE OIL. PAUL DANCKWARDT, Denver, Colo. Filed Aug. 27, 1917. Serial No. 188,305. 6 Claims. (Cl. 196—26.)

1. The process of producing hydrocarbons of relatively low boiling points from hydrocarbons of relatively high boiling points, which consists in causing material containing such hydrocarbons of relatively high boiling points to react with a heated mixture of carbon, a haloid salt and a metal, removing the vapors formed and condensing all oils having relatively low boiling points separately from those of higher boilings points, substantially as and for the purpose described.



1,373,654. PROCESS FOR THE PRODUCTION OF HYDROCARBONS OF LOW BOILING-POINTS FROM HYDROCARBONS OF HIGH BOILING-POINTS. PAUL DANCKWARDT, Denver, Colo. Filed Aug. 27, 1917. Serial No. 188,307. 7 Claims. (Cl. 196—26.)

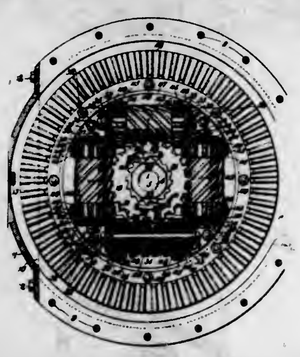


3. The process of producing hydrocarbons of relatively low boiling points from hydrocarbons of relatively high boiling points, which consists in igniting a mixture of carbon, nickel and nickel chlorid, passing air and steam through the mixture to maintain combustion, adding oil to the mixture, allowing it to distil off, passing it through another body of oil and mixture of the above ingredients, and condensing that part of the oils which boils at or below 150° C. separately from the portion boiling at a temperature above said point.

1,373,655. SAFETY DEVICE FOR PREVENTING MOTOR-CARS FROM OVERTURNING. CHARLES DANIEL, Huntington Park, and EDWARD A. JUHNKE, Los Angeles, Calif. Filed Oct. 16, 1919. Serial No. 331,251. 4 Claims. (Cl. 280—150.)

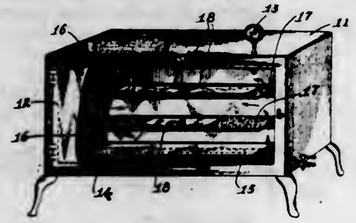
1. A device for preventing the lateral overturning of automobiles, comprising a leg pivotally connectible to the upper portion of a side of the automobile; and a pawl attachable to the side of the automobile in a position vertically below the pivot of the leg and interengaged with the latter so as to prevent separation of the parts and adapted to interlock therewith to limit the outward swing of the leg when the parts are swung outward by the tilting of the automobile.

1,373,656. MEANS FOR ATTACHING PRINTING-PLATES TO CYLINDERS. CARL EBERHARD DRANGE, Plainfield, N. J., assignor to Isabella Scott and David J. Scott, executors of the estate of Walter Scott, deceased. Filed Jan. 20, 1916. Serial No. 73,093. 9 Claims. (Cl. 272.)



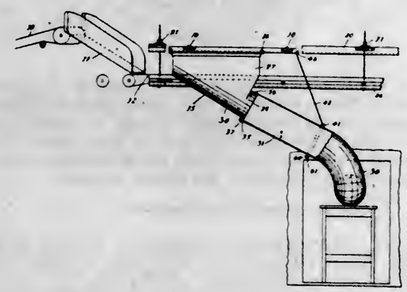
3. A printing machine cylinder, a plurality of flexible printing members carried on the surface of said cylinder lengthwise of the axis of said cylinder, a plurality of flexible printing members mounted on said cylinder circumferentially thereof, and means for individually straining said members from one end of said cylinder.

1,373,657. DIFFERENTIAL GEARING. JOHN A. FINEFROCK, Canal Fulton, Ohio. Filed Apr. 11, 1919. Serial No. 289,369. 9 Claims. (Cl. 74—99.)



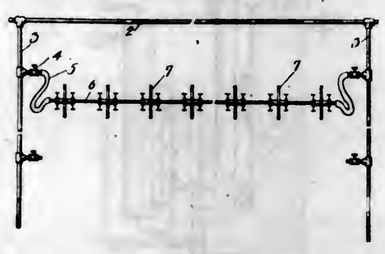
9. In a differential gearing, adjacent alined shafts or axle sections with worm gears at the meeting ends, and a plurality or group of worms surrounding each worm gear

and each meshing therewith, the worms of each group having means at each end meshing with the like means



of the other group, and means connecting each group of worms with the other group of worms and provided with journal supports for the worms.

1,373,658. METHOD AND APPARATUS FOR PREPARING PHOTOENGRAVING-PLATES. JAMES S. FREER, Rutherford, N. J. Filed Mar. 23, 1920. Serial No. 368,079. 8 Claims. (Cl. 41—43.)



1. In a process of etching metal plates by applying an erosive to a plate surface having selected portions covered with an erosive resisting coating and which includes the heating of such coating, the step which consists in applying heat directly to the outer surface of the coating for a restricted period of time, sufficient to heat the coating and insufficient to considerably heat the body of the plate.

1,373,659. CONVEYER DEVICE FOR LOADING FLOUR INTO CARS. HENRY O'B. HARDING, Minneapolis, Minn. Filed Feb. 14, 1919. Serial No. 276,910. 3 Claims. (Cl. 193—19.)

1. A conveyer device for loading articles such as sacks of flour into cars comprising a framework, an overhead track supported by said framework, a carriage mounted for movement along said overhead track, a driven conveyer belt mounted adjacent and parallel to said overhead track, a chute depending from said carriage and having an angularly-disposed portion adapted to enter the side doors of cars, and means for shifting articles from said conveyer belt into said chute.

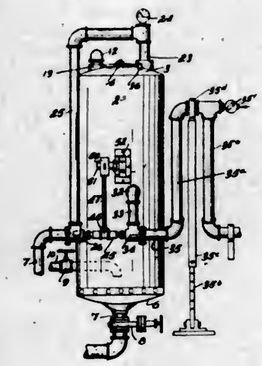
1,373,660. IRRIGATION SYSTEM. AARON E. IVERSON, Chatsworth, Calif. Filed Feb. 7, 1920. Serial No. 356,830. 6 Claims. (Cl. 299—47.)

1. An irrigation system, comprising a delivery pipe, a plurality of supporting members mounted for rotation on said pipe, and means for locking said supporting members to said pipe for rotation therewith in one direction.

1,373,661. EMULSION AND METHOD OF PRODUCING IT. ERNST M. JOHANSEN, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1920. Serial No. 430,789. 9 Claims. (Cl. 134—1.)

1. The method of emulsifying oily material of mineral origin, which consists in dispersing the same in water in the presence of water soluble sulfonates resulting from acid treatment of mineral oil or product thereof and in amount from about 1½ per cent. to about 8 per cent. by weight of said material.

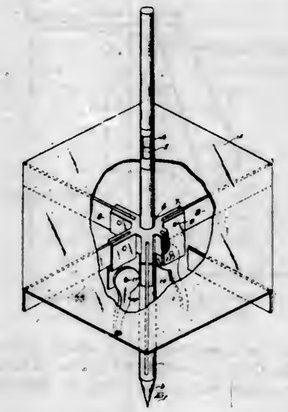
1,373,662. SHOE-POLISHING APPARATUS. FRANCIS KINGSLEY, New Rochelle, N. Y. Filed Aug. 10, 1917. Serial No. 185,439. 3 Claims. (Cl. 15—61.)



1. In an apparatus of the character described, the combination of a rotary brush, a vertical brush shaft movable with the brush in a horizontal and in a vertical plane, a depending drive shaft connected slidingly with the first named shaft and means to counter-balance the weight of the brush and the brush shaft for vertical movement relative to the drive shaft.

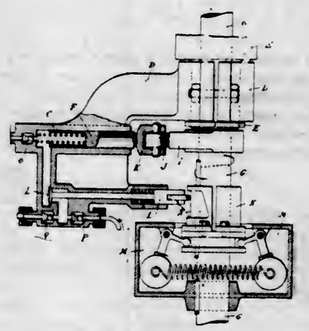
1,373,663. PEEL-PLATE FOR BAKING. CARL W. LAMPRECHT, Los Angeles, Calif., assignor of one-half to James L. Gilbert, Los Angeles, Calif. Filed Apr. 29, 1920. Serial No. 377,645. 1 Claim. (Cl. 107—67.)

The herein described peel plate comprising a substantially rectangular flat body having its top and bottom surfaces cut away at its forward end to form shallow recesses, a continuous sheet of asbestos positioned on the end of the body within said recesses, the thickness of which sheet of asbestos is substantially half the depth of the recesses in said body, a sheet of thin sheet metal bent around the end of the body of the peel plate and wholly covering the sheet of asbestos, the outer surfaces of said section of sheet metal lying flush with the corresponding faces of the body of the peel plate, and fastening means extending through the body of the peel plate and through the end portions of the sheet of asbestos and the thin metallic sheet.



1,373,664. GAS, OIL, AND SAND SEPARATOR. DAVID G. LORRAINE, Los Angeles, Calif. Filed Feb. 5, 1920. Serial No. 356,438. 5 Claims. (Cl. 183—39.)

3. In an apparatus for separating oil and gas, a receptacle having separate discharge means for the oil and gas, each having an exterior valve actuated by a common crank, said valves being set for one to open as the other closes and float means within the receptacle actuated by the height of the liquid, operatively connected to said crank to actuate said valves.

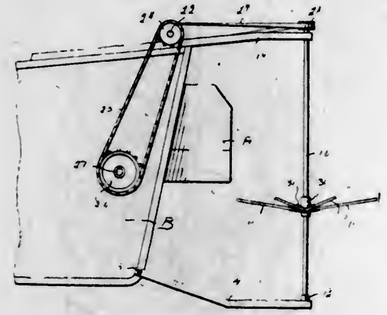


1,373,665. FOLDING CAMP-TABLE. FRED J. LOZON, Los Angeles, Calif. Filed Dec. 11, 1919. Serial No. 344,163. 2 Claims. (Cl. 45—11.)

1. A collapsible, convertible camp table and umbrella, comprising a standard adapted to be driven into the ground, a hub member slidably mounted on the standard, a pair of diametrically opposed eccentric clamps having actuating levers pivotally mounted on the hub and adapted to engage opposite sides of the standard to adjustably support the hub thereon, a plurality of radial ribs pivotally mounted on the hub, said ribs having stops at their pivots to support them in a horizontal position when

opened, and a pliant sheet adapted to be connected to said ribs and be supported in a horizontal plane.

1,373,666. FUEL-SUPPLY REGULATOR FOR INTERNAL-COMBUSTION ENGINES. RODOLPHE EDGARD MATHOT, Brussels, Belgium. Filed May 13, 1919. Serial No. 296,952. 8 Claims. (Cl. 123—140.

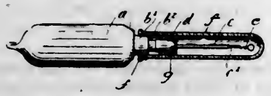


1. In fuel regulating mechanism for liquid fuel engines, the combination of a fuel injector, means for regulating the supply of fuel to said injector, separate operating devices for said injector and regulating means, a shaft supporting said devices and a governor controlling the operation of said regulating means, the injector and regulating means being connected to turn in unison for adjustment about the axis of said shaft whereby the timing of the fuel supply may be regulated without affecting the setting of the governor.

1,373,667. STRAW-DISTRIBUTER FOR HARVESTER-THRESHERS. EDWARD F. MILLER, Bison, Kans. Filed Oct. 2, 1920. Serial No. 414,182. 3 Claims. (Cl. 275—8.)

1. The combination with a harvester thresher, of means for distributing the straw therefrom comprising a vertically disposed shaft mounted at the discharge end of the harvester thresher and having a series of radially

directed separated arms attached thereto and rotating therewith in a horizontal plane and all extending from

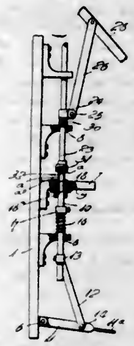


the shaft on the same plane, and means operatively connected to the driving mechanism of the thresher and for rotating the arms, said arms being of different lengths.

1,373,668. SCORING-MACHINE. CHESTER B. PEARSALL, Rochester, N. Y., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 28, 1919. Serial No. 333,883. 6 Claims. (Cl. 164—62.)

1. The method of treating paper board, which consists in passing the board through a primary scoring device, partially slitting the board longitudinally, and feeding the slitted board transversely to a secondary scoring device by pressure on the edge of the board remote from the secondary scoring device.

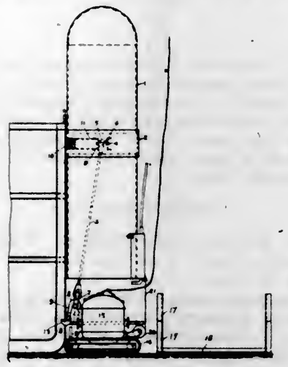
1,373,669. HYPODERMIC SYRINGE. PAUL S. PITTENGER, Philadelphia, Pa., assignor to H. K. Mulford Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 23, 1919. Serial No. 305,987. 5 Claims. (Cl. 128—216.)



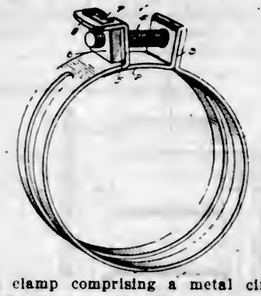
1. A hypodermic syringe comprising a collapsible capsule, a neck of relatively incompressible material on the capsule provided with a discharge duct, a needle formed with a discharge duct for alinement with the first named duct and a compressible hub carried by the needle and adapted to be pressed on to the exterior of said neck to form a practically nonrenewable connection between the needle and the capsule.

1,373,670. BEDCLOTHES-HOLDING DEVICE. EDWIN B. PLUMB, Clawson, Mich. Filed Oct. 6, 1919. Serial No. 328,804. 3 Claims. (Cl. 267—75.)

1. A bed clothes holding device comprising flexible members disposed in parallelism and adapted to have the ends thereof connected to the ends of a bed so as to extend lengthwise thereof at the side edges of the bedclothes, and detachable clamps at intervals on said flexible members and adapted to frictionally grip the side edges of the bed clothes.

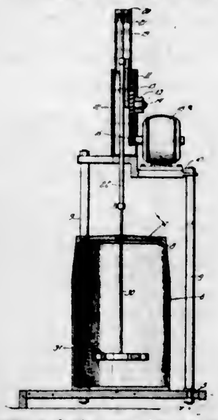


1,373,671. EYELETING-MACHINE. MARTIN RASMUSSEN, Racine, Wis. Filed Nov. 7, 1919. Serial No. 336,245. 4 Claims. (Cl. 218—1.)



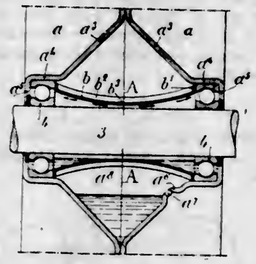
3. In an eyeleting device, a mandrel having an axial bore and being insertible through an unclenched eyelet, a sharp-ended leading member having a shank to fit in the bore of said mandrel, said leading member having a base to extend outward over the entering end of the unclenched eyelet to guard the said entering end against engagement with material in which the eyelet is being inserted, a table having an aperture therethrough and constituting an anvil and a support for the object to be eyeleted, yielding means to hold said mandrel in such position that its bored end extends through said aperture and beyond the upper surface of said table, a plunger having a hollow end to receive the sharp end of said leading member, said plunger being formed to clench said eyelet when operated, means to operate the plunger, and means to retract the mandrel from the eyelet.

1,373,672. DEVICE FOR RAISING SUNKEN VESSELS. JESSE W. RENO, New York, N. Y. Filed July 23, 1920. Serial No. 398,481. 6 Claims. (Cl. 114—52.)



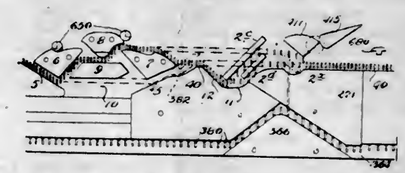
1. A pontoon, having a closed upper end and open lower end, adapted to be vertically disposed in the sea, and lifting cables extended up to the pontoon to the approximate middle line thereof, and at which point secured to the walls of the pontoon.

1,373,673. HOSE-CLAMP. CHARLES E. RITTER, Chicago, Ill., assignor, by mesne assignments, to J. S. McChesney & Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 26, 1918, Serial No. 255,865. Renewed June 23, 1920. Serial No. 391,159. 3 Claims. (Cl. 24—19.)



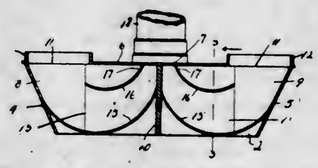
3. A hose clamp comprising a metal circumferential band equipped with two outwardly projecting ears, and a tightening bolt engaging the said ears and including a nut; one of the said ears being equipped with a perforation sufficiently larger than the shank of the bolt to permit a tilting of the said shank while extending through the perforation; the second ear comprising a main portion extending radially outward of the clamp and an end portion extending transversely of the aforesaid portion and in a direction away from the first named ear of the clamp; the second ear having a slot portion extending radially of the clamp inward from the juncture of the said two portions of this ear and adapted to receive the shank of the bolt, and having in its said end portion a slot portion extending transversely of the clamp and adapted to permit the passage of the nut of the bolt therethrough, the said two slot portions being connected and the said second ear having on its end portion shoulder formations disposed laterally of the first named slot and adapted to engage the nut to lock the bolt against movement radially outward of the clamp, the said end portion of the second ear being spaced from the adjacent circumferential portion of the band by a distance closely approximating the width of the nut, thereby causing the nut simultaneously to engage the said shoulders and the juncture of the second ear with the said circumferential portion of the band.

1,373,674. POWER-OPERATED CHURN. JOHN M. RODGER, Chicago, Ill. Filed June 1, 1920. Serial No. 385,493. 18 Claims. (Cl. 259—113.)



1. In a churn, a dasher member, a guide for said dasher member and means to impart a vertical reciprocating motion to said dasher member comprising a rotatable gear, a link pivotally mounted at one end near the outer periphery thereof and having its other end pivotally mounted on said dasher member and means to impart rotation to said gear.

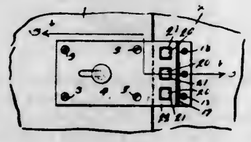
1,373,675. PULLEY CONSTRUCTION. LOUIS ROUANET, Ivry-Port, France, assignor to Campagnie D'Applications Mecaniques, Ivry-Port, France. Filed Aug. 4, 1917. Serial No. 184,495. 9 Claims. (Cl. 64—26.)



6. In combination, a pulley, spaced bearings carried by the pulley, a lubricating chamber between the bearings having a circumferentially extending groove therein, a coupling piece between the bearings and within the chamber arranged to receive the lubricant from the chamber and to distribute the same to the bearings when the pulley is rotating.

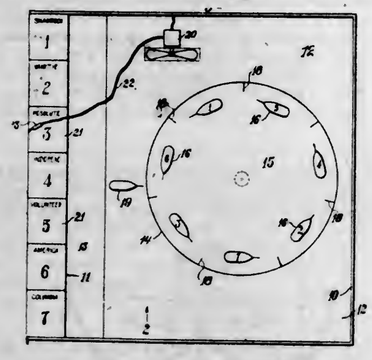
1,373,676. YARN FEEDING AND SEVERING MECHANISM FOR KNITTING-MACHINES. ROBERT W. SCOTT, Babylon, N. Y., assignor to Scott & Williams, Incorporated, a Corporation of Massachusetts. Original application filed Dec. 31, 1914, Serial No. 879,887. Divided and this application filed Sept. 30, 1919. Serial No. 327,393. 11 Claims. (Cl. 66—12.)

1. A knitting machine having therein a single series of knitting needles and means for knitting plain fabric thereon by continuous circular single-course knitting of a main yarn, means for establishing and extinguishing during said continuous operation an auxiliary knitting wave in said instruments, and means movable toward and away from the needles to introduce to and withdraw from knitting relation with said auxiliary wave an auxiliary yarn acting at the times of such establishment and extinguishment respectively.



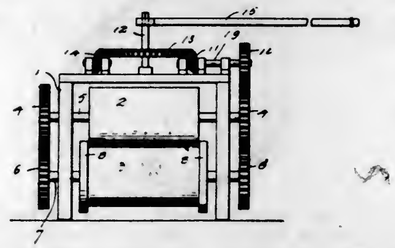
1,373,677. HARMONY-BOX FOR TALKING-MACHINES. BENEDICKT SCRIVANI, Camden, N. J. Filed Apr. 17, 1920. Serial No. 374,572. 1 Claim. (Cl. 181—27.)

A harmony box for talking machines, comprising a top having an inlet opening midway its length and provided



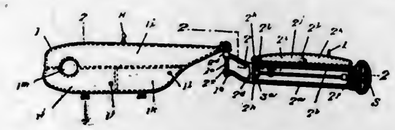
with an outlet opening at each end thereof, parallel side walls connected with said top, downwardly converging end walls connected with said top and side walls; a partition between the side walls midway the length thereof bisecting the inlet opening and forming two resonating compartments, a pair of flat vertical sounding boards in each compartment connected with the partition, side walls, and top, and diverging from points in the region of the inlet opening on the partition to the side walls at points approximately in alinement with the inner edge of the outlet opening, and a longitudinal arcuate sounding board in each compartment, the ends of which are connected to the partition and one of the end walls, the edges of said sounding board diverging outwardly therethrough, a portion of their length connected to the upright sounding boards and end walls.

1,373,678. LOCK. MARTIN SIEMER, New York, N. Y. Filed Feb. 11, 1919. Serial No. 276,267. 1 Claim. (Cl. 70—14.)



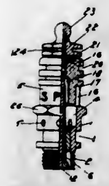
A lock comprising a body portion adapted to be secured to the surface of a door, said body portion having its end adjacent its outer face provided with an apertured plate, said plate extending outwardly parallel to the face of the door and spaced therefrom, a striker plate secured to the edge of the door jam, the outer face of the striker plate being provided with a series of lugs adapted to be received by the apertures of the apertured plate of the body member, said striker plate being of a thickness equal to the thickness of the body portion of the lock less the thickness of the apertured plate thereof so as to allow the door to close and a recess carried by the striker plate and disposed between the lugs thereof and the door frame for the reception of the lock bolt, thereby locking the door at right angles so that the door will be prevented from swinging when a tool is inserted between the edge of the door and a door jamb.

1,373,679. GAME. CHARLES E. SILKWORTH and AMOS P. SILKWORTH, Atlantic City, N. J. Filed Sept. 20, 1920. Serial No. 411,481. 1 Claim. (Cl. 46—56.)



In a game the combination of a turntable, a plurality of miniature sailboats pivoted thereon, an electric fan for producing a current of air toward said sailboats to cause them to rotate on the said turntable, a miniature vessel mounted adjacent the path of rotation of said sailboats, positioning marks on said turntable for defining the positions of the sailboats relative to the said miniature vessel in a contest and after said sailboats have ceased to rotate, a counter arranged adjacent the said game and marks on said counter for identifying the players and the sailboats in the contest.

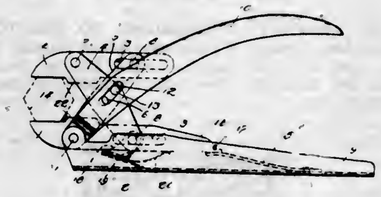
1,373,680. CANE-MILL. JOHN LITTLETON STANALAND, Moultrie, Ga. Filed Apr. 24, 1920. Serial No. 376,303 1 Claim. (Cl. 100—47.)



A canemill comprising a frame including uprights and a cross piece connecting the upper ends of the uprights, crushing rollers mounted in said uprights and having their journals extended therebeyond, corresponding sets of gears connecting the respective journals, a vertical shaft mounted on said cross piece, a gear wheel fast to the vertical shaft, vertical gear wheels mounted on the cross piece upon opposite sides of the vertical shaft and in mesh with the gear wheel fast thereto, the shaft of one of said vertical gear wheels extending beyond the cross piece, a gear wheel connecting said extended shaft with the adjacent set of gearing connecting the crushing rollers, and a sweep pole on the vertical shaft.

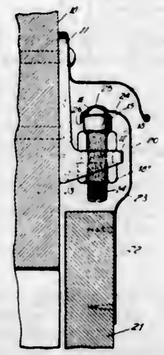
1,373,681. AQUATIC VEHICLE. BRUCE W. STRINGFELLOW, Culpeper, Va. Filed July 23, 1920. Serial No. 398,403. 10 Claims. (Cl. 9—18.)

1. The combination in an aquatic vehicle of a body member; and a frame adapted to carry the propulsive means for said vehicle, said body member and said frame being connected by means of a universal joint.



1,373,682. SPARK-PLUG. MAURICE P. SULLIVAN, Torrington, Conn., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Mar. 18, 1918. Serial No. 223,213. 4 Claims. (Cl. 123—169.)

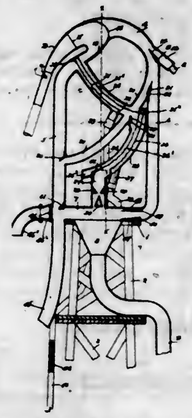
1. In a spark plug, the combination of a shell having threads cut at one end thereof for the purpose of screwing said shell into an engine cylinder, a chamber at the



opposite end and a bore tapering upward from the threaded end into said chamber, a unitary structure consisting of a central electrode with only wound mica insulation thereon, a tapered metallic gland securely positioned on the wound mica and a terminal attached to the end of said central electrode, a fixed distance from said gland, said unitary structure being adapted to fit within said shell in such a manner that the taper on said gland engages the tapered bore on said shell so as to give a predetermined spark gap between the terminal and the shell, a spacing collar resting on the upper part of said shell, an insulator fitting over the central electrode and resting on said collar and a nut adapted to screw on to the upper part of the central electrode to draw all of said parts securely into operative position, as described.

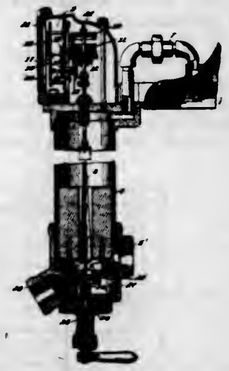
1,373,683. PLIER-TYPE WRENCH. HENRY M. SVEBILIUS, Evanston, Ill. Filed May 14, 1920. Serial No. 381,424. 12 Claims. (Cl. 81—78.)

1. In a tool of the pliers type, a pair of jaw members, a pair of handles operatively connected thereto, and means operated by a continued approaching of the handles after the engagement of the jaws with an interposed object, for biting directly into a face of one of the jaw members to lock the jaws against separational movement.



1,373,684. SLIDING-DOOR HANGER. KENNETH JOSEPH TOBIN, Chicago, Ill. Filed Apr. 2, 1920. Serial No. 370,662. 7 Claims. (Cl. 16—7.)

1. In hanger construction, the combination of a series of spaced brackets each provided with a bearing roller and a track bridging the space between said brackets and formed with a portion supported on said rollers and shaped to be self retaining thereon.



1,373,685. GRAIN-CLEANER. CHARLES ARGYLE TORRENCE, Winnipeg, Manitoba, Canada. Filed Sept. 3, 1919. Serial No. 321,402. 11 Claims. (Cl. 130—17.)

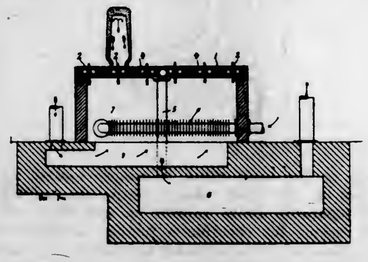
1. In a wind operated grain cleaning machine in combination, a wind feed spout for receiving and delivering the grain to be cleaned, a head chute receiving from the wind spout, vertically disposed side chutes connecting with the opposite ends of the head chute, a screen extending across the head chute and designed to effect an initial separation of the grain and direct the separated grain toward one of the side chutes, a blast chute connecting the lower ends of the side chutes, a spreader located above and

delivering to the blast chute, a hopper located on the under side of the blast chute, means for feeding the initially separated grain caught by the screen to the spreader, means for effecting a further cleaning of the grain in passage to the spreader and means for carrying off the material separated from the grain in passage.

1,373,686. DISPENSING-TANK. WILLIAM S. TOWNSEND, Washington, D. C. Filed July 1, 1920. Serial No. 393,279. 8 Claims. (Cl. 221—100.)

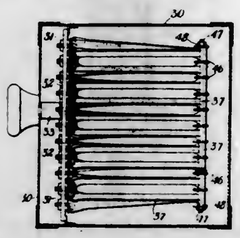
1. The combination with a dispensing tank provided with an air exhaust or suction means and a fluid inlet or supply means, and an outlet, of a vertically movable valve closing upwardly over said outlet and a valve stem movable toward and from the valve to hold it closed when moved up and permit it to automatically close or remain closed when moved downwardly away therefrom; whereby when the valve stem is turned to open the valve prior to the closing of the suction and breaking of the vacuum in the tank, the valve will remain closed or will fly to closed position upon a reverse flow through said outlet.

1,373,687. SHOE-LACE. MAXWELL E. TRAPHAGEN, Brooklyn, N. Y. Filed Feb. 9, 1920. Serial No. 357,245. 2 Claims. (Cl. 24—143.)



2. A lace comprising a body portion, flexible strands stitched securely into the ends of said body portion from

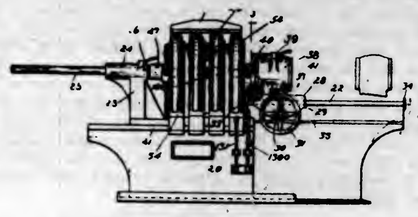
its extremities inward toward its center and then outward to the extreme ends, tightly wound over the end portions thereof the length of the coils being sufficient to



form tips, the ends of the strands being repeatedly passed through the body, in the manner of stitching, adjacent the inner ends of the coils formed by the windings.

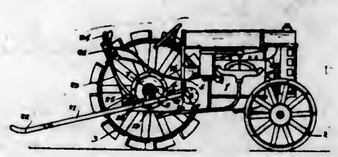
1,373,688. PROCESS AND APPARATUS FOR DRYING CRUCIBLES. LOUIS VERGNIAUD, Paris, France, assignor to Corporation said: Etablissements Jacob Holtzer. Filed July 9, 1919. Serial No. 309,775. 9 Claims. (Cl. 263—4.)

1. A process for drying crucibles consisting in placing the crucibles in inverted position on a heated surface, subjecting the interior of the crucibles directly to a continuous circulation of hot air, and simultaneously subjecting the exterior surfaces of the crucibles to the heat given off by the heated surface, whereby the crucibles are dried rapidly and systematically.



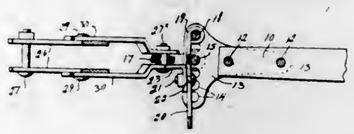
1,373,689. RESISTANCE DEVICE. ALFRED E. WALLER, Mount Vernon, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed Mar. 3, 1919. Serial No. 280,293. 18 Claims. (Cl. 219—55.)

1. In a resistance device, a supporting panel, a plurality of resistor elements comprising strips having stiffened lengthwise portions connected by unstiffened bent portions, and supports for said strips mounted on said panel laterally displaced from each other and connected with the ends of said strips, which ends are separated from said bent portions by the intervening stiffened lengthwise portions.



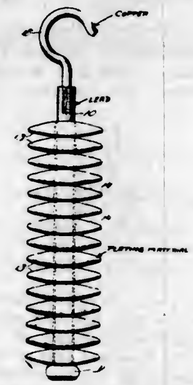
1,373,690. METAL-WORKING MACHINE. HANS H. WANDERS, Brookline, Mass. Filed Feb. 7, 1918. Serial No. 215,896. 29 Claims. (Cl. 90—15.)

1. A metal-worker machine comprising an annular tool carrier, a bearing therefor, work holders adapted to hold work extending through said carrier, means by which said work may be fed longitudinally into and out of position



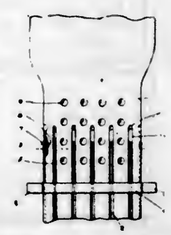
within said tool carrier, mechanism for rotatively indexing said work, and means for rotating said annular tool carrier.

1,373,691. SAFETY ATTACHMENT TO TRACTORS. HARRY LEE JACKSON WATCHORN, GEORGE HADLEY ROBERTS, and MICHAEL RAKER, Coutts, Alberta, Canada. Filed Dec. 9, 1919. Serial No. 343,504. 3 Claims. (Cl. 180—82.)



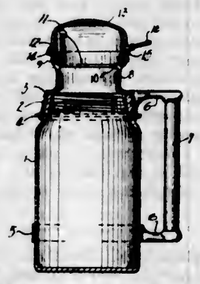
1. In a tractor, the combination with the clutch controlling pedal and the rear axle housing, of a bar extending rearwardly beneath the housing, a quadrant and detent adjustably connecting the bar to the housing, a shoe at the rear end of the bar and an operating connection between the front end of the bar and the clutch pedal.

1,373,692. CLEVIS. GEORGE W. WHATLEY, Clovis, N. Mex. Filed Nov. 3, 1920. Serial No. 421,570. 2 Claims. (Cl. 97—4.)



2. In combination with a wheel supported beam, a draft bar, side plates secured to said beam and provided in the forward edges with alined rows of openings, a pivot pin adapted for interchangeable mounting in the pairs of openings of said rows and having the ends thereof projecting beyond the sides of said side plates, a plate rigidly attached to said bar and provided with rearwardly extending portions having openings formed therein adapted for the reception of the ends of said pivot pin, a second pivot pin mounted in the uppermost pair of openings, a plate pivotally mounted upon said pin intermediate said side plates and extending downwardly of the forward side of said first named pivot pin, said plate being provided with a longitudinally elongated slot, a bolt slidably mounted in said slot, and members mounted upon the forward end of said bolt and provided with a forwardly extending portion adapted to engage beneath said bar attached plate when said plate is axially alined with said plow beam.

1,373,693. ANODE. ARTHUR H. WICKS, Woodstock, Ill. Filed Feb. 19, 1920. Serial No. 359,930. 9 Claims. (Cl. 204—4.)

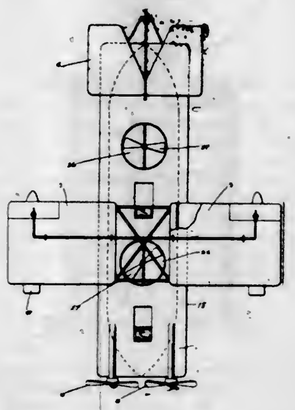


1. An anode of the character described for use in electrolytic tanks comprising a carrier made of material substantially uninfluenced by the solution in the tank, and a plurality of slugs consisting of active plating material demountably supported upon said carrier.

1,373,694. DRYING-FORM. EARL M. WITHERELL, Duluth, Minn., assignor of one-half to F. A. Patrick & Company, Duluth, Minn., a Corporation of Minnesota. Filed Mar. 24, 1919. Serial No. 284,800. 8 Claims. (Cl. 223—17.)

1. The combination with a garment shaping and drying form of the character described, of vertically reciprocable means extending wholly about the base of the form, and carried thereby for holding the garment equally on all sides thereof.

1,373,695. DISPENSER FOR FRUIT-JARS AND THE LIKE. JOSEPH E. WRIGHT, Lankershim, Calif. Filed Oct. 28, 1920. Serial No. 420,230. 2 Claims. (Cl. 65—31.)

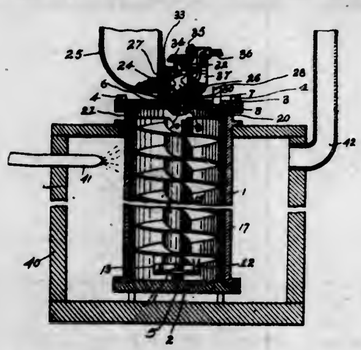


2. The combination with a jar, of a removable cap forming a spout, said cap being threaded on to said jar and having a handle depending therefrom, and a ring at the lower end of said handle received around said jar.

1,373,696. FUSE-PLUG. JOHN WILLIAM WULF, San Juan, Porto Rico. Filed July 7, 1919. Serial No. 308,983. 7 Claims. (Cl. 200—130.)

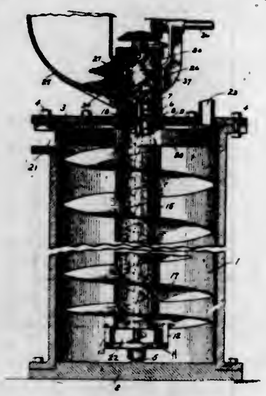
1. A fuse plug, comprising a body, spaced terminals carried thereby, and a fuse connecting said terminals, said body having a part adapted for the reception of a spare fuse, normally separated from said fuse connecting said terminals, said spare fuse being connected to one of said terminals and branching therefrom for disposition in said receiving part.

1,373,697. AIRSHIP. JENNINGS GRANT AMBROSE, San Diego, Calif. Filed Nov. 25, 1919. Serial No. 340,664. 2 Claims. (Cl. 244—2.)



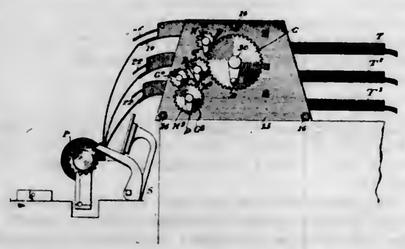
2. In a hydroaeroplane the combination with an aeroplane structure, of a pontoon thereunder, wells extending downwardly through the aeroplane structure and through the pontoon and registering, said wells being open at their upper and lower ends, means for detachably connecting the pontoon to the aeroplane structure, helicopters mounted for rotation within the well for displacing air downwardly and dissipating it between the pontoon and the surface of the water on which the pontoon is resting, and means under the control of the aviator for disconnecting the pontoon from the aeroplane structure while the machine is in flight.

1,373,698. METHOD OF TREATING SHALE AND LIKE MATERIAL. LIGON B. ARD, New York, N. Y. Filed Feb. 3, 1921. Serial No. 442,142. 2 Claims. (Cl. 196—21.)



1. The method of treating shale and like material to drive off volatile matter therefrom, which consists in forcing relatively cool material immediately downward below the surface of a bath of molten metal of higher specific gravity than that of the material to be treated, discharging it in relatively cool condition into the bath of

molten metal to permit it to float upward through said molten metal, and retarding the upward movement of the

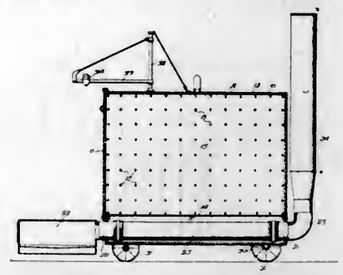


material whereby all of the volatile matter is driven off during its upward movement through said molten metal.

1,373,699. APPARATUS FOR TREATING SHALE AND LIKE MATERIAL. LIGON B. ARD, New York, N. Y. Filed Feb. 4, 1921. Serial No. 442,398. 3 Claims. (Cl. 196—19.)

1. The combination with a heated retort containing molten metal, of a conveyer and means for rotating it arranged to deliver the material to be treated at a point near the bottom of the retort below the surface of the molten metal, and means for retarding the upward movement of the material through the molten metal comprising a helical vane surrounding the conveyer.

1,373,700. PAPER-FEEDING APPARATUS FOR TYPEWRITERS. WILLIAM CHARLES AVERY, Honolulu, Hawaii. Filed Mar. 13, 1920. Serial No. 365,408. 10 Claims. (Cl. 270—58.)

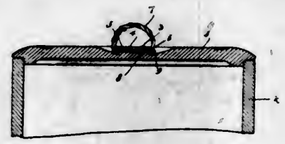


3. A paper feeding apparatus for typewriters comprising, a plurality of trays mounted for rocking movement independently of each other, a set of feed rollers for each of said trays, means for rotating one set of rollers independently of the other sets, and means for rotating all of said rollers simultaneously and at different speeds.

1,373,701. ANIMAL-POKE. PHILIP BARNEY, Dollard, Manitoba, Canada. Filed Mar. 8, 1920. Serial No. 364,107. 5 Claims. (Cl. 119—142.)

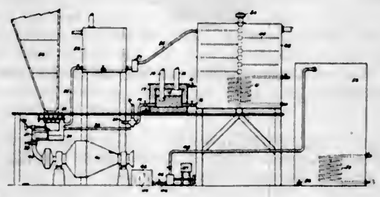
1. In an animal poke, a neck part formed from a single piece of wire bent to span the neck and provided at its extremities with eyes and centrally of its length with a pair of parallel coils, a hooked part formed from a single piece of wire attached to the neck part by passing the ends of the wire through the coils, said hooked part being bent to provide a head rest lying approximately at right angles to the neck part and a pair of upwardly extending diverging prongs positioned approximately at right angles to the neck part, a coil of wire connecting the bases of the prongs together and a nose part detachably connected to the latter coil.

1,373,702. RETORT. HUGH M. BARR, Pensacola, Fla. Filed May 24, 1920. Serial No. 383,742. 9 Claims. (Cl. 203—6.)



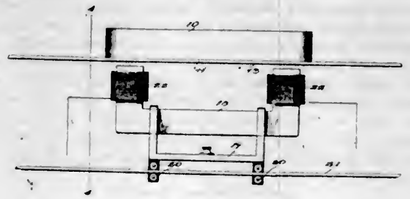
1. A retort for the destructive distillation of wood comprising a metallic shell, a lining of asbestos for said shell, a false bottom of reticulated material defining a retort chamber in the upper portion of the metallic shell and a heating chamber in the lower portion of the metallic shell and means for heating the retort comprising a pair of flues extending longitudinally of the heating chamber, each of said flues including two stationary flue sections alined with each other, one of said sections being seated in one wall of the shell and leading to the source of heat and the other of said sections being seated in the opposite wall of the shell and leading to the stack, a floating flue section suspended within the heating chamber between the stationary sections and spaced from the walls of the heating chamber and means for floating said floating flue section including a split asbestos sleeve having a centrally convexed portion, a split metallic sleeve having a correspondingly convexed central portion and clamping bands for securing the ends of the sleeve to the respective flue section.

1,373,703. COMBINATION HOLDER AND LIFTER. FREDERICK WARREN BARRON, Winnipeg, Manitoba, Canada. Filed July 6, 1920. Serial No. 394,095. 6 Claims. (Cl. 215—100.)



1. The combination with a cover having a knob and with the knob presenting an undercut circumscribing

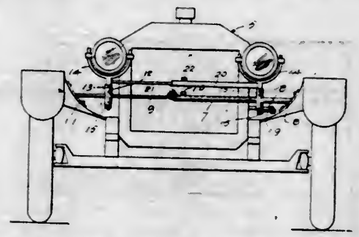
groove, of a combined holder and lifter presenting a band passing around the knob and within the groove and a



handle above the knob and passing from side to side of the band.

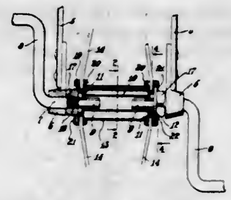
1,373,704. METHOD OF PRODUCING GAS. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Feb. 19, 1920., Serial No. 359,810. 7 Claims. (Cl. 48—211.)

1. That method of making gas which consists in the atomization into and ignition of stable mobile fuel comprising liquid hydrocarbon and pulverized solid carbonaceous substance in a mixture of air and steam in a generator heated to a temperature sufficient to transform the particles of solid carbonaceous substance and the liquid hydrocarbon into gas, the removal of ash from the gas, and the subsequent passage of the gas through a wash box containing liquid hydrocarbon to remove tar and lampblack therefrom.



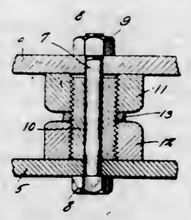
1,373,705. SHUTTLE-MOVER. FRANK JOSEPH BAUME, Mulhouse, Alsace-Lorraine. Filed Nov. 29, 1920. Serial No. 427,107. 2 Claims. (Cl. 139—83.)

1. In looms, a shuttle having a lower lengthwise strip of magnetically attractable material, a race-way on which the shuttle is movable having a lengthwise slot into which the said strip of the shuttle projects for guiding the shuttle, a track parallel with and below the race-way, and a carriage movable in guided relation on the track and having electro-magnetic means spaced below the race-way to attract the shuttle.



1,373,706. DIRIGIBLE HEADLIGHT. JOHN JOSEPH BAVOR, Cleveland, Ohio. Filed Feb. 6, 1920. Serial No. 356,679. 1 Claim. (Cl. 240—62.)

A dirigible headlight for automobiles comprising telescopic members having their outer ends provided with curved plates adapted to be secured to the mud guards of the automobile, upstanding sleeves carried by the telescopic members adjacent their outer ends, revoluble lamp supports mounted in the sleeves, a longitudinally adjustable connection between the lamp supports, a crank arm

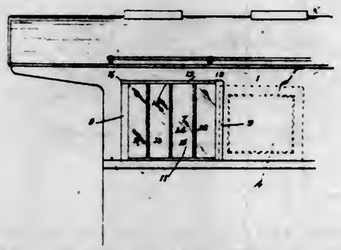


extending laterally from one of the lamp supports, and an operating connection between the crank arm and the steering post of the automobile.

1,373,707. VELOCIPEDE. CLARENCE W. BENNETT, New York, N. Y. Filed Jan. 14, 1920. Serial No. 351,385. 14 Claims. (Cl. 208—68.)

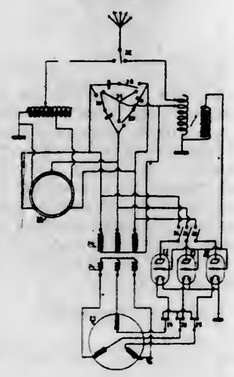
1. In combination with a velocipede, a fork provided with bearings, a wheel in said fork, a hub for the wheel, said hub having non-circular seats in the opposite ends thereof, cranks having non-circular end portions for interlocking engagement in said seats, screw-threaded portions on the crank, journal portions on the crank for engagement with the bearings, and nuts rotatably confined to the opposite ends of the wheel hub and engaging the threaded portions of the cranks to draw the inner ends of the cranks into the seats in the hub and the journal portions into the bearings in the fork.

1,373,708. MOTOR-SUPPORT. GEORGE FRED BLUME, Philadelphia, Pa. Filed Dec. 30, 1920. Serial No. 434,137. 3 Claims. (Cl. 248—30.)



3. In an adjustable motor support, a pair of spaced members, means for securing the spaced members in spaced relation, said means including a threaded sleeve and adjusting nuts operating on the sleeve, and means welded between the nuts for securing the nuts against movement.

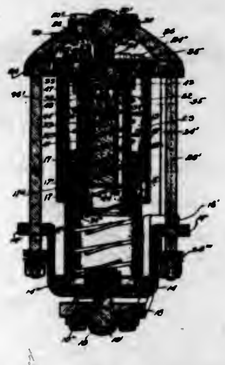
1,373,709. WINDOW ATTACHMENT. WALTER STEWART BORLAND, Saskatoon, Saskatchewan, Canada. Filed Dec. 23, 1919. Serial No. 346,864. 7 Claims. (Cl. 20—40.)



1. The combination with a window frame, of a box like window attachment having the inner side open and

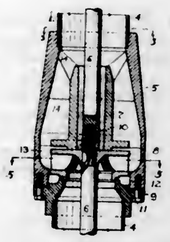
the outer side and ends fitted with window sashes and jack screws carried by the inner side of the extension win-

dow and engageable with the top and bottom of the window frame and detachably securing the extension window to the window frame.



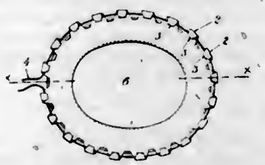
1,373,710. GENERATOR OF HIGH-FREQUENCY OSCILLATIONS FOR WIRELESS TELEGRAPHY. VICTOR JOSEPH FRANÇOIS BOUCHARDON, Lyon, France. Filed Oct. 24, 1919. Serial No. 333,116. 3 Claims. (Cl. 250—36.)

1. A device for generating high frequency electrical oscillations comprising a generator of polyphase currents, a step-up transformer, double anode tubes with cathodic rays of the audion type, a rotary spark apparatus, identical condensers their number being equal to that of the phases of said generator and connected on one hand each with one of the secondaries of the transformer and on the other hand with the tubes and the rotary spark apparatus, switches for connecting to the generator either the tubes with cathodic rays, or said rotary spark apparatus, and switches for connecting said condensers either in delta connection, spark working, or in star connection, working with tubes, the switching of the generator from the rotary spark to the tubes apparatus and inversely being effected while keeping to the same wave length.



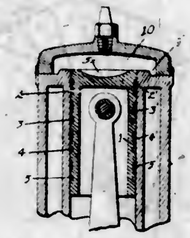
1,373,711. PNEUMATIC SPRING. ALEXANDER P. BOURNE, Barrington, R. I. Filed July 16, 1918. Serial No. 245,230. 36 Claims. (Cl. 267—50.)

1. An air spring having normally closed inlet and outlet for air, and means actuated by expansion of the spring to open the outlet, and by contraction to open the inlet; and a device intervening between said means and the moving parts of the spring, actuating said means and itself being actuated with the spring actuations, and com-



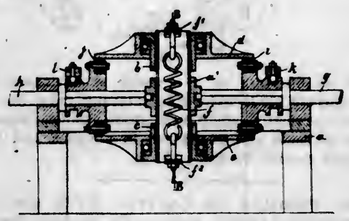
posed of means transmitting the impulses with less resilience than air.

1,373,712. DEEP-WELL PUMP. FRANK M. BUDLONG, San Jose, Calif. Filed Feb. 13, 1920. Serial No. 358,347. 2 Claims. (Cl. 253—199.)



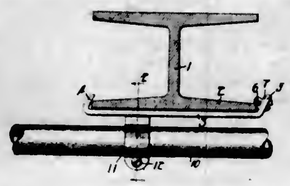
1. An extensible deep well pump comprising an outer tubular column consisting of a series of tubes, a pump inclosing casing having the upper of said tubes secured to the top thereof, a coupling member fixed to the bottom of said casing and having the next lower tube engaged therewith, said casing having a shaft bearing in the center thereof and water passages about said bearing through said casing, a sectional shaft rotatably mounted in said bearings and having the sections thereof screwed one into the other at the bottom of said bearings, and a pump fixed on the lower of said shaft sections immediately beneath the union between said sections and next beneath said bearing.

1,373,713. HAT-PROTECTOR. JEAN FRÉDÉRIC SCHWEIZER-CAILLAUX, Vincennes, France. Filed Oct. 31, 1919. Serial No. 334,692. 1 Claim. (Cl. 2—108.)



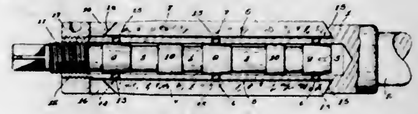
A hat cover of waterproof material, comprising a flexible cover body having tapering teeth formed at its outer edge, the ends of which teeth are folded down and secured to the cover so as to form loops, and a flexible member adapted to be inserted in said loops.

1,373,714. ENGINE-PISTON. JAMES W. CALTA, Platte, S. D. Filed May 19, 1919. Serial No. 298,180. 3 Claims. (Cl. 74—108.)



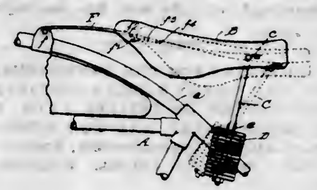
1. A piston for internal combustion engines including a body portion having a series of annular grooves in its exterior face and piston rings in said grooves, and annular tapering recesses in the exterior face of the piston, the tapering walls of the recesses gradually approaching the circumference of the piston body and terminating in and coinciding with one outer corner of said grooves.

1,373,715. CHANGE-SPEED DEVICE. CHARLES AMÉDÉE CAMBAY, Paris, France, assignor to Antoine Henri Theophile Bonnet and James Tiburce Felix Conti, Paris, France. Filed Apr. 12, 1920. Serial No. 373,362. 3 Claims. (Cl. 74—26.)



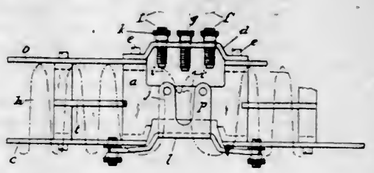
1. A change speed system containing in combination a driving shaft and a receiving shaft, two friction rollers keyed respectively upon the shafts, means for displacing the rollers along said shafts, a main body or frame, a hollow column supported by said frame, two sleeves sliding upon the column, friction plates mounted in ball bearings upon sleeves, and a retractile spring disposed within the column and tending to draw the sleeves together.

1,373,716. SUPPORT. JOSEPH DOTTL and HERBERT G. HART, Madison, Wis. Filed Aug. 2, 1919. Serial No. 314,966. 1 Claim. (Cl. 248—32.)



A hanger including a main member secured at one end to the corresponding edge portion of a flanged beam and extending transversely across said beam, the other end of said member being of channel cross section, a key element associated with said last named end and adapted to engage over the corresponding edge of the flange of the beam, and means for supporting a pipe or the like from said main member.

1,373,717. REAMER. HENNING ENLUND, Syracuse, N. Y. Filed May 16, 1919. Serial No. 297,521. 1 Claim. (Cl. 77—76.)

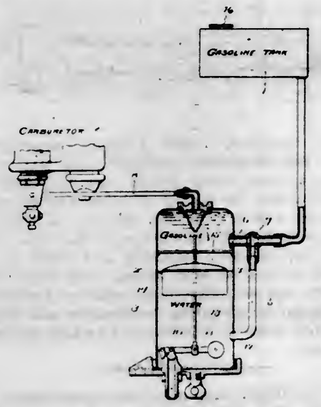


A reamer comprising a body having a lengthwise internal bore and lengthwise peripheral grooves, the bottoms of the grooves being formed with passages at intervals opening into the bore of the body, cutters mounted in the grooves and a retaining ring at one end of the body and coacting with the cutters to hold the same in the grooves, an expander extending into the bore of the body, a wall located in each passage and coacting with the expander and with the inner edge of the adjacent cutter and means for operating the expander and holding it in its adjusted position, substantially as and for the purpose described.

1,373,718. SADDLE. LEIGH R. EVANS, Rochester, N. Y., assignor to Cyclemotor Corporation, Rochester, N. Y. Filed Mar. 1, 1920. Serial No. 362,546. 12 Claims. (Cl. 208—100.)

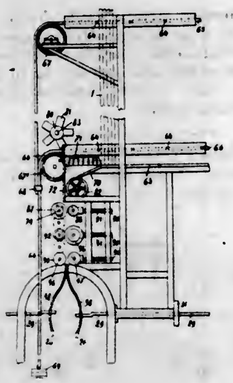
1. The combination with a cycle frame, of a saddle mounted thereon, a spring operatively connected with the rear portion of said saddle and with said frame, and means for holding said saddle and said spring in different relative positions to vary the force exerted upon said spring by a weight on said saddle.

1,373,719. CROSSCUT-SAW GAGE. WILLIAM E. GIBBS, Portland, Oreg. Filed Nov. 23, 1917. Serial No. 203,640. 4 Claims. (Cl. 33—202.)



2. In a saw gage of the character described, the combination of a body piece, a gage plate, a pair of screw posts threaded into the body piece, each provided with a collar-like shoulder, the extremities of the gage plate bearing on said shoulders, clamping nuts threaded on the screw posts, said gage plate having a pendant web, and means for clamping said web to the body piece, thereby holding the gage plate rigid in the position to which adjusted.

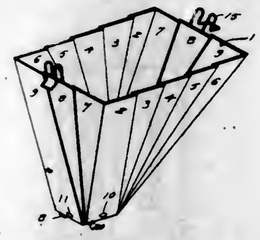
1,373,720. PROCESS OF TREATING HYDROCARBONS. DANIEL BRAILEY GISH, Washington, D. C. Filed June 12, 1917. Serial No. 174,334. Renewed Apr. 22, 1920. Serial No. 375,899. 1 Claim. (Cl. 48—219.)



The process of supplying an explosive engine with a volatile liquid hydrocarbon consisting in providing a body

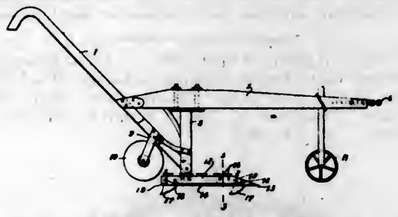
of water between the supply tank and the engine and passing the hydrocarbon through said water on the way to the engine, whereby the hydrocarbon is washed and all

foreign substances in suspension separated from the hydrocarbon and retained by the water, and whereby said hydrocarbon is caused to take up in suspension a certain amount of water and carry the same into the engine.



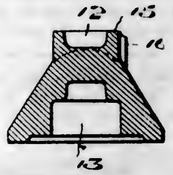
1,373,721. APPARATUS FOR THE TRANSFORMATION OF REEDS INTO WOVEN FABRICS SUITABLE FOR THE MANUFACTURE OF CEILING LATH-WORK, BASKETS, RECEPTACLES, AND THE LIKE. PAUL DE GUARDIA-CALMÈTES, Cayeux-sur-Mer, France. Filed Oct. 27, 1920. Serial No. 419,963. 8 Claims. (Cl. 144—182.)

1. An apparatus for the transformation of reeds into woven fabrics suitable for the manufacture of ceiling lath work, baskets, receptacles and the like, constituted by reed preparing devices located above the weaving loom; comprising a platform upon which the reeds are disposed vertically, means for separating and spacing in line the reeds, means for feeding the said reeds, means for splitting, opening and flattening the same, and a device for feeding directly the warp bands into the weaving loom.



1,373,722. COLLAPSIBLE FUNNEL. ELMER E. GUSTAFSON, Sullivan, Mich. Filed May 14, 1920. Serial No. 381,387. 6 Claims. (Cl. 226—38.)

1. A funnel comprising a body including side and end walls, a plurality of plates constituting said walls, means pivotally connecting the plates of said walls together, and means formed on some of the plates of said walls and

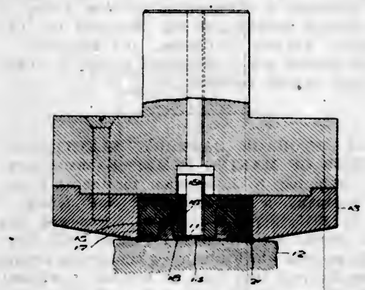


adapted to engage the other plates of said walls to limit the movement of the plates away from each other.

1,373,723. PLANT TOPPER AND CULTIVATOR. LEONARD G. HARDY, Salt Lake City, Utah. Filed Jan. 17, 1920. Serial No. 352,192. 3 Claims. (Cl. 55—107.)

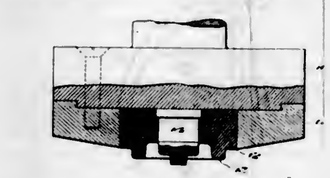
1. The combination of a landside, a horizontally positioned cutting blade extending laterally from the landside, and vertically positioned guide blades depending from the landside and positioned in advance and to the rear of said cutting blades.

1,373,724. FORGING OR CASTING WITH GRIPPING AND DRIVING LUGS. CARL G. HEIBY, JOHN BURKAM, DAVID E. LINDQUIST, FRED L. RIGGIN, EBENEZER W. ALLEN, and RICHARD LAU, Sarnia, Ontario, Canada, assignors, by mesne assignments, to Mueller Metals Company, Port Huron, Mich., a Corporation of Michigan. Filed Jan. 17, 1918. Serial No. 212,229. 2 Claims. (Cl. 29—148.2.)



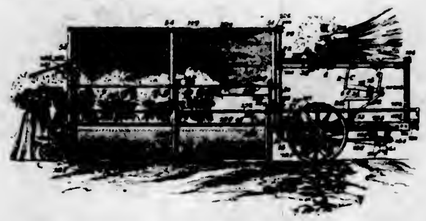
1. As a new article of manufacture, a blank for fuse caps and like articles, having a body portion of substantially cone-like formation, with a gripping surface of ring-like form extending from the small end of said body portion, said gripping surface having a centrally disposed depression or cavity, and a driving lug projecting laterally from the outer wall of said gripping surface.

1,373,725. METHOD OF PRODUCING FORGINGS. CARL G. HEIBY, JOHN BURKAM, DAVID E. LINDQUIST, FRED L. RIGGIN, EBENEZER W. ALLEN, and RICHARD LAU, Sarnia, Ontario, Canada, assignors, by mesne assignments, to Mueller Metals Company, Port Huron, Mich., a Corporation of Michigan. Filed Jan. 17, 1918. Serial No. 212,230. 5 Claims. (Cl. 78—81.)



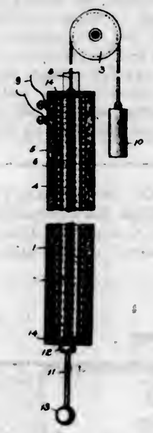
1. The method of producing forged blanks having hollow interiors which consists in forming centering means

on a suitable slug, positioning said slug by the centering means on a complementarily formed die, subjecting such



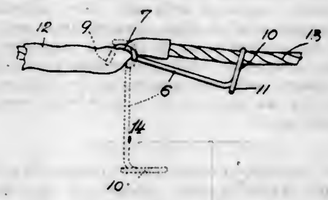
centered slug to the combined action of dies and a punch without forcing the punch through the slug, and there after trimming away the unpunched webs.

1,373,726. METHOD OF AND DIE FOR PRODUCING FORGINGS. CARL G. HEIBY, CHARLES A. HILL, and DAVID E. LINDQUIST, Sarnia, Ontario, Canada, assignors, by mesne assignments, to Mueller Metals Company, Port Huron, Mich., a Corporation of Michigan. Filed Jan. 17, 1918. Serial No. 212,233. 14 Claims. (Cl. 78—81.)



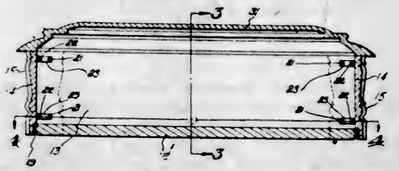
1. The method of producing a forged article free from surface impurities from a blank having an impure skin or outer surface, which consists in subjecting such blank to the action of forging dies to bring it to the required shape and simultaneously therewith forging off by die action the outer skin of the blank.

1,373,727. GRAIN SHEAF-SHOCKER. JACOB P. HIEBERT, Hillsboro, Kans., assignor to Hillsboro Shocker and Machine Co., Hillsboro, Kans., a Corporation of Kansas. Filed Aug. 7, 1919. Serial No. 315,922. 78 Claims. (Cl. 56—416.)



1. Instrumentalities in a sheaf shocker for automatically controlling shock forming mechanism by the weight of successive sheaves, comprising a shock compartment, instrumentalities for catching and automatically setting a sheaf at the entrance of the shock compartment, and instrumentalities automatically rendered active by the action of setting said sheaf for pushing it into said compartment.

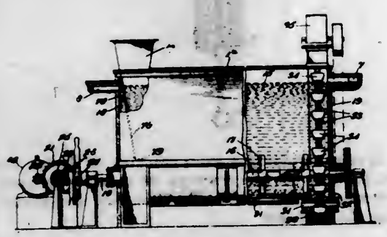
1,373,728. DEVICE FOR SEVERING GLASS. HARRY F. HITNER, Wilkinsburg, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Feb. 5, 1920. Serial No. 356,396. 9 Claims. (Cl. 49—50.)



1. In combination in a glass cracking off device, a heating chamber, a flexible cracking off member mounted for movement into and out of the chamber, and means for heating the chamber.

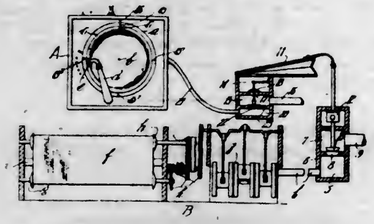
1,373,729. CLOTHESPIN. ALFRED J. HOEHN, New York, N. Y. Filed July 31, 1920. Serial No. 400,370. 2 Claims. (Cl. 24—139.)

1. As a new article of manufacture, a clothes pin made of a single piece of wire and comprising a straight body portion, a clothes engaging hook formed at the one end of said body portion, said clothes engaging hook being in a plane substantially parallel to a plane through the center of said body portion, a line engaging hook formed at the other end of the said body portion, said line engaging hook being in a plane at right angles to the said body portion.



1,373,730. KNOCKDOWN BURIAL-CASKET. FREDERICK E. HOLLINS, Somerville, Mass. Filed Nov. 20, 1920. Serial No. 425,347. 5 Claims. (Cl. 27—2.)

1. A knock-down burial casket comprising an oblong bottom member, a pair of side members, a pair of end members, the longitudinal and transverse edges of the



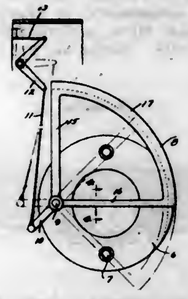
bottom member and the lower portions of the inner sides of the side and end members being provided with elements of separable interengaging means, permitting engagement of the lower portions of the side and end members with the longitudinal and transverse edges of the bottom member by horizontal sliding movements of the side and end members, to form a preliminary connection maintaining the side and end members perpendicular to the bottom members, and in position to form the body of a rectangular box, angular corner members formed to cover the corner portions of said body, and means operable from the interior of the body for clamping said corner members against the side and end members.

1,373,731. PROCESS OF EXTRACTING VALUABLE COMPONENTS FROM RAW MATERIALS. JOHN W. HORNSBY, Summit, N. J. Filed June 29, 1916. Serial No. 106,677. 1 Claim. (Cl. 23—13.)

The process of extracting a soluble salt from a raw material, carrying said salt and other ingredients, which consists in providing a mother liquor containing and adapted to be saturated with said other ingredients between the ranges of working temperatures, moving said material and mother liquor in opposite directions in contact with each other while energetically agitating the same to dissolve said salt, separating the solid and liquid and removing the liquid from a quiet zone remote from the agitated zone.

1,373,732. REPRODUCING INSTRUMENT AND ASSOCIATED MECHANISM. FREDERICK A. HOSCHKE, Springfield, Mass. Filed May 10, 1918. Serial No. 233,719. 6 Claims. (Cl. 84—4.)

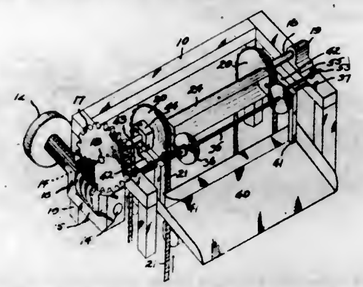
1. In combination, a record propelling means, reproducing mechanism, indicating means permitting the record to be set relatively to the reproducing means so that reproductions commence after the record has been moved a predetermined distance, a second mechanism, and means independent of the first mechanism and its record for starting the second mechanism simultaneously with the reproductions of the first mechanism and after the first-named means has moved the record said distance.



1,373,733. STORAGE-BATTERY ELECTRODE AND PROCESS OF MAKING SAME. HARRY CROSS HUBBELL, Irvington, N. J., assignor to Hubbell-Fuller Battery Company, a Corporation of New Jersey. Filed July 9, 1915, Serial No. 38,902. Renewed Aug. 13, 1920. Serial No. 403,301. 6 Claims. (Cl. 204—29.)

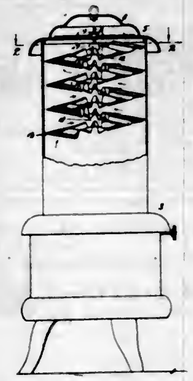
1. The process which comprises heating a nickel oxid with finely divided cadmium.

1,373,734. STORAGE-BATTERY ELECTRODE AND PROCESS OF MAKING SAME. HARRY CROSS HUBBELL, Irvington, N. J., assignor to Hubbell-Fuller Battery Company, a Corporation of New Jersey. Filed July [illegible] 1915, Serial No. 38,901. Renewed Aug. 13, 1920. Serial No. 403,302. 4 Claims. (Cl. 204—29.)



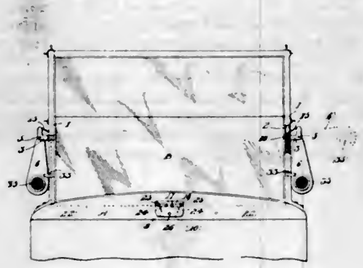
3. The process which comprises converting precipitated cobaltous hydrate into oxid by heating it without substantial exposure to the air, cooling it under the same conditions, mixing with a nickel material, tableting the mixture, and assembling same in a conducting container.

1,373,735. DRAFT APPLIANCE FOR LOCOMOTIVES. GEORGE J. HUESTIS, Belleville, Ontario, Canada. Filed Dec. 9, 1919. Serial No. 343,637. 5 Claims. (Cl. 162—8.)



1. The combination with a locomotive smoke box, and an exhaust nozzle therein, of a movable deflector adapted to be positioned across the outer end of the nozzle, said deflector pivotally mounted and movable transversely across the outlet end of the exhaust nozzle.

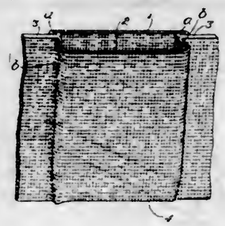
1,373,736. WATER-HOIST. OTTO H. JAHNKE and FRANCIS L. ORR, Denver, Colo. Filed June 26, 1919. Serial No. 306,970. 5 Claims. (Cl. 193—6.)



1. In a water hoist, sprockets, an endless conveyer passing thereover, buckets on said conveyer, and means positioned adjacent the said conveyer at one side thereof and projecting into the path of said buckets to engage the tops thereof to discharge the water therefrom, said means being laterally adjustable to withdraw them from the path of said buckets.

1,373,737. ATTACHMENT FOR STOVES. GEORGE FREDERICK JAMES and IVAN E. SMITH, New York, N. Y. Filed Aug. 14, 1920. Serial No. 403,557. 1 Claim. (Cl. 126—83.)

The combination with the body of an oil or gas stove of a draft retarding and deflecting device suspended in the combustion chamber the same being in annular volute form the spirals being radially fluted and the flutes diminishing in depth from the inner to the outer edge, substantially as shown and described.

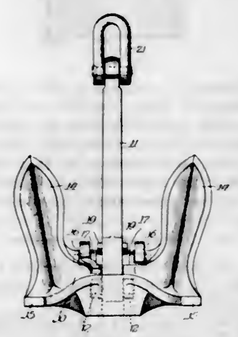


1,373,738. AUTOMOBILE-SIGNAL. MARYAN A. JASZEWSKI, Bethlehem, Pa. Filed Dec. 8, 1919. Serial No. 343,169. 4 Claims. (Cl. 116—52.)

1. A signal for automobiles comprising in combination the side rails of a wind shield frame, said side rails being hollow, a tensioned rod vertically movable in said side rails, a signal arm operatively connected to the upper end of said tensioned rod and means for lowering the rod against tension thereof for shifting the signal arm to a horizontal signaling position.

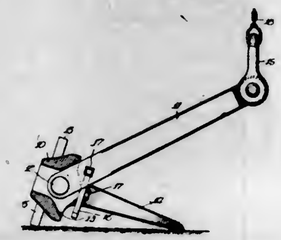
1,373,739. WOVEN POCKETED CARRIER. VICTOR H. JENNINGS, Worcester Mass., assignor, by mesne assignments, to Frank R. Batchelder, Worcester, Mass. Filed Aug. 8, 1918. Serial No. 248,872. 4 Claims. (Cl. 224—23.)

1. A woven pocketed carrier having the front and back walls of its pocket equal in width and united at the opposite sides of the pocket by being interwoven, and also having one of said walls permanently secured in plaited shape by applied fastening means and thereby shortened transversely, whereby the other wall is given fullness to



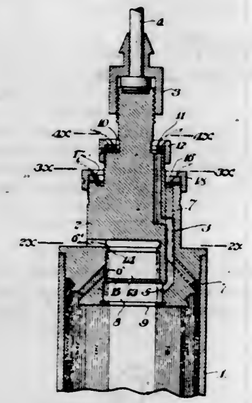
constitute a bulging body-portion adapted to expand across the breadth thereof to give the pocket a substantially rectangular cross-section.

1,373,740. ANCHOR. AP TREVOR JONES, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed May 1, 1920. Serial No. 378,030. 12 Claims. (Cl. 114—208.)



1. A stockless anchor including a head, a shank movably connected thereto, and means for locking said head and shank in a given relative position for creating a gripping leverage causing a quick gripping action of the anchor.

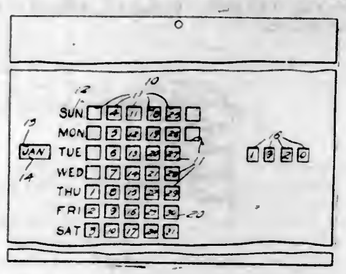
1,373,741. ANCHOR ARRANGEMENT. AP TREVOR JONES, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed May 1, 1920. Serial No. 378,031. 7 Claims. (Cl. 114—208.)



1. A stockless anchor including a head, a shank movably connected thereto, and means carried by said head cooperating with said shank for locking said head and shank in a given relative position for creating a gripping leverage causing a quick gripping action of the anchor.

1,373,742. ANCHOR MECHANISM. AP TREVOR JONES, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed May 1, 1920. Serial No. 378,032. 3 Claims. (Cl. 114—208.)

1. A stockless anchor including a head, a shank movably connected thereto having a locking notch therein, and a locking member carried by said head for coöperating with said locking notch for creating a gripping leverage locking the head and shank in a given relative position for causing a quick gripping action of the anchor.



1,373,743. METHOD AND MECHANISM FOR CENTRIFUGALLY SEPARATING SUBSTANCES. LEO D. JONES, Philadelphia, Pa., assignor to The Sharples Specialty Company, West Chester, Pa., a Corporation of Delaware. Filed Sept. 4, 1920. Serial No. 408,336. 5 Claims. (Cl. 233—21.)

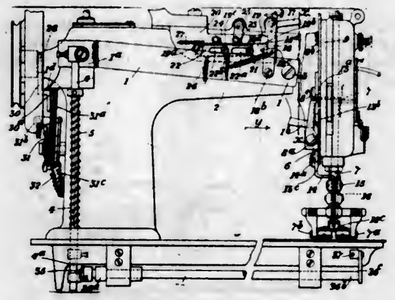
1. The method of separating three substances having different densities which consists in subjecting them to centrifugal force and controlling the distance of the contact surfaces of the centrifugally stratified substances from the center of revolution so that either of the contact surfaces of the intermediate substance may vary substantially without substantially varying its other contact surface.

1,373,744. CALENDAR. JOHN J. KELLY, Holyoke, Mass. Filed Feb. 18, 1920. Serial No. 359,519. 2 Claims. (Cl. 40—109.)

1. A calendar comprising a base provided with a group of openings for the exposure of the day designations of any given month arranged in vertical and horizontal rows, parallel rows of openings having day designations associated therewith, a day indicating slide mounted on the rear of the base and provided with a group of day indicating numerals arranged in vertical and horizontal rows to register with the group of openings in the base for exposure therethrough, said slide being movable on the base in line with the day designations, and concealing slides

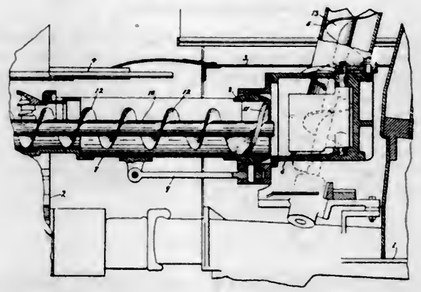
mounted on the day indicating slide to cover surplus numerals thereof.

1,373,745. BUCKLE. GEORGE LARSON, Minneapolis, Minn. Filed June 11, 1917. Serial No. 174,036. 1 Claim. (Cl. 24—191.)



A belt buckle comprising a face plate having its longitudinal edges inwardly turned to form flanges on the rear face of the plate, a cross bar connecting the edges of the flanges at one end of the plate, there being an unobstructed space between said cross bar and said face plate, said face plate having means for connection with one end of a belt, a clamping plate having an angle portion at one end pivotally supported by the flanges of said face plate at the oposite end thereof from said cross bar, the free end of said clamping plate bearing on the belt when the buckle is in use and limiting the movement of the edge of said angle portion past the center of its pivot in said flange, the loose end of the belt being inserted between said cross bar and the other end of the belt and gripped between the angle portion of said clamping plate and face plate and released from said clamping plate by a pull on the belt that would normally tend to tighten it.

1,373,746. HANDHOLD-HANGER. HENRY G. LEWIS and WALTER S. MAYER, Philadelphia, Pa., assignors to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 2, 1920. Serial No. 355,750. 8 Claims. (Cl. 105—354.)

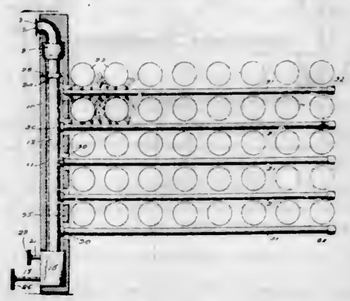


1. The combination with a bearing, of a resilient metal tension member supported by said bearing so as to restrain oscillatory movement thereof, and a tubular hand hold supported by said member

1,373,747. THREAD-CUTTING AND THREAD-END-HOLDING DEVICE FOR EMBROIDERY SEWING-MACHINES. JOHN LINDSAY, Lurgan, Ireland, assignor of one-third to William Henry Evans Brown and one-third to James Bell, Lurgan, Ireland. Filed May 13, 1918. Serial No. 234,279. 3 Claims. (Cl. 112—252.)

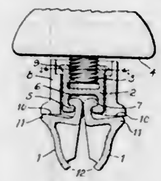
1. In or for sewing machines for doing embroidery or like work on cloth, cutting mechanism for cutting the upper and lower sewing threads, means connected with the pressure bar of the machine, for operating said upper thread cutting mechanism, means for operating said under thread cutting mechanism, and a pivotal catch and sliding member whereby the upper thread, after being cut, is held and prevented from being drawn out of the eye of the machine needle until several stitches have been made by the machine.

1,373,748. SCREW CONVEYER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Aug. 1, 1918, Serial No. 247,762. Divided and this application filed Feb. 24, 1919. Serial No. 278,916. 2 Claims. (Cl. 193—13.)



1. In a locomotive stoker, in combination, a fuel-transferring screw having its final turn of greater radius than the remainder of its turns, and fuel elevating screw means receiving from the transferring screw.

1,373,749. MANUFACTURE OF SPLICE-BARS FOR RAIL-JOINTS. RICHARD JOHNSON MCCOMB, Chicago, Ill., assignor to Q & C Company, New York, N. Y., a Corporation of Maine. Filed Dec. 16, 1920. Serial No. 431,114. 16 Claims. (Cl. 238—243.)

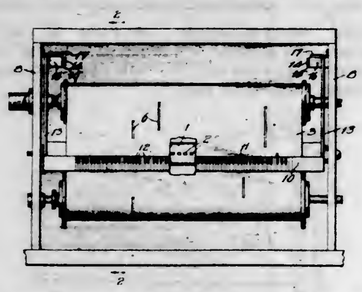


1. The herein described method for producing reinforced splice bars for rail joints which consists in forming a reinforcing enlargement of the cross sectional area of a standard rolled splice bar by welding additional metal thereon, substantially as described.

1,373,750. SOOT-BLOWER. WILLIAM M. MCNEILL, Rosiclare, Ill., assignor of one-half to Billie M. Sheffey, Rosiclare, Ill. Filed July 25, 1919. Serial No. 313,164. 5 Claims. (Cl. 122—392.)

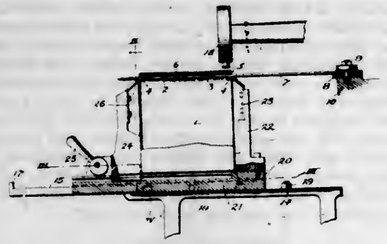
1. In a device of the type described, a tubular member, a plurality of tubes having openings formed therein, said tubes communicating at one end with said tubular member, means for oscillating said tubular member, comprising a casing having an opening formed therein, an extension formed on the lower end of said tubular member extending through said opening, a gear secured to said extension, a shaft mounted within the casing provided with a gear meshing with the gear on said extension, and means for actuating said shaft and means for reciprocating said tubular member embodying a rack formed upon said extension and a shaft rotatable within said casing and provided with a gear meshing with said rack.

1,373,751. CONDUCTOR CLAMP AND SUPPORT. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 6, 1920. Serial No. 415,192. 17 Claims. (Cl. 191—43.)



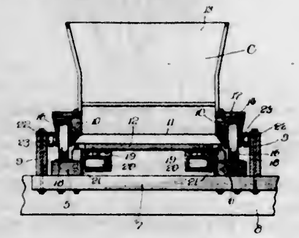
10. A wire clamp to be secured to a hanger to engage and support a conductor comprising clamping means to grip and hold the conductor, means to secure the clamping means to the hanger, unitary operating means slidably and rotatably mounted interposed between the hanger and the clamping means to engage the hanger and move the clamping means into engagement with the conductor.

1,373,752. INDICATOR FOR PLAYER-PIANOS AND SIMILAR INSTRUMENTS. CARL H. MAYER, Chicago, Ill. Filed Feb. 20, 1919. Serial No. 278,150. 3 Claims. (Cl. 84—169.)



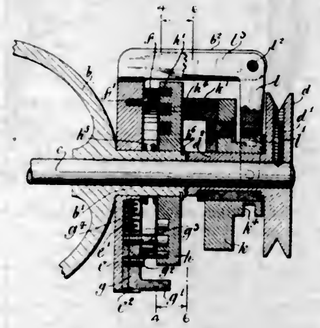
1. In a player piano, the combination of a roller box having side walls, a tracker board in said roller box for coöperation with a perforated sheet of music, a key designation bar adapted to be swung into position adjacent said tracker board, a pivot support on the end wall of said

roller box, a pivotal extension on said key designation bar having pivotal mounting on said pivot support, a plurality of flat detent surfaces on said pivotal extension and a leaf



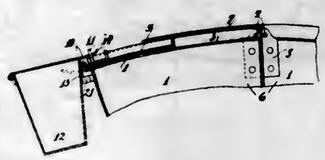
spring fixedly mounted and adapted to bear on said flat surfaces for retaining said key designation bar in its operative and inoperative positions.

1,373,753. BOX-STITCHING MACHINE. CHARLES C. MENGEL, Louisville, Ky. Filed July 9, 1919. Serial No. 309,625. 6 Claims. (Cl. 1—15.)



4. In a box stitching machine, the combination of a stitching mechanism; a thin bar anvil secured at one end to the frame of the machine and underlying the anvil; a table; a platform mounted for reciprocation on the table beneath the anvil; and a pair of relatively adjustable combined box clamps and anvil supporting members mounted on the platform.

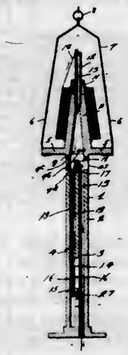
1,373,754. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Nov. 6, 1920. Serial No. 422,115. 1 Claim. (Cl. 104—246.)



In pleasure railway structures of the class described, the combination of supporting frame work, rail structures mounted thereon, a vehicle, vehicle wheels and supporting axles therefor, said vehicle wheels engaging with the top sides of said rail structures, horizontal guard rollers journaled from the underside of said vehicle in position to engage with the inner sides of said rail structures to thereby limit the lateral movement of said vehicle while traveling over said rail structures, guard rollers journaled on the ends of said axles, supporting uprights along side the rail structures, and guard rails secured on said uprights in position to be engaged on their undersides by said guard rollers on the vehicle axles whereby the vertical displacement of said vehicle is confined to prevent said vehicle from leaving the rail structures.

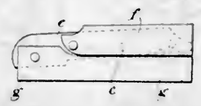
1,373,755. STOPPING MECHANISM FOR SEWING-MACHINES. GEORGE E. MOLYNEUX, Bayonne, N. J. Filed Dec. 2, 1916. Serial No. 134,567. 14 Claims. (Cl. 192—116.)

1. In a stopping mechanism, the combination of a relatively stationary member, a rotatable member, a brake-ring carried by one of said members, the other of said members being formed with a coöperating brake-surface, said members being held normally with the brake-ring and the coöperating brake-surface in inoperative relation, means to move one of said members to place the brake-ring and brake-surface in operative relation, and means to actuate the brake-ring to exert a braking action on the brake-surface.



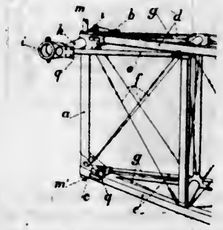
1,373,756. DEVICE FOR THE REMOVAL OF REFUSE. JACOB OCHSNER, Zurich, Switzerland. Filed Aug. 25, 1917. Serial No. 188,100. 2 Claims. (Cl. 220—98.)

1. The combination with a refuse receiving receptacle having a portion of its top open, of a sliding cover for said open portion of the receptacle, a refuse bucket pivotally suspended adjacent said opening, and means carried by the bucket and having a lost motion connection with said cover whereby when the bucket is turned about its pivot said cover is slid away from the opening and the contents of the bucket may be emptied into said receptacle through the opening in the top thereof.



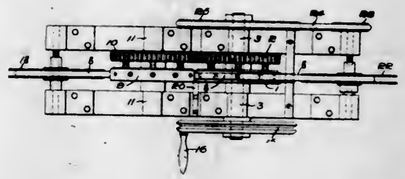
1,373,757. TWINE-HOLDER. AXEL E. OSTERBERG and GUSTAF OBERG, Norway, Mich. Filed Oct. 31, 1919. Serial No. 334,706. 2 Claims. (Cl. 242—143.)

2. A twine holder comprising a body member, means at the upper end of said body member for holding a ball of twine, a chamber in said body member, the lower end of said chamber being divided into two compartments, a roller centrally disposed in the chamber adjacent the upper ends of the two lower compartments, an aperture in one wall of the chamber and having a transversely disposed pin therein, the cord from said ball being adapted to feed downwardly into the aperture and outside of the pin thereby forming angular bends in the cord, said cord being formed in one of the chambers with a bight, a slidable weight carried by said bight, the free end of the cord passing over the roller and out of the body member



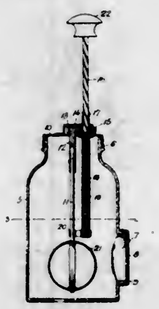
through the other chamber, said angular bending of the cord preventing the feeding of said cord until the weight has been raised substantially to the lower angular bend, at which point it will be maintained during the feeding of the cord.

1,373,758. COLLAPSIBLE HOLDER FOR SHARP-EDGED BLADES OR INSTRUMENTS. AUGUSTO NERY PLATERO, Montevideo, Uruguay. Filed Sept. 4, 1919. Serial No. 321,697. 2 Claims. (Cl. 30—10.)



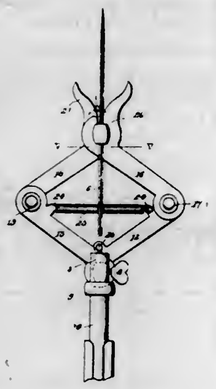
2. A device for holding and protecting a double-edged blade comprising a clamp adapted to hold a double-edged blade, a first cover member pivotally connected to said clamp, holding the same in locked position and adapted to protect one edge of a blade carried by said clamp and a second cover member pivotally connected to the clamp and movable into positions in alinement with and parallel to said clamps for forming a handle for the clamps and a protector for the other edge of the blade.

1,373,759. TAILPIECE FOR AEROPLANES. PIERRE JEAN RENÉ POSTEL-VINAY, Paris, France, assignor to Societe Des Moteurs Salmson (Systeme Canton-Unne), Billancourt, France. Filed Dec. 19, 1918. Serial No. 267,545. 4 Claims. (Cl. 244—31.)



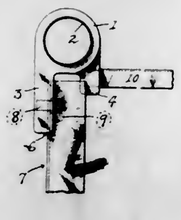
1. A tail-piece for aeroplanes comprising in combination an end upright, metal fittings fixed to the ends of said upright, these fittings being each made in one piece and having each two separate straight recesses independent from each other, each having the shape of the section of the longitudinals of the fuselage, said recess being arranged according to a V in which the ends of the upper and lower longitudinals of the fuselage may be engaged and stay wires connecting the fitting to the fuselage.

1,373,760. PERFORATING-MACHINE. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed June 12, 1916. Serial No. 103,084. 5 Claims. (Cl. 164—28.)



1. In a machine for perforating metallic strip material, the combination with a rotary punch wheel and a rotary die wheel mounted to rotate about parallel axes and with their surfaces closely adjacent but separated by a sufficient amount to receive between them the strip of metal to be perforated, said punch wheel having one or more radially fixed and projecting punch members fixed thereon and protruding above its surface, and said die wheel having radially arranged die openings flush with its cylindrical surface, the openings being spaced apart and of sufficient diameter to receive the punch members with a suitable clearance and said cylindrical surface affording an underlying support for the metal close to the line of shear thereby acting to give a shearing cut to the metal as the two wheels rotate, and said punch members protruding from the surface of the punch cylinder for a sufficient distance to clear the sheared metal from the cut but avoiding substantial wearing contact with the edges of the die opening, means positively to time the rotation of one of said wheels with relation to the other whereby the contact of the punch with the die opening is not relied upon to impart rotative movement from one to the other, and means for presenting the strip metal between the wheels to subject it to the shearing action of the dies.

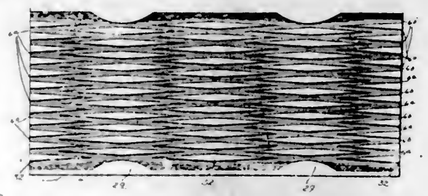
1,373,761. BEATER AND MIXER. SAMUEL RABIN, New York, and JOHN M. LANG, Yonkers, N. Y. Filed Feb. 3, 1920. Serial No. 355,946. 3 Claims. (Cl. 259—128.)



1. In a beater and mixer, the combination of a container having a perforated cap, a depending tube below the perforation, a stem penetrating the cap and having beaters at one end and a pinion at the other end, a plate on the upper side of the cap and securing the pinion, a pinion held against the cap by the plate and having a threaded perforation, a screw working within the threaded perforation and the tube, and a return spring in the tube.

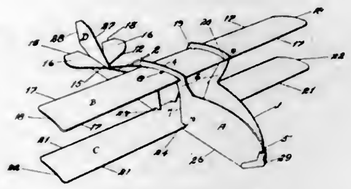
1,373,762. WIRE-CUTTER. FRANK X. RATKOVIC, Etna, Pa. Filed Mar. 5, 1920. Serial No. 363,393. 2 Claims. (Cl. 42—90.)

1. In combination with a bayonet including a blade having a handle, a wire cutter attachment for said bayonet including a sleeve formed to slide onto the bayonet blade and to snugly fit the latter when assuming a position adjacent the handle of the bayonet, means carried by said sleeve to clamp the same adjacent the handle against movement on the blade, a pair of links having their inner ends pivoted to said sleeve to swing toward and away from each other in a plane at right angles to the plane of the bayonet blade, a pair of wire shears including non-crossed blade-carrying handles each having one end pivoted to the outer end of one of said links, a second sleeve slidably mounted upon the bayonet blade and having means pivotally connecting said handles of the wire shears, whereby rearward movement of the second-named sleeve on and relative to the bayonet blade will cause movement of the cutting blades of the shears toward each other for cutting a wire disposed therebetween, and a tension spring extending between and connected to said links for swinging the latter forwardly toward each other, whereby the second named sleeve is yieldably maintained in a forward position with the cutting blades open.



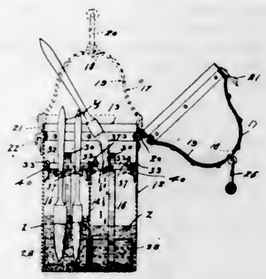
1,373,763. METAL BED CONSTRUCTION. ROY F. REDDING, Evansville, Ind. Filed July 8, 1920. Serial No. 394,754. 4 Claims. (Cl. 5—55.)

1. Metal bed construction comprising side-rails, a jaw secured to posts disposed at each corner of the bed, an arm extending from said jaw, a lug projecting from said jaw opposite said arm adapted to support said rails, and means for detachably securing said rails to said arm.



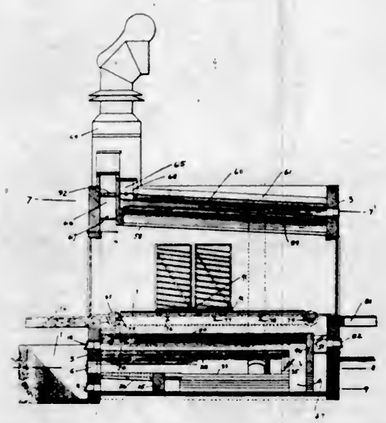
1,373,764. POWER-TRANSMISSION APPLIANCE FOR PUMPS AND COMPRESSORS. PATRICK J. ROONEY, New Rochelle, N. Y. Filed Feb. 16, 1920. Serial No. 358,995. 10 Claims. (Cl. 74—41.)

1. In a power transmission appliance for pumps and compressors, in combination, a hollow cylinder with a plurality of helical grooves in the inner surface thereof, a plurality of ribbed cylindrical segments adapted to seat in the said grooves, a shaft to be reciprocated, means for connecting the said shaft to the said ribbed segments, means for preventing the rotation of the said segments and the said shaft to be reciprocated, means for changing the direction of slope of the said ribs at the point of de-



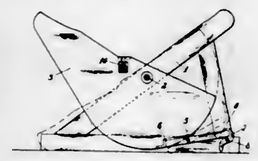
parture of the said segments from one set of helical grooves and of entry into another set of helical grooves of opposite slope, a rotary motor, a coupling between the said motor and the said cylinder, connective means between the said reciprocating shaft and the instrument to be operated, bearings and lubricating means, substantially as described.

1,373,765. AMUSEMENT DEVICE. JOHN M. RUSSELL, San Francisco, Calif. Filed June 21, 1920. Serial No. 390—444. 10 Claims. (Cl. 244—12.)



1. A device of the described class comprising a fuselage formed of a single piece of sheet material, plane supporting struts integral with the side walls thereof, horizontal direction controlling rudders integral with the fuselage, sustaining planes removably connected with the fuselage through said struts and a balancing weight on the forward end of the fuselage.

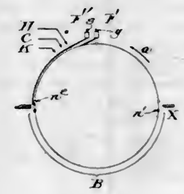
1,373,766. PAINTBRUSH CARRYING AND PRESERVING CASE. OSCAR C. SATHER, Minneapolis, Minn. Filed Sept. 30, 1920. Serial No. 413,791. 4 Claims. (Cl. 91—63.)



1. A paint brush container having a multiplicity of compartments, trays detachably seated in said compartments, and brush holders applied to said container and arranged to suspend brushes within the respective compartments above the underlying trays, said trays having upstanding bails with transverse upper portions that afford brush scrapers.

1,373,767. DRIER. WILLIAM F. SCHALLER, San Francisco, Calif., assignor of one-third to Elsie Schaller and one-third to Irma Helen Schaller, San Francisco, Calif. Filed Sept. 11, 1918. Serial No. 253,628. 5 Claims. (Cl. 34—46.)

2. In an apparatus of the class described, a drier having a hot air chamber surrounding three walls of the dry chamber, a fire chamber below the air chamber, flues leading from the fire chamber for the products of combustion, flues for supplying fresh air to the dry chamber and for heating it, a downwardly extending flue at one end of the dry chamber with an opening thereinto at the lower portion thereof for mixing the incoming air prior to its passage into the dry chamber, and a flue at the opposite end of the dry chamber for the escape of the heated air.

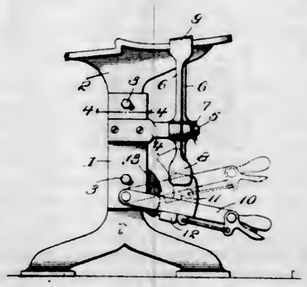


1,373,768. COLLAPSIBLE LIFEBOAT-CHOCK. ANE PIETER SCHAT, Utrecht, Netherlands. Filed June 12, 1920. Serial No. 388,528. 12 Claims. (Cl. 9—22.)

1. A lifeboat chock comprising two members for supporting the boat, one of said members being stationary and the other member being pivoted thereto; a stop on said pivoted member of the chock; a journaled bar disposed tangentially to the path of said stop and having its inner end adapted to come into abutting engagement with said stop to form a lock for the pivoted member of the chock, and to cause the compression exerted on the end of said bar to pass substantially longitudinally through said bar to the journal thereof; and means for tripping said tangential bar to unlock the pivoted member of the chock.

1,373,769. ART OF KNITTING REINFORCED FABRICS. ROBERT W. SCOTT, Boston, Mass., assignor, by mesne assignments, to Scott & Williams, Incorporated, a Corporation of Massachusetts. Filed Sept. 11, 1916. Serial No. 119,331. 11 Claims. (Cl. 66—12.)

1. The art of knitting fabrics having areas reinforced by forming parts of courses containing a splicing yarn and a body yarn interknit together comprising as a step severing the splicing yarn between adjacent places for



new loops in predetermined wales of the fabric during formation of said loops and of the fabric.

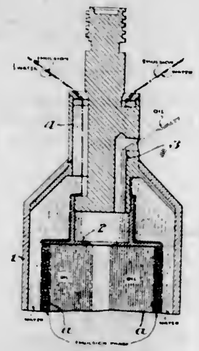
1,373,770. MECHANISM FOR KNITTING REINFORCED FABRICS. ROBERT W. SCOTT, New York, N. Y., assignor, by mesne assignments, to Scott & Williams, Incorporated, a Corporation of Massachusetts. Original application filed Sept. 11, 1916. Serial No. 119,331. Divided and this application filed June 29, 1917. Serial No. 177,702. 25 Claims. (Cl. 66—12.)

8 A knitting machine having therein a series of needles and means for knitting on said needles and yarn severing means acting to sever a yarn between adjacent needles of said series and substantially in the plane of the fabric.

1,373,771. SHOE-HOLDING DEVICE. EUGENE F. SHARKOFF, Washington, D. C. Filed Mar. 27, 1920. Serial No. 369,360. 7 Claims. (Cl. 15—58.)

1. A shoe holding device comprising a member adapted to be disposed on a shoe standard, shoe clamping means on said member and actuating mechanism for said means, independently disposed on the member.

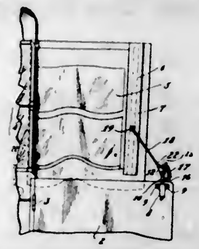
1,373,772. FLEXIBLE SPINDLE-COUPLING. DAVID TOWNSEND SHARPLES, West Chester, Pa. Filed Oct. 3, 1919. Serial No. 328,120. 7 Claims. (Cl. 64—106.)



1. The combination of a suspended spindle having a depending bearing ball, a bowl provided with a concave

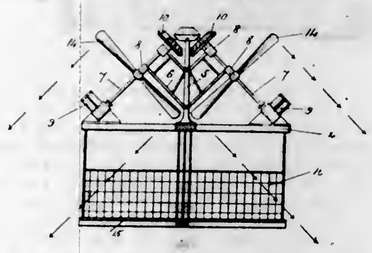
bearing engaging said ball, and means comprising a concave bearing connecting said ball and concave bearing

first named, whereby said bowl is connected flexibly with said spindle.



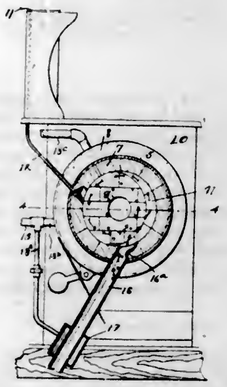
1,373,773. METHOD OF RESOLVING EMULSIONS. PHILIP T. SHARPLES, St. Davids, Pa. Filed Oct. 21, 1918. Serial No. 259,107. 9 Claims. (Cl. 196—25.)

1. The method of treating an emulsion comprising three phases which consists in centrifuging the same so as to effect separation with the discharge of the lightest phase separately from the heavier phases, retarding the discharge of said lightest phase so as to hold a relatively large volume thereof in the centrifuge, and subjecting said volume to the highest centrifugal force practicable without discharging a substantial amount thereof with said heavier phases.



1,373,774. DOOR-IRON. FRANK J. SHIVELY, Canton, Ohio. Filed Mar. 6, 1920. Serial No. 363,654. 3 Claims. (Cl. 296—139.)

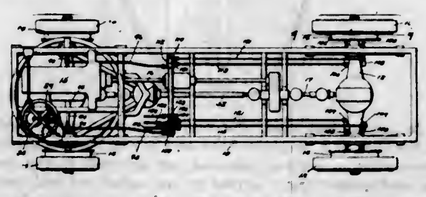
1. A door iron comprising a keeper adapted to be connected to a vehicle door, a bolt adapted to be normally seated in said keeper, an arm pivotally connected to said bolt and arranged to be pivotally connected to the edge



of a door curtain and a spring connecting said bolt and said arm to hold the curtain taut.

1,373,775. HELICOPTER. WALTER TAFT, Wilmington, N. C. Filed Aug. 20, 1920. Serial No. 404,784. 7 Claims. (Cl. 244—19.)

7. In a helicopter, a frame, pairs of propellers journaled in the frame and arranged symmetrically around a normally vertical axis with their axes inclined thereto, means for revolving each alternate pair of propellers in a different direction from the remaining pairs, and a support for the aviator suspended from the said frame and arranged in the central space between the blast currents of the propellers.

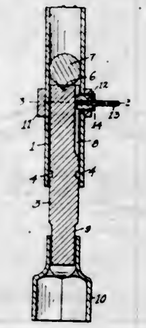


1,373,776. COAL-DUST FURNACE. JOHN TAYLOR, Salt Lake City, Utah. Filed June 6, 1919. Serial No. 302,330. 2 Claims. (Cl. 110—28.)

1. In a device of the character described, a substantially circular combustion chamber the axis of which is horizontally disposed, a conductor for the products of combustion leading from the rear of said chamber and materially

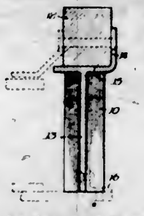
smaller in diameter than said combustion chamber, a flue disposed at right angles to said conduit and a pipe adapted to carry air and powdered fuel, said pipe leading through the side wall of the combustion chamber adjacent the front end thereof and discharging tangentially thereinto.

1,373,777. MOTOR-TRUCK STEERING-GEAR. DANIEL T. TIMBERLAKE, St. Louis, Mo., assignor to Universal Motor Truck and Traction Engine Company, St. James, Mo., a Corporation of Missouri. Filed Oct. 26, 1918. Serial No. 259,743. 1 Claim. (Cl. 180—49.)



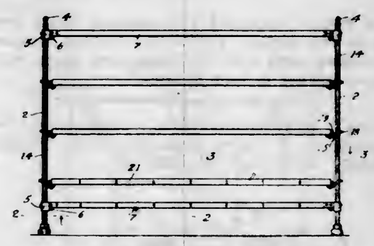
In a motor truck provided with a main frame, a ring positioned beneath the frame, a second ring provided with teeth on its inner face and adapted to revolve beneath the first ring, anti-friction bearings between the rings, a frame carried by the second ring, an axle and wheels carried by said frame, a laterally projecting bracket secured to said frame, a gear housing revolubly mounted in said bracket, driving gears in said housing, driving connections between said gears and front axle, a pinion meshing with said teeth of the second ring, a shaft adjacent to the pinion, a worm mounted thereon, and a substantially vertical steering staff for rotating said shaft.

1,373,778. BUSHING. ERNEST E. TOMPKINS, Philadelphia, Pa. Filed Mar. 31, 1919. Serial No. 286,290. 3 Claims. (Cl. 85—32.)



1. A bushing comprising an internally threaded cylinder, and longitudinally extending fingers arranged outwardly of and near the cylinder in a surrounding group, said fingers being secured to the cylinder and twisted upon their longitudinal axes for forming spirals.

1,373,779. RATCHET SOCKET-WRENCH. CHARLES O. TOOKER, Richmond, Ind., assignor of one-half to Roy C. Fry, Richmond, Ind. Filed Nov. 29, 1920. Serial No. 427,113. 1 Claim. (Cl. 81—60.)

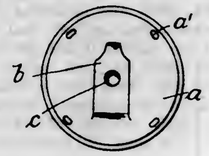


A ratchet wrench comprising a tubular body, a crossbar for turning the body, a stem rotatably mounted in the lower portion of the body and projecting downward therefrom, a ball secured in the body forming a bearing for said stem, means for retaining the stem in place in the body, there being channels formed in the periphery of the upper portion of the stem and extending longitudinally thereof, a collar surrounding the body and located below said ball bearing, a dog slidable in and out in an aperture formed through the collar and the wall of the body, a spring carrying said dog, means for securing the spring to the collar, and means for manually turning the dog to reverse the action of the ratchet connection of the dog with said grooves in the stem, all substantially as shown and described.

1,373,780. DRAFT-ARM. WILLIAM S. TROWBRIDGE, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed June 16, 1919. Serial No. 304,579. 11 Claims. (Cl. 105—420.)

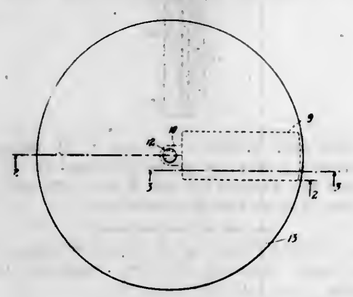
1. A draft arm having a web and a sill flange, and means whereby a draw bar pocket is formed on the inner side of said web whether the arm is used with said flange on the inner or outer side of a center sill.

1,373,781. DISPLAY-RACK. CHARLES WAGNER, Minneapolis, Minn. Filed July 22, 1918. Serial No. 246,142. 2 Claims. (Cl. 211—14.)



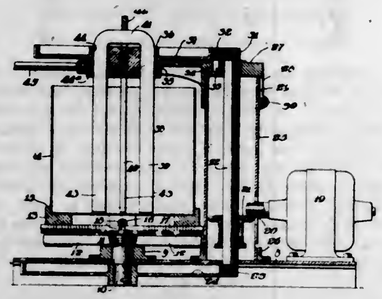
1. A display rack comprising upright posts having means for holding them in parallel relation and provided with notches at intervals therein, plates having angular portions provided with openings to receive said posts and lugs formed on one edge of said openings to enter said notches, the opposite edges of said openings bearing on the opposite sides of the posts to support said plates in a horizontal position, cross bars secured to said plates and spaced from said posts to allow said plates to be tilted sufficiently to disengage their lugs from the notches in said posts, and display racks seated upon said cross bars.

1,373,782. FASTENING DEVICE. CHARLES WEST, London, England. Filed Mar. 3, 1920. Serial No. 363,075. 5 Claims. (Cl. 24—224.)



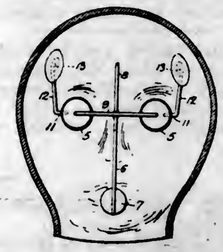
1. A fastening device of the type described consisting of two members each formed from a single piece of material, one of said members constituting a bridge portion comprising a plate having raised centrally thereon a bridge, said bridge extending above the general level of the plate, and formed of restricted width at at lease one end and a second member constituting a receptive portion comprising a plate having raised thereon two upwardly and inwardly projecting sides spaced apart to receive the bridge of the other member the tongue located between

the projecting sides having a central recess adapted when the parts are engaged with one another to receive a bead



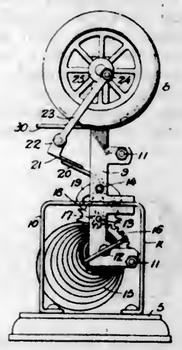
pressed out centrally of the bridge portion to prevent self disengagement, for the purposes set forth.

1,373,783. SELF-LUMINOUS WRITING AND READING DEVICE. PAUL M. WILLIS, Orange, N. J., assignor to Radium Luminous Material Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 17, 1917. Serial No. 202,608. 6 Claims. (Cl. 240—1.)



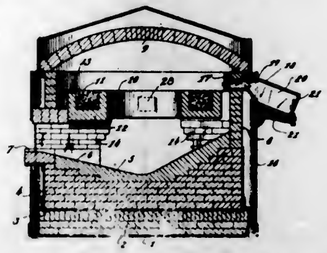
1. A device comprising a transparent plate with recesses in one surface, a reflecting backing cemented to said recessed surface of the transparent plate, and self-luminous powder in said recesses.

1,373,784. MIXING-MACHINE. CLARENCE G. WYATT, Camden, N. J. Filed Sept. 25, 1919. Serial No. 326,267. 6 Claims. (Cl. 259—84.)



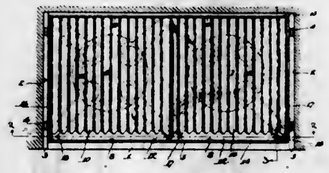
1. A mixing machine including means for supporting a vessel in which material to be mixed is placed; a supporting structure; an arm on said supporting structure and adapted to be moved over and away from said vessel; movable means on said arm; and a mixing device freely suspended from said latter movable means into said vessel and having a portion resting on said moving means, said portion being adapted to be manually grasped and lifted so as to move said mixing device out of the vessel without raising said arm and to permit said arm to be moved in a substantially horizontal path from over said vessel; substantially as described.

1,373,785. MECHANICAL EYES. DAVID ZAIDEN, New York, N. Y. Filed Oct. 13, 1919. Serial No. 330,329. 1 Claim. (Cl. 46—40.)



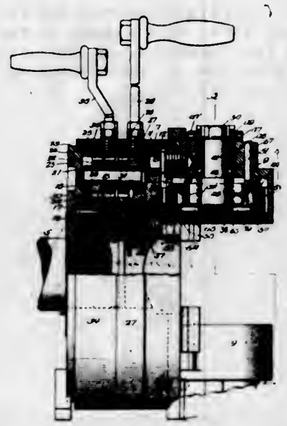
In mechanical eyes, the combination of eyes carried at the ends of a horizontal bar and having sockets at their outer edges, a vertical resilient rod attached to the cross bar and comprising a spring at its upper end and carrying a muffled weight at its lower end, and hooks adapted to enter the sockets and be fastened to the sides of the interior of a doll's head.

1,373,786. MECHANICAL MOTOR. DAVID ZAIDEN, New York, N. Y. Filed Oct. 13, 1919. Serial No. 330,330. 2 Claims. (Cl. 185—46.)



1. In a mechanical motor, the combination of power means, a gear wheel driven by the latter, a shaft with a pinion to mesh with the gear wheel, an escapement wheel on the shaft, an escapement dog, an arm projecting from the upper side of the dog, a fly wheel, a pitman connecting the arm and the fly wheel, and a flexible brake adapted to operate on the shaft of the fly wheel.

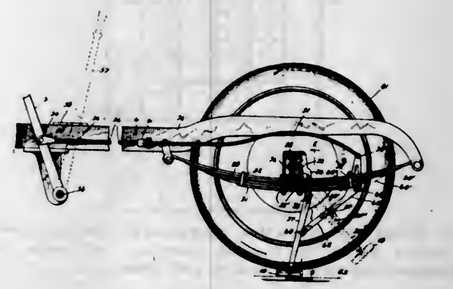
1,373,787. MELTING-FURNACE. THADDEUS F. BAILY and FRANK T. COPE, Alliance, Ohio, assignors to The Electric Furnace Company, Alliance, Ohio, a Corporation of Ohio. Filed Feb 16, 1920. Serial No. 359,090. 12 Claims. (Cl. 263—12.)



12. A brass melting furnace and a condenser communicating with the upper portion of the heating chamber thereof, the condenser provided with an inclined neck communicating with the heating chamber near the hearth of the furnace.

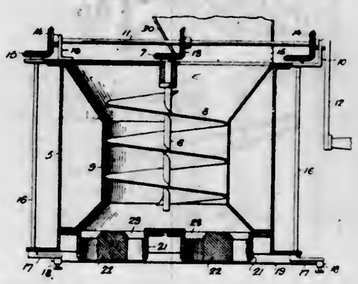
1,373,788. GRID OR GRILL. HENRY PRICE BALL, Brooklyn, N. Y., assignor to S. Sternau & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1920. Serial No. 410,441. 10 Claims. (Cl. 53—5.)

1. A device of the character described, comprising a relatively thin plate adapted to be positioned above the flame of a source of heat, that portion of the plate directly above the flame being of relatively small area as compared to the area of the plate, there being a portion of the plate thicker than the major portion thereof, said thickened portion adapted to be in vertical alinement with the source of heat.



1,373,789. REVOLVING-JAW CHUCK. WENDELL A. BARKER, Elkhart, Ind. Filed Nov. 19, 1919. Serial No. 339,080. 7 Claims. (Cl. 279—5.)

1. In a chuck of the character described, the combination of a rotatable chuck body, a radially movable jaw housing mounted on said chuck body, a rotatable jaw mounted in said housing and formed with an annular row of teeth on its outer side, a locking member for said jaw slidably mounted in said housing and formed with an annular row of teeth movable into and out of locking engagement with the teeth of said jaw, a spring urging said locking member into locking engagement with said jaw, a rotatable member mounted in said housing and serving when turned in one direction to retract said locking member and when turned in the opposite direction to index said jaw to a new position, and manually operable means mounted on said chuck body for actuating said rotatable member in both directions.

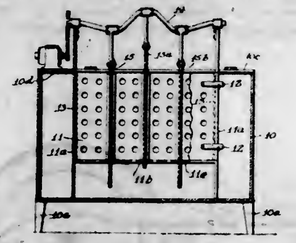


1,373,790. POWER-TRANSMISSION DEVICE. JOHN B. BECKER, New York, N. Y. Filed Aug. 5, 1919. Serial No. 315,433. 14 Claims. (Cl. 180—1.)

11. In a vehicle moving device, in combination, means for revolubly supporting two series of revoluble fluted rollers; a series of revoluble fluted conical rollers extending beyond the supporting means; a second series of revoluble fluted conical rollers abutting upon the first series of rollers and extending beyond the supporting means, the flutings of the two series of rollers being in alinement at the line of abutment, the axes of the two series of rollers being greater than 0° with respect to each other;

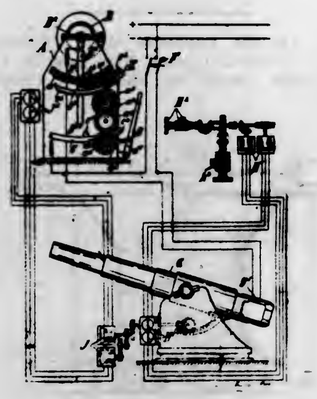
a vehicle; means for attaching the device to the vehicle, means whereby the device may be situated between the wheels of the vehicle and the road surface and removed therefrom, and means whereby the revolution of a vehicle's wheels resting upon the rollers will cause a movement of the device and the vehicle in a direction at variance with the direction of rotation of the vehicle's wheels.

1,373,791. DOUGH FORMING AND CUTTING MACHINE. CHARLES O. BODE, New York, N. Y. Filed Feb. 3, 1920. Serial No. 355,895. 2 Claims. (Cl. 107—14.)



1. In a dough former and cutter, the combination of a box having a contracted passage-way, a hopper at the top of the passage-way, a flaring lower end to the passage-way, a feeding screw in the passage-way, a plurality of outlets for the flaring lower end, a knife common to all the openings and adapted to cut the dough leaving the outlets, gearing operating the screw and the knife, and a handle above the box to actuate the gearing.

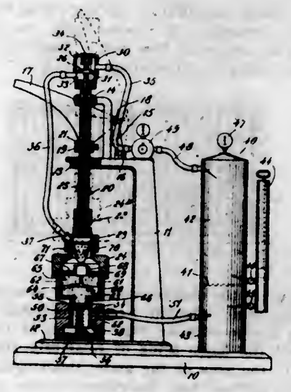
1,373,792. WASHING-MACHINE. MICHAEL BOGRE, Detroit, Mich. Filed Mar. 13, 1920. Serial No. 365,549. 4 Claims. (Cl. 68—20.)



1. A washing machine comprising a casing for the washing fluid, an inner container for the materials to be washed, said container being supported within the casing and having its bottom spaced from the casing bottom, and means for subjecting the material to rubbing action, said means including a plurality of rubbing surfaces movable

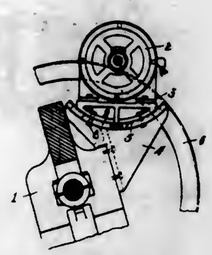
in planes parallel to each other and operative to divide the container into compartments of constant dimensions

to retain the respective compartment contents independent during the washing operation, and means for reciprocating such surfaces in such planes.



1,373,793. FIRE-CONTROL APPARATUS FOR NAVAL GUNS. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 406,073. 4 Claims. (Cl. 89—41.)

1. Fire control apparatus of the class described which comprises a sighting device, a stabilizing device for said sighting means, a pair of marks adjustable to correspond to the angle of rolling of a ship, a pair of contact devices for closing a firing circuit, one of said marks and one of said contact devices being rigidly connected to the sighting means and the other mark and contact device being operatively connected together and means for adjusting said mark and contact device.

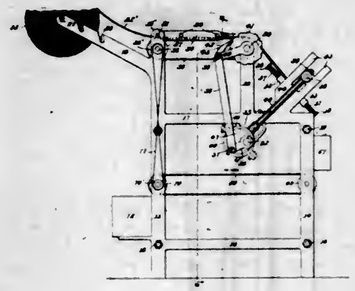


1,373,794. CASTING-MACHINE. JOHN EDWARD BURNS, Flushing, N. Y. Filed July 2, 1919. Serial No. 308,285. 5 Claims. (Cl. 22—69.)

1. In a casting machine, the combination of a molding flask open at opposite ends, a source of compressed air, a hollow plunger cap adapted to seal the top of the flask, an inlet valve for admitting air to the plunger cap, means for withdrawing air from the bottom of the flask, an outlet valve for controlling said air withdrawing means, and movable means for first bringing the said flask and cap together, said means being arranged to have a further

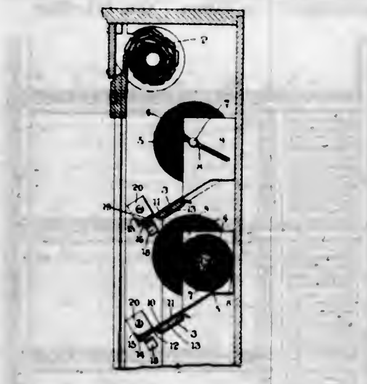
movement in the same direction imparted to it for actuating the inlet valve, and a still further movement for actuating the outlet valve.

1,373,795. ADJUSTABLE MOTOR-MOUNT. ARTHUR A. BYERLEIN, Toledo, Ohio, assignor to The Toledo Machine & Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 20, 1920. Serial No. 411,523. 3 Claims. (Cl. 172—36.)



1. In combination, a tiltable support, a bracket carried by the support and having a concaved seat on its top, a motor having its frame base provided with a curved bottom for seating in the concavity of the bracket and for adjustment lengthwise thereof to vary the position of the motor relative to the bracket, a pinion driven by the motor shaft, the curvature of the bracket seat and motor bottom being concentric to the axis of the pinion, and means for adjustably securing the motor base to the bracket.

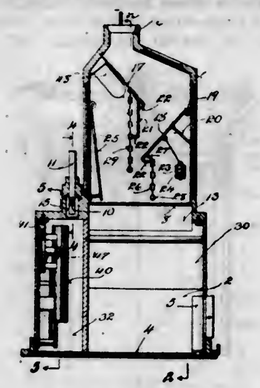
1,373,796. DOUGH-CUTTING MACHINE. PAUL CARDONE, GIACOMO FUMAGALLI, and CARMINE SURICO, New York, N. Y. Filed Dec. 2, 1919. Serial No. 341,919. 9 Claims. (Cl. 107—8.)



2. A dough cutting machine of the class described comprising a frame, a forming plate carried thereby and having a plurality of openings therein, means for progressively feeding a dough strip over the forming plate, a punching die coöperating with said forming plate openings, collecting means for the punched noodles, collecting means for the punched sheet of dough, means projecting into the forming plate openings through the side walls

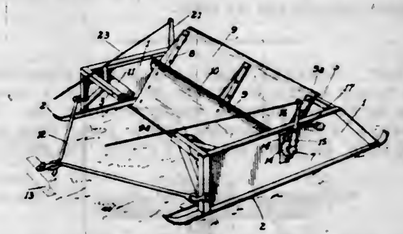
thereof to prevent the complete passage of a piece of punched dough through the openings in the forming plate

when initially received therein, and means for operating the last named means extending between the forming plate and the power shaft.



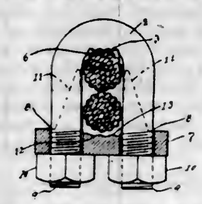
1,373,797. TICKET-CASE. JOHN J. CARR, Yonkers, N. Y. Filed Sept. 6, 1917. Serial No. 189,076. 8 Claims. (Cl. 211—31.)

2. A device of the character described comprising, a holder for a strip of tickets, said strip being provided with slots intermediate the successive tickets, a dispenser for the tickets, and a spring actuated finger located behind the dispenser and normally passing through one of said slots for arresting the movement of the strip and facilitating the removal of a ticket therefrom, the end of the said finger normally projecting in front of the dispenser so that, in the natural act of placing the operator's thumb upon the ticket to withdraw it from the dispenser, the thumb will engage the said projecting end of the finger and temporarily depress it for permitting the withdrawal of a ticket.



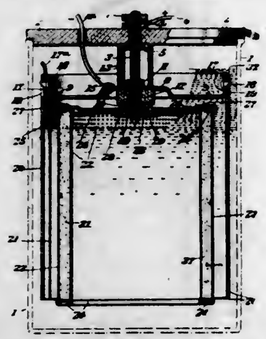
1,373,798. FARE-BOX. ANTON J. CHMURSKI, Milwaukee, Wis., assignor of one-half to Frank Regis, Milwaukee, Wis. Filed Apr. 5, 1920. Serial No. 371,405. 2 Claims. (Cl. 232—7.)

2. In a receptacle of the class described, a receiving compartment having an article inlet, a storage compartment below the receiving compartment, a partition plate separating the compartments, means for moving the partition to open position when the receptacle is in normal location, and a pusher plate carried by the partition plate



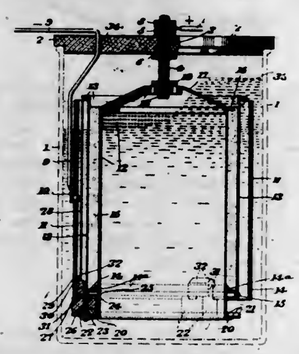
for engagement with the articles in the storage compartment to pack the same when the partition plate is moved to open position.

1,373,799. REVOLVING SELF-DUMPING LEVELER. JOHN M. CONLEY, Stockton, Calif. Filed Jan. 10, 1920. Serial No. 350,563. 2 Claims. (Cl. 37—42.)



1. A scraper comprising a frame adapted to be drawn by a tractor, a transverse shaft turnably mounted in the frame but normally held against turning, a pair of oppositely disposed scraper plates secured to the shaft, one at a time being adapted to rest adjacent the ground, means controllable at will for permitting the shaft to turn whereby the scraper will automatically upset with the forward movement of the tractor, and means for then turning the shaft in the same direction, to position the other scraper plate for loading.

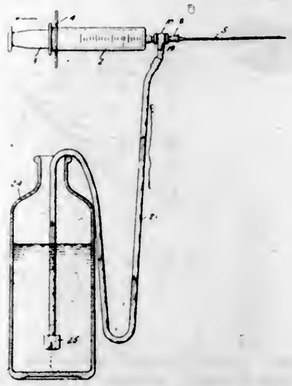
1,373,800. ROPE-CLAMP. OLIVER CROSBY, St. Paul, Minn., assignor to American Hoist & Derrick Co., St. Paul, Minn., a Partnership. Filed May 26, 1919. Serial No. 299,684. 5 Claims. (Cl. 24—135.)



4. A rope clamp comprising a U-shaped bolt, a block slidable on the arms thereof, clamping nuts for the arms of said bolt, the curved middle portion of said bolt having a surface of greater width than the normal diameter of the bolt, said surface being formed by the pressure of a die thereon, the rope or cable to be clamped being held between said surface and said block.

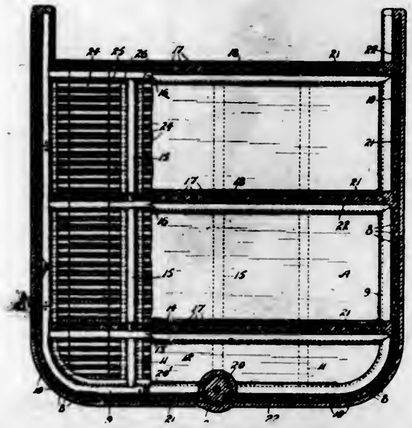
1,373,801. BATTERY. EDWARD M. DEEMS, Forest Hills, N. Y., and LE ROY W. WILLIS, Hoboken, N. J., assignors to Eastern Signal & Supply Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1919. Serial No. 334,781. 6 Claims. (Cl. 204—29.)

1. A primary battery comprising a jar, a removable jar cover, a terminal member held to tue jar cover and depending within the jar, a second terminal member, means for supporting the second terminal member within the jar on the other terminal member, and independently removable negative and positive elements suspended within the jar from said terminal members and detachable therefrom without disturbing the connection between the terminal members and jar cover.



1,373,802. BATTERY. EDWARD M. DEEMS, Forest Hills, N. Y., and LE ROY W. WILLIS, Montville, N. J., assignors to Eastern Signal & Supply Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 24, 1920. Serial No. 405,610. 6 Claims. (Cl. 204—38.)

1. A primary battery comprising a jar, a cover for the jar, an electrode suspended from the cover, a series of blocks of insulating material supported on the electrode around the lower end of said electrode, and a tubular electrode surrounding the first-mentioned electrode in contact with the outer faces of said blocks, said tubular electrode being split longitudinally and provided with apertures adjacent its lower end and said blocks being provided with outwardly extending projections engaged in said apertures.

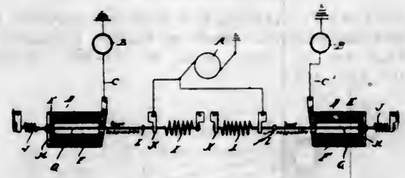


1,373,803. SYRINGE ATTACHMENT. LOUIS DUNN, Minneapolis, Minn. Filed Mar. 1, 1919. Serial No. 280,084. 7 Claims. (Cl. 128—218.)

2. The combination, with a syringe having a transparent barrel and hypodermic needle, of a tube communicating at one end with a source of fluid supply and provided with means at its other end for mounting the nozzle of the syringe barrel and the needle therein, a normally unobstructed passage being provided between said syringe nozzle and said needle, means mounted to open the

passage between said fluid supply and said syringe when the syringe is operated, the transparent syringe barrel enabling the user to determine the condition of the fluid and the position of the needle in the tissues.

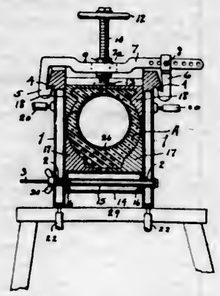
1,373,804. CONCRETE SHIP CONSTRUCTION. JOHN J. EAGAN, San Francisco, Calif. Filed June 19, 1920. Serial No. 390,223. 6 Claims. (Cl. 114—65.)



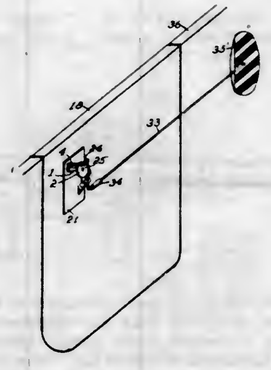
1. In a concrete vessel the framework consisting of U-shaped ribs for the bottom and sides of said vessel, cross-ribs connected to said U-shaped ribs and supporting the decks, pillars between and connected to said cross-ribs, a plurality of pillars between and connected to the lowermost of said cross-ribs and the bottom of said U-shaped ribs, hollow members in contact with the outer surface of said U-shaped ribs, cables extending through said hollow members and secured to the ends of said vessel and wire mesh covering said hollow members.

1,373,805. CREASE-CUP. WILLIAM FREDERICK EMERSON, Buffalo, N. Y., assignor to Buffalo Metal Goods Company, Buffalo, N. Y., a Corporation of New York. Filed Apr. 13, 1917. Serial No. 161,890. 10 Claims. (Cl. 184—38.)

8. The combination with a grease cup comprising a base having a small outlet pasasge for the lubricant and a cap threaded to fit the base, of a compressible grease capsule containing lubricant arranged within the cap and adapted to be compressed between the cap and the base, as the former is turned down on the latter, said capsule having a closed end and an open end arranged adjacent the base, and means on the upper end of the base to engage with the margin of the crushed capsule at its open end and retain the capsule when the cap is withdrawn.

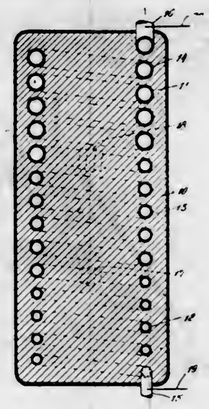


1,373,806. REGULATOR FOR ELECTRIC-LIGHTING SYSTEMS ON MOTOR-VEHICLES. JOHN W. FITZGERALD, Detroit, Mich. Filed Mar. 23, 1918. Serial No. 224,151. 4 Claims. (Cl. 171—229.)



4. In an electric system for motor vehicles, the combination with a generator varying in voltage with speed changes, of a lamp circuit and a current regulator for said lamp circuit comprising a compressible resistor and an expansible conductor connected in series in said circuit, said resistor varying in resistance under different degrees of compression, and means acting through said conductor to subject said resistor to a compressive stress to decrease the resistance thereof, said stress being relieved through expansion of said conductor upon a predetermined flow of current therethrough to permit of expansion of said resistor and a consequent increase of the resistance of the same.

1,373,807. VULCANIZER. OSCAR M. FREDD, Hancock, Mich. Filed Dec. 6, 1920. Serial No. 428,527. 6 Claims. (Cl. 18—18.)

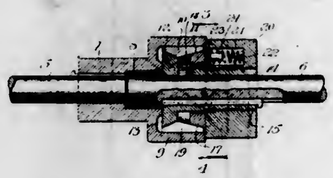


1. In a tire vulcanizer, the combination of hollow side chambers and a hollow base block between them, said parts having alined passages, bolts extending through the passages, pipes to supply steam to said members, tread blocks and bead blocks adapted to fit around a tire casing between said sides, and means to press the bead blocks toward the tread blocks.

1,373,808. MOTOR-VEHICLE SIGNALING DEVICE. CASPER HUGO GRINGS, Waterloo, Iowa. Filed July 10, 1920. Serial No. 395,304. 6 Claims. (Cl. 116—52.)

1. In a device of the character described, a shaft having a discoidal head, said shaft being mounted to rock on and for longitudinal reciprocation relative to a vehicle, a semaphore mounted pivotally on said vehicle to rock horizontally and having a crank-arm positioned in the path of reciprocatory movement and in contact with the said discoidal head, yieldable resilient means operable upon said discoidal head in one direction, and other yieldable resilient means operable upon said semaphore to yieldingly retain it in contact with said discoidal head.

1,373,809. VAPOR ELECTRIC HEATER. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed July 11, 1917. Serial No. 179,838. Renewed Aug. 6, 1920. Serial No. 401,823. 10 Claims. (Cl. 219—39.)

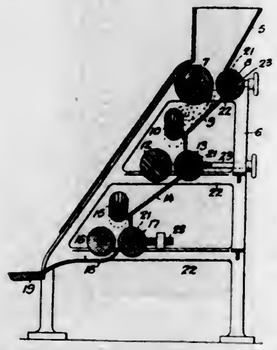


1. A vapor heater comprising a body of heat insulation having a vapor passage therein of varying size in cross-section, and electrical means for imparting heat to the vapor in the passage.

4. A vapor heater comprising a body of heat insulation having a vapor passage therein of varying size in cross-section, and heating coil set into the walls of the vapor passage and varying in size to correspond thereto.

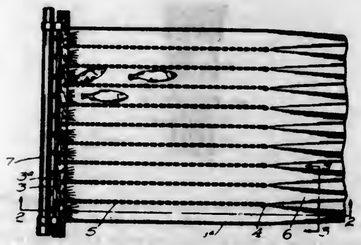
7. A vapor heater comprising a body of heat insulation having a tortuous vapor passage therein of increasing

size in cross-section from the inlet to the outlet end of the passage, and a heating coil set into the walls of the vapor passage and varying in size to correspond thereto.



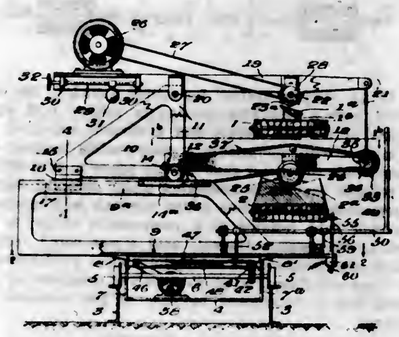
1,373,810. FRICTION-CLUTCH. CLIFFORD O. HANSEN, Tiffin, Ohio. Filed Feb. 9, 1920. Serial No. 357,383. 2 Claims. (Cl. 64—106.)

1. In a friction-clutch, the combination of a sleeve having a hollow cylindrical head, an expansion-ring in said head having a straight outer surface adapted to bear against the interior of said head and having its inner surface beveled to converge toward its circumferential center, clutch-members within said ring provided with beveled peripheral surfaces to engage, respectively said beveled ring-surfaces, a nut provided with recesses in its inner face, and springs in the nut-recesses to bear against the outer of said clutch-members and hold the clutch yieldingly in normally shipped condition.



2. In a friction-clutch, the combination of a sleeve having a hollow cylindrical head, an expansion-ring in said head having a straight outer surface adapted to bear against the interior of said head and having its inner surface beveled to converge toward its circumferential center, clutch members within said ring provided with beveled peripheral surfaces to engage, respectively, said beveled ring-surfaces, a nut adjustably mounted relatively to said head and provided with recesses in its inner face, and helical springs in the nut-recesses to bear against the outer of said clutch-members and hold the clutch yieldingly in normally shipped condition.

1,373,811. DOUGH-DIVIDER. GEORGE HAPP, Jr., Port Jervis, N. Y. Filed Sept. 20, 1919. Serial No. 325,224. 4 Claims. (Cl. 107—9.)

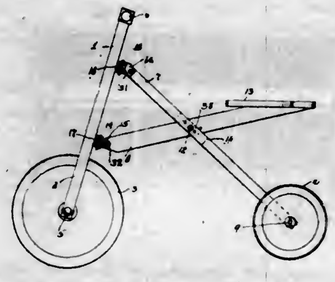


1. In a dough divider, the combination of an upright frame adapted to receive dough in a mass or batch at its top, compression rollers within the top and adapted to form the mass of dough into a sheet, a roller adapted to intercept the sheet of dough and form it into a coiled mass, and a second set of compression rollers adapted to receive the coiled mass of dough from the mass-forming roller and compress it into a shc t.

1,373,812. SARDINE-TURNING APPARATUS. FRANK HEATH, National City, Calif. Filed Aug. 14, 1919. Serial No. 317,405. 3 Claims. (Cl. 17—10.)

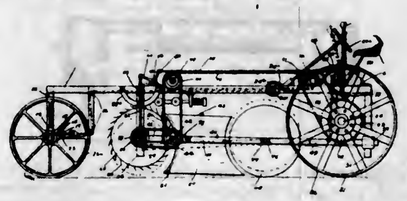
1. In a sardine turning apparatus, an inclined imperforate member and a plurality of flexible sardine engaging and retarding members extending in the direction of inclination over the top surface of said inclined imperforate member.

1,373,813. APPARATUS FOR MACHINING PROPELLER-BLADES. SPENCER HEATH, Baltimore, Md. Filed Feb. 23, 1918. Serial No. 218,857. 5 Claims. (Cl. 144—144.)



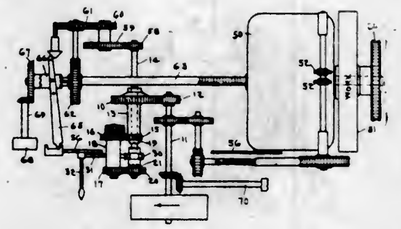
2. In an apparatus for machining propeller blades comprising a stationary model support, a stationary work support parallel thereto, a power driven primary carriage mounted to travel parallel to said supports during the cutting action to effect a continuous cutting movement lengthwise of the work, means to move said primary carriage in said continuous travel lengthwise of the work, a secondary carriage mounted on said primary carriage capable of manual adjustment transversely to said supports, and substantially at right angles to the line of movement of said primary carriage for each successive cutting position, a frame pivoted to said secondary carriage and extending forwardly and rearwardly of said pivotal support, a model follower member and a cutter member mounted in fixed relation to each other at the forward end of said frame, actuating means for rocking said frame, and operating means for said cutter member mounted at the rearward end of said frame whereby the frame is maintained in a balanced position.

1,373,814. CHILD'S VEHICLE. EDWARD J. HEMINGTON, Lakewood, Ohio. Filed Mar. 21, 1919. Serial No. 284,123. 6 Claims. (Cl. 208—165.)



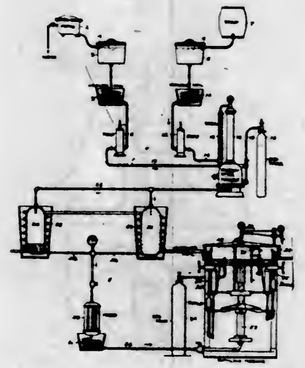
1. In a vehicle of the character described, the combination of a front frame member, a wheel mounted therein

and a steering handle attached thereto, two rear frame members, both being pivotally and removably attached to said front member, said two members being adjustably connected together, the adjustment being effected by



swinging one of said members about its point of pivotal connection to said front frame member, a seat mounted on one of said members and rear wheels mounted on the other.

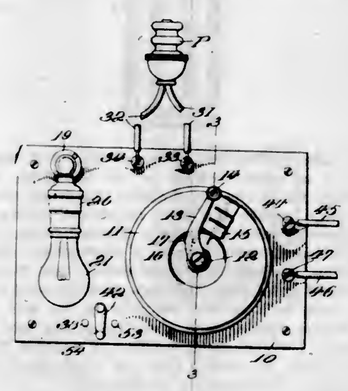
1,373,815. DIGGING-MACHINE. CHARLES HOLLY, Weimar, Tex. Filed Sept. 20, 1920. Serial No. 411,369. 5 Claims. (Cl. 55—12.)



3. In a digging machine a wheel supported frame, means carried by said frame for digging a strip of earth of a width greater than the span of the supporting wheels of the frame to a predetermined depth and means for forming the dug earth in a ridge of less width than the span of the supporting wheels.

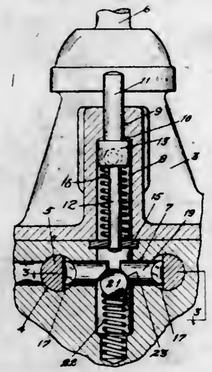
1,373,816. SPEED-CHANGING MECHANISM FOR METAL-WORKING MACHINES. CLARENCE J. HOWARD, Manton, R. I., assignor to Brown & Sharpe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed June 2, 1920. Serial No. 386,114. 15 Claims. (Cl. 90—3.)

1. In a gear-cutting machine, a work-support, a cutter support, a pair of cutters operatively mounted on said support both of said cutters being arranged to operate simultaneously upon the work, means for moving one support slowly relatively to the other causing both cutters to make an initial or roughening cut, and means for increasing the feeding ratio when but one of said cutters is making an initial cut and the other is finishing a roughening cut previously made.



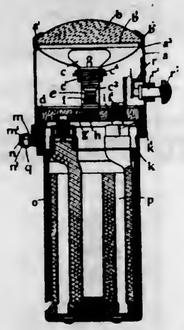
1,373,817. APPARATUS FOR BOTTLING CARBONATED LIQUIDS. DAVID HUMPHREY, Cleveland, Ohio. Filed July 24, 1918. Serial No. 246,445. 2 Claims. (Cl. 99—2.)

1. The method herein described of preparing carbonated liquid for bottling which consists in first separately cooling the water and the syrup and then forcing the liquids together under pressure into a mixer and carbonating the same to cause excessive foaming, then cooling and liquefying the carbonated mixture and subjecting the same to repeated admixture under pressure in advance and as a preparation for bottling the same.



2. Means for making a carbonated mixture with water and syrup as ingredients comprising means for separately cooling the water and the syrup, a pump for each ingredient and a mixer into which the ingredients are forced by pressure, means for carbonating and converting the mixture into a frothy condition, means for cooling and liquefying the frothy mixture, and a mixer for the cooled liquid and for further carbonating the same preparatory for bottling.

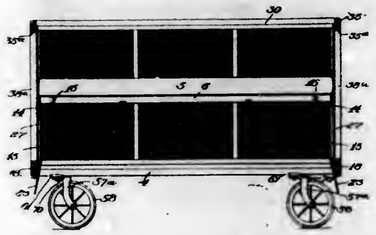
1,373,818. ELECTROTHERAPEUTIC APPARATUS. CHARLES L. IRELAND, Fort McPherson, Ga. Filed May 24, 1920. Serial No. 383,729. 20 Claims. (Cl. 174—177.)



1. An electro-therapeutic appartaus of the character described comprising a rheostat, electrode conductors in circuit therewith, a periodically actuated interrupter, means providing a circuit to said rheostat, and selective means by which said interrupter may be included in said circuit.

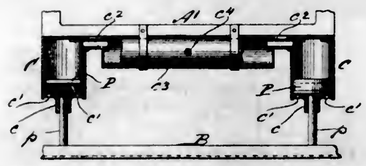
1,373,819. SHIFTER-LOCK MECHANISM. GEORGE C. JENSEN, Oakland, Calif. Filed June 25, 1919. Serial No. 306,698. 9 Claims. (Cl. 70—126.)

1. In combination with a pair of gear shifters provided with stops, a pair of movable members positioned therebetween for engaging said shifters, a locking bolt movable between said members to maintain the same in locked engagement with said shifters, and a spring held device coöperating with the adjacent ends of said members and movable independently of the bolt for yieldably maintaining the said members in coöperative relation with said shifters to retain said shifters in their adjusted position.



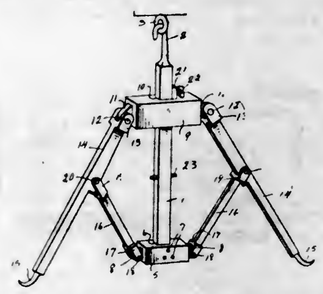
1,373,820. MINER'S ELECTRIC SAFETY-LAMP. JOHN WILLIAM JONES, Cannock, England, assignor to Haslam & Stretton Limited, Cardiff, Wales. Filed May 10, 1920. Serial No. 380,328. 2 Claims. (Cl. 240—8.5.)

1. An electric safety flash lamp, consisting in combination of the cylindrical casing of the lamp top, a lens surmounting and carried by the said cylindrical casing, a contact plate within the said cylindrical casing, said contact plate carrying a centrally disposed contact and a laterally disposed contact plate, a transversely disposed fitting within the said cylindrical casing, said fitting being supported at its respective ends upon the said contact plate, a lamp bulb carried centrally in the said transversely disposed fitting, and a switch on the said cylindrical casing operable from outside and adapted to complete the circuit by contact with the upstanding contact plate aforesaid, substantially as described.



1,373,821. FOLDING CRIB. BENJAMIN H. KENNEDY, Rochester, N. Y., assignor, by mesne assignments, to Benjamin H. Kennedy and Dewey M. Kennedy, Rochester, N. Y. Filed Nov. 12, 1917. Serial No. 201,434. 19 Claims. (Cl. 5—58.)

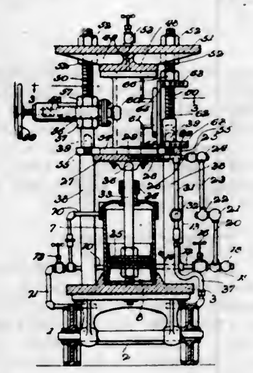
19. A crib comprising in combination a body having oppositely positioned rails adjacent to the bottom thereof, a frame normally resting on said rails, normally folded supports pivoted upon the frame, and means adapted to cause the supports to travel upon the rails into position to sustain the frame thereon when the latter is raised, said



supports comprising substantially U-shaped wire bails having intermediate offset portions accessible beneath the crib to effect their manual release by means of the operator's foot.

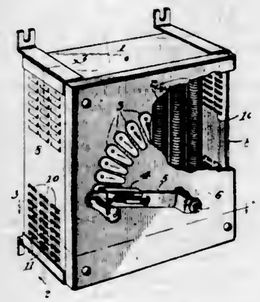
1,373,822. VEHICLE-FENDER. HARRY A. KLEINE, Jersey City Heights, N. J. Filed May 5, 1920. Serial No. 378,944. 1 Claim. (Cl. 293—55.)

A vehicle fender of the character designated, comprising a sealed horizontal elongate medial air reservoir formed with end cylinders positioned at right angles thereto, air compression pistons in said cylinders the rods of which support the buffer bar, and cylinder caps formed with bearings for said piston rods and also formed with open air vents for the free access of the atmosphere to, and its escape from, the front of the pistons, for the purpose set forth.



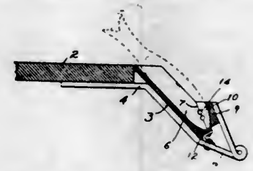
1,373,823. GAMBREL. CHARLIE SPURGEON MCCLUNG, Longacre, W. Va. Filed July 19, 1919. Serial No. 311,965. 1 Claim. (Cl. 294—79.)

In a gambrel, the combination with a suspending member rectangular in cross-section and provided on one of its edges with a series of spaced sockets, of a base having a depression rectangular in shape, in which the lower end of the member is fixedly but detachably secured, a head having a vertical opening through which the member passes, whereby the head may be adjusted vertically, said head having an outwardly projecting lug adjacent one edge of the member, a set screw threaded in the lug and adapted to slidably engage said sockets, to hold the head



in different positions on the member against movement in either direction, a pair of arms having hooks pivotally mounted upon the laterally extending ends of the head, whereby the legs of a carcass may engage the hooks for suspending the carcass, a pair of links pivotally connected to the base and extending upwardly and laterally in opposite directions and having their upper lateral ends pivotally connected to the arms substantially midway their ends, and a pin extending transversely of the member, to limit the head in its movement downwardly.

1,373,824. VALVE-TESTING MACHINE. WILLIAM H. MCKENZIE, Oakland, Calif. Filed Mar. 2, 1920. Serial No. 362,849. 4 Claims. (Cl. 73—51.)

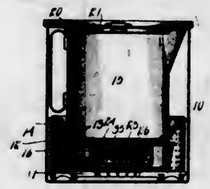


1. In an apparatus for the purpose set forth, the combination of a plurality of posts, a head plate movable vertically between the posts and adapted to support a fitting to be tested, means for raising the head plate, means for supplying liquid under pressure through the head plate to the fitting, a clamping plate secured on the posts above the fitting and against which the fitting is clamped by the head plate, said clamping plate being provided with intersecting reinforcing ribs on its under side, and a vent valve at the intersection of said ribs.

1,373,825. RESISTANCE-BOX. FRANCIS W. MAGIN, Milwaukee, Wis., assignor to Industrial Controller Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 9, 1920. Serial No. 387,696. 4 Claims. (Cl. 219—48.)

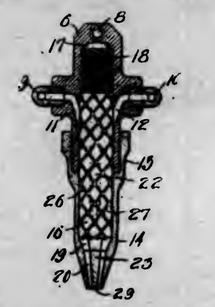
1. Apparatus of the class described having a casing with a wall of sheet metal having ventilating slots, the edges whereof are close together for chilling the flaming gases within to a point below the temperature of ignition.

1,373,826. FISH-STRINGER. FRED J. MULLINS, Pittsburg, Calif., assignor to F. E. Booth Co., San Francisco, Calif., a Corporation of California. Filed May 8, 1919. Serial No. 295,811. 3 Claims. (Cl. 17—30.)



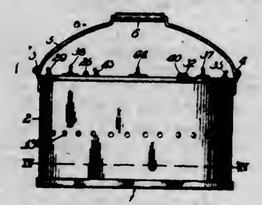
1. In an apparatus for stringing fish, a pocket plate for holding a plurality of fish in spaced predetermined position, a stringing rod, means for guiding the stringing rod through a portion of each pocket whereby the fish lying therein are impaled upon the rod, and means for varying the position of the fish in said pockets.

1,373,827. COMBINED FENCE, PLANT-PROTECTOR, AND INSECT-DESTROYER. JOHN NELSON and ROBERT WATSON, Pasadena, Calif. Filed Sept. 25, 1920. Serial No. 412,800. 5 Claims. (Cl. 43—107.)



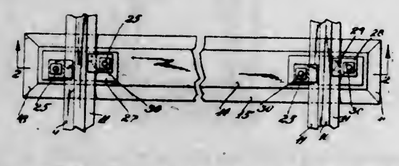
4. In a fence for protecting young plants or crops, a vertical fence portion provided with a trough at its upper marginal portion, said trough having an over-hanging roof, said protecting fence being constructed in sections, means for detachably connecting the sections together, the marginal portion of the roof being spaced above and offset outwardly beyond the upper marginal portion of the vertical portion acting to shed water from the interior of the trough, said means comprising a strap carried by one section and overlying the wall of an adjacent section, said overlying part having a slot, and means extending through the slot and held therein, for holding the sections together.

1,373,828. HEATER AND COOKER. OTIS W. NOTTINGHAM, Indianapolis, Ind. Filed July 15, 1919. Serial No. 310,940. 1 Claim. (Cl. 126—38.)



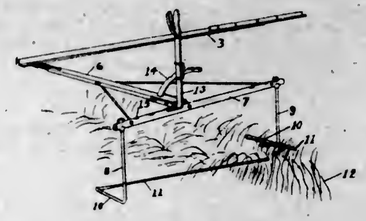
A cooking kit comprising, a covered receptacle, a stove having an annular rib surrounding a combustion space and upstanding above the plane of the stove, a fuel receptacle surrounding the combustion chamber and insulated therefrom by material carried beneath the annular rib, and a plurality of utensils proportioned to be contained within the receptacle and each unit bearing upon the unit below with the lowermost of said units bearing upon the annular rib of the stove, and with the cover of the receptacle bearing upon the uppermost unit, whereby each unit is held against movement within the receptacle.

1,373,829. WELDING AND CUTTING TORCH. WILLIAM B. PERDUE, Emeryville, Calif. Filed Aug. 26, 1918. Serial No. 251,368. 6 Claims. (Cl. 158—27.4.)



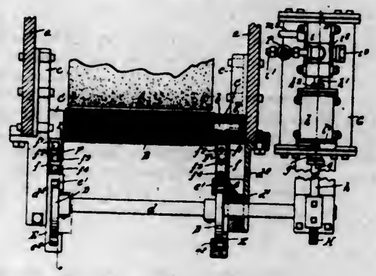
2. In a torch, a mixing tip provided with intersecting channels whereby the gases to be mixed flow therethrough in recurrently commingling streams and having a tapered lower end upon the surface of which said intersecting channels open, a casing inclosing said tip and having a conical lower end between which and the tapered end of said tip a passage is formed, and having a discharge orifice at the end of said passage, and means for feeding gases to be mixed into the channels adjacent the upper end of the tip.

1,373,830. COMBINATION FISH AND BAIT BUCKET. HERBERT H. PETTY, Indianapolis, Ind. Filed Oct. 30, 1919. Serial No. 334,491. 5 Claims. (Cl. 43—56.)



1. A combination fish and bait bucket having a lower compartment and an upper compartment and a passageway between the compartments, and a plurality of ventilated vessels of equal height collectively occupying the space and having their bottoms supported on one and the same horizontal plane in the upper compartment.

1,373,831. RAILROAD-TIE. PIOTR S. RACHWAL, Depew, N. Y. Filed Mar. 21, 1919. Serial No. 284,159. 2 Claims. (Cl. 238—343.)



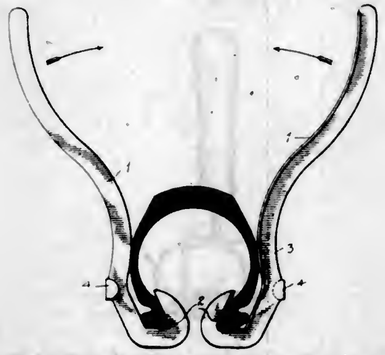
2. A railway tie comprising a hollow body having a top provided with an enlarged inner opening, a reduced recess extending outwardly from said opening, and lugs arranged underneath said top and on opposite sides of said recess, a clip adapted to engage a rail on said tie, and a bolt having its stem passing through said clip and recess and having its head movable through said opening and normally arranged between said lugs so as to be held against turning thereby, and the nut of the bolt bearing against the upper side of said clip.

1,373,832. PEA-VINE-HARVESTING MACHINE. PHILLIP REINBOLD, ARTHUR REINBOLD, and ALEXANDER REINBOLD, Blumfield township, Saginaw county, Mich. Filed June 22, 1920. Serial No. 390,842. 3 Claims. (Cl. 56—1.)

1. A vine-folding attachment for pea-harvesters and the like comprising in combination, a laterally-extending arm carried by said harvester, a frame and means connecting said frame to said arm at a point above an adjacent row of vines, a pair of downwardly projecting bars secured to said frame, runners on said bars, and upwardly, rearwardly and inwardly projecting prongs fixed to the front ends of said runners, for the purposes set forth.

1,373,833. APPARATUS FOR DRESSING GRINDSTONES. RALPH R. ROBERTS, Lockport, N. Y., assignor to Roberts Manufacturing Co., Lockport, N. Y. Filed Mar. 28, 1918. Serial No. 225,164. 49 Claims. (Cl. 125—11.)

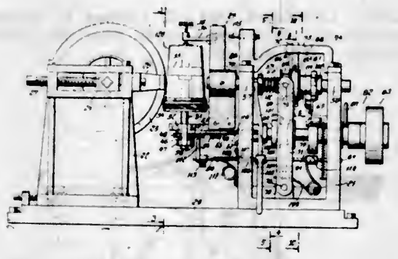
1. In an apparatus for dressing grindstones, the combination of a rotary dressing tool arranged in operative relation to a stone, means for pressing said tool against the circumferential face of the stone to form impressions on said face of said stone and for controlling the pressure with which said tool is pressed against said stone, to form impressions of predetermined depth on said stone.



2. In an apparatus for dressing grind stones, the combination of a dressing tool arranged in operative relation to a stone, and means independent of the pressure exerted by said tool against said stone for pressing said tool for a predetermined interval of time against the surface to be dressed.

3. In an apparatus for dressing grindstones, the combination of a dressing tool, means for pressing said tool against said stone, means for controlling the pressure with which said tool is pressed against said stone, and automatic means independent of the pressure exerted by said tool against said stone for causing said tool to act on said stone for a predetermined interval of time.

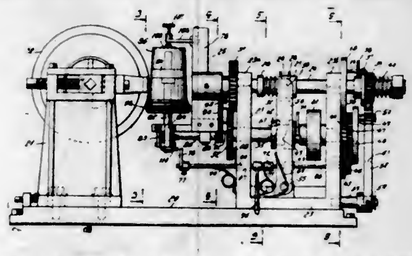
4. In an apparatus for dressing grinustones, the combination of a dressing tool, power-operated means for pressing said tool against the grindstone, and automatic means for controlling the time during which said power-operated means act on said stone.



5. In an apparatus for dressing grindstones, the combination of a rotary dressing tool extending across the cutting surface of a stone, means for pressing said tool against the surface of said stone, and means for regulating the pressure with which said pressing means press said tool against the stone.

1,373,834. TIRE-TURNING TOOL. JOHN F. ROGERS, Dayton, Ohio. Filed Sept. 13, 1920. Serial No. 410,063. 6 Claims. (Cl. 152—27.)

6. As an article of manufacture, a tire turning tool comprising an ogee lever, tire engaging means at one end of the lever, and means for interengaging the said lever with a second like lever engaged with the tire in reversed parallel relation.

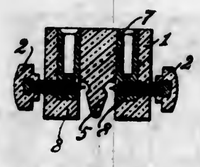


1,373,835. GLASS-GRINDING MACHINE. EDWARD A. RYON, Wellsboro, Pa., assignor to Fred W. Siemens, Wellsboro, Pa. Filed June 19, 1919. Serial No. 305,362. 17 Claims. (Cl. 51—107.)

1. A glass grinding machine comprising a grinding wheel, a driving shaft, a pulley thereon, a clutch for coupling the pulley to the shaft, a spindle, a ratchet and pawl connection between the shaft and the spindle for rotatively advancing the spindle step by step, an annular cam on the driving shaft, and a rocking lever actuated by the annular cam to move the spindle toward and from the cutting wheel.

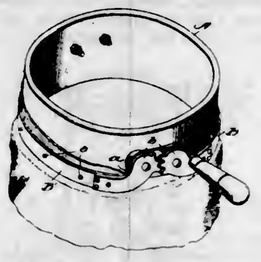
1,373,836. GLASS-GRINDING MACHINE. EDWARD A. RYON, Wellsboro, Pa., assignor to Fred W. Siemens, Filed June 19, 1919. Serial No. 305,363. 14 Claims. (Cl. 51—107.

1. A glass grinding machine comprising a work holder, means for producing an oscillatory adjustment of the work holder, means for reciprocating the work holder between each oscillatory adjustment thereof, means for



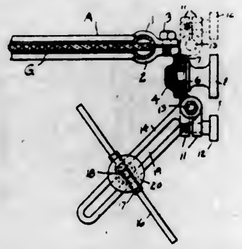
rotatively adjusting the work about an axis at right angles to the axis of oscillation, and means for reciprocating the spindle.

1,373,837. PROCESS OF RENOVATING POLISHING-PLATES. LOUIS SCHULTE, Pittsburgh, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 24, 1918. Serial No. 246,532. 2 Claims. (Cl. 204—1.)



1. The process of renovating press polishing plates having a nickel facing, which comprises nickel plating the worn facing by means of a solution containing sulfate of sodium, and single and double nickel slats, and polishing the nickel plated surface.

1,373,838. PLUG-SOCKET. GIORGIO SCOPPOLA, Rome, Italy. Filed Dec. 11, 1920. Serial No. 430,014. 2 Claims. (Cl. 173—340.)

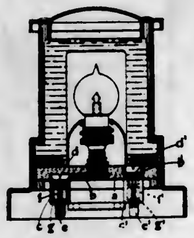


2. A plug socket comprising an insulating body having spaced projections at one end, an arrow head extending from the body intermediate the projections, metallic members inserted in said body in line with the projections and formed at one end to receive contact terminals, and connecting members operative through the projections and having electrical connection with said metallic members, the inner ends of said connecting members being pointed.

1,373,839. BAG-HOLDER. LESTER B. SHAMBLEN, Omaha, Nebr., assignor of one-half to United Alfalfa Company, Omaha, Nebr., a Corporation of Nebraska. Filed June 2, 1920. Serial No. 385,930. 6 Claims. (Cl. 83—26.)

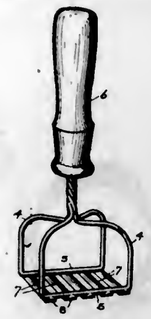
1. A bag holder comprising an apertured frame and a pair of clamping sections pivotally mounted thereon having intergeared ends, said sections having substantially horizontal lower edges and said frame having a base flange against which the sections seat edgewise.

1,373,840. WINDSHIELD. HARVEY G. SMITH, Los Angeles, Calif. Filed Aug. 8, 1919. Serial No. 316,125. 2 Claims. (Cl. 296—84.)



1. In an auxiliary wind-shield, a clamp adapted to be attached to a vehicle, a pivot lug integral with said clamp, a bracket revolubly mounted thereon, corrugations on the adjacent faces of said lug and said bracket, a rod mounted in said bracket and capable of rotative and longitudinal adjustment, means for locking said rod, slotted arms adjustably mounted at the extremities of said rod, a windshield revolubly mounted on trunnions capable of being adjusted and locked in said slots in said arms; all substantially as shown and described.

1,378,841. ROTARY SCREEN. JOHN M. STONE and AVON L. STONE, Stockton, Calif., assignors to Gravity Grain Grader Company, Stockton, Calif., a Corporation of California. Filed Apr. 17, 1919. Serial No. 290,655. 3 Claims. (Cl. 130—16.)

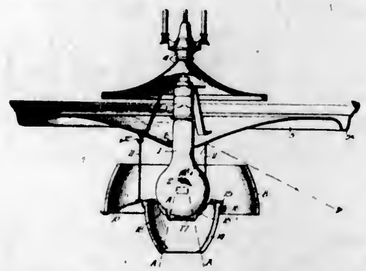


1. A rotary screen comprising a plurality of ribs disposed about an axial support, screen surfaces supported by the ribs, and diagonally disposed strips successively arranged between alternate pairs of ribs and spaced from the screening surfaces to provide means for advancing material from the receiving end of the screen to the discharge end.

1,373,842. MINER'S ELECTRIC SAFETY-LAMP. THEODORE STRETTON, Cardiff, Wales, assignor to Haslam & Stretton Limited, Cardiff, Wales. Filed May 10, 1920. Serial No. 380,254. 1 Claim. (Cl. 240—8.5.)

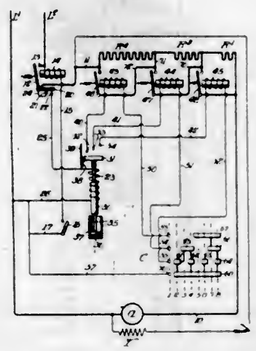
In a miner's lamp, in combination, the following elements, a contact plate of insulating material, two contacts mounted in said plate and having their respective upper and lower faces flush with the respective upper and lower faces of the contact plate, hollow cylindrical members internally screw threaded at their upper ends for connection with the respective contacts on the under face thereof by means of countersunk screws whose top faces are flush with the respective faces of the contacts, and spring pressed plugs at the lower ends of the said cylindrical members, substantially as described.

1,373,843. VEGETABLE-MASHER. CARL H. SUNDBERG, Chicago, Ill. Filed Sept. 7, 1920. Serial No. 408,493. 3 Claims. (Cl. 146—15.)



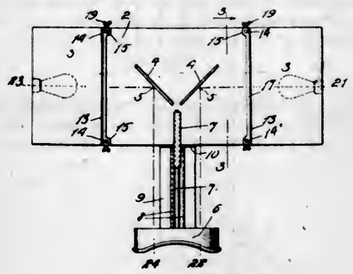
1. In a device of the class described, mashing elements provided with flat lower surfaces and rounded upper surfaces.

1,373,844. HIGH EXPLOSIVE AND PROCESS OF MAKING SAME. WENDELL R. SWINT, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 6, 1918. Serial No. 232,872. 31 Claims. (Cl. 52—3.)



1. An explosive composition comprising wet nitrocellulose of a high degree of nitration and a liquid nitro derivative of a hydrocarbon.

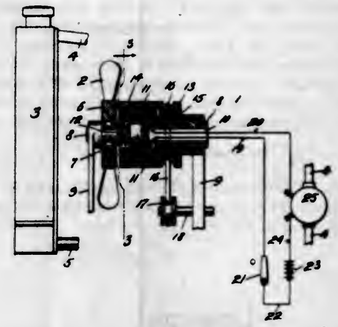
1,373,845. LIGHTING DEVICE. EDWIN D. TILLSON, Evanston, Ill. Filed July 8, 1918. Serial No. 243,082. 2 Claims. (Cl. 240—92.)



1. A lighting device having a light source, a reflector above said source, an upper annular translucent element, open top and bottom, surrounding said source and having its upper edge high enough to intercept the rays which would escape the edge of the reflector, a lower and smaller annular translucent element open top and bottom, surrounding said source and having its upper edge high enough to intercept the rays which would escape beneath the lower edge of the upper translucent element, said lower element having a substantially sheer inner concave surface facing inward and upward, and said upper element having a concave inner surface facing inward and downward.

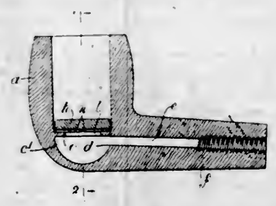
1,373,846. CONTROLLER FOR ELECTRIC MOTORS. HERMON L. VAN VALKENBURG, Milwaukee, Wis., assignor to Industrial Controller Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 21, 1918. Serial No. 263,594. 14 Claims. (Cl. 172—288.)

1. A motor controller having a plurality of sections of resistance in series in the motor circuit, a regulator adapted at will to vary the sequence in which said sections shall be cut out of circuit, and a time controlled starting switch adapted as it advances to cut out the sections in the sequence previously determined by the regulator.



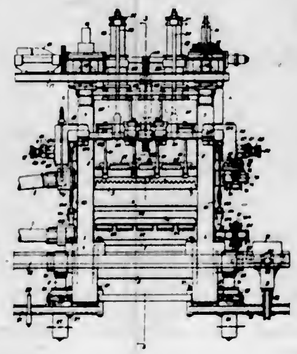
1,373,847. STEREOSCOPE FOR X-RAY PLATES. HARRY F. WAITE, New York, N. Y. Filed July 14, 1919. Serial No. 310,780. 5 Claims. (Cl. 88—20.)

1. A stereoscope for X-ray plates of different sizes which consists of a base with lanterns fixed thereto and supported thereon and provided with adjustable means adapted to receive plates and support them in the same optical axis, mirrors fixed to said base between said lanterns and a head piece adjustably connected to the base so that its position may be adjusted according to the nature of the plates and the needs of the observer.



1,373,848. DEVICE FOR KEEPING COOLING-WATER AT DESIRABLE TEMPERATURES. HARRY F. WAITE, New York, N. Y. Filed Jan. 17, 1920. Serial No. 351,987. 1 Claim. (Cl. 123—171.)

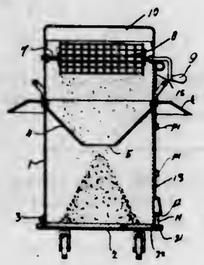
In a device of the class described, a radiator, a fan mounted to revolve immediately in the rear of the radiator, a pulley immediately in rear of the fan and means for driving the same, an electromagnetic coil incased in said pulley, means for energizing the magnet including a thermostatic switch which is controlled by the engine temperature so that when the system is in use, the magnets



will be energized and the pulley will drive the fan and cool the radiator whenever the heat of the engine rises above a predetermined point.

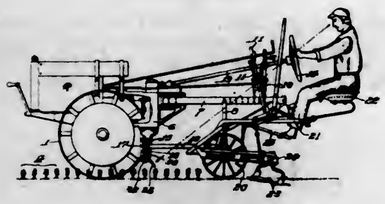
1,373,849. TOBACCO-PIPE AND CIGAR AND CIGARETTE HOLDER. ALFRED WEBBER, Portsmouth, England. Filed Apr. 13, 1920. Serial No. 373,665. 3 Claims. (Cl. 131—12.)

2. A tobacco pipe having the bowl divided by an annular ledge providing restricted communication between the bowl portions and opposite sides of the ledge, and an imperforate non-absorbent partition removably supported on said ledge as a support for the tobacco, there being air passages formed between the ledge and partition.



1,373,850. ROLLING-MILL. JOHN S. WORTH, Coatesville, Pa., assignor to Worth Brothers Corporation, Claymont, Del., a Corporation of Delaware. Filed Aug. 27, 1919. Serial No. 320,129. 35 Claims. (Cl. 80—56.)

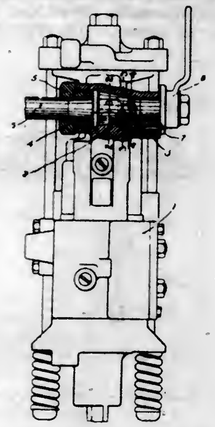
10. The combination in a 5-high rolling mill, of housings; bearings in the housings; upper and lower working



rolls adapted to the bearings; a supporting roll back of each working roll and also adapted to the bearings in the housings; an intermediate roll; means for moving the intermediate roll; means for driving the working rolls, each supporting roll having additional trunnions less in diameter than the main trunnions; bearings in which these trunnions are mounted; a cross beam carrying the upper bearings; means for supporting the beam; and hydraulic cylinders having pistons supporting the bearings carrying the trunnions of the lower supporting roll.

1,373,851. CLOSURE-FASTENER FOR ASH-SIFTERS. STANISLAW ZYSKOWSKI, Wilkes-Barre, Pa. Filed Sept. 1, 1920. Serial No. 407,530. 1 Claim. (Cl. 292—100.)

In a device of the class described, a casing having a base member pivotally attached thereto, a recess in the periphery of said base, a tongue rigid with said base and extending into said recess, a substantially S-shaped hook pivotally attached to said frame and adapted to enter said recess and engage said tongue, a rod pivotally attached to said hook and extending vertically along the exterior of said casing, and means attached to the upper end of said rod for moving said rod, said rod being vertically slidable.

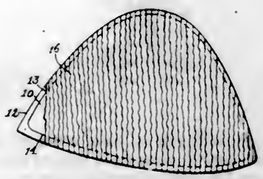


1,373,852. TRACTOR. CHARLES J. ALLEN, Moorestown, N. J., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed June 17, 1920. Serial No. 389,606. 8 Claims. (Cl. 97—30.)

1. The combination with a farm tractor having a depending draft plate, of a marker movably secured to said draft plate for indicating the position of the tractor.

1,373,853. THROTTLE-VALVE FOR DRILLS. LEWIS C. BAYLES and FRED M. SLATER, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 11, 1918. Serial No. 257,788. 3 Claims. (Cl. 121—7.)

1. In a throttle valve for percussive rock cutting tools having independent percussive and rotation elements, a valve casing, a valve rotatable therein, said valve having ports adapted to register with fluid conduits extending to the fluid consuming elements of the tool, rotation of said valve in one direction being adapted to gradually vary the supply to the conduit extending to the percussive ele-

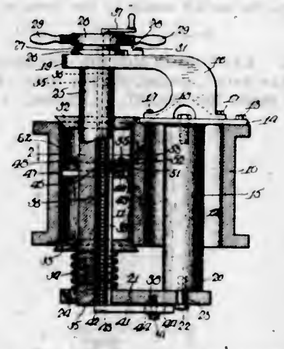


ment from nothing to light operating supply, and then maintain the supply to the percussive element uniform while varying the supply to the rotation element.

1,373,854. REFRACTORY BRICK. CHARLES W. BERRY, St. Louis, Mo., assignor to Laclede-Christy Clay Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 4, 1918. Serial No. 226,745. 2 Claims. (Cl. 106—9.)

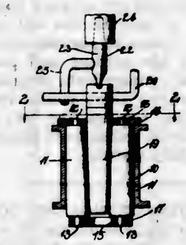
1. A process of manufacturing refractory material consisting in first mixing the desired proportions of magnesite and bauxite in a raw condition, then mixing water with the same, then burning the resultant product at a temperature sufficient to drive off moisture and gas, next regrinding said calcined product and mixing with water, finally forming same into a suitable shape, and burning such shape to produce a hard refractory article.

1,373,855. BOX FOR THE TOE PORTIONS OF BOOTS OR SHOES. RALPH W. BIEBER, Binghamton, N. Y. Filed July 12, 1919. Serial No. 310,355. 3 Claims. (Cl. 36—77.)



3. A box for the toe portions of shoes having a celluloid member and a member of paper capable of being expanded or stretched without tearing or splitting adhesively affixed to said celluloid member.

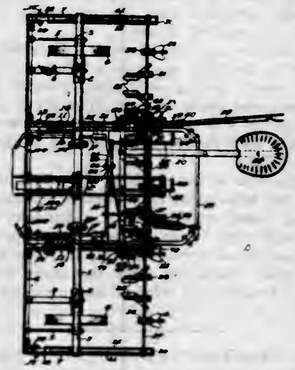
1,373,856. BORING-MACHINE. POMPEIN BOSCH, Elgin, Ill. Filed July 18, 1919. Serial No. 311,761. 6 Claims. (Cl. 77—2.)



1. A boring machine, embodying a rotatable tool shaft, a feed screw rotatable with the shaft and with respect thereto, a tool carried slidably mounted upon the tool shaft and rotatable therewith, a nut movable upon the feed screw, said tool carrier having a recess opening through the face thereof, an element separate from

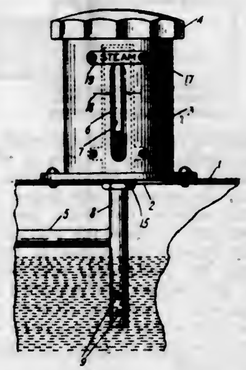
and interposed between the nut and tool carrier, said element being freely detachable from the nut while the latter is upon the screw, and also being removably seated in the said recess, and a catch plate movably mounted upon

the tool carrier and adapted to be moved across the said recess and over the said element whereby the said element will be locked in operative position and against detachment from the nut and tool carrier.



1,373,857. ENGINE-CYLINDER-BURNISHING TOOL. POMPEIN BOSCH, Elgin, Ill. Filed June 14, 1920. Serial No. 388,869. 5 Claims. (Cl. 29—90.)

1. An engine cylinder burnishing tool embodying a plurality of rollers having journals at their ends, annular bearing elements at the ends of the rollers and having elongate slots forming bearings for said journals, means connecting the said elements for holding the rollers against displacement with respect thereto, one of said elements being of a diameter greater than the bore of the cylinder and adapted to rest upon the end of the cylinder for supporting the tool, a mandrel adapted to be inserted between the rollers to force the latter against the cylinder wall, and means for rotating the mandrel, the rollers being rotated about their axes and also around the cylinder wall by frictional engagement with the mandrel.



1,373,858. AGRICULTURAL IMPLEMENT. JAMES MONROE BOWEN, Cape May Courthouse, N. J., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed May 14, 1920. Serial No. 381,291. 9 Claims. (Cl. 97—34.)

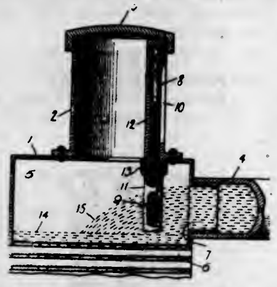
7. In a cultivator, the combination of a frame, a supporting bar, supporting wheels in operative relation therewith, a bracket bar rigid with said supporting bar, a plurality of brackets vertically movable with respect to said bracket bar, a gang bar disposed in the rear of said supporting bar, a plurality of parallel draft rods extending between said gang bar and said brackets and movable with respect thereto, a pair of foot levers pivoted on said frame, means interposed between said levers and said draft rods operative to communicate motion from said levers to said rods, to shift said gang bar laterally, means for vertically supporting said rods with respect to said frame, and manually operated levers for raising and lowering said sup-

porting means whereby vertical angular adjustment of said gang bar may be effected and said gang bar raised or lowered when said gang bar is either in normal or laterally shifted position.

1,373,859. TEMPERATURE-INDICATOR FOR AUTOMOBILES. HARRISON H. BOYCE, Forest Hills, N. Y. Filed Mar. 29, 1916. Serial No. 87,423. 8 Claims. (Cl. 73—52.)

1. In apparatus of the character described, the combination with a vehicle radiator having a filler spout, of a thermometer mounted on the radiator, said thermometer having its thermally responsive part subjected to temperatures within the radiator and having its indicator part extending above the top of the radiator but not above the top of the filler spout and being located in proximity to a wall of the filler spout, the parts being so constructed and arranged that the front of said indicator part is exposed to view, whereby the indicating part is readable and at the same time is protected by the filler spout.

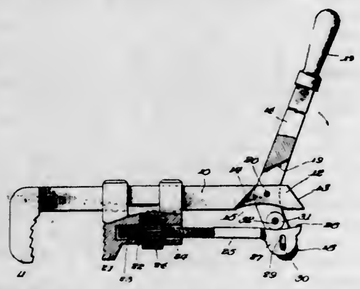
2. In apparatus of the character described, the combination with an automobile radiator having a filler spout, of a glass tube thermometer disposed vertically adjacent to a wall of the filler spout, the upper end of the thermometer being lower than the top of the filler spout and the bulb of the thermometer extending below the filler spout into the radiator, said parts being so constructed and arranged that the indicating part of the thermometer is exposed to view.



3. In an apparatus of the character described, the combination with an automobile radiator having a filler spout, of a glass tube thermometer disposed vertically adjacent

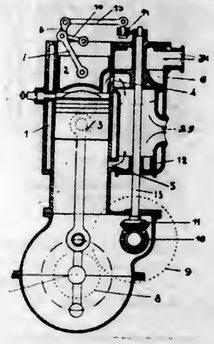
to the rear wall of the filler spout, the upper end of the thermometer being lower than the top of the filler spout and the bulb of the thermometer extending below the filler spout into the radiator, said parts being so constructed and arranged that the indicating part of the thermometer is exposed to view.

4. In apparatus of the character described, the combination with the filler spont of an automobile radiator, said filler spout having a window therein, of a thermometer mounted inside of said filler spout close to the side wall thereof and adjacent to said window and visible therethrough, said windOw being formed in the rear wall of the filler spout.



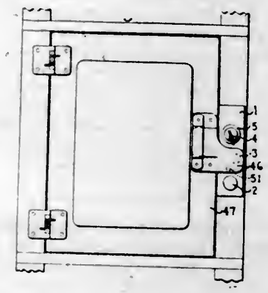
5. In apparatus of the character described, the combination with the filler spout of an automobile radiator, said filler spout being provided with a window, of a thermometer supported inside of said filler spout and adjacent to said window and readable therethrough, and an inclosing shell contacting with the inner wall of said filler spout around said window and inclosing said thermometer.

1,373,860. TEMPERATURE-INDICATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. HARRISON H. BOYCE, Forest Hills, N. Y. Filed May 13, 1916. Serial No. 97,252. 4 Claims. (Cl. 73—52.)



1. In means for indicating the thermal condition of an internal combustion engine, having a water circulating cooling system including a radiator having a top tank and a return pipe for returning the heated water from the engine to the radiator, the return pipe discharging the heated water directly into the radiator in an unconfined stream through an orifice in the rear wall of said top tank, the combination with such radiator and return pipe, of a temperature indicating instrument having a temperature responsive element located in such proximity to such orifice as to be acted upon by the unconfined jet or stream of water entering the top tank through such orifice.

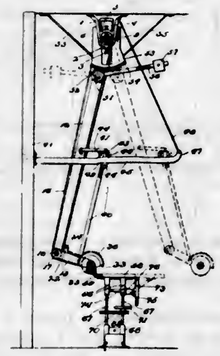
1,373,861. WRENCH. LARKIN BRILES, Lake City, Calif., assignor to J. E. Leonard, Davis Creek, Calif. Filed Mar. 19, 1920. Serial No. 367,175. 4 Claims. (Cl. 81—85.)



1. A wrench including a shank provided with a fixed jaw and having a coacting movable jaw slidable thereon, an operating lever pivoted upon the shank and provided with a laterally directed arm, means forming a connection between the arm and the movable jaw, means loosely and pivotally connecting the first means with said arm, and means carried by the arm for shifting the first means relative to the second means as the lever is swung.

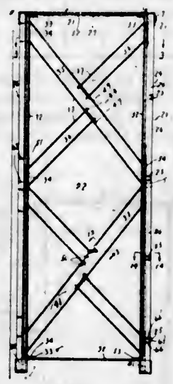
1,373,862. EXPLOSION-MOTOR. ROBERTO BUONOCORE and FRANCESCO CAPALDO, Naples, Italy. Filed Apr. 14, 1919. Serial No. 289,837. 3 Claims. (Cl. 123—75.)

1. In an explosion motor, a cylinder having a slot, a spark plug adjacent to said slot, a working piston within the cylinder, a second piston arranged near the mouth of the cylinder and acting as piston cover, this second piston being adapted to move toward or away from the working piston and to cover or uncover said slot provided in the wall of the cylinder, means to put this slot alternately in communication with the exhaust and suction pipes, a second slot within the cylinder wall, controlled by the said means, means to control these means from the motor shaft and connections between the last named means and the secondary piston rod so as to impart a to and fro motion to the secondary piston.



1,373,863. COIN-CONTROLLED LOCKER-LOCK. RALEIGH B. BUZZAIRD, Washington, D. C., assignor, by mesne assignments, to Davis Automatic Equipment Corporation, New York, N. Y., a Corporation of New York. Filed July 17, 1920. Serial No. 397,119. 4 Claims. (Cl. 194—1.)

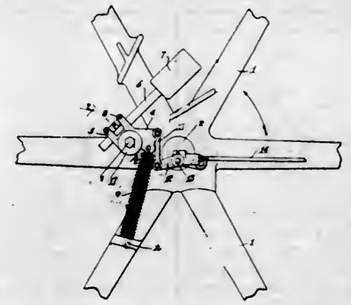
1. The combination of a coin-controlled lock, a coin-entrance thereto, a relatively movable door subject to said lock, and a lip on the door for closing said coin-entrance.



1,373,864. SAWING-MACHINE. CHARLES J. CARLSON, Helena, Mont. Filed Dec. 31, 1919. Serial No. 348,540. 3 Claims. (Cl. 143—46.)

1. In an apparatus of the class described, the combination of a frame mounted at its upper end to swing about a fixed point, a saw frame pivotally connected to the lower end of said swinging frame and extending forwardly therefrom, a saw carried by the front end of the saw frame, a swivel bar pivoted at its lower end to the saw frame, a link connecting the upper end of said bar

with the swinging frame, a horizontal track adjacent the swivel bar and the swinging frame and parallel to the plane of movement thereof, and a carrier pivoted to the swivel bar near the upper end thereof and arranged to travel on said track.

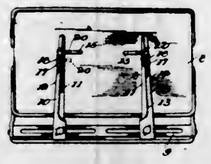


1,373,865. SHEET-METAL STRUCTURE. CHARLES Q. CARPENTER, Dayton, Ohio. Filed July 10, 1919. Serial No. 309,815. 6 Claims. (Cl. 189—34.)

1. A composite sheet-metal wall comprising a comparatively thin sheet of metal of extended area, and reinforcing strips extending in a plurality of directions across the face of said comparatively thin sheet of metal, the major portions of said reinforcing strips distanced from the margins of said comparatively thin sheet of metal, said reinforcing strips rigidly interconnected and rigidly connected with said sheet along said reinforcing strips.

1,373,866. GOVERNOR FOR STEAM-ENGINES. ADOLPH F. CHRISTMAS, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 14, 1919. Serial No. 310,737. 3 Claims. (Cl. 121—172.)

1. In a governor for steam engines, the combination with a fly wheel, of a hollow pin mounted in one arm of the fly wheel, a bolt passing longitudinally through said pin, a governor body pivoted on said pin, a governor arm carried by said body, a governor weight adjustable to and from the said pin about which the weight is adapted to oscillate, a collar on said bolt and friction material between said collar and the face of the said governor body,



for withstanding the accelerating effect of gravity as the weights travel with gravity.

1,373,867. KEY-RING. ALBERT W. CONNER, Falls City, Nebr. Filed May 10, 1920. Serial No. 380,281. 6 Claims. (Cl. 59—96.)

6. A key ring comprising a loop, one terminal of the loop having a keyhole slot with the larger end of the slot disposed adjacent the closed end of the loop and the other terminal of the loop comprising a hook, a connecting member having a lug for pivotal engagement in the larger end of the keyhole slot and keyed engagement in the smaller end thereof, the other end of the connecting member having means for releasable engagement with the hook.

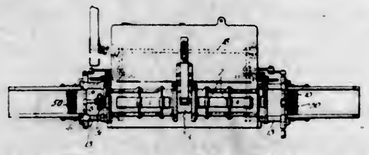
1,373,868. AUXILIARY GRIPPER. CHARLES G. COPE, Pittsburgh, Pa., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 2, 1920. Serial No. 355,550. 2 Claims. (Cl. 101—408.)

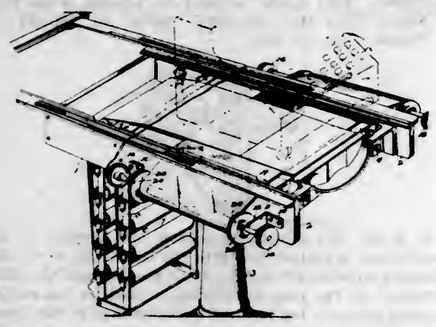
2. The combination with a platen gripper having an edge wall and a wall parallel with said edge wall, of an auxiliary gripper having a portion coöperating with one of said walls and including eccentric locking means cooperating with the other wall, and resilient means connecting said portion with said locking means.

1,373,869. FEEDING DEVICE FOR SHEETS, ENVELOPS, AND THE LIKE. OTIS C. CURRIE, Detroit, Mich., assignor to William O. Albig, Adrian, Mich. Filed Apr. 4, 1917. Serial No. 159,725. 7 Claims. (Cl. 271—29.)

4. In mechanism for feeding sheets, envelops and the like, means for holding a stack of sheets or envelops, a suction plate, a hollow arm supporting the plate, means

for oscillating the said arm to bring the plate to and from the stack to turn an end of the foremost sheet outward from the stack with the suction plate therebeneath providing a table for the sheet, a pair of continuously rotatable feed rolls, a frame supporting the rolls oscilla-





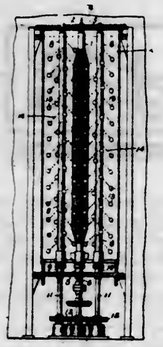


table in timed relation with the oscillation of the suction plate and its supporting arm to place the rolls in position to grasp the end of the sheet, means for releasing the sheet from the suction plate at the time it is grasped by the feed rolls, and a receiver to which the sheet is delivered by the rolls.

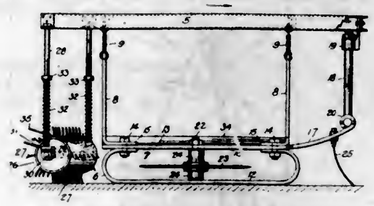
1,373,870. ATTACHMENT FOR BILLING-MACHINES. MILLARD J. DOWNEY, Chicago, Ill. Filed June 26, 1919. Serial No. 306,926. 9 Claims. (Cl. 197—126.)



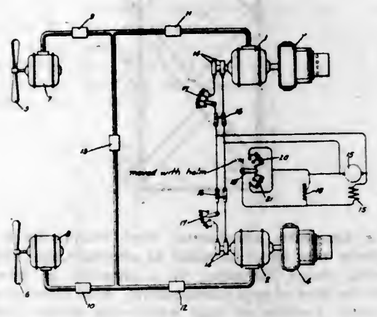
1. The combination with the platen support of a writing machine, of paper storage rolls mounted at the opposite sides of the said supports, and means supporting the rolls for reversal end for end.

1,373,871. APPARATUS FOR CLEANING STIRRING-RODS. CLARENCE B. DUTTON, New York, N. Y. Filed July 3, 1916. Serial No. 107,451. 3 Claims. (Cl. 29—81.)

1. In an apparatus for cleaning stirring rods, the combination of means for rotating the rod to be cleaned, a shaft arranged substantially parallel with the stirring rod; means for rotating said shaft and a plurality of balls flexibly connected to the shaft at suitable intervals along its length and adapted to impinge against the stirring rod on the rotation of the shaft.

1,373,872. BEET-TOPPER. JAMES L. EAST, Denver, Colo. Filed Mar. 25, 1920. Serial No. 368,780. 19 Claims. (Cl. 55—107.)

1. A beet topper comprising a sled composed of connected runners, and rotary cutting disks reversibly mounted on the runners and each having two hubs of different heights.



2. A beet topper comprising a frame, a sled having a universal movement thereon, and a cutting element on the sled.

10. A beet topper comprising a frame, a sled composed of runners having forwardly extended draw bars, a pivoted yoke on the frame, in pivotal connection with said draw bars, and a cutting element on the sled.

13. A beet topper comprising a sled, a cutting element thereon, and rearward of the sled, an element adapted for moving severed beet tops to one side, and yieldably mounted for up and downward motion.

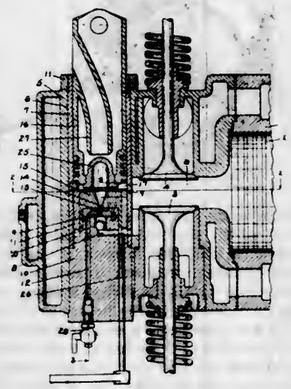
16. A beet topper comprising two normally rigidly connected runners, a pair of coöperating cutting disks rotatably mounted on said runners, and means to adjust the distance between the runners whereby to vary the cooperative relation of the cutting disks.

1,373,873. SHIP PROPULSION. WILLIAM L. R. EMMET, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 29, 1920. Serial No. 385,343. 4 Claims. (Cl. 172—8.)

3. A system of electric ship propulsion, comprising an alternating current generator, a propeller on each side of the ship, an alternating current motor coupled to each propeller and adapted to be electrically connected to said generator, and means coöperatively related to the steering mechanism for affecting the system to control the torque characteristic of the motors to keep them from falling out of step when the helm is thrown substantially to alter the course of the ship.

4. A system of electric ship propulsion comprising a propeller on each side of the ship, an induction motor arranged to drive each propeller, an alternating current generator arranged to supply current to each of said motors and means for increasing the generator excitation when the helm is thrown to change the course of the ship.

1,373,874. SAFETY-RAZOR. CARL O. ENGSTROM, Sacramento, Calif. Filed Apr. 21, 1920. Serial No. 375,425. 5 Claims. (Cl. 30—12.)

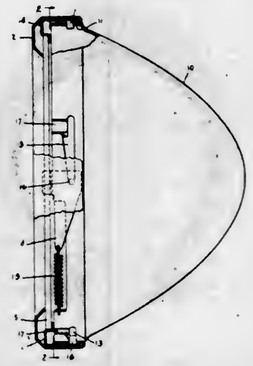


1. A safety razor comprising a frame providing a head, a handle connected therewith, a bed pivotally mounted within the frame, a guard carried by the frame adjacent one edge of said bed, a blade supported by said bed and arranged with its cutting edge overlying the edge of the bed and lying adjacent to said guard, means for holding said blade to the bed, and means for adjusting the bed on its fulcrum to swing the cutting edge thereof relatively to the guard.

1,373,875. RAIL-SPIKE. EDWARD F. FALLON, Harrisonburg, Va. Filed Dec. 8, 1919. Serial No. 343,239. 6 Claims. (Cl. 85—21.)

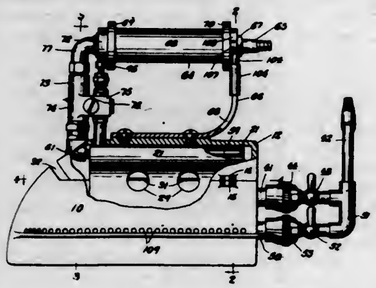
1. A rail spike having a head and a shank, said shank being uniformly tapered inwardly from its driving end to its rear end, the greatest cross sectional area of said shank being immediately below said head.

1,373,876. INTERNAL-COMBUSTION ENGINE. EDWARD A. FIELD and EDWARD A. FIELD, Jr., Oak Park, Ill. Filed June 21, 1920. Serial No. 390,612. 14 Claims. (Cl. 123—33.)



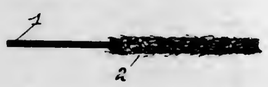
1. In an internal combustion engine, the combination with a cylinder provided with an air inlet valve, an exhaust valve and a coacting piston, of a cylindrical charging chamber member having spirally disposed ports delivering to said cylinder, a cylindrical charging valve arranged within said charging chamber member to control said ports, said charging valve being subject to the pressure within said charging chamber and within said cylinder whereby it is actuated to control said ports, a charging air passage from said cylinder to said charging chamber, a fuel nozzle operatively associated with said air charging passage whereby a charge of fuel is vaporized and delivered to said charging chamber on the compression stroke of the piston, said charging valve being closed by the pressure of said charging stroke, a plunger-like charging chamber adjusting member arranged in said charging chamber member in an opposed relation to said charging valve, an ignition member for said charging chamber carried by said adjusting member and alined with the charging nozzle whereby the charge is ignited in said charging chamber and pressure generated to open said charging valve and eject the charge into the cylinder, and an adjustable stop for regulating the opening of said charging valve.

1,373,877. CORE FOR MOLDING HOLLOW WALLS. JASPER E. FIFIELD, San Diego, Calif. Filed June 12, 1920. Serial No. 388,613. 8 Claims. (Cl. 25—128.)



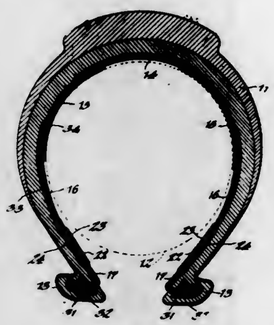
7. A device of the class described, including four plates, each provided with a right angled turn, two of said members provided with downwardly, enlarging, inclined edges and the other two members with upwardly, enlarging, inclined edges conforming to the edges on the first two mentioned plates.

1,373,878. LAMP CONSTRUCTION. HARRY C. FOSTER, Connersville, Ind., assignor to Indiana Lamp Company, Connersville, Ind. Filed Mar. 13, 1920. Serial No. 365,501. 3 Claims. (Cl. 240—41.)



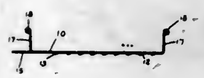
1. In a lamp construction the combination with a casing, and a lens rim adapted to be securely fastened over the face of said casing, of yielding means for normally maintaining said rim in locked position and permanently tying it to said casing after its removal therefrom.

1,373,879. STEAMER, CLEANER, AND PRESSER. GEORGE FRANKS and OSCAR SPROESSIG, New York, N. Y. Filed Dec. 13, 1919. Serial No. 344,521. 4 Claims. (Cl. 68—26.)



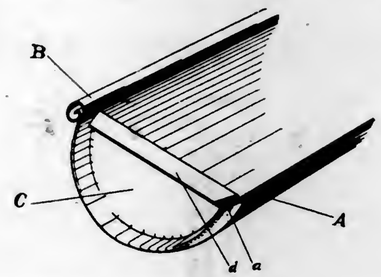
1. In a device of the class described, a suitable casing, a hollow U-shaped steam generator in and independent of said casing, means for supplying water to the generator, the bottom of the casing being provided with a plurality of discharge apertures, means connected with said generator and the bottom of the casing for placing said discharge apertures in communication with said generator whereby the steam in said generator may be discharged through the bottom face of said casing, and burner devices mounted within the casing and said generator for independently heating the bottom of said casing and said generator.

1,373,880. TEXTILE FABRIC. ISRAEL GARON, Duluth, Minn. Filed Dec. 2, 1919. Serial No. 342,004. 4 Claims. (Cl. 28—5.)



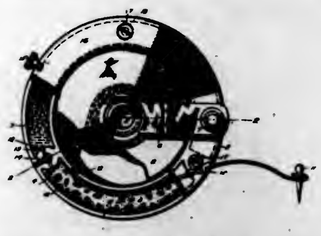
4. As a new article of manufacture, a yarn comprising an elastic rubber core and a cover of fibrous material spun upon and around said core.

1,373,881. ARMOR FOR PNEUMATIC TIRES. MICHAEL J. GILLICE, Buffalo, N. Y. Filed Mar. 10, 1920. Serial No. 364,649. 3 Claims. (Cl. 152—18.)



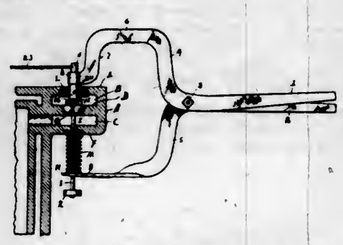
1. A tire-armor, comprising overlapping tread and side plates extending continuously around the armor and slidable laterally on one another, means for loosely connecting adjoining plates, annular base plates spaced from the adjacent side plates, flexible connections between said base plates and the adjacent side plates, and a covering strip extending over said flexible connections.

1,373,882. PARING DEVICE. ROBERT C. GLASSCO, Anderson, Ind., assignor of two-thirds to Computing Cheese Cutter Company, Anderson, Ind., a Corporation. Filed Dec. 23, 1919. Serial No. 346,857. 6 Claims. (Cl. 146—15.)



1. In a paring device, the combination of a plate provided with a hand engageable end extending angularly of the plate and a lug formed from the angularly extending end and extending angularly of said end to form a finger support.

1,373,883. ATTACHMENT FOR EAVES-TROUGHS. WILLIAM GRAY, Rochester, N. Y. Filed May 13, 1920. Serial No. 381,186. 4 Claims. (Cl. 108—28.)



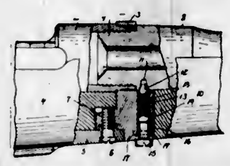
3. An integral end closure for eaves troughs consisting of an approximately semi-circular plate having a flange at its curved edge bent upon itself forming a groove to receive the end of the trough, and a stiffening flange along its straight edge.

1,373,884. MARKING-LINE. WILLIAM F. GREGORY, San Francisco, Calif., assignor of eighty-five per cent. to Charles A. Levy, Newark, N. J., five per cent. to John Boegershausen, San Francisco, Calif., and ten per cent. to Grace Mosher, San Francisco, Calif. Filed Oct. 22, 1919. Serial No. 332,553. 5 Claims. (Cl. 33—87.)

1. A device of the character described comprising a reel, a holder in which the reel is turnably mounted, there being an annular chamber formed in the holder exterior of the reel, partition members in said chamber dividing the chamber into two separate chambers, there being a pair of openings formed in the holder and communicating with one of the chambers, a marking line adapted to be received by the reel and having one end secured thereto, said line having its free end passing through said last named openings, means permitting filling of the chamber with a colored liquid, and means in said holder for delivering said liquid to the chamber through which the line passes to apply the liquid to the line.

1,373,885. VALVE-LIFTER. FRANK M. HANDLY, Edinburg, Ind. Filed Aug. 13, 1920. Serial No. 403,202. 3 Claims. (Cl. 29—86.3.)

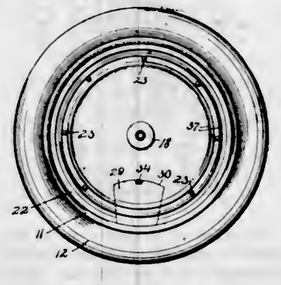
1. A valve lifting tool comprising a pair of crossed handles pivoted together, a notched plate carried by one of the handles and adapted to be inserted astride a valve-stem for engagement with the valve-spring, an arm and a finger carried by the other one of said handles, a bearing carried by said finger, rotatable means mounted in said bearing, means for revolving said rotatable means, and a removable bit connected to said rotatable means and adapted to engage a valve for holding the valve in its seat and enabling the valve to be turned, all substantially as shown and described.



1,373,886. SULFONATED RESIN AND METHOD OF MAKING THE SAME. ALEXANDER HORWITZ, New York, N. Y. Filed Nov. 19, 1918. Serial No. 263,170. 4 Claims. (Cl. 134—26.)

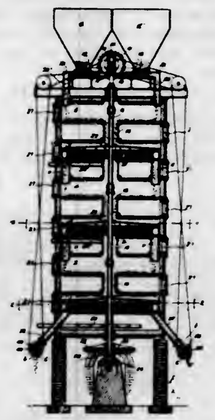
2. The method herein described of producing a sulfonated resin which is soluble in water by the treatment of resin with sulfuric acid, substantially as described.

1,373,887. PROCESS OF FILTRATION. DIBRELL P. HYNES, Chicago, Ill., assignor to Roseberry Surprise Mining Co. Ltd., Sandon, British Columbia, Canada, a Corporation of British Columbia, Canada. Filed Jan. 26, 1920. Serial No. 354,300. 6 Claims. (Cl. 75—18.)



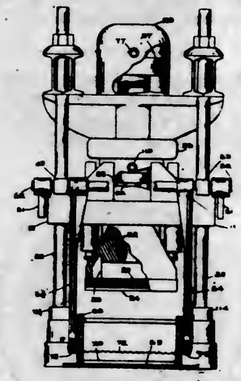
1. The process of preparing for filtration a pulp containing solid and colloidal substances, which consists in adding to a pulp substantially free from acid, a basic compound of zinc, to change the colloidal substances to a form which does not inhibit filtration.

1,373,888. TAKEDOWN GUN. THOMAS C. JOHNSON, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed May 22, 1920. Serial No. 383,353. 1 Claim. (Cl. 42—75.)



In a take-down gun having a receiver-unit and a barrel-unit, the combination with a receiver provided at its forward end with a threaded opening and a depending abutment-lug, and a barrel provided at its rear end with a threaded shank adapted to be screwed into the said receiver, and also provided with an integral collar located immediately in front of the said shank and formed with a frusto-conical recess; of a take-down screw mounted in the said abutment-lug and provided with a frusto-conical nose adapted to enter the said frusto-conical recess, whereby after the receiver and barrel units have been manually screwed together and while the said take-down screw is being turned home, the wedge-like action of its frusto-conical nose upon the side walls of the frusto-conical recess will relatively rotate the barrel and receiver-units until they are brought into predetermined relative position, and whereby the threads of the receiver and barrel take the shocks of recoil and protect the said nose of the take-down screw from deformation thereby.

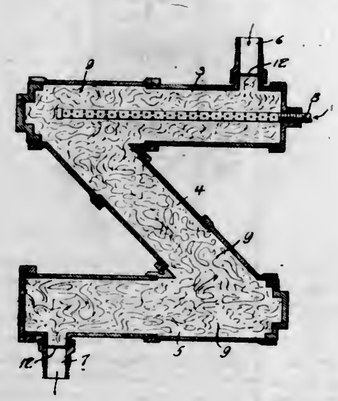
1,373,889. GUARD FOR WHEELS. JOHN O. JOHNSTON, Newark, N. J., assignor to The J. J. Disc-Wheel Corporation, Newark, N. J., a Corporation of New Jersey. Filed Jan. 28, 1919. Serial No. 273,574. 6 Claims. (Cl. 301—37.)



1. A guard for wheels comprising members fitting against the rim of the wheel and covering opposite sides of the wheel within the rim, studs fitting in alined openings in said members and covering the openings, and springs connecting the studs and detachably secured to at least one of each pair of alined stubs.

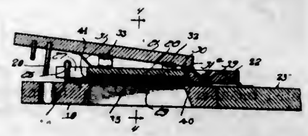
1,373,890. OIL-SHALE RETORT. FRANK JONES, Salt Lake City, Utah. Filed May 29, 1918. Serial No. 237,304. 9 Claims. (Cl. 196—19.)

1. A continuous retort for the destructive distillation of oil-sands and oil-shale, said retort comprising a series of superposed intercommunicating annular hearths, a combustion or heating chamber interposed between said hearths, the floors of said hearths constituting the roofs of the heating or combustion chamber, and means for advancing the material from one hearth to another, said means including a hollow central shaft having hollow arms radiating therefrom and provided with rabbles, and means for supplying steam to said shaft and arms, said arms being perforated to allow steam to be directed onto the material being treated.



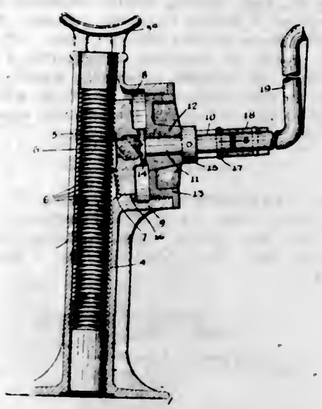
1,373,891. WARE-MOLDING APPARATUS. GEORGE C. KALBFLEISCH, Tiffin, Ohio, assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 22, 1918. Serial No. 251,026. 27 Claims. (Cl. 25—63.)

1. In the manufacture of ware, supply means for unformed material, control means coacting with the supply means for measuring the material movable away from the supply means, a mold, and means effecting distribution of said measured supply of unformed material into the mold, means for closing the mold and pressing the material to form therein, means for giving the material in the mold a supplementary pressure, and means for removing the formed material from the mold.



27. An automatic machine for forming pottery comprising a press, provided with opposing plungers, a mold intermediate the plungers to be closed thereby, hydraulic actuating means for the plungers, hydraulic pressure increasing means for holding the plungers in mold closing position, means for applying hydraulic compacting pressure in the mold to bring the material therein to ware form, a drive device controlling said means in sequence for forming the ware and opening the mold, and a ware support movable with a plunger in removing formed ware from the mold.

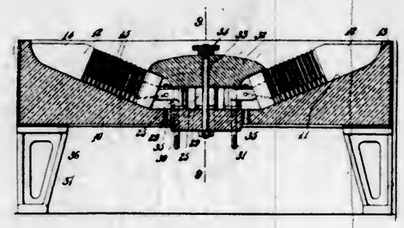
1,373,892. LIQUID-CARBONATING APPARATUS. MORTON S. KIMBEL, Oakland, Calif. Filed Dec. 18, 1917. Serial No. 207,694. 3 Claims. (Cl. 261—96.)



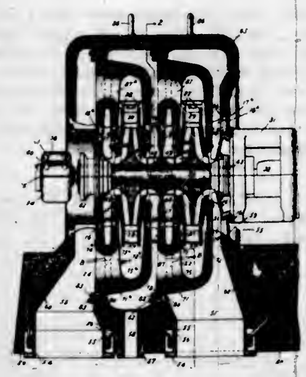
1. An apparatus for carbonating liquid, comprising a vertical chamber having a horizontal upper compartment, a lower compartment parallel thereto and an oblique compartment connecting diagonally opposite ends of the said compartments at an angle of about 45° to form sharp return flow currents in the flowing liquid, inlet and outlet means for the liquid, means for supplying carbonating gas to the upper compartment, and a filling in the chamber for intimately mixing the gas and liquid.

1,373,893. PHOTOGRAPHIC-PRINTING APPARATUS. FRED V. KOEPKE, Lamoille, Ill. Filed Nov. 3, 1919. Serial No. 335,403. 8 Claims. (Cl. 95—73.)

8. In a photographic printing apparatus, the combination of a support, a glazing on said support, a light-source on one side of said glazing, a frame on the other side of said glazing having an opening therein for receiving and locating a sensitized sheet, a mask comprising a thin unitary opaque sheet secured to said frame, means for securing said frame to said support, the arrangement being such that the mask is adapted to clamp a film interposed between the mask and glazing, and a suitable pad member hinged to said frame and fitting in said opening for resiliently clamping a sensitized sheet in contact with the surface of the mask and the disclosed surface of the film.



1,373,894. JACK. JOHN C. KOPF, Bellevue, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1919. Serial No. 332,512. 1 Claim. (Cl. 254—96.)

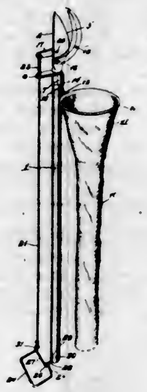


A jack comprising a stand, a rack-bar guided therein and carrying a lifting seat, and operating means comprising a tilted convex spiral face pinion mounted in the stand and meshing at its upper part with the rack, the periphery of the pinion being smooth and circular, and the stand having a bearing beneath said periphery.

1,373,895. ELECTRIC-HEATER UNIT. LESLIE VICTOR LEONARD, Richmond, Victoria, Australia. Filed July 1, 1919. Serial No. 308,043. 15 Claims. (Cl. 219—34.)

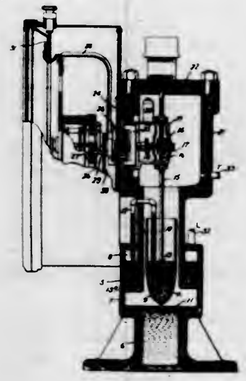
1. In an electric heater, a refractory base, an insulating refractory support arranged on said base so as to permit of air circulating therebetween and from the under to the upper side of the base, and an electric conductor arranged wholly on the exposed side of said support.

1,373,896. CENTRIFUGAL COMPRESSOR AND THE LIKE. LOUIS C. LOEWENSTEIN, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 5, 1919. Serial No. 335,876. 16 Claims. (Cl. 230—11.)



1. A machine of the character described, having its casing made chiefly of concrete but having means forming a continuous metallic structure which defines the clearances of the machine, and bearings carried by said metallic structure.

1,373,897. KEY. WILLIAM A. LOTZ, Newark, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Aug. 10, 1918. Serial No. 249,255. 3 Claims. (Cl. 70—9.)

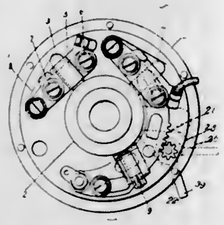


1. An improved key comprising a main solid cylindrical shank, said shank being provided with a flattened-out end-portion, said flattened-out portion being formed with a bit-extension and a centering stud, all being made from a single piece.

1,373,898. FRUIT-PICKER. QUEENIE MCCRIE, deceased, Sarnia, Ontario, Canada, by William McCrie, administrator, Sarnia, Canada, assignor of one-half to May McCrie, Sarnia, Ontario, Canada, and one-half to William O. Sheets, Clivale, Alberta, Canada. Filed Oct. 4, 1919. Serial No. 328,572. 2 Claims. (Cl. 56—336.)

1. In a fruit picker, the combination including a staff and a gathering receptacle coextensive therewith, of a fixed cutter blade projecting from the upper end of the staff and in line therewith, a ferrule engaged over the upper end of the staff and securing said fixed cutter blade in position thereon, a movable cutter blade pivotally supported on said fixed cutter blade, a guide pin mounted on said fixed cutter blade and in engagement with a guide slot formed in said actuating lever, a guide arm projecting radially of said ferrule, an operating rod coextensive with the staff and movable in said guide arm and connecting said actuating lever, a spring associated with said operating rod between said actuating lever and said guide arm and normally tensioning said actuating lever to hold the movable cutter blade in operative position with respect to said fixed cutter blade, and an operating crank pivoted at the lower end of the staff and connecting said operating rod.

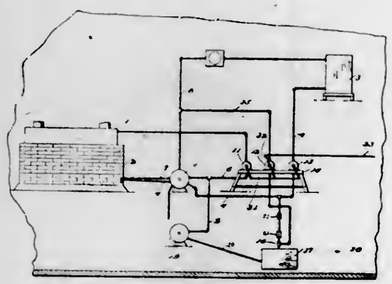
1,373,899. FLOW-METER. JACOB W. MCNAIRY, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 4, 1919. Serial No. 328,443. 6 Claims. (Cl. 73—167.)



1. In a flow meter, a casing, a float well therein containing a liquid, a float which rides on the liquid and comprises a displacing portion and a cup, an annular cham-

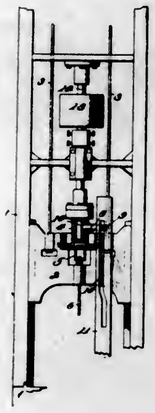
ber in the casing concentric with said float, a tube connecting said cup and chamber for transferring liquid from one to the other, and leading and trailing pipe connections for said chamber and cup.

1,373,900. MANUFACTURE OF DETERSIVE AND EMULSIVE AGENTS. ROBERT MACPHERSON, Brondesbury, and WILLIAM E. HEYS, Bushey, England. Filed May 23, 1916. Serial No. 99,409. 4 Claims. (Cl. 87—5.)



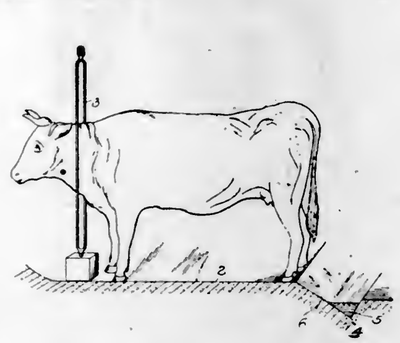
1. The process of producing a detersive and emulsive agent from vegetable materials which consists in mixing, in the cold, the said materials in pulverized form with solid caustic alkali with the addition of only sufficient water to effect the reaction without the application of heat.

1,373,901. DYNAMO-ELECTRIC APPARATUS. CHARLES MARCUS, New York, N. Y., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed June 27, 1918. Serial No. 242,157. 13 Claims. (Cl. 171—324.)



1. In an extra brush generator, in combination, an end head, main brushes, a plate, studs in said end head passing through arcuate slots in said plate, for permitting adjustment of said plate, an extra-brush box insulatedly supported by said plate, an extra brush in said box, an arcuate rack on said plate, a pinion operable from the exterior of said end head, to adjust the position of said extra brush and means apart from said plate and said rack for resisting rotation of said pinion.

1,373,902. SAFETY FIRE-STOP VALVE. HARVEY GRANGER MAULE, Seattle, Wash., assignor of one-half to Reginald A. Pearce, King county, Wash. Filed May 10, 1920. Serial No. 380,325. 4 Claims. (Cl. 158—36.)

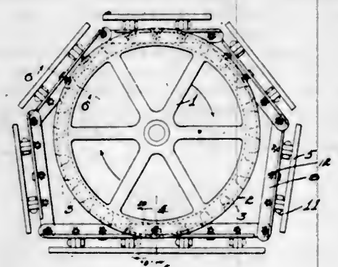


1. In an oil burning system, an oil supply tank, a pump for delivering oil therefrom under pressure to a burner, a motive fluid for the pump, a suction tank, a communication between said suction tank and the oil system, a normally open valve for the oil from the supply tank, a normally open valve for the motive fluid for the pump, and a normally closed valve controlling communication with the suction tank.

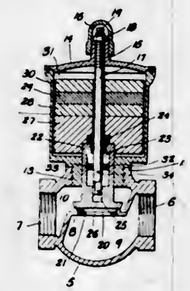
1,373,903. CLAY-PRESS. RALPH F. MEYER, Freeport, Pa. Filed May 2, 1919. Serial No. 294,300. 5 Claims. (Cl. 25—27.)

1. In a clay press, the combination with a die member, of a hollow mold adapted to contain plastic material and coöperating with said die member for forming a longitudinal opening in said plastic material, means for moving said mold toward and away from the die member, a plunger movable toward and away from the interior of said mold, and automatically actuated means for reciprocating said plunger.

1,373,904. ANIMAL-STALL. RALPH MILLER, Boulder, Colo. Filed Dec. 5, 1919. Serial No. 342,667. 1 Claim. (Cl. 119—27.)



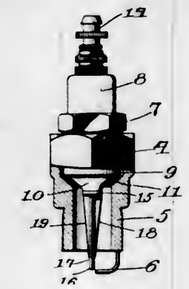
In combination, an animal stall, a gutter rearward thereof, a surface sloping gradually from the rear end of the stall-floor to the gutter, and means at the head-end of the stall, adapted to fasten an animal therein so that its excrement must fall clear of the floor, said surface being sufficiently wide to prevent the animal from stepping rearwardly beyond it.



1,373,905. TRACTOR-WHEEL. ROYAL R. MILLER, Chicago, Ill., assignor, by mesne assignments, to Miller Traction Tread Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 8, 1919. Serial No. 322,520. 3 Claims. (Cl. 305—6.)

1. A vehicle drive wheel comprising an annulus, gear teeth thereon of less width than the annulus, link tread members adapted to be engaged by the periphery of the annulus, means associated with the tread members and

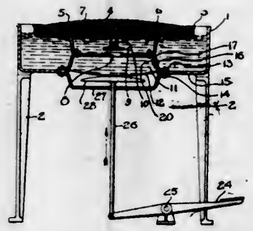
adapted to be engaged between the gear teeth, and means movable relative to each of a pair of adjacent tread members for connecting the same, whereby a true rolling relation between the tread members and the annulus is maintained.



1,373,906. HIGH-PRESSURE GOVERNOR-VALVE. JOSEPH NEEDHAM, New York, N. Y. Filed Aug. 13, 1919. Serial No. 317,252. 5 Claims. (Cl. 251—146.)

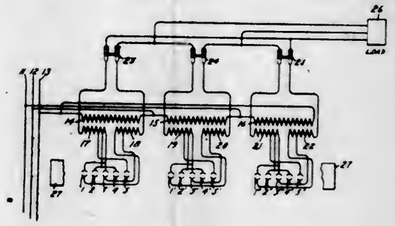
5. A valve device of the class described comprising a valve casing having a passage, a valve for controlling said passage and having an integral plunger body in which is a piston chamber, a stationary piston rod passed into said plunger body and through said chamber, a piston mounted on said rod within said chamber, and means coöperating with the plunger body of said valve for normally holding the same in a closed position under predetermined pressure.

1,373,907. ELECTRODE FOR SPARK-PLUGS. JOHN V. OSTERHOUT, Bridgeport, Conn. Filed Dec. 8, 1919. Serial No. 343,152. 5 Claims. (Cl. 123—169.)



1. In a spark plug including a jacket, a lock-nut and a core, an electrode mounted in said core, said electrode having an extended bearing against the surface of the core and bearing braced against distortion.

1,373,908. MANUFACTURE OF STEEL. ALADAR PACZ, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Aug. 17, 1917. Serial No. 186,723. 16 Claims. (Cl. 75—1.)



16. A steel containing tungsten, niobium and tantalum, the tungsten being in the proportion of four to eight per cent., the niobium two to four per cent., and the tantalum three to six per cent.

1,373,909. COOLER FOR PHOTOMECHANICAL PRINTING-PLATES. FRANK T. POWERS, New York, N. Y. Filed Aug. 11, 1919. Serial No. 316,682. 10 Claims. (Cl. 62—11.)

1. A cooler for photo-mechanical printing plates, including in combination a convexly spheroidal, fluid-pervious member over which the manually held plate may be freely moved, and means for supplying cooling fluid thereto.

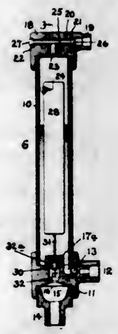
1,373,910. SYSTEM OF DISTRIBUTION. WILBUR A. PRESSEY, Boston, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 23, 1920. Serial No. 375,973. 6 Claims. (Cl. 171—119.)

1. In a system of distribution comprising a source of polyphase alternating current, a plurality of primary and secondary coils for transforming the voltage of said source, the secondary coils being connected in closed delta for supplying a load, the method of varying the ratio of transformation without disconnecting the load, which consists in opening the delta by disconnecting one of said coils therefrom, varying the number of turns on said coil, reconnecting said coil into the delta, and repeating this operation in succession with each secondary coil.

1,373,911. MEANS AND METHOD FOR SUPPLYING LIQUID FUEL TO EXPLOSIVE-MOTORS. JOSEPH PERCY REMINGTON, Philadelphia, Pa., assignor to Remington Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 26, 1919. Serial No. 299,836. 10 Claims. (Cl. 158—36.)

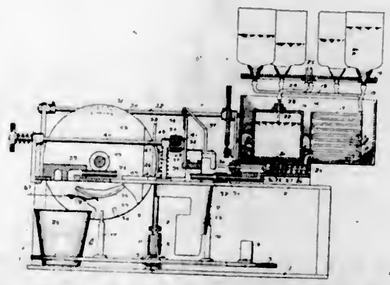
1. Means for supplying a liquid fuel to an explosive motor, comprising the combination of a motor provided with a carbureter, a reservoir for liquid fuel at a lower elevation than the carbureter, a chamber at a higher elevation than the carbureter, a pipe leading from the lower part of the chamber to the carbureter, a pipe leading from the lower part of the chamber to the reservoir, a

pipe leading from the upper part of the chamber and communicating with a cylinder of the motor whereby rapid alternating impulses of suction and pressure are exerted in said pipe during the normal operation of the motor, valve means for permitting the liquid fuel to flow from the reservoir into the chamber and normally preventing flow in the opposite direction, and a valve device



for alternately providing communication between the chamber and the atmosphere on the one hand and the pipe communicating with the motor cylinder during its suction cycle on the other hand, said valve device arranged for synchronous reciprocation with each change from pressure to suction in the cylinder of the motor, and vice versa.

1,373,912. MEANS FOR SUPPLYING LIQUID FUEL TO EXPLOSIVE-MOTORS. JOSEPH PERCY REMINGTON, Philadelphia, Pa., assignor to Remington Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 26, 1919. Serial No. 299,837. 6 Claims. (Cl. 158—36.)



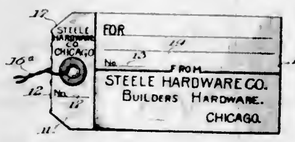
1. Means for supplying liquid fuel to an explosive motor, comprising the combination of a motor provided with a carbureter, and a reservoir for liquid fuel at a lower elevation than the carbureter, combined with a chamber at a higher elevation than the carbureter, a pipe leading from the lower part of the chamber to the carbureter for supplying liquid fuel thereto, a pipe leading from the reservoir to the lower part of the chamber, a freely operating gravity actuated check valve interposed between the chamber and reservoir to permit flow of liquid fuel from the reservoir into the chamber and prevent backflow therefrom, a pipe leading from the upper part of the chamber and connecting with a cylinder of the motor whereby rapid alternating impulses of suction and pressure are exerted in said pipe during the normal operation of the motor, and a valve device for providing rapid alternating communication between the upper part of the chamber and the atmosphere on one hand and the pipe connecting with the motor cylinder during its suction cycle on the other hand, said valve device arranged for synchronous reciprocation with each change from pressure to suction and vice versa, in the cylinder of the motor.

1,373,913. MEANS FOR SUPPLYING LIQUID FUEL TO EXPLOSIVE-MOTORS. JOSEPH PERCY REMINGTON, Philadelphia, Pa., assignor to Remington Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 26, 1919. Serial No. 299,838. 4 Claims. (Cl. 158—36.)

1. Means for supplying liquid fuel to an explosive motor, comprising a motor provided with a carbureter, and a reservoir for liquid fuel at a lower elevation than the carbureter, in combination with a float chamber at a higher elevation than the carbureter, a pipe leading from the lower part of the float chamber to the carbureter for supplying liquid fuel thereto by gravity, a pipe for supplying liquid fuel from the reservoir to the float chamber, a pipe leading from the upper part of the float chamber and connecting with the cylinder of the motor whereby rapid alternating impulses of suction and pressure are exerted in said pipe during the normal operation of the motor, valve devices for alternately providing communication between the float chamber and the atmosphere on the one hand and the pipe connecting with the motor cylinder during its suction cycle on the other hand and said valve devices arranged for synchronous reciprocation with each change from pressure to suction and vice versa, in the cylinder of the motor, a float in the float chamber, and a valve operated by the float for automatically controlling the flow of liquid fuel between the reservoir and float chamber to prevent flow of said fluid into the float chamber when the maximum level therein has been reached and to prevent flow of fluid from the float chamber back to the reservoir when a normal or lower level in the float chamber has been reached.

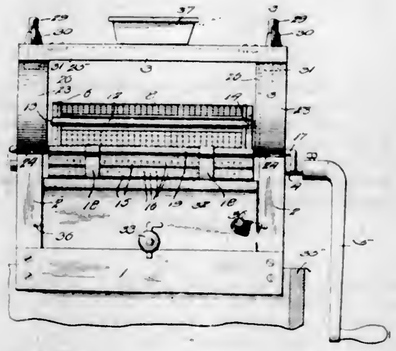
1,373,914. LIQUID-VENDING MACHINE. JULIUS S. SAMUELSON, Duluth, Minn. Filed Jan. 26, 1920. Serial No. 353,038. 4 Claims. (Cl. 226—19.)

1. In combination a suitable support, a cooling receptacle, a liquid supply, a measuring cup, a drinking cup,



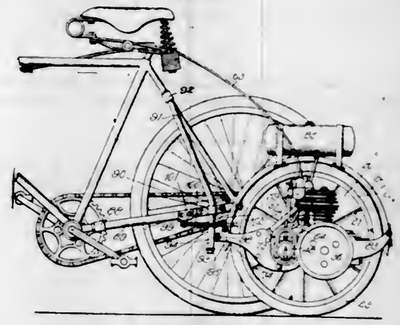
means for automatically emptying the measuring cup into the drinking cup, means for automatically supplying the cups to be filled, an operating motor, an electric circuit for the motor, means whereby the deposit of a coin will close the circuit and start the motor and a second means for closing the circuit and completing the operation of the machine.

1,373,915. BURIAL-RECEPTACLE. LOUIS SCHAFER, St. Louis, Mo. Filed June 17, 1920. Serial No. 389,568. 4 Claims. (Cl. 27—35.)



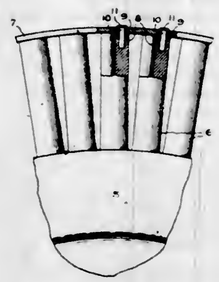
1. A burial receptacle comprising a member providing a platform having a depending wall and having a grooved portion at the lower end of said wall, and a coöperating member having a part to seat in but not fill said groove, whereby the air inclosed within said members when assembled resists the upward passage of water between said wall and coöperating member.

1,373,916. SHIPPING-TAG. STROWBRIDGE B. SEATON, Chicago, Ill., assignor to International Tag Co., Chicago, Ill., a Corporation of New Jersey. Filed Mar. 17, 1919. Serial No. 283,175. 13 Claims. (Cl. 40—6.)



4. A shipping tag comprising separably connected portions, each portion being adapted to receive a member whereby both portions may be attached to an article, said portions being connected together, one portion of the tag being detachable from the other portion at the connection when a strain sufficient to release it from said member is exerted thereon, and each portion of the tag having means of identification provided thereon.

1,373,917. WASHING-MACHINE. JOHN W. SEIFERT, Houston, Tex. Filed Mar. 27, 1920. Serial No. 369,288. 5 Claims. (Cl. 68—23.)

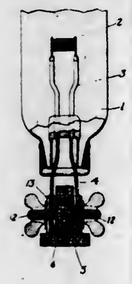


1. A washing machine including a base, standards rising therefrom, a rotary rubbing drum supported by the standards, a foraminous concave rubbing bed of flexible material embracing the lower portion of the drum, springs centrally mounted upon the uprights and having curved or bowed ends extending downwardly therefrom and connected at their free ends with the edges of the rubbing bed on opposite sides of the rotary rubbing drum, and means adjustably mounted upon the uprights for engaging and regulating the bowing curvature of the ends of the springs so as to vary the drawing tension of such ends of the spring upon the concave rubbing bed.

1,373,918. MOTOR-WHEEL FOR BICYCLES. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 20, 1914. Serial No. 857,692. 44 Claims. (Cl. 180—11.)

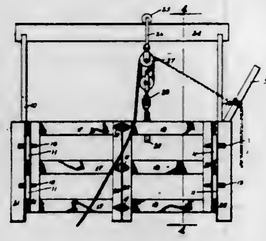
35. In combination, a bicycle, independent driving apparatus therefor including a driving wheel and universally flexible means for connecting said bicycle and apparatus together, said means normally holding the driving wheel substantially parallel to the bicycle.

1,373,919. ELASTIC-FLUID TURBINE. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 15, 1920. Serial No. 396,385. 2 Claims. (Cl. 253—77.)



1. In an elastic fluid turbine, a rotor, a ring of buckets thereon, said buckets having flared holes in their outer ends, a bucket cover, and pins fastened in said holes and forming tenons for fastening the bucket cover in place.

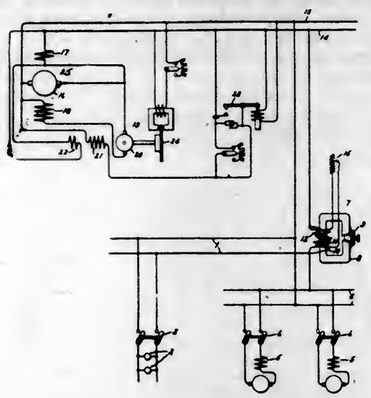
1,373,920. MOUNTING FOR INCANDESCENT LAMPS. ROYAL F. STRICKLAND, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Mar. 6, 1917. Serial No. 152,774. 3 Claims. (Cl. 240—41.)



1. In an illuminating arrangement for projection apparatus the combination of an incandescent lamp having a monoplane filament and a lamp mounting, with leading-

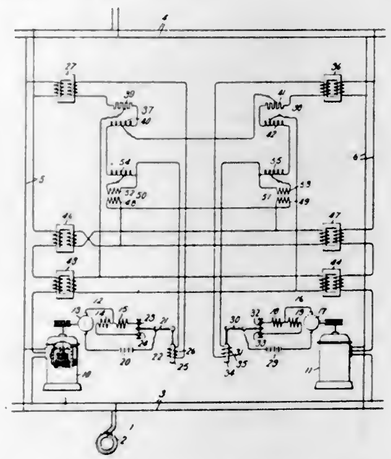
in conductors projecting through the lamp base and serving as supports therefor adapted to be received by sockets in the lamp mounting whereby the lamp may be properly

alined with reference to the optical axis of the projection apparatus merely by the insertion of the lamp leads in the socket.



1,373,921. BREEDING-CRATE. GEORGE H. STULTZ, Winterset, Iowa. Filed Feb. 14, 1921. Serial No. 444,844. 5 Claims. (Cl. 119—98.)

1. In a crate of the class described, the combination of two crate end members having upper and lower transverse boards, each provided with a series of openings therein, a stationary side crate member having openings therein designed to receive the ends of the boards of said end members, pins detachably mounted in the holes for adjustably securing the side member in position relative to the said end members, a second side member comprising one stationary side member portion and a gate portion, the latter being hinged to the stationary side member portion, and both portions of the latter side member being provided with openings through which the ends of the horizontal boards of the gate end members are extended, and pins for detachably and adjustably securing both the stationary and the hinged side members in position relative to the end members, for the purposes stated.



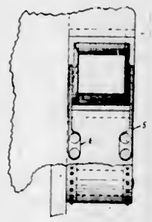
1,373,922. MEANS FOR PREVENTING VOLTAGE FLUCTUATIONS IN DISTRIBUTING-CIRCUITS. LOUIS W. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1918. Serial No. 235,250. 6 Claims. (Cl. 171—312.)

6. In combination, a direct current generator, regulating means for controlling the excitation of said generator, a circuit from which a load requiring substantially constant voltage is energized, a circuit from which a load drawing variable current is energized, means for connecting said generator to said circuits, and means responsive to variations in the current in the latter circuit for inducing voltages in the former circuit comprising a magnetic core provided with a plurality of inductively related windings, one of which is located in the first mentioned

circuit, another of which is located in the second mentioned circuit, and means for controlling the rate of change of flux in said core.

1,373,923. ELECTRICAL SYSTEM OF POWER TRANSMISSION. MAGNUS UNGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 14, 1920. Serial No. 388,732. 7 Claims. (Cl. 171—119.)

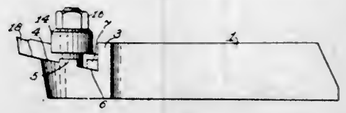
1. In an electrical system, a distribution circuit, a source of alternating current, a plurality of feeder circuits connecting said distribution circuit and said source, a voltage modifying means interposed in each one of said feeder circuits, and means responsive to a circulating current flowing between said feeder circuits for automatically regulating said voltage modifying means.



1,373,924. COMPRESSOR. PEIRCE VAN VLECK and HOWARD COOPER, Baltimore, Md., assignors to William H. Peirce, Baltimore, Md. Filed June 16, 1920. Serial No. 389,371. 4 Claims. (Cl. 230—18.)

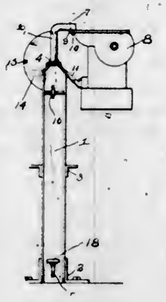
3. A fluid piston compressor comprising two compression chambers, each of which is provided with a cylinder communicating therewith, a gas inlet and a gas discharge for each cylinder, a float-piston within each cylinder having its interior in communication with a gas inlet and a gas discharge and a compression chamber, a float-valve within each float-piston adapted to shut off communication between the gas discharge and interior of said hollow piston, a valve chest, an independent passage connecting the valve chest with each compression chamber at a point opposite to that of the cylinder, a combined oscillating and reciprocating valve having high and low fluid pressure ports and within said chest, a link passing through each compression chamber and independent passages and con-

necting said float-piston with the combined oscillating and reciprocating valve for oscillating the valve by movement of the float-piston, high and low fluid pressure ports communicating with the interior of said chest and provided with passageways so constructed, arranged and disposed to coöperate with said valve within the chest and ports in the valve to reciprocate said valve within the chest when oscillated by the float piston and alternately fill the compression chambers with the fluid under pressure and exhaust the same and permit the fluid to enter and discharge from the chest.



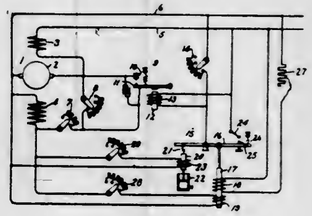
1,373,925. FILM-EXPANDING PRESSURE-GUIDE. WILLIAM WENDERHOLD, New York, N. Y., assignor to Cru Patents Corporation, a Corporation of New York. Filed June 9, 1917. Serial No. 173,764. 5 Claims. (Cl. 88—17.)

1. A film guide member having inclined grooves to engage a film when fed through the guide, said grooves operating to draw the film taut.



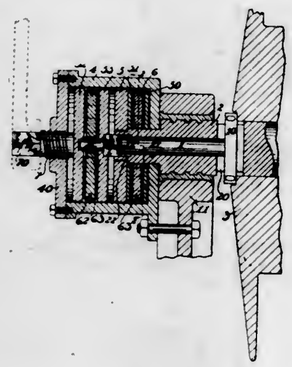
1,373,926. ADJUSTABLE TOOL-HOLDER. FRANK WERMES, Waterloo, Iowa. Filed July 10, 1920. Serial No. 395,317. 2 Claims. (Cl. 29—96.)

1. A tool-holder, comprising a shank, a bearing-head thereon offset at an angle thereto and having integral triangular transversely-spaced buttresses at said angle, also having a rearwardly and downwardly inclined longitudinal passage leading from the interspace of said buttresses rearwardly through the shank, and means for releasably securing a tool adjustably upon said bearing-



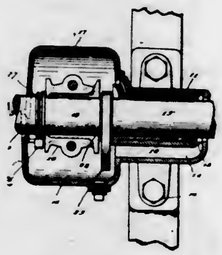
head longitudinally in said passage between said buttresses, or adjustably at an angle to said head along inclined faces of the buttresses.

1,373,927. MOTOR-STAND. ROSS D. WILSON, Kokomo, Ind. Filed Jan. 16, 1920. Serial No. 351,824. 4 Claims. (Cl. 29—89.)



1. A motor stand including a rotatably mounted shaft, said shaft being bent at its ends to form arms, integral extensions on said arms, means on said extensions for engaging parts of a motor, said shaft having a laterally extending portion for engagement with other parts of said motor, means for holding said shaft in different adjusted positions and a spring for counterbalancing the weight of said motor when suspended in certain positions.

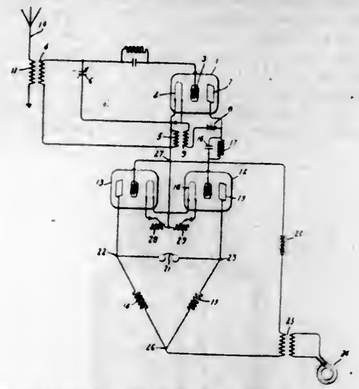
1,373,928. REGULATOR FOR ELECTRIC GENERATORS. FRED H. WINTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 11, 1918. Serial No. 253,604. 6 Claims. (Cl. 171—229.)



1. The combination with a dynamo-electric machine having a power circuit and an exciting circuit, of a regulator therefor comprising a winding responsive to an electrical condition of said power circuit, anti-hunting means, a vibratory contact actuated by said winding and said anti-hunting means, and means responsive to an electrical condition of said exciting circuit for modifying the action of said contact to compensate the under-compounding tendency of said anti-hunting means.

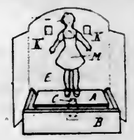
1,373,929. ROLLER THRUST-BEARING FOR FRICTION-DRUMS. JAMES N. WISDOM, Elma, Wash. Filed Sept. 9, 1920. Serial No. 409,232. 3 Claims. (Cl. 64—50.)

1. A friction set comprising an axially bored drum shaft, a thrust plate fixed to the end of the drum shaft, a casing fixed relative to the shaft bearings, a roller bearing between said thrust plate and the said casing, a thrust pin reciprocable in the bore of the shaft and held to rotate therein, a thrust plate fixed to the outer end of the thrust pin to turn therewith, a setting-up screw carried by the casing and engaging the last named thrust plate, and a roller bearing interposed between said last named thrust plate and the thrust plate which is carried by the thrust pin.



1,373,930. ECCENTRIC-SHAFT MOUNTING. LESLIE I. ZIEGLER, Indianapolis, Ind., assignor to Nordyke & Marmon Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 21, 1920. Serial No. 390,367. 3 Claims. (Cl. 64—31.)

1. The combination with a journal bearing and oil reservoir arranged at one end thereof, of an eccentric shaft journaled in said bearing and carrying an eccentric closely adjacent the bearing, an eccentric strap mounted on the eccentric, and an oiling ring mounted on the shaft between the bearing and eccentric so as to deliver oil to both journal and eccentric, said oiling ring depending into the oil reservoir.

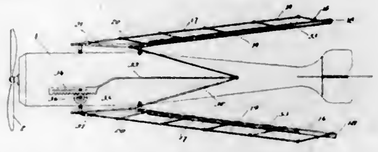


1,373,931. RADIO-RECEIVING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1919. Serial No. 302,003. 6 Claims. (Cl. 250—8.)

6. The method of receiving and detecting continuous wave radio telegraphic signals which consists in utilizing received signals to produce a current which carries at a frequency below audibility and utilizing the current thus

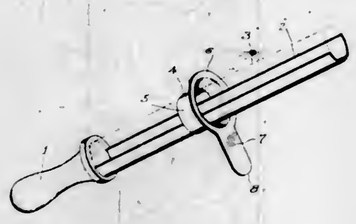
produced to cause a local source of audio frequency current to produce an audible indication.

1,373,932. TOY DANCING FIGURE. ALONZO HORACE ALLEN, Leicester, England. Filed Apr. 13, 1920. Serial No. 373,554. 1 Claim. (Cl. 46—40.)



The combination with a dancing figure, of a stage consisting of a box open at top and rear, a loose platform, a supporting spring fast to the front of the box and to the platform, a projecting tongue at the rear of the platform, a back screen adjusted on the box at the rear of the platform, and a suspension hook on said screen for holding the figure above the platform.

1,373,933. CITRUS-JUICE POWDER. SHIRLEY L. AMES, New York, N. Y. Filed May 3, 1919. Serial No. 294,553. 3 Claims. (Cl. 99—5.)



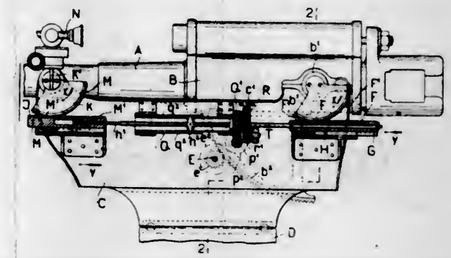
1. A new article of manufacture consisting of a self-preserving powder of dry solids comprising substantially in nature's proportions and chemical conditions all the solids of the natural juice of a citrus fruit as they exist immediately after extraction from the fruit.

1,373,934. AEROPLANE. DOMENICO AMICI, Woodland, Calif. Filed Jan. 8, 1920. Serial No. 350,069. 4 Claims. (Cl. 244—12.)

2. In an aeroplane, the combination with the fuselage, of a pair of wings hingedly connected therewith, angle arms associated with the inner ends of the wings, a shaft, connections between the arms and shaft, a motor for operating the shaft, and means carried respectively by the shaft and fuselage for locking the shaft against rotation in opposite directions.

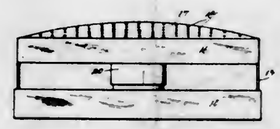
1,373,935. VESSEL-FILLING APPARATUS. THEODORUS S. BAILEY, Berkeley, Calif. Filed Feb. 14, 1920. Serial No. 358,675. 6 Claims. (Cl. 226—101.)

1. In combination with an elongated troughed body open at one end for receiving a body of plastic material, a shaping member provided with an edge formed to cooperate with the troughed body and capable of movement longitudinally thereof for shaping the plastic material received therein to substantially complete the symmetrical contour of the troughed body, and a member extended from said shaping member and adapted for disposing transversely of the troughed body with its free end seated within the troughed body to displace the contents of the trough on the longitudinal movement of the trough or member relatively to each other.



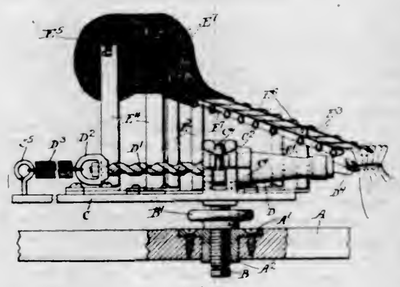
1,373,936. SIGNAL. JOHN E. BALL, Council Bluffs, Iowa. Filed July 3, 1920. Serial No. 393,821. 1 Claim. (Cl. 116—50.)

A direction indicating apparatus for vehicles, including an elongated housing elliptical in cross section having a round head at the end thereof providing two spaced members, and flanges connecting the upper and lower edges thereof to the housing and the lower flange being of a greater length than the upper flange, a signal including a disk that is normally received in the housing and rests on the lower flange thereof, an elongated arm elliptical in cross section extending from the disk into the housing, anti-frictional bands on the arms, said housing having elongated slots and passages communicating therewith adjacent the ends thereof, a lug passing through the arm and entering the slot, spring means on the lug contacting with the inner ends of the arm for moving the lug inward of the housing, a handle member on the outer end of the lug and received thereby into contacting engagement with the outer face of the housing, and said handle designed to cause the lug to be passed through the slot to enter either of the passages thereof when the same is manually operated to bring the disk to signaling or non-signaling position.



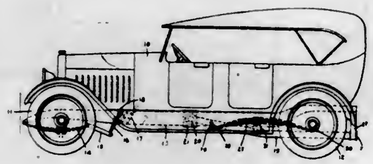
1,373,937. SIGHTING DEVICE FOR ORDNANCE. MAX BARTHOLDY, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,393. 7 Claims. (Cl. 33—48.)

1. A sighting device for ordnance having a gun barrel and carriage therefor which comprises a sighting telescope, a carrier therefor, means for adjusting said sighting telescope and a second sighting telescope adjusting



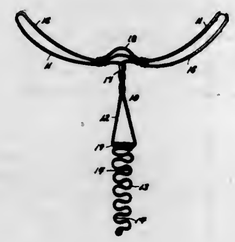
means connected to and operatable by the gun trunnion independently of the first mentioned means.

1,373,938. STEAMER DEVICE FOR MILLINERY-WORK. MAY BASSETT, Des Moines, Iowa. Filed Feb. 28, 1920. Serial No. 361,981. 1 Claim. (Cl. 223—27.)



A steamer device comprising a shallow container having a filler opening near one end and having a central opening in its top, a cylindrical member extending upwardly from said opening, said container having near its ends upwardly extending flanges, a steamer head having a bottom provided with a central opening and having a cylindrical member extending downwardly from said opening that receives said first cylindrical member, said steamer members having a curved perforated top, and being provided at its ends with downwardly extending supporting members adapted to rest on said receptacle adjacent to the upwardly extending flanges thereon.

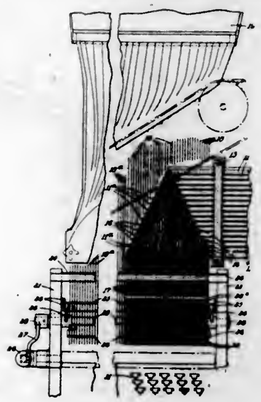
1,373,939. BAG-TYING TOOL. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed June 14, 1919. Serial No. 304,265. 12 Claims. (Cl. 140—93.)



2. The combination on an adjustable base of a bag tying tool and means for feeding bag ties to said tool.

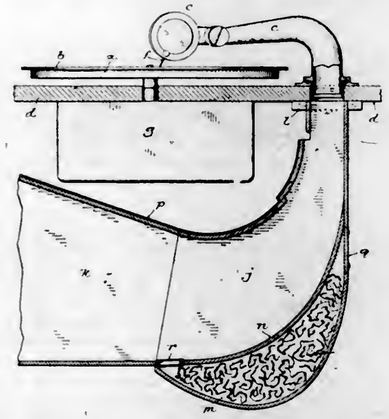
1,373,940. VEHICLE SPRING SUSPENSION. RAYMOND W. BECKMAN, Indianapolis, Ind. Filed Apr. 16, 1920. Serial No. 374,425. 13 Claims. (Cl. 267—19.)

1. A spring suspension for vehicles having a frame and an axle, including a spring connected with one of said members and extending at an acute angle to a vertical line, and a bar pivoted at one end to the other one of said vehicle members and at the other end to the end of said spring.



1,373,941. NECKTIE-HOLDER. SOLOMON BERLIN, Philadelphia, Pa. Filed June 27, 1919. Serial No. 307,053. 1 Claim. (Cl. 2—84.)

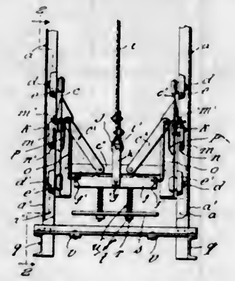
A tie holder for a collar and the button thereof comprising a frame including wings and a shank, a hump on the frame at the central portion thereof, said hump lying in the vertical plane of the shank and at the inner extremities of said wings, and an adjusting element mounted to swing upon the lower end of the shank to be moved into position behind the shank and in the vertical plane thereof, said element having a series of superposed open loop portions for the reception of the collar button, providing a multiplicity of vertical adjustments of the holder relative to said collar and the button thereof.



1,373,942. TYPOGRAPHICAL COMPOSING-MACHINE. JOHN ERNEST BILLINGTON, Broadheath, England, assignor to Linotype and Machinery Limited, London, England. Filed Dec. 23, 1919. Serial No. 346,939. 10 Claims. (Cl. 199—19.)

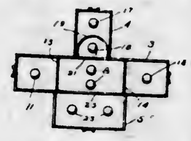
4. In a typographical composing machine the combination with an ordinary magazine, an auxiliary magazine arranged in tandem thereto, a set of escapements for each magazine, a bank of escapement reeds each for actuating the respective escapement of the ordinary magazine but without effect on the escapements of the auxiliary magazines, and a keyboard normally controlling the actuation of the escapements of the ordinary magazine, of a series of auxiliary escapement rods one for each of the escapements of the auxiliary magazine, a motion-transmission device in permanent operative connection with each of the auxiliary escapement rods and adapted to be actuated independently of the first-mentioned escapement reeds, and switch mechanism controlled by the operator for diverting control exercised by the keyboard from escapement reeds

of the ordinary magazine to the motion-transmission devices connected with the auxiliary escapements, and vice versa.



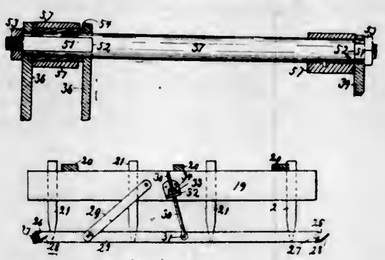
1,373,943. TONE-CHAMBER. FREDERICK F. BLANDIN, Racine, Wis., assignor to Racine Phonograph Company, Racine, Wis., a Corporation of Wisconsin. Filed Nov. 16, 1918. Serial No. 262,887. 4 Claims. (Cl. 181—27.)

1. A tone chamber for sound reproducing machines, having an auxiliary chamber separated from a main chamber by a sound board and provided with loose sound-modifying material.



1,373,944. ELEVATOR SAFETY APPARATUS. WILLIAM EDWARD BOEHCK, Jersey City, N. J., assignor to Revolvator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 1, 1919. Serial No. 314,644. 4 Claims. (Cl. 187—87.)

1. Elevator safety apparatus for tiering machines, including a hoisting mechanism; a pair of fixed standards; a load-carrying platform mounted to travel therebetween; platform-guiding rollers arranged to travel along said standards; a lifting-beam below said platform and supported by said hoisting mechanism, said lifting-beam being free to move downwardly relatively to said platform in case said hoisting mechanism ceases to support said lifting-beam; cams mounted free to turn independently of each other and arranged to travel in close proximity to said standards; and cam-actuating devices connecting said cams and lifting-beam and arranged to throw said cams



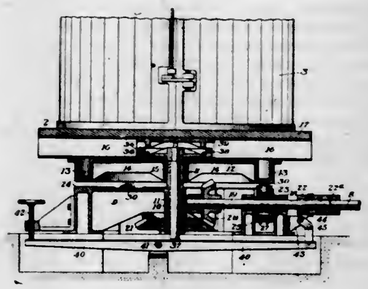
into frictional engagement with said standards when said lifting-beam falls relatively to said platform, whereby said platform-guiding rollers are forced into frictional engagement with said standards and the platform is held from dropping.

1,373,945. CASING FOR AUTOMOBILE SIGNAL-LIGHTS. WILEY E. BOLES, Indianapolis, Ind. Filed Oct. 2, 1919. Serial No. 328,043. 3 Claims. (Cl. 40—132.)

1. A signal casing including an elongated hollow body having a central compartment and separate compartments at the ends thereof of the same height and of less length than the central compartment, hollow sections extending upwardly and downwardly from the body portion, a partition having a horizontal portion for separating the lower section from the central compartment and integral vertical sections for separating the central compartment from the two end compartments, an additional partition for separating the upwardly extending section from the central compartment, lamps in the individual compartments formed by said partitions, and a single door covering one face of all of said compartments and removably secured in position, said door having signal indicating openings therethrough.

1,373,946. HARROW WITH CLEANING ATTACHMENT. GILBERT BORSTAD, Starbuck, Minn. Filed May 8, 1920. Serial No. 379,820. 4 Claims. (Cl. 55—34.)

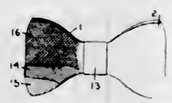
1. In a harrow, a series of teeth and a tooth cleaning attachment movable up and down on the teeth, means for moving the attachment, and means for regulating and limiting the downward movement of the attachment.



2. In a harrow cleaning attachment, a rock shaft having an end portion flattened at two sides, producing two shoulders, a rocker arm with an oblong hole fitting the flattened end and a nut threaded upon the end of the shaft and holding the rocker arm against said shoulders.

1,373,947. METALLIC RAILWAY-TIE. AUGUSTUS F. BROWN, Havre de Grace, Md. Filed May 26, 1920. Serial No. 384,394. 9 Claims. (Cl. 238—31.)

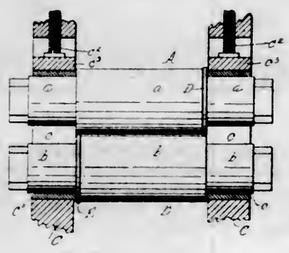
2. A sectional metallic tie having similar end portions and a divided intermediate portion the under surface of which is arched to elevate the same above the corresponding under surfaces of the ends and for a substantial distance above the road-bed.



1,373,948. JARRING-MACHINE. CHARLES F. BUENTE, Avalon, Pa. Filed Sept. 10, 1919. Serial No. 322,798. 15 Claims. (Cl. 25—41.)

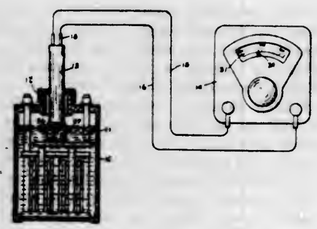
4. A jarring machine, comprising a rotary mold support, means for intermittently engaging the support to simultaneously raise and rotate the support, and means for engaging said support to permit dropping thereof without rotation, substantially as described.

13. A jarring machine, comprising a base, a hollow shaft rotatably mounted in the base, a support connected to said shaft and arranged to be rotated thereby, a plurality of radially disposed shafts rotatably mounted in bearings on the base, gearing connecting the vertical shaft to the radial shafts, support raising and rotating means on the radial shafts, means for actuating said shafts, a support raising device within the hollow shaft, and means for actuating said support raising device to move the support above the support raising and rotating device, substantially as described.



1,373,949. TIE. ALBERT B. CHAUNCEY, Revere, Mass. Filed Sept. 17, 1920. Serial No. 410,843. 3 Claims. (Cl. 2—82.)

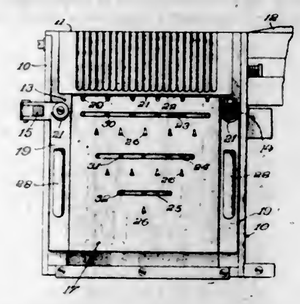
1. A bow tie having wings comprising an outer facing of foraminous material having a lining of material differing in color from that of said facing and a knot portion intermediate of said wings formed of material correspond-



ing to the facing whereby said knot will present a solid color while the wings will present a changeable color effect.

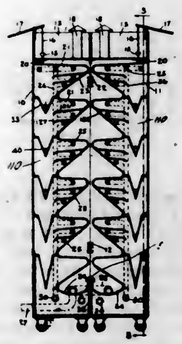
1,373,950. ROLLS FOR HOT-ROLLING SHEET METAL. THOMAS R. COLLEY, Blasdell, N. Y. Filed Apr. 26, 1920. Serial No. 376,510. 5 Claims. (Cl. 80—58.)

5. A pair of rolls for use in hot rolling metal sheets and having substantially cylindrical surfaces adapted to engage the metal to be rolled, said rolls being mounted in housings and being movable toward and from each other, and an enlarged portion formed on one end of each roll, the two enlarged portions being arranged at opposite ends of the rolls, whereby the cylindrical surfaces of the rolls are out of contact when the rolls are in operative positions, and whereby said cylindrical surfaces may be brought into contact by moving one of said rolls endwise with regard to the other roll when said rolls are removed from their housings.



1,373,951. STORAGE-BATTERY INDICATING DEVICE. CLARE C. COX and GEORGE W. LENTZ, Indianapolis, Ind.: said Cox assignor of one-tenth of the whole right to said Lentz. Filed Mar. 11, 1918. Serial No. 221,741. 6 Claims. (Cl. 177—351.)

1. In means for measuring the specific gravity of the electrolyte in storage batteries, a current generating device adapted to be inserted in the electrolyte, including a body portion, oppositely located terminal plates secured to the lower end thereof and made of dissimilar metal, and protected conductor means leading from said plates.

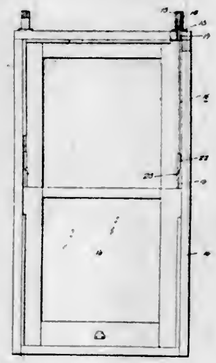


1,373,952. INDIVIDUAL WORK-HOLDER ATTACHMENT FOR SLICING-MACHINES. ALFRED M. DEMUTH, Chicago, Ill., assignor to John A. Kelly, Chicago, Ill. Filed Jan. 30, 1919. Serial No. 274,013. Renewed July 31, 1920. Serial No. 400,567. 23 Claims. (Cl. 17—14.)

1. A device of the character described, embodying a main support, an upright connected therewith, a supplemental support, and a clamping element movable upon the upright and adapted to coöperate with the supplemental

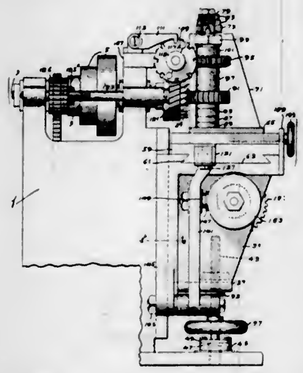
support, said supplemental suport being attachable and removable at will and while the said clamping member is connected with the upright.

1,373,953. APPARATUS FOR HEATING AND COOLING LIQUIDS. CHARLES W. DESOBRY, Indianapolis, Ind. Filed Mar. 17, 1919. Serial No. 283,098. 15 Claims. (Cl. 257—180.)



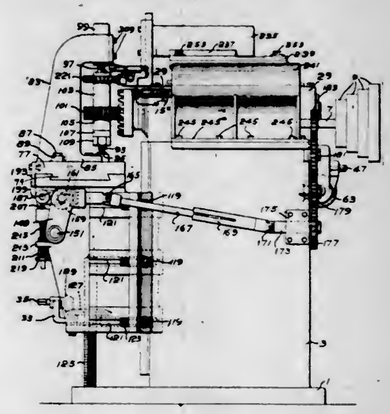
7. Apparatus for heating or cooling liquid, including two sections formed substantially alike and hinged together at one side whereby they can be opened and closed against each other, a chamber in each section with the inner walls of the chambers similarly formed so as to furnish two substantially vertically disposed surfaces and over each of which liquid is adapted to flow down and adhere thereto, whereby the portion of the device containing the liquid being treated will be inclosed when said sections are in closed position, and means for circulating a heating or cooling media in said chambers.

1,373,954. AUTOMOBILE-BUMPER. THOMAS I. DUFFY, Oak Park, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 17, 1917. Serial No. 197,055. 10 Claims. (Cl. 293—55.)



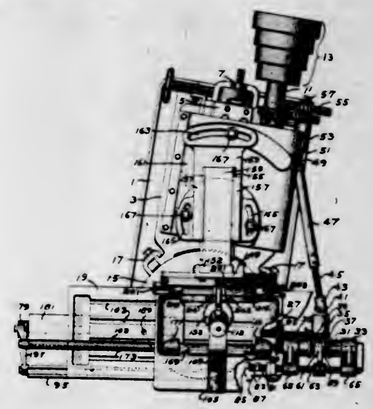
1. A bumper attaching bracket provided with a rearwardly-facing bearing portion, and at the bottom of said bearing portion a rearwardly-projected and upwardly-open hook; an arm extending rearwardly from said bearing portion in a vertical fore-and-aft plane situated outwardly from said hook, and an inwardly directed hook adapted for engagement upwardly at the rear end of said arm.

1,373,955. WINDOW-COUNTERBALANCE. ERIK GEORG ERICKSON, Baker, Oreg. Filed Aug. 11, 1919. Serial No. 316,701. 1 Claim. (Cl. 16—148.)



The combination with a window including a casing and upper and lower sashes slidably mounted therein, a sheave mounted upon the top of the frame near each side thereof, and a cable passing over each of said sheaves, and having one end permanently secured to the upper sash, perforated plates secured to and extending above the upper end of the lower sash, a sleeve secured to the opposite end of said cable, with a reduced extension projecting beyond the lower end of the sleeve, and terminating to provide a hook to be interchangeably received by said perforations.

1,373,956. GEAR-CUTTING MACHINE. WILLIAM C. FARNUM, Winchendon, Mass. Filed July 22, 1918. Serial No. 245,983. 25 Claims. (Cl. 90—4.)

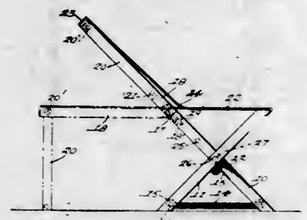


1. A machine for cutting teeth of gears, comprising, in combination, a toothed cutter for cutting teeth on a gear blank, means to rotate said cutter, a mandrel supporting said gear blank, a master gear on said mandrel, a worm meshing with said master gear adapted to serve as a rack to roll the gear blank across the teeth of the cutter, and means for rolling the master gear and gear blank out of engagement with the worm and cutter respectively to allow indexing of the gear blank.

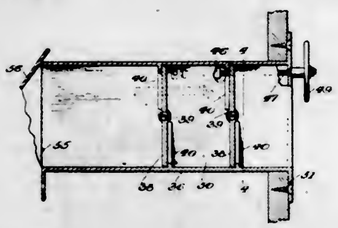
1,373,957. GEAR-CUTTING MACHINE. WILLIAM C. FARNUM, Winchendon, Mass. Filed Aug. 5, 1918. Serial No. 248,806. 30 Claims. (Cl. 90—4.)

1. A machine of the character described, comprising, in combination, a gear tooth cutter, means to support a gear blank in position to be acted upon by said cutter; and means to index said gear blank including a pair of racks, a master gear adapted to mesh with said racks, and means relatively to adjust said racks to turn said master gear a step after the latter has rolled from one rack to the other.

1,373,958. ATTACHMENT FOR CUTTING TEETH OF BEVEL-GEARS. WILLIAM C. FARNUM, Winchendon, Mass. Filed Dec. 23, 1918. Serial No. 267,887. 27 Claims. (Cl. 90—5.)



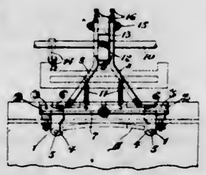
1. In a machine of the character described, the combination of a rotary cutter, a curved rack, a curved indexing rack, an arbor to receive a gear blank, a master gear on said arbor, means to oscillate said arbor to roll said master gear to and from said rack, and means to shift said indexing rack to index the gear blank.



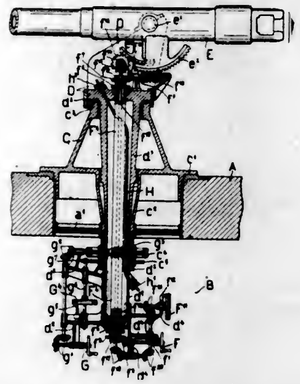
1,373,959. COLLAPSIBLE CHAIR. GABRIEL FLORESKUL, Toronto, Ontario, Canada. Filed Aug. 13, 1920. Serial No. 403,372. 1 Claim. (Cl. 155—45.)

A collapsible chair comprising pairs of legs hinged together intermediate their length at their point of intersection, braces pivotally secured near the lower ends of one

pair of said legs, hooked ends at the opposite ends of said braces adapted to normally engage pins at the inner faces of the other pair of said legs, means for holding said braces parallel to one pair of said legs when the chair is to be folded, extensions hingedly secured to the upper ends of one pair of said legs, latches and keepers for normally holding said extensions in alinement with the last named pair of legs, couch legs pivotally secured to the upper ends of said extensions, means for normally holding said couch legs against the sides of said extensions parallel to the same, said means allowing a swinging of said couch legs around their pivots when the chair is to be used as a bed, and a canvas seat secured to the front end of one pair of legs and to the upper ends of said extensions, said canvas normally forming a fold for allowing a stretching of the same when the chair is to be converted into a cot or couch.

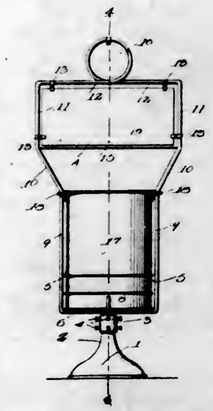


1,373,960. VENTILATOR. WILLIAM G. FORCIER, Wollaston, Mass. Original application filed July 31, 1919, Serial No. 314,405. Divided and this application filed Jan. 20, 1920. Serial No. 352,868. 3 Claims. (Cl. 126—285.)



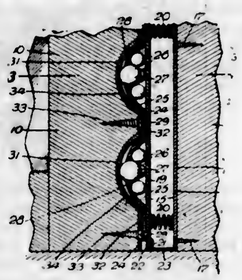
1. A ventilator for buildings comprising an open-ended casing, a plate mounted within the casing for rocking movement in a vertical plane, a radial arm at one end of the plate, a worm disposed above said arm and held against longitudinal movement, a sleeve mounted upon said worm and having a depending tongue provided with a vertical slot, and a pin inserted through said radial arm and playing in the slot in said tongue.

1,373,961. NAILING-MACHINE. JOHN R. GILDA, St. Louis, Mo. Filed Jan. 16, 1919. Serial No. 271,425. 8 Claims. (Cl. 1—15.)



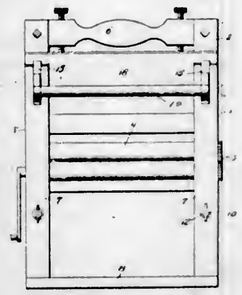
8. A nailing machine including, in combination, a support for a board, a pair of spaced levers for drawing a warped board against the support for straightening the board, means for actuating the levers, and pins carried by the levers for alining a second board with the warped board when straightened.

1,373,962. PIVOT-GUN. KURTH HALLER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,404. 6 Claims. (Cl. 89—37.)



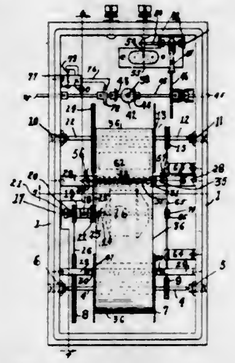
1. An arrangement of the class described comprising a pivot gun, a carriage therefor, a closed chamber, said chamber being provided with an opening, a pedestal projecting from said opening, a hollow pivot pin forming the axis for said gun carriage, said pivot pin being supported by said pedestal, an extension on said pedestal projecting into the chamber and surrounding said pivot pin, means for packing the pivot pin in the extension, means operatable from within the chamber and extending through said pivot pin for elevating the gun and means operatable from within the chamber for rotating the pivot pin for traversing the gun.

1,373,963. RECEPTACLE-SUPPORT AND ADVERTISING-EXHIBITOR. JAMES H. HARTZELL and HARRY F. HARTZELL, Lakeland, Fla. Filed Sept. 4, 1920. Serial No. 408,125. 3 Claims. (Cl. 248—41.)



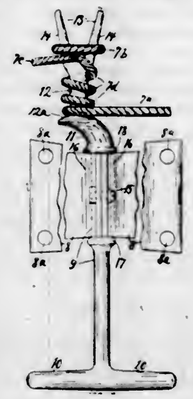
1. In a support of the class described, a pedestal, a frame detachably mounted on said pedestal including radiating arms, some of which have upstanding fingers at their outer ends, and others having upstanding side members arranged parallel with each other, and a rectangular frame connecting the upper ends of said side members.

1,373,964. SASH-HOLDING DEVICE. JOHN W. JONES, Haddonfield, N. J. Filed Sept. 19, 1919. Serial No. 324,911. 1 Claim. (Cl. 292—75.)



The combination with a window frame having a slidingly mounted sash, of a sash holding device comprising a laterally movable hollow member located between the side rail of the sash and the adjacent side of the frame, a downwardly projecting wall included in the hollow member for engagement in spaced sockets provided in the adjacent edge of the sash to hold the latter in adjusted position, an antifriction ball projecting through an opening in the hollow member for engagement with the socketed edge of the sash to facilitate adjustment and antifriction balls located within the hollow member and providing a bearing for the first mentioned ball.

1,373,965. WRINGER AND CLAMP THEREFOR. LLEWELLYN R. JONES, Belleville, Ontario, Canada, assignor of one-fourth to Charles A. Badgley, Belleville, Ontario, Canada. Filed Apr. 5, 1920. Serial No. 371,526. 1 Claim. (Cl. 68—32.)



In combination with a wringer including side bars formed in their rear edges at their lower ends with support receiving recesses, the side bars being also provided on their rear edges adjacent the upper ends of said recesses with inclined bearing faces, bolts extending through the side bars centrally to said inclined bearing faces, a clamping frame rockably associated with said side bars and having legs through which said bolts extend, wing nuts threaded on said bolts to bind the clamping frame against said bearing surfaces, a clamping bar connecting the lower ends of the clamping legs and projecting therebeyond toward the vertical walls of said support receiving recesses, a transverse bar connecting said side bars near the upper ends thereof, cam levers pivoted upon the upper ends of the legs of the clamping frame and engageable with said last named bar, whereby to tilt the clamping frame upon said bolts, and a rod connecting said levers and serving as a handle.

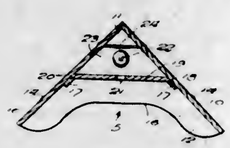
1,373,966. MECHANICAL DIRECTORY. GEORGE HENRY KEYSER, Akron, Ohio. Filed Jan. 2, 1920. Serial No. 348,745. 7 Claims. (Cl. 40—31.)

1. In a device of the class described, a casing, a strip of flexible material positioned in said casing, a window in said casing, means to move said flexible material longitudinally beneath said window, characters registered on said flexible material in class order, a dial on said casing, index characters corresponding to the class of the characters on the flexible material, registered on said dial, an indicating hand on said dial and means connected with the movement of said flexible material to automatically move said hand to points on said dial which indicate the class of characters on said strip as the same is positioned beneath the window on said casing.

1,373,967. CLOTHESLINE HOLDER AND TIGHTENER. JOHN V. LOFQUIST, St. Paul, Minn. Filed Aug. 2, 1920. Serial No. 400,618. 7 Claims. (Cl. 254—149.)

1. In a clothes line holder and stretcher, a frame or bracket adapted to be secured to a stationary object, a shaft journaled in the bracket and having at one end a handle by which to rotate it, the other end being offset to form a crank and terminating in a means adapted to have the clothes line attached to it; said crank serving as a winding drum for a portion of the attached line and as a means for preventing accidental unwinding of the line.

1,373,968. HAIR-CURLER. ORA D. MCCLINTOCK, Portland, Oreg. Filed Oct. 30, 1919. Serial No. 334,534. 3 Claims. (Cl. 132—40.)

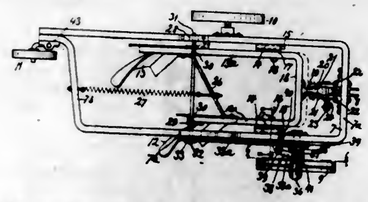


1. A hair curler comprising a bendable element having terminal loops and bent intermediate the ends to form

side portions in parallel relation with a loop at the bend, and a casing of flexible material having a smooth outer

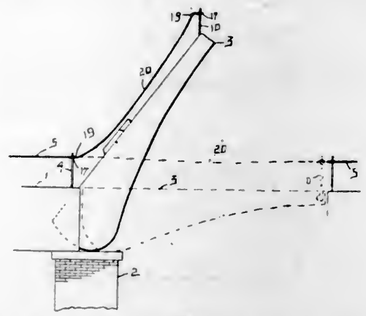
face and inclosing the parallel side portions, said terminal loops adapted to receive a binding tape.

1,373,969. DAYLIGHT EGG-CANDLER. FRANK E. MUSSEHL, Lincoln, Nebr. Filed Sept. 17, 1918. Serial No. 254,387. 1 Claim. (Cl. 99—6.)



A daylight egg candler comprising a casing substantially triangular in form and open at one side, a partition extending transversely of the casing in parallel relation to the open end thereof and forming in the apex of the same a darkened chamber, a reflector spaced in rear of said partition, and parallel thereto, and a lamp within said darkened chamber between said partition and said reflector, said partition having a focal aperture in alinement with said lamp and the apex point of said casing, the top wall of said casing having a semi-circular sight opening arranged immediately above said focal aperture so as to bring the egg to be candled directly in focus with the line of sight of the operator, the inner surfaces of the walls of said casing and the outer wall of said partition being rendered black to contrast with the light aperture and the natural light of the day.

1,373,970. ROUGHENING OR HAND ABRADING TOOL. ERWIN PEASLEY, Amherst, Ohio. Filed Mar. 16, 1920. Serial No. 366,303. 1 Claim. (Cl. 29—78.)

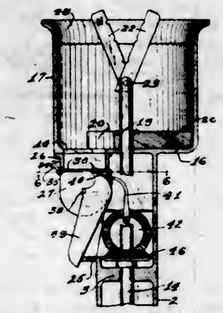


In a roughening and hand abrading tool, a cup-shaped cap having a convexed center formed with teeth cut and stamped outwardly therefrom, and a handle having an end anchored in the cap removed from the convexed center thereof.

1,373,971. PLOW-RreleasING DEVICE. BENJAMIN C. F. PRITZEL, Stillwater, Minn. Filed Dec. 4, 1920. Serial No. 428,355. 6 Claims. (Cl. 97—36.)

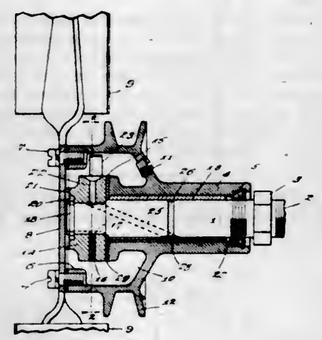
1. The combination with a skeleton frame having supporting wheels on which it is to be drawn forward, of a plowing device within the frame and having its front end coupled to the front end of the frame by a spring-pressed device adapted to yield and uncouple the plowing device when the latter gets obstructed, a chank-shaft journaled across the frame and having its crank engaged with the plowing device, said plowing device having its front portion provided with trunnions journaled in longitudinally slidable plates guided to slide one upon each side bar of the wheeled frame, a short shaft journaled in one side of the frame and forming the axle of one of the ground wheels fixed on it, a clutch member rotatable on the short shaft and having attached to it a sprocket, another sprocket fixed on the crank-shaft and a link belt connecting the two sprockets, a second clutch member slidably keyed on the short shaft and a spring tending at all times to engage said second clutch member with the first mentioned clutch member, a pivotally mounted shifter engaging the second clutch member and having an arm supported by one of the sliding plates holding the trunnions, as long as said plate is in its normal forward position.

1,373,972. TROLLEY-LINE SUPPORT. WILLIAM E. RICHARDS, Toledo, Ohio. Filed Feb. 7, 1920. Serial No. 357,061. 9 Claims. (Cl. 191—9.)



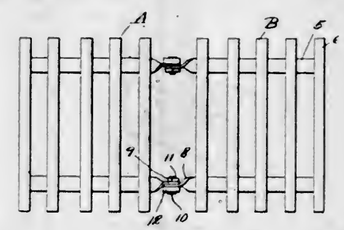
5. A lift bridge trolley support including a counterweighted tiltable pole.

1,373,973. DISPENSER. GEORGE L. RICHARDSON and WALTER E. RICHARDSON, Chicago, Ill. Filed May 2, 1918. Serial No. 232,004. 17 Claims. (Cl. 221—95.)



1. A material dispenser embracing a container having a discharge opening therein, doors for closing said opening, a tray pivotally mounted on said container below said doors for normally engaging and holding the doors in closed position, means for moving the tray to open said doors including a link pivoted to the upper end of the tray, said link being eccentrically mounted on the tray operating means, so that in one position it moves the tray to allow the doors to open and in its other position it moves the tray to close the doors.

2. A material dispenser comprising a container having a discharge opening therein, doors for closing said opening, a tray pivotally mounted on said container for normally engaging and holding the doors in closed position, a gear operated eccentric mechanism connected with said tray for actuating the tray to move the same out of engagement with said doors, and spring controlling means connected with said doors for automatically opening the same when said tray is moved into receiving position to permit a predetermined quantity of the material to be dispensed.

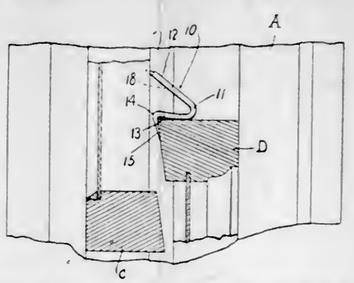


3. A material dispenser comprising a container having a discharge opening therein, doors for closing the same, a mechanism connected with said doors adapted to move the same into open position, a gravity acting material receiving tray pivotally mounted on the container and normally positioned to engage and hold said doors in closed position, a link pivotally connected to said tray, and a gear mechanism to which said link is eccentrically connected, said gear mechanism and link adapted to be operated to move said tray into a receiving position to release said doors to permit the same to be opened by said door controlling mechanism whereby a predetermined quantity of the material is deposited in said tray.

1,373,974. BEARING. CHESTER S. RICKER, Indianapolis, Ind., assignor to The Oakes Co., Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 25, 1919. Serial No. 326,128. 9 Claims. (Cl. 64—26.)

1. In combination, a stationary supporting member, a rotatable member rotatably supported by said supporting member and provided with an internal annular lubricant-holding chamber, said supporting member being provided with a passageway communicating with the bearing surfaces between said two members and with said lubricant-holding chamber, said passageway being provided with a substantially radial funnel-shaped entrance where it communicates with said lubricant-holding chamber, and a baffle plate carried by said stationary member and projecting outward substantially parallel to the radius of such entrance but circumferentially displaced from such entrance so that when the rotatable member rotates said baffle plate directs into said passageway lubricant which is carried in said chamber but permits excess of lubricant to overflow the sides of the baffle plate.

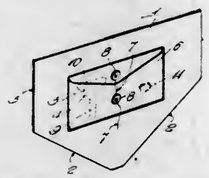
1,373,975. FOLDABLE SINK-RACK. ARTHUR J. RIDDLE, Erie, Pa. Filed July 17, 1919. Serial No. 311,481. 1 Claim. (Cl. 141—11.)



A foldable rack of the class described composed of a plurality of hingedly connected sections, each comprising a pair of parallel laterally spaced flat metal bars with one end of each twisted to position the terminal thereof at right angles to its flat face, said terminals being apertured, pintles in the apertures, spaced slats connecting the bars of each section, the free ends of the sections having feet with rounded soles or support engaging portions, and rollers carried by said pintles with the peripheries thereof extending beyond the edges of said terminals to coöperate with said feet to support the rack spaced from its support and to facilitate its movement over said support.

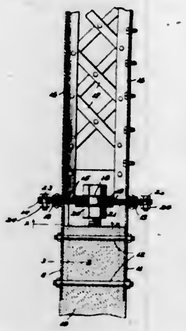
1,373,976. BUTTON. FRANK A. ROBERTS, Chicago, Ill. Filed July 3, 1920. Serial No. 393,877. 1 Claim. (Cl. 24—103.)

In combination, a button having a central opening adapted to receive a fold of a piece of fabric, and also having an annular groove surrounding said opening, a pin adapted to be passed through the fold in the fabric and having its terminals snapped into said groove, one wall of the groove being tapered inwardly to prevent casual separation of the pin from the button, and said pin being wholly disposed within the area of the button between the opposed faces thereof.



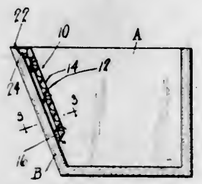
1,373,977. WINDOW-LOCK. JOHN A. ROUCH and THOMAS H. HASTIE, Tulsa, Okla. Filed Oct. 12, 1920. Serial No. 416,417. 1 Claim. (Cl. 292—288.)

A device of the character described comprising an elongated sheet of metal bent into acute angular form to de-



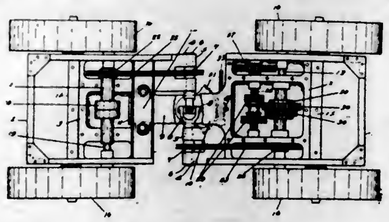
fine diverging arms, one arm being engageable upon the top rail of the lower sash of a window and terminating in a tapered extension engaging against the side of the rail toward the upper sash, the other arm terminating in a penetrating point engageable with the side rail of the upper sash, and a lateral extension formed on one side of said sheet and having its upper corner formed as a penetrating time engageable with the parting strip of the window.

1,373,978. REPAIR OUTFIT FOR MUSIC-ROLLS. JOHN S. RUHLMAN, Trenton, N. J. Filed Aug. 25, 1919. Serial No. 319,662. 1 Claim. (Cl. 206—38.)



An article of manufacture comprising a pattern card conforming in shape to the end of a perforated music sheet and adapted for use in properly trimming the sheet for the application of a pull tab thereto, an envelop smaller than said card and secured flat against the same, a pull tab in said envelop for application to the trimmed music sheet, and releasable means for holding said envelop closed.

1,373,979. TELEGRAPH-POLE. DUDLEY RANDOLPH RYALS, Richmond, Va. Filed Aug. 16, 1920. Serial No. 403,797. 3 Claims. (Cl. 72—84.)

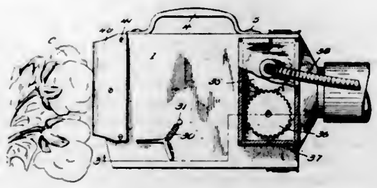


1. In a pole for supporting wires or the like, a base, a top plate fixed to the base, a body having a bottom plate resting on the top plate of the base, a bolt passing centrally through the plates and constituting a swivel connection for the base and body, and means to lock the plates immovably with relation to each other.

1,373,980. LAUNDRY-TUB. MAUDE SHULTS, St. Johnsville, N. Y. Filed Mar. 3, 1920. Serial No. 363,026. 2 Claims. (Cl. 68—31.)

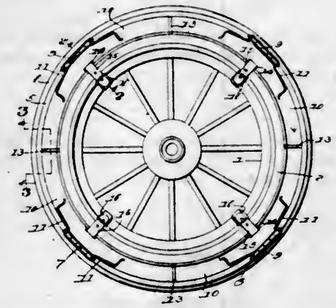
2. A wash tub having an inclined side, a wash board located on said inclined side and having its lower face spaced from said side and supporting parts at the corners of the board integrally connected with both the board and the inclined side.

1,373,981. TRACTOR. GEORGE M. SMITH, Cleveland, Ohio. Filed Sept. 28, 1920. Serial No. 413,318. 1 Claim. (Cl. 180—50.)



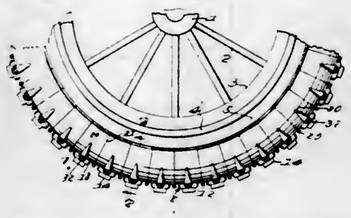
A tractor of the class described comprising a frame formed of two parts, means for pivotally connecting the two parts together so that they can move about a vertical axis, an axle supporting each part, wheels carried by each of said axles, a drive shaft on each part, gears connecting the same with the wheels, each shaft being formed of two parts and a differential connecting these two parts together, a sprocket connected with a part of the differential housing, an extension on the inner end of each frame part, a horizontally arranged shaft carried by each extension, a universal joint connecting the inner ends of the two shafts together, a sprocket on each shaft, a chain connecting the sprocket on each horizontal shaft with the sprocket on the differential, gears of different sizes on the differential housing of the drive shaft of the rear frame part, a power driven shaft and slidable gears thereon for engaging with the gears on the differential.

1,373,982. GAGE AND LEVEL. HENRY M. SMITH, Ottumwa, Iowa. Filed Feb. 28, 1920. Serial No. 362,047. 3 Claims. (Cl. 33—145.)



1. A device of the class described comprising a ring, a pair of tubes having their inner ends connected with the ring at diametrically opposite points, a forked member at the outer end of one tube, prongs on said forked member for engaging one rail of the track, a sliding bar carried by the other tube, a spring in said tube for forcing the bar outwardly and indicating means associated with the bar and tube for indicating the gage of the track.

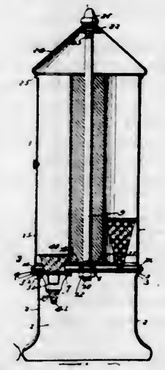
1,373,983. COTTON-PICKER. TAYLOR J. SMITH, Union City, Ga. Filed Sept. 15, 1920. Serial No. 410,504. 6 Claims. (Cl. 56—39.)



1. In a cotton picker of the class described, a casing, a pair of spaced rollers journaled in said casing, an endless belt connecting the rollers, a transverse shaft, a movable bottom hinged to said shaft and provided with a complementary pair of rollers and an endless belt and spring pressed means for separating the forward rollers and endless belts.

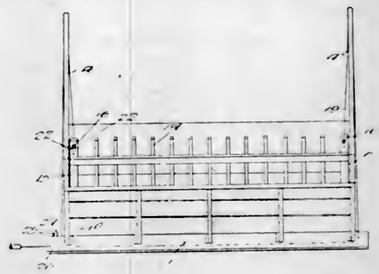
1,373,984. TIRE-SHIELD. GIROLAMO SOLDANI, Spencer, Mass. Filed Oct. 9, 1918. Serial No. 257,446. 1 Claim. (Cl. 152—33.)

A tire shield embodying a metallic band for attachment to a tire so as to embrace one side thereof and the tread, a plurality of members conforming in shape to the other side of the tire, the said members being hingedly attached to said band at the edge of that portion embracing the tread and having interlocking ends and springs bearing upon said members to force them in contact with the said other side of the tire, whereby the said members may be thrown back to permit the attachment of the band to a tire, the springs operating to throw the members into contact with the tire and thereby retain the whole device on the tire, as herein shown and specified.



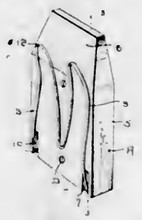
1,373,985. COMBINED TIRE-ARMOR AND ANTISKID DEVICE. GIROLAMO SOLDANI, Spencer, Mass. Filed Oct. 9, 1918. Serial No. 257,447. 2 Claims. (Cl. 152—16.)

1. A device of the character described including a plurality of sections each of which consists of a casting, a block fitted in the casting and a clamp fitted about the casting and through which the block projects, common means securing the block, casting and clamp together, and means movably connecting the clamps of each section together.



1,373,986. ICE-CREAM-CONE DISPENSER. GIROLAMO SOLDANI, Spencer, Mass. Filed Oct. 9, 1918. Serial No. 257,448. 2 Claims. (Cl. 211—8.)

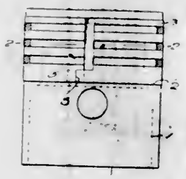
1. A device of the kind described including a stand formed with opposed openings in its wall and provided with a flared upper edge, a base plate seated on the upper edge of the stand and formed with a central opening and with a relatively large opening to one side of the center, a vertically disposed rod mounted in the center opening of the base and secured to the latter by clamping nuts disposed relatively against the upper and lower faces, a casing having vertically disposed outwardly opening doors giving access to the plurality of compartments concentrically disposed with reference to said rod, spiders having their arms connected to the walls of the casing at the upper and lower end and rotatably engaging the rod, a removable cover for the casing clamped to the upper end of the rod, the compartments registering with the large opening in the base upon the rotation of the casing and



being designed each to receive a stack of nested cones, a retaining device embodying a supporting ring secured to the base in surrounding relation to the large opening therein, and opposed resiliently mounted jaws carried by the ring.

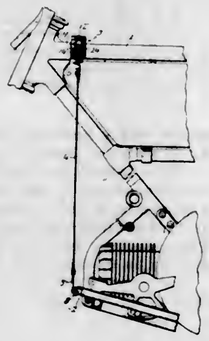
1,373,987. UNLOADING DEVICE FOR HEADER-BOXES. FRED TOEPFER, Victoria, Kans. Filed Apr. 2, 1919. Serial No. 286,891. 5 Claims. (Cl. 298—11.)

1. The combination with a header-box having sides; of standards connected with the header-box and extending above the same, a false bottom positioned in the header-box to ride upwardly upon one of the sides, pulleys connected with the standards, a draft appliance, and cables leading from the draft appliance and over the pulleys of the standards and connected with the false bottom for lifting said bottom to an elevated and tilted position.



1,373,988. NEWSPAPER-HOLDER. JOHN S. WALLICK, Lancaster, Pa. Filed Feb. 7, 1920. Serial No. 356,956. 3 Claims. (Cl. 24—66.)

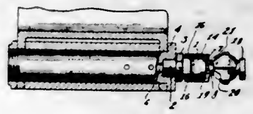
1. A holder of the character described comprising a base plate having spaced notches in one end thereof, a



resilient clip forming a substantially M-shaped jaw and hooked extremities opposite the latter, spring coils formed in the clip between the jaw and the said hooked extremities, said coils being seated within the notches causing the said jaw and hooked extremities to exert tension on the base plate.

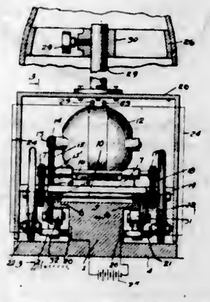
1,373,989. PISTON CONSTRUCTION. BERT L. WOODLAND, Muskegon, Mich. Filed Dec. 9, 1918. Serial No. 265,955. 1 Claim. (Cl. 74—108.)

In a piston construction a cylindrical body having an annular groove in its outer face, a transversely split expansible collar seated in said groove and substantially flush with the outer wall of said body, the side edges of the groove and collar adjacent to each other being parallel with one another, the ends of the collar being correspondingly beveled and freely overlapping permitting expansion and contraction of said collar, one end of the collar being recessed, an integral lug on the other end of the collar and engaging in the recess preventing the passage of oil or gas through the split, and a plurality of split rings in the collar and having pressure exerted outwardly against the same by said collar.



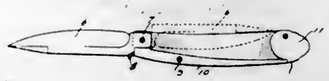
1,373,990. MUD-GUARD. ADAM ZISKA, Jr., Milwaukee, Wis., assignor to Harley-Davidson Motor Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 22, 1919. Serial No. 319,286. 18 Claims. (Cl. 208—143.)

1. A detachable mud guard for cycles comprising a plurality of hinged supporting bars adapted to be mounted on the frame, a flexible guard member for each bar, attaching means for the bottom of the guard members, and resilient means coöperating with the bars and guard members and causing the bars to grip the frame.



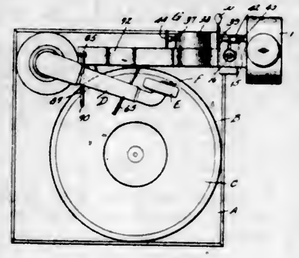
1,373,991. GREASE-CUP. THOMAS E. ADKINS, Canton, Ohio. Filed Apr. 22, 1920. Serial No. 375,741. 4 Claims. (Cl. 184—88.)

1. A grease cup having a valve seat at its rim and a supporting seat in its bottom, and an extensible capsule comprising two similar telescoping cups with valve forming ends and a compression spring within the capsule normally



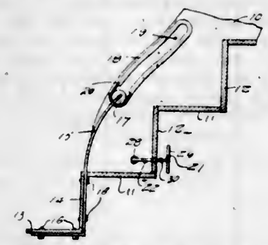
holding the ends of the capsule cups against the seats, there being longitudinal ducts for passage of grease along the wall of the grease cup.

1,373,992. DISPLAY DEVICE. SAMUEL MAX BENJAMIN, New York, N. Y. Filed Nov. 20, 1920. Serial No. 425,515. 5 Claims. (Cl. 104—139.)



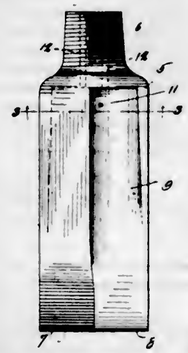
1. A display device, comprising a track having a relatively wide base, a web projecting upwardly from the center of the base, flanges projecting laterally from the upper end of the web, a car, wheels on the car mounted to run on the base of the track at both sides of the web, rollers on the car engaging the under faces of the flanges at both sides of the web, a motor on the car, electric conductors on the track, means electrically connecting the motor with said conductors, and a form supporting standard on the car.

1,373,993. KNIFE. EDD BOE, Clearbrook, Minn., assignor of one-third to Edwin A. Halseth and one-third to Carl V. Bexell, Clearbrook, Minn. Filed Feb. 26, 1920. Serial No. 361,524. 1 Claim. (Cl. 30—10.)



A knife comprising a handle, a blade pivoted in the handle and adapted to asume an open or closed position and be locked in said positions, a lever pivoted intermediate its ends within the handle and constituting the back thereof, one end of said lever having a flat stepped portion, the pivot end of the blade having on one side a shoulder, and a flat portion extending from said shoulder to that end of the blade and on the opposite side, the blade having a continuous flat portion which with the shouldered side, coact with the aforesaid flat stepped portion of the back lever, a locking cam pivotally mounted in the end of the handle opposite the blade pivot end, said cam having its inner end rounded and adapted to have wiping contact with the adjacent end of the back lever, and its outer end projecting beyond the end of the handle and having a serrated rounding edge, terminating in a stop shoulder adapted to abut the adjacent end of the back lever to lock the blade in complete open or closed position, substantially as herein shown and described.

1,373,994. CONTROLLING DEVICE FOR PHONOGRAPHS. EUGEN O. BREUNING, Hoboken, N. J. Filed Mar. 18, 1920. Serial No. 366,750. 11 Claims. (Cl. 161—23.)

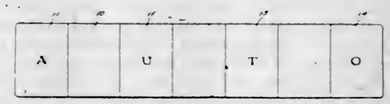


1. Means for controlling the operation of a phonograph comprising a vertically movable tone arm support, slidable means for effecting vertical movements of the same, and a device carried by said means adapted to co-act with the brake for causing the release of the same from the turn table upon movement of the slidable means in a direction to effect the lowering of the tone arm support.

1,373,995. AUXILIARY CAR-STEP. HERBERT L. CLAPP, Checotah, Okla.; Myrtle A. Clapp administratrix of said Herbert L. Clapp, deceased. Filed Oct. 14, 1919. Serial No. 330,574. 2 Claims. (Cl. 105—449.)

2. The combination with a stationary stairway having a tread and a riser, of an auxiliary step including a tread and a riser and adapted to be arranged at times on the stationary tread, of a locking rod arranged rearwardly of the stationary riser, locking means carried by the locking rod, means to normally retain said locking means in engagement with the riser of the auxiliary step, and means to suspend the auxiliary step in extended position.

1,373,996. WELL-DRILLING TOOL. FRANKLIN H. CLORE, Livingston, Tex. Filed Dec. 29, 1919. Serial No. 348,146. 2 Claims. (Cl. 255—61.)



1. In a well bit, a body having a threaded shank with ports extending longitudinally therein on opposite sides of the longitudinal axis of the said shank, the said body having concavities in each face oppositely disposed on opposite sides of the longitudinal axis, the surfaces of the concavities being curved and the cutting edges of the bit being curved, the said cutting edges extending oppositely.

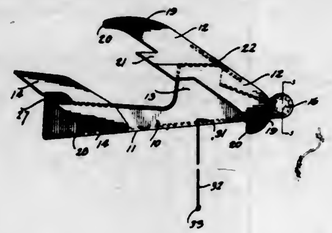
1,373,997. APPARATUS FOR LIFTING AND TRANSPORTING GLASS AND OTHER PLANE-SURFACE ARTICLES. GEORGES HENRI LÉON DEBAECKER, Sas-de-Gand, Netherlands, assignor to Société Anonyme des Manufactures des Glaces et Produits Chimiques de Saint-Gobain, Chauny & Cirey, Paris, France, a Corporation of France. Filed Jan. 30, 1920. Serial No. 355,213. 5 Claims. (Cl. 294—65.)

1. Apparatus for lifting and transporting glass and other plane surface articles, comprising a movable lifting frame, a plurality of suction chambers carried by the said frame, each suction chamber comprising a cylinder and a piston, the piston rods of the said cylinders being suspended from the frame, means at the contacting end of the suction chamber to make air-tight joint with the surface of the article to be lifted when the frame is lowered to operative position, the piston moving in the cylinders to produce a partial vacuum therein when the frame is raised.

1,373,998. GAME. NELSON D. DILLON, Seattle, Wash. Filed Apr. 27, 1920. Serial No. 377,040. 4 Claims. (Cl. 46—25.)

1. A game, including a number of cards sub-divided into a number of series, said cards bearing upon their faces an aggregation of unrelated characters, certain of said characters being in predominance upon the face of each card, whereby to render the series to which each card belongs capable of detection from its face, each of said cards containing an identification mark upon its back presenting an instantaneous recognition of the series to which each card belongs, the series, when the cards are properly arranged, expressing a unitary thought.

1,373,999. GUN-CLEANER. ALEXANDER COCHRAN DRUMMOND, Ilion, N. Y. Filed July 22, 1920. Serial No. 398,088. 2 Claims. (Cl. 42—91.)

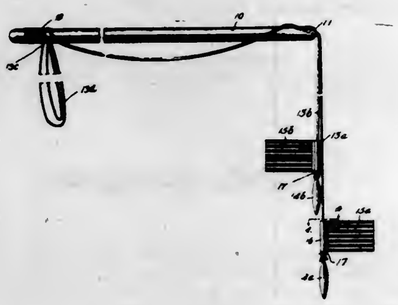


1. A cleaning device, comprising a stem, a head on one end of the stem having an opening therethrough, a wire having its intermediate portion projected through the opening and its ends positioned spirally around the stem forming cleaning blades, and adjustable means on the stem engaging the free ends of the blades.

1,374,000. TOY AEROPLANE. WILLIAM HOBARD DUNN, Chicago, Ill. Filed Sept. 20, 1920. Serial No. 411,462. 7 Claims. (Cl. 244—12.)

1. In a toy aeroplane, the combination, of a fuselage, an overhanging plane mounted forwardly upon the fuse-

lage, a tail plane mounted rearwardly upon the fuselage, detachable means for maintaining said overhanging plane

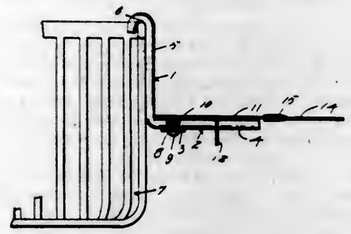


in rigid position, and means for adjustably positioning said tail plane at any predetermined angle with respect to the fuselage.

1,374,001. MOWER-GUARD. JOHN R. EDGAR, Ava, Ill. Filed July 31, 1920. Serial No. 400,420. 1 Claim. (Cl. 56—298.)

The combination with a mower bar, of guard fingers secured to the mower bar and comprising integral upper and lower portions, both of said portions secured to the mower bar, lugs on the lower portions of the fingers, shear plates located on the lower portions and having notches receiving the lugs, rivets securing said shear plates in the fingers, a reciprocating cutter bar mounted in the fingers, cutter blades secured to the cutter bar and located over the shear plates, and the upper portions of said fingers having bearing surfaces thereon exerting pressure on said movable cutter blades.

1,374,002. WHIRLING TOY. JOHN TRACEY EDSON, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,842. 3 Claims. (Cl. 46—14.)

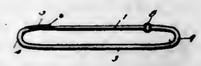


1. The herein described whirling toy comprising a rigid handle having a bearing eye formed at its end, a plurality of flexible connections of variable length extending through said eye and a weight attached to each flexible connection, the flexible connections being adapted to be moved through the eye to vary their length during the whirling of the weights around said eye as an axis.

1,374,003. RECLAIMING DRY BATTERIES. CARLETON ELLIS and ALFRED A. WELLS, Montclair, N. J., assignors, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 29, 1917, Serial No. 194,072. Renewed June 14, 1920. Serial No. 388,983. 16 Claims. (Cl. 204—38.)

1. The process of reclaiming spent dry batteries of the Leclanche type which comprises heating the battery to a temperature to melt the pitch and soften the solder, in stripping the zinc sheet from the carbon and depolarizing element, in separating the carbon element, and in reviving the depolarizing material.

1,374,004. SADIRON-HOLDER FOR FIREPLACES. AMELIA J. ENNIS, Columbus, Ga. Filed May 31, 1919. Serial No. 300,818. 1 Claim. (Cl. 126—336.)



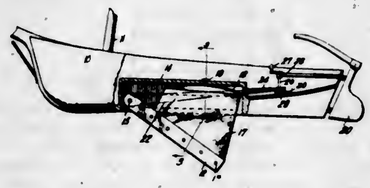
An iron holder comprising arms having angularly disposed end portions and provided at one end with hooks, a bar adjustably connected with the lower end portions of the arms, a platform, a handle attached to the platform, a strip applied to the underside of the platform and traversing the length thereof and provided with openings adapted to receive the lower end portion of the arms.

1,374,005. ADVERTISING DEVICE. CIRIACO GARCILLÁN, New York, N. Y. Filed May 27, 1920. Serial No. 384,671. 2 Claims. (Cl. 40—142.)

1. A device of the character described comprising a pair of spaced parallel bars, a plurality of letter plates carried by said bars, and detachable means embodying a clip having an integral tongue adapted to be bent relative to the body portion of the clip and into engagement with the bars and having letter-plate-engaging means adapted to engage the letter plates and maintain them in proper position with respect to said bars, substantially as described.

1,374,006. COLLAR-PIN. STANLEY LINCOLN GEDNEY, Maplewood, N. J. Filed Apr. 3, 1920. Serial No. 371,032. 1 Claim. (Cl. 24—161.)

A collar pin, comprising a single length of wire bent into the form of an oval in which the two longitudinal portions are substantially parallel when in normal position, a

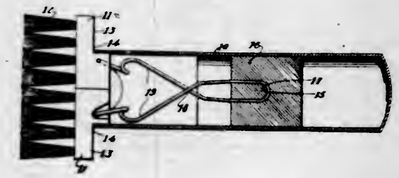


pin of less diameter than the main portion of the wire and formed on one end of the wire, a keeper formed on the other end of the wire receiving the pointed end of the pin, and an integral annular enlargement on the wire at the juncture of the pin with the larger diameter of wire, said enlargement forming a shoulder spaced from one end of the oval a distance equal to the distance between the free end of the keeper and the other end of the oval, whereby when said pin is in position in a collar, both ends of the oval will be projected equal distances from the outer face of the collar.

1,374,007. COLLAR-FASTENER. STANLEY L. GEDNEY, Maplewood, N. J. Filed July 16, 1920. Serial No. 396,653. 3 Claims. (Cl. 24—81.)

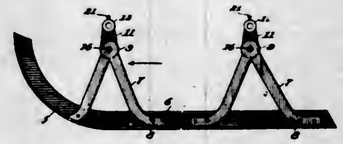
1. A connected collar fastener, comprising a pair of collar engaging spring clamps, said fastener composed of wire, and the clamps consisting each of a pair of jaws having their free ends flared apart, one of said jaws constituting a loop and the other of said jaws normally positioned within the loop.

1,374,008. CENTERBOARD. FRANK ARCHIE GRAHAM, Harbor Springs, Mich. Filed Aug. 13, 1920. Serial No. 403,374. 7 Claims. (Cl. 114—134.)



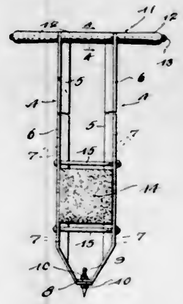
1. In a centerboard, the combination with the centerboard housing of a boat, of a rigid element pivotally mounted in said housing adapted to extend below the keel of a vessel, and a flexible element extending between said vessel and said rigid element adapted to increase the lateral resistance of said boat when sailing.

1,374,009. HOSE-SUPPORTER. FRED D. GRAVES, Owego, N. Y. Filed July 30, 1920. Serial No. 400,135. 1 Claim. (Cl. 24—245.)



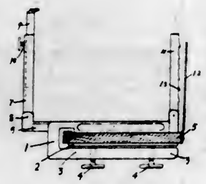
As a new article of manufacture, a garment supporter including a flexible strip of tape, and a non-resilient sheet metal button carrying plate associated therewith, said plate having parallel slits therein, said tape threaded through said slits, the intermediate portion of said plate between said slits being normally offset from the plane of the plate to permit the passage of the tape through the slit, and adapted to be pressed into the plane of the other portion of the plate to permit clamping action of the walls of the slits on said tape.

1,374,010. FOLDABLE CLOTHESBRUSH. WILLIS R. HENKLE, Lima, Ohio. Filed Oct. 11, 1920. Serial No. 415,978. 6 Claims. (Cl. 15—30.)



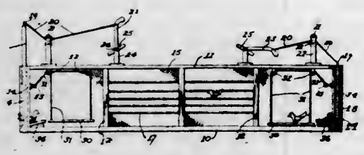
1. A brush including a casing which constitutes the handle of the brush, a sectional brush head slidable in the casing, and means arranged within the casing for holding said sections of the head associated for use beyond one end of the casing, and in folded position within the casing.

1,374,011. RUNNER ATTACHMENT FOR CHILDREN'S VEHICLES. JOHN HUDRY, Hazleton, Pa. Filed June 21, 1920. Serial No. 390,406. 8 Claims. (Cl. 280—14.)



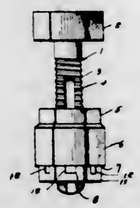
8. A sled, comprising a top, side rails projecting beyond the front end of said top, a cross-bar or foot-rail connecting the front ends of said side rails and projecting beyond the outer sides thereof, axles secured to the underside of said top and side rails and projecting beyond the sides thereof, and runners having pivotally adjustable axle-engaging hub members adapted to be detachably fixed upon said axles, said runners having openings at their forward ends adapted to fit upon the projecting ends of the cross-bar or foot-rail, and detachable fastening means for securing the runners in place upon said cross-bar or foot-rail.

1,374,012. DISK-SHARPENER. CARL B. HUTCHINS, Algona, Iowa. Filed May 13, 1920. Serial No. 381,129. 3 Claims. (Cl. 51—211.)



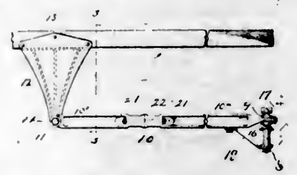
1. A sharpening device of the class described comprising a pair of spaced angle-bars connected together at their lower ends, each bar having one of its flanges inturned, the other flange being apertured, an abrasive element disposed between the apertured flanges and resting against the inturned flanges, bolts extending through said apertures, there being one bolt above and one below the abrasive element serving to clamp the flanges with which they co-act against said element, thus retaining it in place, and a handle at the upper ends of the bars.

1,374,013. LUGGAGE-CARRIER. PERRY JACKSON, Los Angeles, Calif. Filed May 10, 1920. Serial No. 380,313. 1 Claim. (Cl. 224—29.)



A luggage carrier, comprising in combination with a U shaped base, a member adapted to reciprocate horizontally, in a track or groove, in said U shaped base, and a vertical telescopic member, with set screw locking means and an upper attached ring, said vertical telescopic member combined with and fulcrumed at its lower end, to said first mentioned member, in a manner to allow of limited oscillation, in one plane, of approximately 90°, and a further vertical member, in combination with said base, and fulcrumed thereto, having raised projections thereon, substantially as shown, and an adjustable side jaw member attached to the lower jaw of said U shaped base, allowing same to be clamped in a predetermined position, substantially as shown.

1,374,014. BIRD-TRAP. LUCIAN JAKUBOWSKI, Dexter, N. Y. Filed Mar. 19, 1919. Serial No. 283,555. 1 Claim. (Cl. 43—76.)

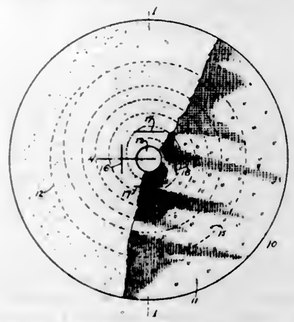


A device of the class described comprising a substantially rectangular frame, vertical posts at one end of said frame, vertical grooves on the inner sides of said posts, a door adapted to slide vertically in said grooves between said posts, eyelets on the top of said door, cords attached to said eyelets, pulleys mounted upon the top of said frame, said cords passing between said pulleys, a bar pivotally mounted on the top of said frame, said cords being secured to the end of said bar, a hanging platform in said frame, cords attached to said platform, pulleys in said frame, said last-named cords passing over said pulleys, holes in said posts communicating with said grooves, pins adapted to slide in said holes, eyelets on said pins, said last-named cords being attached to said last-named eyelets.

1,374,015. SAFETY LOCK-BOLT. JOSEPH JERRUSS and ALPHONSO F. FREGLY, Patton, Pa. Filed Aug. 17, 1920. Serial No. 404,114. 5 Claims. (Cl. 151—29.)

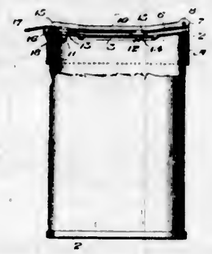
2. A nut lock including a screw threaded bolt having a groove, inner and outer nuts threaded on said bolt, a tension locking means between said nuts and engaging the groove to prevent rotation thereof in relation to the bolt, said locking means receiving one of the nuts and having a locking connection with the other nut to prevent relative rotation of the nuts in relation to each other and with the bolt.

1,374,016. SAFETY RADIUS-ROD. BRUCE B. KELLER, Scranton, Pa. Filed July 30, 1920. Serial No. 400,100. 7 Claims. (Cl. 267—66.)



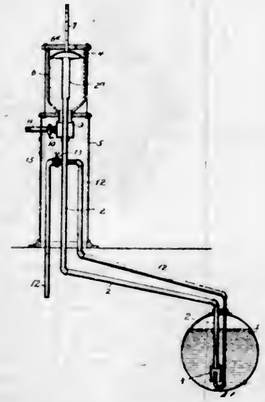
7. In a vehicle, a radius rod comprising two members swiveled together end to end, said swiveling ends having alined bolt holes terminating in transverse openings and a bolt extending through the bolt holes and having its ends terminating in the transverse opening, and fastening heads on the bolt ends.

1,374,017. LID-LIFTER FOR RECEPTACLES. GLENN A. KNAPP, Hugoton, Kans. Filed July 16, 1920. Serial No. 396,664. 1 Claim. (Cl. 220—43.)



A device for removing a receptacle cover including a rigid member carried by the receptacle and extending upwardly adjacent the side wall thereof, a cover for the receptacle, a perforated ear on the cover extending at right angles therefrom and forming a finger piece, said rigid member having its upper end projecting through the perforated ear, a horizontally disposed engaging member at the upper end of the rigid member whereby said engaging portion and ear can be engaged by the thumb and fingers of the hand for removing the cover.

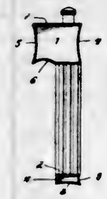
1,374,018. BUFFING OR POLISHING WHEEL. ALEXANDER LEVETT, New York, N. Y. Filed Apr. 16, 1919. Serial No. 290,449. 5 Claims. (Cl. 51—193.)



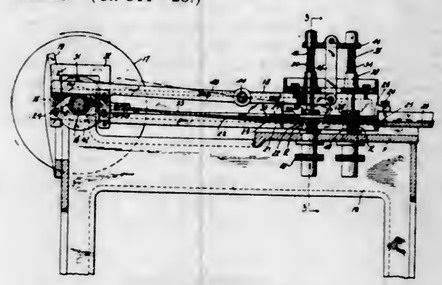
1. A polishing or buffing wheel having a body formed of superimposed layers of woven textile fabric, each layer being provided with a central opening and with slits adjacent the central opening, sundry of the slits extending approximately parallel to the weft and sundry of the slits extending approximately parallel to the warp.

1,374,019. COMBINED CAN OPENER AND SANITARY SEALER. CHARLES A. LOWE, Denver, Colo. Filed Mar. 26, 1920. Serial No. 369,023. 2 Claims. (Cl. 220—51.)

1. The combination with a can having the usual flanged top secured thereon, of a band clamped around the can adjacent to the flange of the top, so that the flange prevents the band from being pulled off the can, and an arm fulcrumed at one end upon the band and extending diagonally across the can head, and carrying means for puncturing the can head, and means for fastening the free end of the arm when the latter is in its normal position.



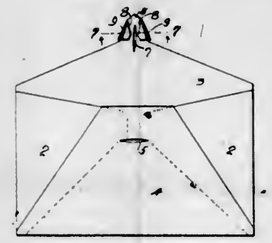
1,374,020. GASOLENE SERVICE-TANK. ABNER JUDSON MCGEHEE, Jackson, Tenn. Filed Oct. 4, 1919. Serial No. 328,526. 5 Claims. (Cl. 221—100.)



1. In a gasolene dispensing apparatus, the combination of a main tank, a dispensing tank, a gasolene supply pipe leading from the main tank to the dispensing tank and communicating with both, the end of the pipe within the main tank terminating near the bottom of the latter in an enlargement open at its lower end, a pipe leading from a source of compressed air and discharging into the enlarged end of the pipe leading to the dispensing tank, a discharge pipe from the latter, a valve in the discharge pipe and a valve in the air pipe.

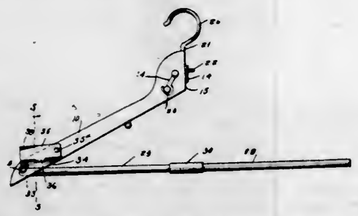
1,374,021. RADIATOR. CARL MCNEELY, Polk, Nebr., assignor of one-third to Clinton Lewis Ayres, Polk, Nebr. Filed Jan. 16, 1918. Serial No. 212,088. 2 Claims. (Cl. 257—125.)

1. In a radiator, the combination of a top header, a bottom header, and a series of water tubes connecting said top and bottom headers and communicating therewith, said top and bottom headers constituting water compartments and each of said compartments comprising an inwardly dished wall thereby presenting an enlarged cooling surface within a given space and allowing such portion of each compartment to bend outwardly under excessive internal pressure.



1,374,022. CORK-CUTTING MACHINE. MELCHOR MARSA, New York, N. Y., assignor to International Cork Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 30, 1919. Serial No. 334,407. 7 Claims. (Cl. 144—23.)

1. In a disk cutting machine, the combination with a frame, of a bodily stationary rotary tubular cutter mounted thereon, a work holder comprising a support having an aperture through which said cutter is adapted to extend and a presser foot for forcing said support and the material thereon against said cutter, said presser foot having an enlargement adapted to bear against said support and being provided in said enlargement with an annular groove accommodating the cutting edge of said cutter, springs working against said support having a tendency to cause the same to move in a direction opposite to which it is moved by said presser foot, a toothed feeding slide coacting with said support, said slide and work support being movable toward and from one another, and means for preventing said support from contacting with said slide when the machine runs idle, said contact preventing means being deeper than the teeth of said slide and interposed directly between said support and slide and permanently associated with one at least.



1,374,023. FASTENING DEVICE FOR PACKAGES. HENRI MORIER, Killingly, Conn. Filed Dec. 11, 1919. Serial No. 344,260. 3 Claims. (Cl. 229—84.)

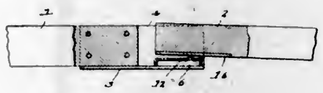
1. In a device of the class described, the combination of a body provided with a primary and an auxiliary flap,

said auxiliary flap provided with a slit, said primary flap provided with a tongue, said tongue provided with wings having stiffening ribs formed thereon, and said tongue and wings adapted to fit in the slit of the auxiliary flap.

1,374,024. GARMENT-HANGER. JOHN R. MORTON, League City, Tex. Filed Sept. 7, 1920. Serial No. 408,520. 3 Claims. (Cl. 211—13.)

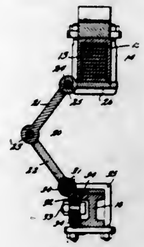
1. In a device of the class described, a plurality of hingedly connected arms, a transverse brace for retaining said arms in an extended position, said brace comprising a plurality of sections detachably connected, each of said arms being formed with a socket for receiving the corresponding end of the brace, and one of the sockets having communication with an entrance slot, and a pivoted plate for closing said slot and retaining the end of the brace within the socket.

1,374,025. FASTENER. FRANK M. MULLINS, Havelock, New Brunswick, Canada. Filed Aug. 31, 1920. Serial No. 407,284. 1 Claim. (Cl. 24—226.)



In a garment fastener, two flat substantially rectangular plates having openings at the corners thereof, one of said plates having a central longitudinal downwardly inclined depressed portion which terminates with a slot which is arranged transversely of the said plate, the portion of the plate inward of the slot being bulged upwardly and the said bulged portion having its outer edge provided with a shoulder, the second plate being slitted transversely and longitudinally and the metal bounded by the slit bent to provide a tongue that terminates in a downturned lip, and said tongue being arranged below the outer surface of the said plate, said tongue being of a width corresponding to that of the depression in the first mentioned plate and designed to be received therein and to have its lip contact with the inner wall of the slot and to be contacted by the inner wall of the bulged portion of the first mentioned plate, and the wall provided by the transverse slot in the second mentioned plate designed to contact with the shoulder of the bulged portion of the first mentioned plate, when the plates are associated.

1,374,026. BRACKET FOR CURTAIN-POLES. HARRY H. NELSON, Minneapolis, Minn., assignor of one-half to Peter A. Nelson, Minneapolis, Minn. Filed May 14, 1920. Serial No. 381,422. 1 Claim. (Cl. 156—19.)



The combination with a curtain pole having a threaded end, of a bracket having an internally threaded opening, a flared portion and an inwardly extending flange, and a flexible element contacting with the outer surface of the flange, said flexible element including a plurality of spaced circumferential flanges having interlocking engagement with the inwardly turned flange of the bracket.

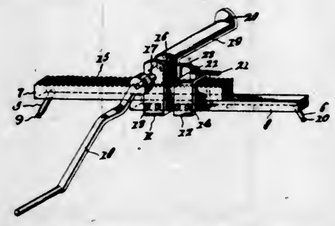
1,374,027. SIGNAL FOR RAILWAY-CROSSING GATES. ELMER O. NOESKE, Milwaukee, Wis. Filed Dec. 6, 1918. Serial No. 265,668. 4 Claims. (Cl. 200—159.)

1. The combination with a pair of spaced members pivoted for movement toward and away from each other, of a member carried by and projecting beyond the end of one of said members, and designed to receive the adjacent end of the other member, a switch including a switch operating element disposed in the path of movement of the second mentioned member, whereby said switch is closed upon the final position of said members when moved toward each other.

1,374,028. ALINEMENT DEVICE FOR AUTOMOBILES. CLIFFORD S. PEETS, Great Neck Station, N. Y., assignor to Charles Dillon, Great Neck, N. Y. Filed Mar. 17, 1920. Serial No. 366,509. 4 Claims. (Cl. 267—66.)

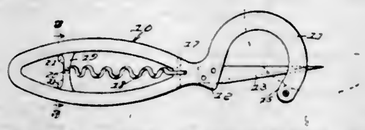
4. In an automobile of the type described, an alinement device, comprising a hinge having an upper leaf, a lower leaf and a transverse pintle connecting the leaves with each other, a clip having a clip plate provided with an eye, the clip connecting the middle of the front spring of the automobile with the chassis, a transverse pintle pivotally connecting the upper end of the said upper leaf with the said eye, an eye plate pivotally connected with the lower end of the said lower leaf, a supporting member, a clip fastening the said supporting member to the front axle, and a pivot connecting the said eye plate with the said supporting member, the pivot being at an angle to the front axle.

1,374,029. TONE-FOOT FOR PHONOGRAPHS. WILLIAM H. PRICKETT, Trenton, N. J. Filed Aug. 31, 1920. Serial No. 407,122. 3 Claims. (Cl. 84—191.)



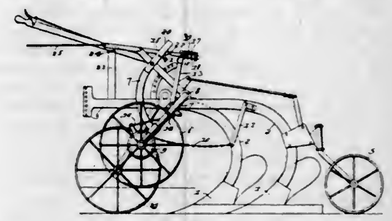
3. As a new article of manufacture, a rubber base, and a glass insert therein of cup shape, said base presenting an undercut depression therein and said insert presenting a corresponding external conformation.

1,374,030. INSOLE FOR BOOTS AND SHOES. FELIX EDWARD RICE and WILLIAM ALBERT RUSH, Northampton, England. Filed Apr. 1, 1920. Serial No. 370,492. 1 Claim. (Cl. 36—22.)



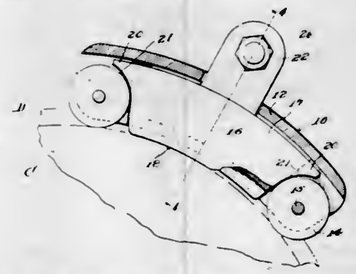
An insole including a sole portion and a heel portion, a wedge shaped member forming a part of the insole and secured to the upper surface thereof, said wedge shaped member having one edge thereof forming an abutment, a cushioning member adapted to be assembled with the above portions after the attachment of the heel and to engage the abutment, and means carried by the cushioning member and adapted to overlap the wedge member for cushioning the upper surface of the wedge member.

1,374,031. DEMOUNTABLE-AUTOMOBILE-RIM TOOL. OLIVER M. RICE, Birmingham, Ala. Filed Feb. 10, 1920. Serial No. 360,011. 3 Claims. (Cl. 157—1.)



1. A tool of the character described comprising a pair of companion bars slidable one upon the other and having pins projecting at acute angles to the longitudinal axes of the bars to engage openings made in a demountable rim at opposite sides of its cross cut, means carried by one bar and operating in conjunction with the companion bar whereby to slide said bars relatively, operating means for said last named means, supporting means for said bar sliding means, a supporting foot having an angularly disposed toe extending from said supporting means, and means supported by one bar and engaging the other bar for holding said bars in any position of adjustment, substantially as described.

1,374,032. CONVERTIBLE CAN-OPENER. WILLIAM H. ROACH, Lindsay, Calif. Filed May 24, 1919. Serial No. 299,533. 1 Claim. (Cl. 30—3.)



A tool of the class described having a shank or handle and a hook-shaped head, a bearing element depending from the extremity of the head and provided with a corrugated concave bearing surface for contact with a can wall, and a longitudinal tapering blade intersecting the throat of said head in the plane of the said bearing element, the hook overhanging and engaging the top of the can to act as a guide for the blade during the cutting operation of the latter.

1,374,033. PLOW ATTACHMENT. WILLIAM R. SCHWARTZ, Independence, N. D. Filed Mar. 21, 1919. Serial No. 283,949. 5 Claims. (Cl. 97—55.)

1. The combination with a plow having means for elevating its ground working elements consisting of a swinging arm, a wheel rotatively mounted at the lower end of the arm and clutch control means operatively connected with the wheel for shifting the arm rearwardly, of a lever pivotally mounted on the plow and operatively connected with said clutch controlled means, a bar operatively connected with the lever at one end to provide for the operation of the lever upon longitudinal movement of the bar, a lock engaging the bar when the lever is in operative position, and a trip for the bar to release the same from the lock and thus render the clutch controlled means inoperative after the arm has moved through a prescribed distance.

1,374,034. RAILROAD-BRAKE. JAMES E. SCOTT, Louisville, Ky. Filed June 3, 1920. Serial No. 386,242. 3 Claims. (Cl. 188—262.)

1. A brake shoe comprising a longitudinally curved casing U-shaped in cross section and having its bight portion formed with an opening, rollers journaled transversely of said casing at the ends thereof, a shoe proper disposed within said casing and having a curved face adapted to engage the tread of a wheel, extensions formed on the ends of said shoe proper and having curved faces adapted to engage the peripheries of said rollers simultaneously with the engagement of said face with the tread of a wheel, and an attaching lug carried by the shoe proper and slidably disposed through said opening.

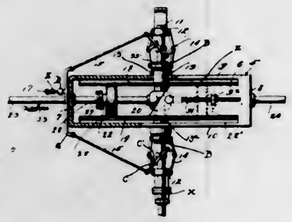
1,374,035. PROCESS FOR PRODUCING LOW-CARBON FERROTITANIUM. HUGH C. SICARD, Buffalo, N. Y., assignor to United States Ferro-Alloys Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1919. Serial No. 318,328. 4 Claims. (Cl. 75—1.)

1. The method of producing low-carbon ferro-titanium which comprises the mixing of commercial ferro-titanium

with an excess of titanic oxid and then heating the mixture in an electric furnace so as to decompose the double carbid of titanium and iron and form a protective blanket of slag which consists substantially of titanic oxid.

1,374,036. PROCESS FOR PRODUCING LOW-CARBON FERROTITANIUM. HUGH C. SICARD, Buffalo, N. Y., assignor to United States Ferro-Alloys Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1919. Serial No. 318,329. 5 Claims. (Cl. 75—1.)

1. The process of producing low-carbon ferro-titanium comprising the formation of a double carbid of iron and titanium containing a high percentage of carbon, then treating the molten bath of this material with aluminum so as to cause the separation of the carbon in the graphitic form, then skimming off this carbon, then reheating the molten bath and then casting the resulting product.



1,374,037. PROCESS FOR THE PRODUCTION OF LOW-CARBON FERROZIRCONIUM. HUGH C. SICARD, Buffalo, N. Y. Filed July 23, 1920. Serial No. 398,512. 6 Claims. (Cl. 75—45.)

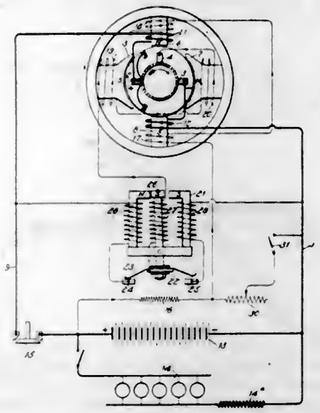
1. The method of making a low carbon alloy of iron and zirconium which consists in the decarbonization of a high carbon ferro-zirconium alloy by means of titanic oxid.

1,374,038. PROCESS FOR PRODUCING ZIRCONIUM STEEL. HUGH C. SICARD, Buffalo, N. Y. Filed July 23, 1920. Serial No. 398,513. 5 Claims. (Cl. 75—45.)

1. An improved process of making zirconium steel which consists in adding to molten steel an alloy of zirconium and silicon.

1,374,039. CLUTCH AND CHANGE-SPEED MECHANISM. ORRIN R. STROME, Pleasant Dale, Saskatchewan, Canada. Filed Dec. 1, 1919. Serial No. 341,824. 1 Claim. (Cl. 74—26.)

A mechanism of the class described including a casing having guideways therein, a web located in the casing, a shaft journaled in the casing and in the web, friction disks mounted upon the shafts for independent rotation, means for moving the friction disks toward each other, shafts journaled in the casing and in the web in alinement with each other, friction rolls slidably mounted upon the alined shafts for rotation therewith, a shifting frame connected with both of the rolls for movement of the rolls upon their shafts, guide heads carried by the shifting frame and arranged to work in the guideways, said web having guideways therein, said shifting frame being slidably engaged in the guideways of the web, and means for moving the shifting frame.

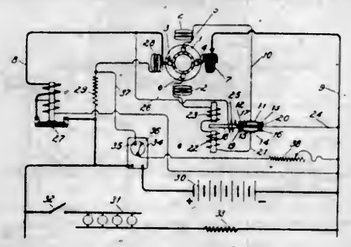


1,374,040. COMBINED SKIRT AND SPORTING-TROUSERS. NILS JOODVIN TJÆRANSEN, Christiansund, Norway. Filed May 16, 1919. Serial No. 297,576. 2 Claims. (Cl. 2—137.)

1. In an article of clothing adapted to be used either as a skirt or as a pair of trousers, the combination of a skirt, two substantially parallel button rows arranged along the splittings in the front and rear of said skirt at one side, the outer one of the said button rows to be used when the article is to be employed as a pair of trousers, and the inner one to be used when the article is to be em-

ployed as a skirt, said button rows leaving open the upper part of the said splittings, and a small inner pair of drawers attached to the inner side of the article, covering from the inside the upper part of said splittings.

1,374,041. SYSTEM OF ELECTRICAL DISTRIBUTION. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Dec. 18, 1917. Serial No. 207,743. 10 Claims. (Cl. 171—223.)

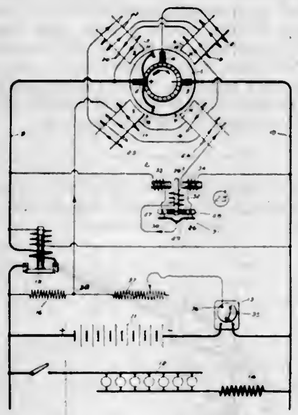


4. In combination, main field poles, auxiliary field poles spaced 90 electrical degrees from said main poles, main brushes coöperating with said main field poles and an auxiliary brush spaced 90 electrical degrees from said main brushes, series windings on said auxiliary poles, main field windings on said main field poles and selective means for connecting said main field windings between said auxiliary brush and one or the other of said main brushes through one or the other of said series windings.

1,374,042. SYSTEM OF ELECTRICAL DISTRIBUTION. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Jan. 25, 1917, Serial No. 144,464. Renewed Mar. 5, 1921. Serial No. 449,602. 10 Claims. (Cl. 171—313.)

1. In a car-lighting system, in combination, a storage battery, a variable speed generator, said generator having magnetic means coöperating with said battery for insuring constant polarity of said generator, and means responsive to predetermined conditions for causing said magnetic means to cut down the output of said generator.

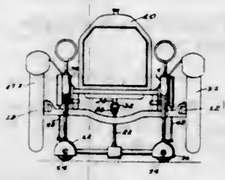
3. In combination, a storage battery, a variable speed generator having main field windings and an auxiliary winding, said auxiliary winding being connected to said



storage battery for controlling the polarity of said field windings under certain conditions and means for causing said auxiliary winding to set up a counter E. M. F. across said field windings under certain other conditions.

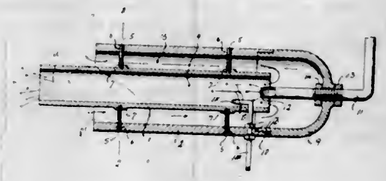
6. In combination, a variable speed generator, said generator being provided with main field windings, a winding for insuring constant polarity of said generator regardless of reversals of rotation, and means for connecting said last mentioned winding to cause a reversal of current flow therethrough, whereby to set up an E. M. F. opposed to that of said main windings.

8. A generator having an armature, a plurality of main brushes, a plurality of field coils and a plurality of auxiliary brushes, said auxiliary brushes serving to connect two of said field coils through the armature, a source of current, and connections for connecting another of said field coils either in series between said source and said armature or across said armature.



1,374,043. SYSTEM OF ELECTRICAL DISTRIBUTION. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Jan. 27, 1917, Serial No. 144,971. Renewed Mar. 5, 1921. Serial No. 449,603. 16 Claims. (Cl. 171—313.)

1. In combination, a generator field winding for setting up a field of flux, main field windings located substantially 90 electrical degrees from said first winding, an armature, means whereby said first mentioned winding will have a fixed polarity regardless of the direction of armature rotation while said armature is picking up, and means whereby the polarity of said first mentioned winding may be reversed upon the attainment of predetermined conditions.

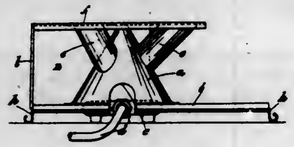


12. In combination, a variable speed generator having main brushes and an auxiliary brush, means for causing a difference in polarity to exist between said auxiliary brush and one of said main brushes, main field windings, and means responsive to the direction of armature rotation for selectively connecting said main field windings between said auxiliary brush and one or the other of said main brushes.

1,374,044. STEERING MECHANISM FOR VEHICLES. EINAR J. VALEUR, New York, N. Y. Filed July 22, 1918, Serial No. 246,082. Renewed Aug. 30, 1920. Serial No. 407,065. 2 Claims. (Cl. 180—1.)

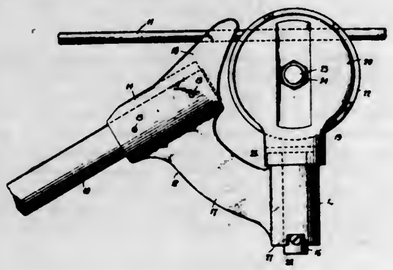
1. A steering mechanism for wheeled vehicles comprising a plurality of pneumatic cylinders carried by the body of the vehicle, pistons movable vertically in said cylinders, a housing carried by the lower end of each of said pistons, a traction wheel mounted in each of said housings, resilient means for normally maintaining the pistons at the top of the cylinders, means connecting said housings and communicating with the interior thereof, and means revoluble in said connecting means and driven by the vehicle motor for imparting rotary motion to the traction wheels.

1,374,045. BURNER. MELBOURNE E. VEZIE, Cement, Okla. Filed Feb. 26, 1920. Serial No. 361,596. 2 Claims. (Cl. 158—99.)



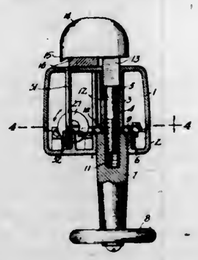
1. In a burner as set forth, inner and outer tubes, diametrically opposite radial means at both ends of the inner tube for holding the former throughout its length in spaced relation to the latter, whereby the air drawn into the space between the two tubes may be heated as it enters the space and circulates around the inner tube, the former having both ends open, the outer tube having an open end adjacent one of the open ends of the inner tube and having its other end closed spaced concentrically from the other open end of the inner tube, the outer tube comprising a pair of united sections, and a gas supply pipe engaged through the closed end of the outer tube and having a perforated end terminating adjacent to and partly within the inner end of the inner tube for injecting a supply of gas thereinto, acting to draw heated air from around the exterior of and forcing it into the inner tube, and means for adjustably holding the gas tube in the closed end of the outer tube, whereby the inner perforated end of the gas tube may be adjusted relatively to the inner open end of the inner tube.

1,374,046. GAS COOKING-STOVE AND LIKE HEATER. GEORGE WAITE, Bexhill-on-Sea, England. Filed Nov. 30, 1920. Serial No. 427,374. 2 Claims. (Cl. 126—216.)



1. A gas cooking or heating apparatus comprising a hollow cone, open at top and bottom, adapted to be set

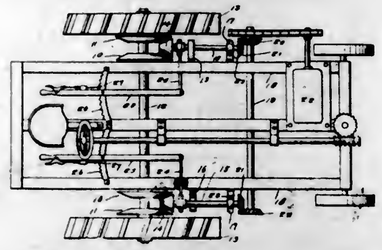
over a ring burner to receive and conduct heat therefrom, and having a plurality of open tubes diverging upwardly



and outwardly therefrom, and means for opening and closing said cone and tubes.

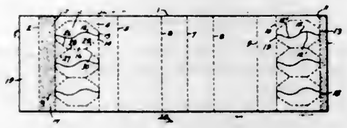
1,374,047. TROLLEY-POLE. MARTIN D. WATROUS, Ansonia, Conn. Filed Jan. 17, 1921. Serial No. 437,076. 4 Claims. (Cl. 191—60.)

1. A trolley-pole having a bracket secured to the upper end thereof, spaced guides fixed to and projecting from said bracket for locating the trolley wire, a trolley-wheel support rotatably mounted in said bracket, and a trolley-wheel rotatably mounted in said support, said guides being located in front of and extending adjacent to the periphery of the trolley-wheel.



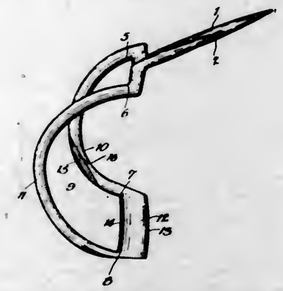
1,374,048. LOCKING DEVICE. DAVID E. WERTS, Olympia, Wash. Filed June 2, 1920. Serial No. 386,017. 11 Claims. (Cl. 70—126.)

1. A locking mechanism comprising a casing, a gripping mechanism extending from said casing, means for moving said gripping mechanism to and from said casing, means for normally limiting to one direction the movement of the above-mentioned means, and key-operated mechanism for releasing at will said second means.



1,374,049. TRACTOR. CHARLES J. WHITE, Leesville, La. Filed Mar. 3, 1920. Serial No. 362,901. 2 Claims. (Cl. 180—17.)

1. The combination with the traction wheels of a motor car and a drive shaft for communicating motion thereto, of transmission mechanism consisting of a pair of oppositely disposed facing friction disks carried by each traction wheel, a conical friction gear disposed between the members of each pair of friction disks for contact with either of said members and arranged in an intermediate or neutral position, line or counter-shafts respectively carrying said friction gears and operatively connected with

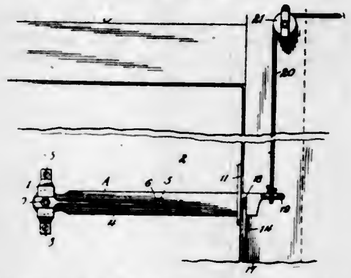


the drive shaft, said line or counter-shafts being mounted for swinging movement in directions perpendicular to the planes of said friction disks, and independent means for imparting swinging movement to the line or counter-shafts to adjust the friction gears relatively to the pairs of friction disks.

1,374,050. EGG-CARTON. JAMES M. YARNALL, Yonkers, N. Y. Filed Aug. 28, 1919. Serial No. 320,457. 3 Claims. (Cl. 229—28.)

1. A carton comprising a pair of hinged sections, each section having a top divided with slits which results in the formation of egg retaining flaps, said tops being integral with the remaining part of the respective sections and a partition member connected to the hinge of said sections, said partition member being positioned to fit between said tops when folded against each other so as to separate the egg carried by said sections.

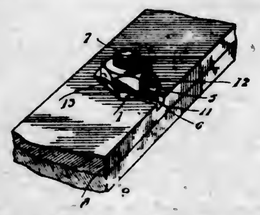
1,374,051. GARDEN HOE AND WEEDER. WILLIAM G. ANDERSON, Seattle, Wash. Filed Jan. 9, 1920. Serial No. 350,290. 1 Claim. (Cl. 55—41.)



A garden tool comprising two parallel curved bars having bevels on their inner faces and having their upper ends connected to a handle and their lower ends connected by a transverse flattened cutting bar, said bar having a flattened face in a plane substantially perpendicular to the end of the handle.

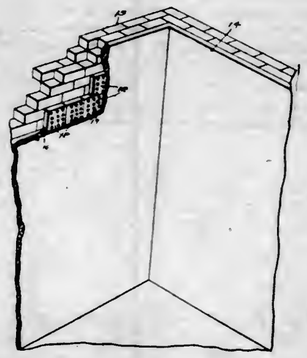
1,374,052. ABRASIVE ROLLER. PINCUS BRAUNER and EDWARD METZNER, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,864. 2 Claims. (Cl. 51—194.)

1. In a device of the class described, a shaft supported at one or both ends and adapted to be driven in either direction frictionally within the hollow portion of a suitable sleeve, said shaft being flattened at one side to form a suitable space between said side and the opposite wall of said sleeve and having a suitable recess adapted to be set in line with a corresponding cut in said sleeve, abrasive material surrounding said sleeve and with the loose ends of such material normally commencing and terminating within said recess, said shaft being adapted to be so driven as to automatically jam said loose ends within said space and firmly move and constantly keep same so that said material shall be taut about said sleeve regardless of constant pressure or other friction on said material.



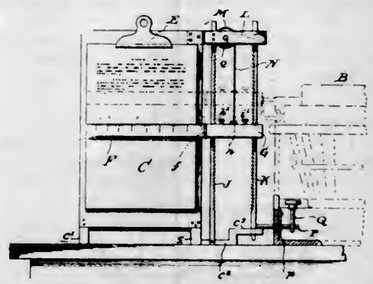
1,374,053. DOOR-LATCH. HENRY N. BRAWNER, Jr., Washington, D. C. Filed June 26, 1919. Serial No. 306,830. 2 Claims. (Cl. 292—225.)

2. The combination with a door, a guide, and a catch, of a latch, a bridge plate arranged transversely of the latch, a stud supported by the door and adapted to pass through alined openings in the latch and bridge plate, and a spring adapted to extend parallel to the latch, one end thereof provided with an opening through which the stud passes, the inner end of said spring bent downwardly against one end of the bridge plate for rigid connection therewith, the outer free end of said spring received in an opening in said latch to exert a downward pressure thereupon to hold it in position, and means attached to the free end of the latch, whence the latch may be released



---

1,374,054. SPRING LOCK-WASHER. ALEXANDER C. BRIDGE, Lachine, Quebec, Canada. Filed Aug. 12, 1919. Serial No. 317,013. 1 Claim. (Cl. 151—53.)

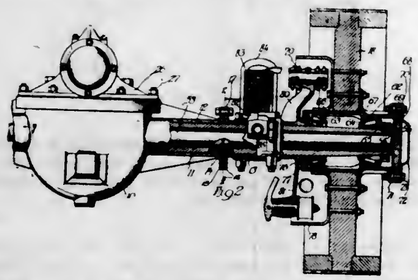


In a washer such as described, the combination of a flat circular piece of metal having a central concentric opening formed therein, said material being cut at diametrically opposite points radially from the center of the metal to the outer edge thereof and thence from the inner edge of said cut portions tangentially to the central opening, said material at the cut portions being bent in like directions forming spring fingers, said radially cut portions being spaced closely together in pairs, and the material at the sides of said pairs being bent tangentially through the central portion thereof at right angles to the material to form locking flanges, substantially as and for the purposes set forth.

1,374,055. MEANS FOR PROTECTING VAULTS. LEONARD E. BUMPASS, Dallas, Tex. Filed Aug. 16, 1920. Serial No. 403,730. 5 Claims. (Cl. 109—6.)

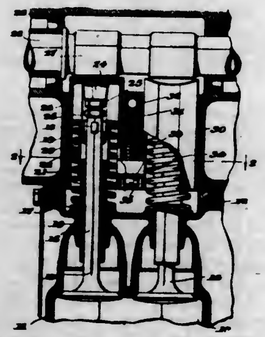
1. The combination with a vault comprising a masonry wall, of an inner liner for said vault wall comprising a plurality of frangible gas containers disposed in contact with the inner side of said wall.

1,374,056. COPY-HOLDER. FRANCIS W. BEEGHLEY, U. S. Navy. Filed Dec. 27, 1919. Serial No. 347,675. Renewed Feb. 25, 1921. Serial No. 448,257. 7 Claims. (Cl. 120—34.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



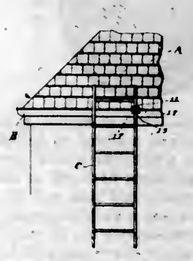
2. The combination with a typewriting machine of a copy holder, comprising a copy-supporting plate, a line indicator adapted to move over said plate, a pawl carrier to which the line indicator is connected, pawls mounted on said carrier, rack bars coöperating with the pawls, an operating key mounted within the typewriter frame, a bracket secured to the frame of the typewriter, a shaft extending through said bracket and to which the key is attached, a spring within the typewriter frame attached to the key for moving it in one direction, devices for attaching one end of the spring to a part of the typewriter frame, a connection between one of the rack bars and said shaft, and devices carried by the pawl carrier coöperating with one of the rack bars for holding the pawl carrier and the line indicator in set position.

1,374,057. SCREWDRIVER ATTACHMENT. WILLIAM JAMES CARLIN, Vallejo, Calif. Filed June 5, 1919. Serial No. 301,863. 1 Claim. (Cl. 145—52.)



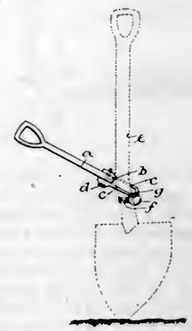
In combination with a screw driver, a spring casing slidable upon the shank of said screw driver, a spring therein coiled around said shank and abutting at one end against the inner end of said casing, a guideway secured to the shank for the spring casing, against which the other end of the spring abuts, a wire doubled to form a loop surrounding and retained by said casing, sides of said wire extending from said loop closely adjacent to each other approximately parallel with the shank of the screw driver, then extending transversely to said shank to the other side thereof, then extending approximately parallel with said shank, and then, at a point substantially opposite to the end of the screw driver, extending transversely to said shank and to the other side thereof and diverging at their ends and bands surrounding the portions of the wire which extend parallel to the shank.

1,374,058. MOTOR-VEHICLE. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 6, 1916. Serial No. 95,882. 10 Claims. (Cl. 64—89.)



1. In an axle, the combination with a stationary supporting structure, of a wheel mounted at the end thereof and having more than two driving recesses, and a driving shaft in said supporting structure having driving lugs adapted to fit said recesses, there being line contact only between the ends of said lugs and said recesses for centering said shaft.

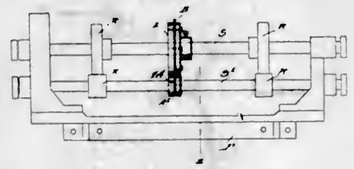
1,374,059. HYDROCARBON-MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 6, 1919. Serial No. 302,126. 4 Claims. (Cl. 123—90.)



1. In a hydrocarbon motor, in combination with a valve, a cam and its shaft, a push rod member between the cam and valve, a removable partition wall adjacent said member and key secured to the bottom of said wall and engaging said member.

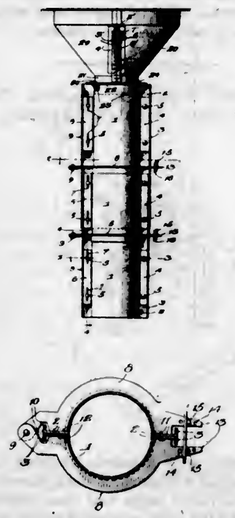
1,374,060. LADDER-CLAMP. RAINSFORD K. CHUTE, Everett, Mass. Filed Oct. 27, 1919. Serial No. 333,718. 1 Claim. (Cl. 228—60.)

A device for holding a ladder immovable with respect to a roof gutter, comprising a U-shaped bracket adapted to straddlingly engage upon one side of a ladder and having down-turned ends disposable within a gutter and terminating in penetrating prongs, a screw threaded through the bight portion of the bracket and having a head whereby it may be turned, and a plate swiveled upon the other end of the screw and provided with tines adapted for penetrating engagement with the ladder.



1,374,061. SHOVEL, SPADE, AND THE LIKE. ARTHUR BERTRAM COLEMAN, Gosnells, near Perth, Western Australia, Australia. Filed Jan. 7, 1920. Serial No. 349,972. 1 Claim. (Cl. 294—58.)

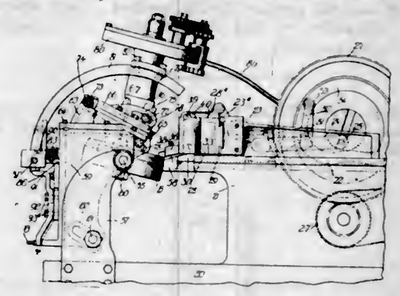
In combination with a spade having a main handle, a secondary handle, a U-shaped member embracing the main handle and connected to one end of said secondary handle, and an eye band secured to said main handle having a large opening therein for loosely engaging the loop of said U-shaped member and thereby acting as a loose pivotal connection therefor.



1,374,062. PERFORATING AND CUTTING DEVICE FOR MULTIGRAPHS. WILLIAM TAYLOR COLLINS, deceased, Tallahassee, Fla., by John Wailes De Milly, administrator, Tallahassee, Fla. Filed Mar. 15, 1920. Serial No. 365,976. 1 Claim. (Cl. 164—99.)

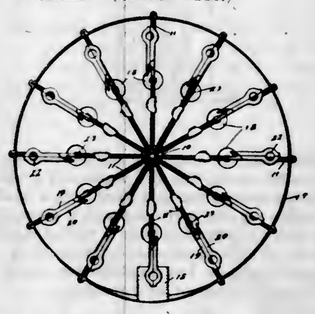
A device of the character described comprising, a roller including combination sections, a blade secured between the sections and having the cutting edge thereof projecting beyond the periphery of the sections, means for securing the sections together, and a second roller comprising sections, fastening members extending through the sections at intervals and securing the sections together, and a ring interposed between the sections of the second roller

and disposed within the area defined by the fastening members for maintaining the sections in spaced relation to accommodate the cutting edge of the blade.



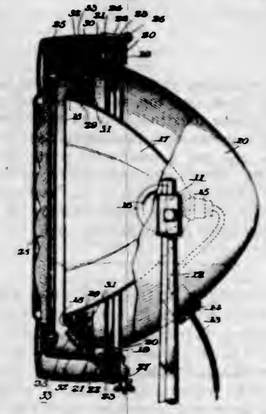
1,374,063. CONCRETE-COLUMN FORM. GEORGE W. CORBETT, Sioux Falls, S. D., assignor to Nels A. Nelson and Cornelius O. Wastun, Sioux Falls, S. D. Filed June 4, 1920. Serial No. 386,537. 5 Claims. (Cl. 25—127.)

1. In a concrete form, telescopic sections, each consisting of two mating parts, each part having an outwardly extending flange at each side thereof, the outer sides of the flanges being turned outwardly at right angles to form channels, angle bars in the channels abutting the sections to brace the latter, slotted bolts extending through the angle bars and flanges, wedges extending through the slots of the bolts and impinging against the adjacent angle bars, clamps consisting of hinged sections having parts received in the channels and having tapered arms at their free sides, slotted bars wedged over the tapered arms, said arms having rows of perforations, and tapered pins engaged through the perforations and abutting the slotted bars to hold the latter in place.



1,374,064. MACHINE FOR CUTTING TEETH. CHARLES E. DERR, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 20, 1915. Serial No. 67,859. 15 Claims. (Cl. 90—9.)

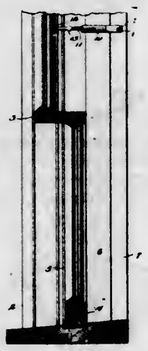
1. In a machine of the class described, in combination, a circular blank, a cutter, and means for relatively operating the cutter and blank so that the cutter's deepest cutting point may operate substantially in a plane clear



of all other cut portions of the blank, and means for producing an additional relative rolling movement of the blank and cutter to generate the desired cut surface.

1,374,065. WHEEL-PROTECTOR. ALEXANDER DIANA, San Francisco, Calif. Filed Apr. 14, 1920. Serial No. 373,945. 5 Claims. (Cl. 280—160.)

1. A shield for wheels comprising an annulus, a plurality of radially disposed elements having corresponding extremities pivoted on said annulus, a flexible covering for said elements, means for supporting the shield upon the wheel at one side thereof, a pocket in said shield and a weight arranged in said pocket for the purpose specified.



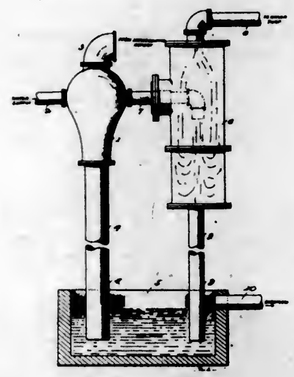
1,374,066. MOTOR-VEHICLE. FRANK J. DRUAR, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1917. Serial No. 202,507. 10 Claims. (Cl. 240—41.)

1. A lamp having a reflector provided with a spherical rim portion disposed at an angle to the main body portion

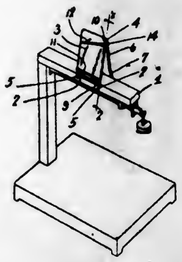
of the reflector and lying forward of the lamp bulb, a support for the reflector, means of engagement between such support and rim portion, the rim portion of said reflector being adjustable on said support about the horizontal axis of the lamp body.

1,374,067. SASH-TIGHTENER. ADELARD JOSEPH DUBEE, Glens Falls, N. Y. Filed July 23, 1920. Serial No. 398,348. 1 Claim. (Cl. 292—63.)

The combination of a member provided in one end with an aperture for permitting the passage of a screw or the like for pivotally securing said member to a window frame and provided at its opposite end with a threaded portion, a presser member provided with a threaded portion said members being held in relative adjustment by means of said threaded portions, and manipulative means for effecting relative adjustment of said members.



1,374,068. SAND-UNLOADING DEVICE. NOBLE C. DUNN, Little Rock, Ark. Filed Apr. 12, 1918. Serial No. 228,285. 4 Claims. (Cl. 37—9.)

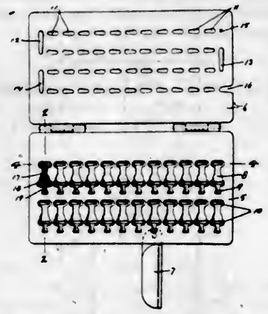


1. In a sand unloading device, a bin having its sides inclined inwardly from the top to the bottom thereof, a suction pipe arranged longitudinally in the bottom of the bin and passing therethrough, in combination with a pump for the suction pipe and a means for partly flooding the bin to arrange the suction pipe therebelow; of sleeves comprising tubular valves arranged on the suction pipe, and means for sliding the tubes longitudinally to cover respectively the openings in the suction pipe.

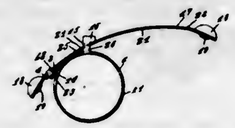
1,374,069. CONDENSER AND SEPARATOR FOR WOOD-IMPREGNATING RETORTS. JOHN H. DUNSTAN and ROBERT A. DAVIS, Slidell, La. Filed Oct. 13, 1919. Serial No. 330,511. 4 Claims. (Cl. 183—22.)

1. Means for creating a high and quick vacuum in a wood impregnating retort, comprising a wood impregnating retort, a barometric condenser connected therewith, a barometric separator, a pipe from the condenser discharging into the side of the separator, a pipe constantly leading directly from the top of the separator to a vacuum pump, a hot well, and a discharge pipe leading downward from said separator having its extremity submerged in said hot well, whereby said separator may constantly discharge while under a vacuum.

1,374,070. DESK. ROBERT B. ELLEDGE, Tampa, Fla. Filed Nov. 22, 1920. Serial No. 425,820. 2 Claims. (Cl. 45—57.)



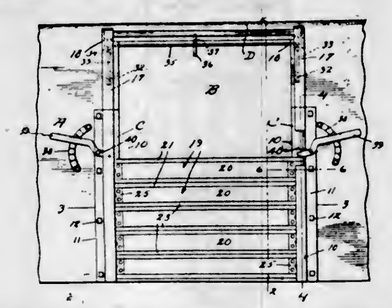
1. In combination with a support having apertures on both sides thereof, of a removable desk therefor, comprising a plate having rolled edges and ends, reinforcing rods therein, the rods in the ends extending above and below the plate and having their lower ends bent angularly to provide hooks that enter the apertures on one side of the support, the upper ends of the said rods being rounded and extended over the rear end of the plate and having their lower portions bent outwardly and from thence bent inwardly to provide hooks which enter the apertures on the opposite side of the support.



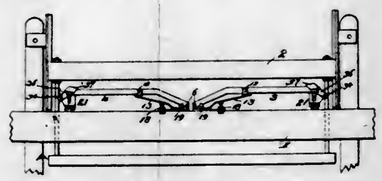
1,374,071. HOOK AND EYE CARDING DEVICE. HENRY A. FRANCIS, Niagara Falls, N. Y. Filed Feb. 18, 1920. Serial No. 359,549. 8 Claims. (Cl. 112—107.)

4. A hook and eye carding device characterized by having a base and a hinged cover, the base being formed with a series of recesses for holding hooks and eyes, the base being also formed with a series of longitudinal tapered slots, the cover being formed with a series of longitudinal tapered slots in lapped relation to the slots of the base.

8. A hook and eye carding device characterized by having a base and a hinged cover, the base being formed with a plurality of series of recesses for holding hooks and eyes, the base being also formed with a plurality of series of longitudinal slots, the cover being formed with a plurality of series of longitudinal slots in lapped relation to the slots of the base, the cover being also formed with lateral slots connecting each adjacent series of longitudinal slots, with an aperture adjacent the first slot of the series and also with an opening into its edge adjacent the last slot of the series.

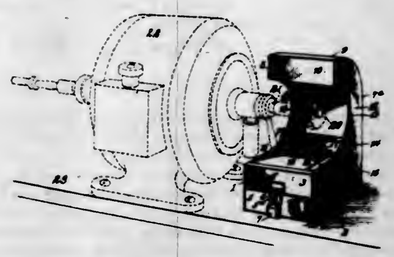


1,374,072. TIMER-BRUSH. CHARLES E. GIBBS, Manhattan, Kans. Filed Aug. 13, 1920. Serial No. 403,338. 2 Claims. (Cl. 200—26.)



1. In a device of the class described, a collar provided with an outstanding tongue and with an outstanding finger; a spring brush; and a securing device connecting the brush with the tongue, the finger being engaged with the brush, the brush having openings adjacent to each end, for the reception of the securing device and the finger, to provide for an end for end reversal of the brush.

1,374,073. GRAIN-CAR DOOR. THEODORE GIBSON, Tulsa, Okla. Filed July 20, 1918. Serial No. 245,923. 3 Claims. (Cl. 20—32.)



2. A grain car door comprising guides secured upon opposite sides of the doorway in a grain car, a door structure slidably mounted within said guides, and means for locking said door structure in its locked position comprising a lever pivoted upon each guide and having a nose portion extending through a vertical slot in the guide and engageable with the top edge of the door structure, and a segment secured upon the car wall adjacent each guide in position to be moved over by said lever, said segment having its outer face provided with ratchet lugs selectively engageable by the lever.

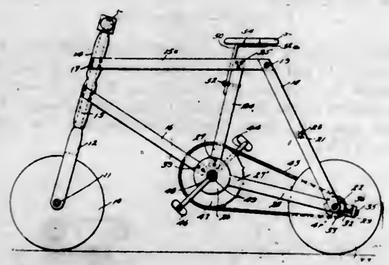
1,374,074. TEMPLE-ROLL BRACKET. JOSEPH L. GILLEBAN, Plainfield, Conn. Filed Feb. 9, 1920. Serial No. 357,135. 5 Claims. (Cl. 139—36.)

1. In a loom, the combination with a support, of a movable temple rod carried by said support, an outer bracket and catch device contiguous to said rod, said device comprising a plate and a pivoted catch mounted on said plate, said catch provided with means engaging and holding a portion of the temple rod, and said catch provided with means for limiting its movement upon the plate and thereby limiting the movement of the temple rod in one direction.

1,374,075. RECEPTACLE AND SEPARATOR FOR PARTICLES OF GOLD AND OTHER PRECIOUS METALS. ROBERT C. GRAHAM, Chattanooga, Tenn., assignor of one-half to David Stokely Etheridge, Chattanooga, Tenn. Filed Apr. 18, 1919. Serial No. 291,091. 5 Claims. (Cl. 32—5.)

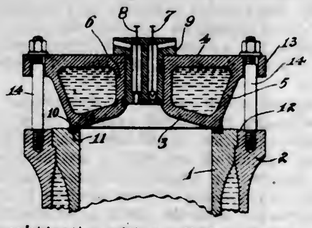
1. A device for the purpose described comprising a closed receptacle provided at its top with a hopper, said hopper comprising four downwardly converging walls of relatively easy descent leading to a narrow elongated opening for the receptacle, said opening being of such width as to allow only particles of dust-like fineness to pass, and a hood rising from the receptacle over the hopper and spaced from and overhanging the opening for a portion of its length, with one side of the hood open to admit a polishing or grinding tool, whereby particles removed in the act of polishing or grinding are caught by the hood and directed into the hopper.

1,374,076. PROCESS OF MAKING STORAGE-BATTERY PLATES. WILLIAM H. GRIMDITCH, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 24, 1920. Serial No. 398,696. 7 Claims. (Cl. 204—29.)



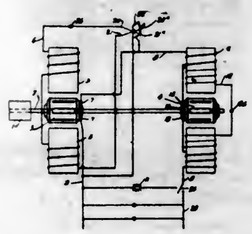
3. The method which consists in determining the temperature necessary in a given quantity of a given ammonium sulfate solution to produce with a given weight of lead oxid containing red lead, a mixture having the plasticity required for properly pasting a battery grid; mixing the given quantity of said solution at the determined temperature with the given quantity of the lead oxid; and applying the resulting paste to a battery grid.

1,374,077. SWIMMING DEVICE. OTTO GRUNDMANN, Jersey City, N. J. Filed Oct. 1, 1920. Serial No. 414,062. 2 Claims. (Cl. 9—21.)



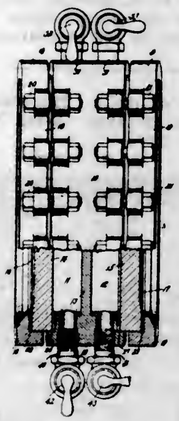
1. A swimming device, comprising a rigid blade having at its rear a recess or mouth to engage around the lower part of the leg of the swimmer, rigid members projecting downwardly from said blade and means adapted to be fixed to a shoe and to engage said members so as to hold the said blade in position.

1,374,078. BICYCLE. OTTO J. HENNEBAUL, New York, N. Y. Filed Jan. 8, 1920. Serial No. 350,128. 1 Claim. (Cl. 208—153.)



A frame for bicycles comprising a head, a wheel supporting fork rotatably mounted in said head, a frame member projecting rearwardly from said head in a horizontal plane and rigidly attached thereto, a second frame member projecting rearwardly and downwardly from said head and rigidly attached at its forward end to the head, a crank-hanging element, a brace depending from the rearwardly constructed horizontal frame member, said rearwardly and downwardly extending frame member and said depending brace forming the support for the crank hanging element, a forked frame extending rearwardly from the crank hanging element and having elongated slots to provide for the mounting of a rear wheel, and a downwardly projected brace extending from the rear end of the horizontal frame member to a point adjacent the rear end of the forked frame member, each of said first and second mentioned frame members comprising two elements arranged in spaced parallel relation.

1,374,079. CYLINDER-HEAD. WILHELM HEFTI, Wülflingen, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 26, 1919. Serial No. 279,380. 10 Claims. (Cl. 123—173.)



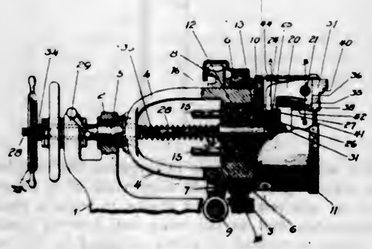
1. The combination with a cylinder, of a water-jacketed head structure symmetrically formed about a central space or cavity which accommodates all the cylinder-head valve mechanism, the inner head wall making a joint against a transverse surface of the cylinder and being devoid of peripheral metal outside the joint capable of developing thermal strains in said structure.

1,374,080. ELECTRIC-CURRENT GENERATOR FOR ARC-CIRCUITS. JOSEPH A. HOLIFIELD, Mobile, Ala. Filed Feb. 17, 1920. Serial No. 359,418. 8 Claims. (Cl. 171—312.)

1. The hereindescribed current generating apparatus for arcing circuits, which comprises a motor and a generator driven synchronously and at a substantially constant speed, the fields of the motor and the arc being in series with the armatures of both generator and motor, and the fields of the generator being in shunt to its armature, substantially as described.

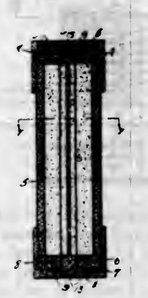
1,374,081. DUPLEX BOILER-GAGE. CHARLES HANLEY JOHNSON and WILLIAM RUSSELL JOHNSON, Jersey City, N. J. Filed July 1, 1920. Serial No. 393,258. 3 Claims. (Cl. 73—54.)

1. A duplex boiler gage, comprising a body provided with two compartments having a partition in common and having diaphanous side plates and covers holding the plates in position, and independent upper and lower valved gage connections at the upper and lower ends of the said compartments.



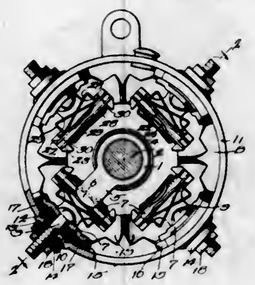
1,374,082. FLOORING. SAMUEL HEDGES, Los Angeles, Calif. Filed May 20, 1918. Serial No. 235,552. 3 Claims. (Cl. 20—8.)

1. As a new manufacture, flooring boards having a tongue at one side converging outwardly, and a groove at the opposite side converging inwardly, the groove being of greater depth than the tongue, one of the lower edges



of the board being cut away to provide a clearance between adjacent edges of the boards below the tongue and groove connection when the boards are assembled.

1,374,083. SECOND-OPERATION CHUCK. HENRY C. HOOK, Worcester, Mass., assignor, by mesne assignments, to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 20, 1918. Serial No. 229,818. 5 Claims. (Cl. 279—108.)

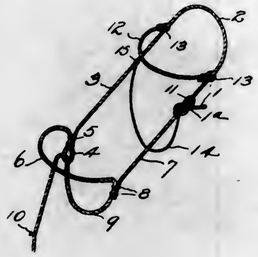


1. In a precision chuck, a casing, pivoted arms therein, work-holding jaw members rigidly located on the outer ends of the arms and projecting beyond said casing to readily engage the work, precision operated cam mechanism coöperating with the arms to tilt the jaws and means comprising a closure for the end of said casing and coöperating therewith to exclude dust from the cam mechanism at all times.

1,374,084. ELECTRIC FUSE. RALPH JUDSON KINGSLEY, New York, N. Y. Filed Sept. 18, 1919. Serial No. 324,523. 3 Claims. (Cl. 200—125.)

1. In an electric fuse, a plurality of fusible elements, a divided mounting on each end of the fuse adapted to maintain one of the fusible elements normally active, said divided mountings providing circuit-completing means for the fusible elements and having an opening for the reception of a plug, whereby the circuit may be completed between the divided parts of the mounting by the plug for selectively rendering one or more of the elements active singly or simultaneously.

1,374,085. SWITCHING DEVICE. CHARLES L. LILLEBERG, Chicago, Ill. Filed July 25, 1919. Serial No. 313,295. 16 Claims. (Cl. 200—24.)

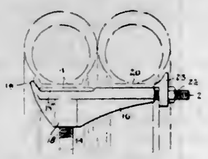


1. An electrical switching device including relatively rotatable contacting members each in the form of an arm having a base portion and a contacting portion angular to the base portion, said contacting portions being in the circle of rotation of the contacting portion of the rotatable contacting member, the contacting portion upon each contacting member extending longitudinally of the axis of rotation toward the base portion of the other contacting member, the base portions of said contacting members being without the plane of rotation of the contacting portion of the rotatable contacting member at the circle of rotation of this contacting portion whereby said base portions are not engaged by said contacting portions.

1,374,086. SWITCHING DEVICE. CHARLES L. LILLEBERG, Chicago, Ill. Filed July 25, 1919. Serial No. 313,296. 6 Claims. (Cl. 200—24.)

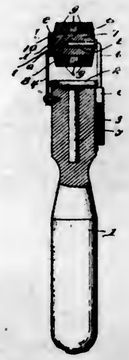
1. An electrical switching device including relatively rotatable contacting members each in the form of an arm having a base portion and a contacting portion angular to the base portion, said contacting portions being in the circle of rotation of the contacting portion of the rotatable contacting member, the contacting portion upon each contacting member extending longitudinally of the axis of rotation toward the base portion of the other contacting member, the base portions of said contacting members being without the plane of rotation of the contacting portion of the rotatable contacting member at the circle of rotation of this contacting portion whereby said base portions are not engaged by said contacting portions, the contacting portion upon one of said contacting members being movable with respect to the base of this member in a plane that is transverse to the axis of rotation; and a spring yieldingly holding this contacting portion in relation to its base.

1,374,087. ROPE SHIPPING-HALTER. CHARLES N. McCLINTOCK, Elwood, Ind., assignor to H. M. Manufacturing Company, Elwood, Ind., a Corporation of Indiana. Filed Dec. 15, 1919. Serial No. 344,968. 4 Claims. (Cl. 54—24.)



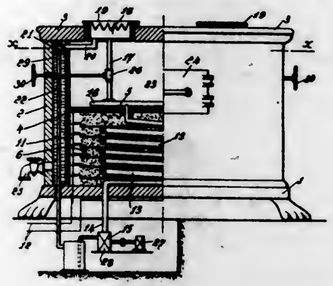
1. In a halter, a continuous rope forming one of the cheek straps, the head stall and an adjustable nose loop, a separate rope secured to the nose loop and constituting the other cheek strap and provided with an eye for receiving the free end of the continuous rope which completes the head stall, a brow band adjustably attached to the head stall portion of the continuous rope, and a throat latch permanently secured to the cheek straps.

1,374,088. WATER-BOTTLE. WILLIAM H. MILLER, Canton, Ohio. Filed Apr. 19, 1920. Serial No. 374,937. 2 Claims. (Cl. 128—258.)



1. A water bottle composed of a flexible rubber wall having a plurality of parallel partition walls with their edges attached to the inner surface of the bottle wall, the said parallel walls being thicker than the bottle wall for the purpose of holding the side walls of the bottle separated.

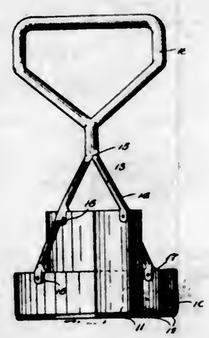
1,374,089. TIRE-HOLDER. ROSCOE C. MONTGOMERY, Brooklyn, N. Y., assignor of one-half to John R. Lettenberger, Jr., Woodhaven, N. Y. Filed Nov. 8, 1919. Serial No. 336,680. 2 Claims. (Cl. 224—29.)



1. A tire holder comprising a plurality of radiating arms radially adjustable, a foot on the outer end of each of said arms formed with a depression adapted to receive the rim of a tire holder, an upstanding flange at one end, and threaded projection at the opposite end; a clamping wedge loosely mounted on said threaded projection, and a nut screwed on to said threaded projection for moving the clamping wedge toward said flange.

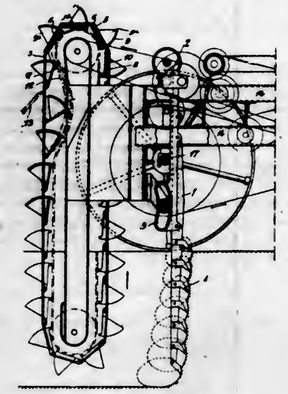
1,374,090. ROLLING STAMP. CHIHIRO NAKAIZUMI, Tokyo, Japan. Filed Sept. 4, 1919. Serial No. 321,733. 3 Claims. (Cl. 101—334.)

1. In a stamp of the type referred to, the combination with a stamp body rotatably supported, of a supporting rod bent at one end at right angles to form a shaft for the stamp-body and at the other end bearing against a spiral spring contained in a box attached to the handle, an ear secured to or made integral with the stamp body and provided with a concavity in which a ridge or high portion is obliquely arranged, and a supporting spring formed at its extremity with a hooked portion normally engaging the uppermost inner edge of the said concavity.



1,374,091. DEVICE FOR HEATING BY ELECTRICITY. ANTONANGELO NEGROMANTI, Milan, Italy. Filed Oct. 4, 1920. Serial No. 414,647. 1 Claim. (Cl. 219—20.)

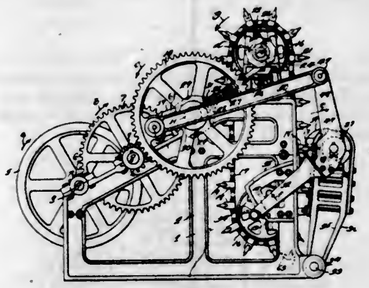
A device for heating by electricity comprising electrical heaters, a mass of heat accumulating material to store the heat produced by said heaters, a circulating pipe containing a liquid with high boiling point, said pipe having a spiral section embedded in said accumulating material, a pump inserted in said circulating pipe, branches in said circulating pipe to convey the liquid to receptacle for which the heat is intended, and valves to regulate the flow of heated liquid from and to said receptacles.



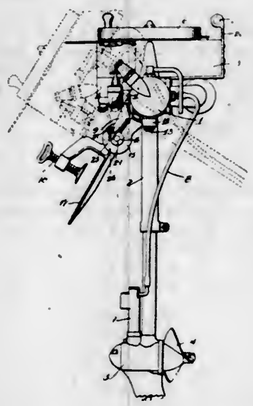
1,374,092. FOOD-CHOPPER. ELMER C. NORCROSS, Pemberton, N. J. Filed Feb. 12, 1921. Serial No. 444,560. 1 Claim. (Cl. 146—7.)

A food chopper comprising concentrically arranged cutters having their cutting edges disposed in the same transverse plane, the opposite end of the inner cutter being extended above the outer cutter, a cruciform head piece

having its arms relatively inclined and connected at their pointed end, means for securing the cutters to the arms and a handle connected to the pointed end of said arms.



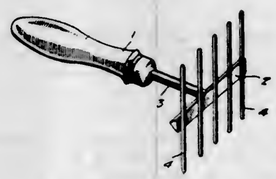
1,374,093. DITCH-DIGGING MACHINE. KRISTOFFER JENSEN NORDBY, Lier, Norway. Filed Jan. 6, 1920. Serial No. 349,796. 2 Claims. (Cl. 37—11.)



1. An elevator for excavators and the like, comprising an endless carrier consisting of a plurality of articulated flat plates each having a transverse slot and longitudinal slots formed therein, and a pair of connecting eyes on opposite ends, the eyes on one end of each plate adapted to lie between the eyes on the opposite end of an adjoining plate, a bucket having a connecting sleeve on one end adapted to fit between both pairs of eyes of adjoining plates, a pin passing through said eyes and sleeve forming a hinge connection therefor, and an end and sides formed on said bucket adapted to normally extend through the slots in the plates.

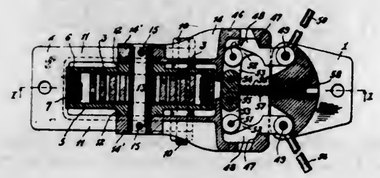
1,374,094. DETACHABLE-PLOW-EDGE-BENDING MACHINE. PETER AUGUIST NORDQUIST, Ogden, Utah, assignor to Detachable Plow Share Edge Manufacturing Company, Ogden, Utah, a Corporation. Filed Apr. 14, 1920. Serial No. 373,776. 6 Claims. (Cl. 153—20.)

1. A metal bending machine comprising a frame, an endless chain vertically movable in said frame, dies carried by said endless chain, a pivoted jaw pivoted to the frame, said jaw having a die member, means for intermittently moving the chain carried dies and means for moving the pivoted jaw inwardly during a bending operation.



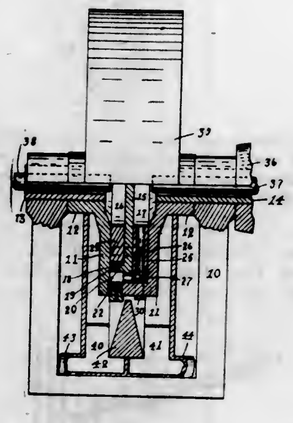
1,374,095. OUTBOARD-MOTOR. RICHARD B. OWEN, Washington, D. C. Filed Feb. 10, 1916. Serial No. 77,504. 10 Claims. (Cl. 115—17.)

1. A motor, a boat bracket, a motor bracket connected with said boat bracket to mount the motor to have swinging movement, and spring held means connected between said brackets to hold the motor in the desired adjustment.



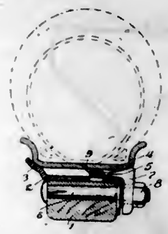
1,374,096. CULINARY IMPLEMENT. WILLIAM H. PALMER, Yale, Mich. Filed Aug. 4, 1919. Serial No. 315,192. 1 Claim. (Cl. 259—144.)

A culinary implement of the class described comprising a handle, a carrier bar triangular in cross section connected with said handle, a shank forming the connection between said handle and carrier bar, fingers being car-



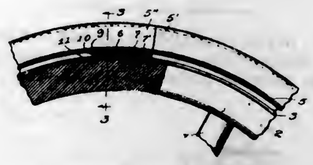
ried by said bar, said shank being connected with the apex of said bar, said fingers being circular in cross section and slightly rounded at their extremities, a flange encircling said handle at its lower end thereof.

1,374,097. DRAWBAR. FRANK A. PECK and JAMES E. A. MOORE, Cleveland, Ohio. Original application filed Nov. 25, 1918, Serial No. 264,048. Divided and this application filed June 24, 1920. Serial No. 391,457. 4 Claims. (Cl. 213—67.)



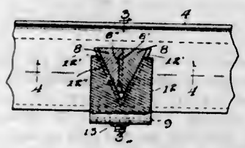
1. A draw-bar comprising a pair of coupling heads; a torsion-spring whose ends are respectively secured relatively to said heads; a movable member intermediate said heads and adapted to be moved amounts proportioned to the stress to which said spring is subjected; movable jaws secured relatively to one of said heads; jaw guides, said jaws and guides interlocking said movable member and said last-mentioned head; means for maintaining said jaws normally effective; and means supported upon said movable member and adapted, upon a predetermined movement of the same, to move said jaws to release the same from the guides.

1,374,098. METHOD OF AND MACHINE FOR CENTRIFUGAL SEPARATION. WILBUR H. PECK, Los Angeles, Calif. Filed Nov. 14, 1919. Serial No. 338,064. 5 Claims. (Cl. 233—15.)



4. A method for separating matter comprising; first causing stratification of the matter to be separated by centrifugal force, then discharging the heavier matter through ports, the lighter matter passing to other ports, and causing fluid pressure to flow through said ports against the outward flow of the heavier particles and then to flow out of the other ports with the lighter particles.

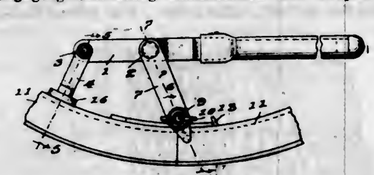
1,374,099. WHEEL. LOUIS H. PERLMAN, New York, N. Y. Filed June 24, 1916. Serial No. 105,694. 6 Claims. (Cl. 301—20.)



1. The combination with a wheel body and a demountable rim therefor, of wedges for locking the demountable rim on the wheel body and stops disposed in the path of the free edges of the wedges for limiting the thrust thereof.

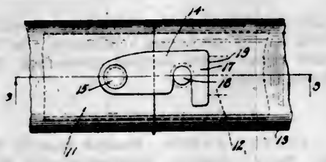
1,374,100. WHEEL. LOUIS H. PERLMAN, New York, N. Y. Filed Aug. 25, 1916. Serial No. 116,855. 10 Claims. (Cl. 301—11.)

1. In a wheel structure, a demountable rim of the channel type having a cross-cut, one of the ends resulting from the cross-cut being formed with a projecting tongue and the other with a corresponding recess for receiving the tongue and enabling it to lie with its outer face flush with the main outer surface of the base of the channel, the tongue having an inwardly extending projection, and means coöperating with the projection for connecting the rim ends against circumferential separation, the projection being of sufficient length to extend inwardly beyond the inner face of the rim.



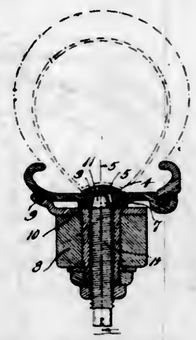
1,374,101. WHEEL. LOUIS H. PERLMAN, New York, N. Y. Filed Sept. 23, 1916. Serial No. 121,830. 7 Claims. (Cl. 301—15.)

2. In a wheel structure, the combination with a wheel body, of a cross cut demountable rim therefor, the end portions of the demountable rim having inwardly extending projections and a bifurcated plate carried by the wheel body and removably extending between the wheel body and rim and adapted to engage said projections for retaining the ends of the rim in operative relation.



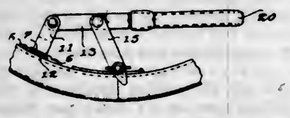
1,374,102. RIM-OPERATING TOOL. LOUIS H. PERLMAN, New York, N. Y. Filed Dec. 4, 1916. Serial No. 135,071. 5 Claims. (Cl. 157—1.)

1. In an operating tool for manipulating a cross-cut demountable rim, a fulcrum post comprising a bar having a pivot-receiving end, and a rim-engaging end, the rim-engaging end being dimensioned and shaped to fit



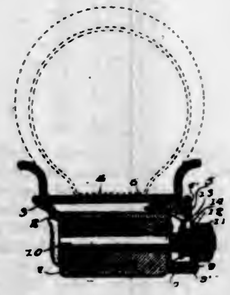
detachably within a locking socket, and means at the rim-engaging end for detachably and rigidly locking said end in a socket.

1,374,103. WHEEL. LOUIS H. PERLMAN, New York, N. Y. Filed Feb. 23, 1917. Serial No. 150,488. 8 Claims. (Cl. 301—11.)



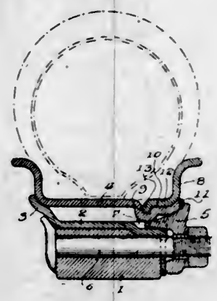
1. The combination of a wheel body having a felly band provided with a peripheral projection, a cross-cut demountable rim for the wheel body, and a hook pivotally connected to one end of the rim and engaging the opposite end thereof to hold the ends together, said projection of the wheel body being adapted to engage the bill of the hook to hold the same from spreading and to retain the hook in interlocking position.

1,374,104. WHEEL. LOUIS H. PERLMAN, New York, N. Y. Filed Aug. 16, 1917. Serial No. 186,522. 12 Claims. (Cl. 301—21.)



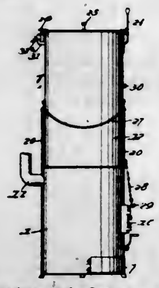
8. The combination, with a demountable rim, of a radially recessed laterally-expansible shank engaging the rim and adapted to receive rim locking means in its recess.

1,374,105. DEMOUNTABLE RIM. LOUIS H. PERLMAN, New York, N. Y. Filed Aug. 16, 1917. Serial No. 186,525. 3 Claims. (Cl. 301—34.)



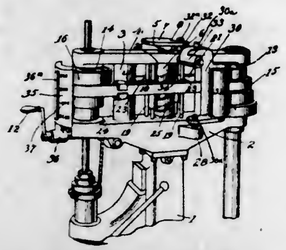
1. The combination of a cross-cut demountable rim and a tool-receiving plate connected with the rim and having a slot with lateral enlargements adapted to accommodate the passage of a post of greater cross section than the width of the main portion of the slot, while leaving outstanding portions of the slot, a portion of the plate being spaced from the rim.

1,374,106. WHEEL. LOUIS H. PERLMAN, New York, N. Y. Filed Aug. 16, 1917. Serial No. 186,526. 9 Claims. (Cl. 301—20.)



1. A locking wedge member for locking a demountable rim to a wheel body comprising a wedge plate adapted to extend along one face of the wheel body and having a wedging projection extending axially from the plate, the projection tapering on a substantially straight line at its under surface and tapering with a compound curve at its upper surface, the wedging projection and plate being connected at the under side of the terminals of the wedging projection by fillets having inclined edges continuing the incline of the under surface of the wedging projection at a more abrupt angle than the incline of the under surface of the wedging projection.

1,374,107. WHEEL. LOUIS H. PERLMAN, New York, N. Y. Filed Aug. 16, 1917. Serial No. 186,530. 2 Claims. (Cl. 301—20.)

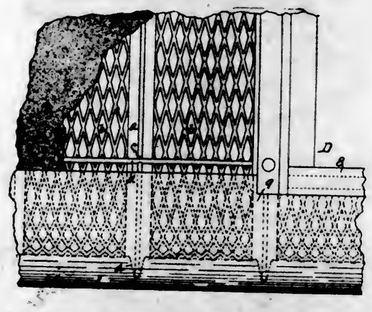


1. In a wheel, the combination of a felly, a fixed rim thereon having a stop flange at one edge, a demountable rim adapted to be sustained with one of its edges in engagement with the stop flange, the demountable rim having at that edge remote from said stop flange a flange-ring seat producing a radially inward projection, and wedge locking means for sustaining the edge portion of the demountable rim having the projection, said wedge locking means being arranged to engage the demountable rim and to extend beyond its point of engagement with the rim to engage the projection, the said projection being disposed to center the demountable rim on the fixed rim, and the fixed rim being formed with depressions for receiving the wedge locking means.

1,374,108. FOOD-BOILER. ROBERT PFAHL, Venturia, N. D., assignor of one-half to Rudolph Dahlke, Ashley, N. D. Filed June 11, 1918. Serial No. 239,465. 1 Claim. (Cl. 126—349.)

A food boiling apparatus embodying a cylindrical stove body having means for carrying a fire therein, the said body being open at its upper end and formed at diametrically opposite points thereon with standards, a boiler corresponding in shape to the stove portion and provided with trunnions on diametrically opposite sides which engage in recesses formed in the upper ends of said standards, the bottom of the boiler being disposed normally through the open top of the stove portion, a removable closure for the upper end of the boiler, a tilting handle carried by the boiler at its upper end, and a chain connected to one of the standards and carrying a hook at its free end engageable with a stud carried on one side of the boiler and above the plane of the aforesaid stud, whereby the boiler may be shifted into an inclined position for the purpose herein specified.

1,374,109. CHANGE-OF-SPEED MECHANISM. HENRY C. PIERLE, Cincinnati, Ohio, assignor, by mesne assignments, to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 14, 1919. Serial No. 310,638. 12 Claims. (Cl. 64—4.)

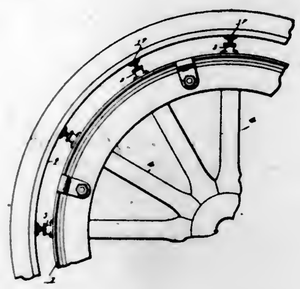


1. In a device of the character described, the combination with a pair of reverse cone pulleys, of a belt passing around said pulleys, a belt shifter for engaging and moving said belt over said pulleys, a resilient belt tightener adapted to bear on the belt to maintain tension thereof, and means in connection with the belt shifter for relieving the tightener from tensioning position, for the purpose described.

1,374,110. WELDING OF DIFFERENT METALS TO FORM A COMPOSITE INGOT. ALOIS GERARD CORNEILLE PITTEVIL, London, England. Filed Oct. 14, 1918. Serial No. 258,013. 1 Claim. (Cl. 78—93.)

A process of welding a ferrous to a nonferrous metal, in which a thin sheet of a metal adapted to combine with a constituent of said non-ferrous metal is interposed between the metals to be welded together.

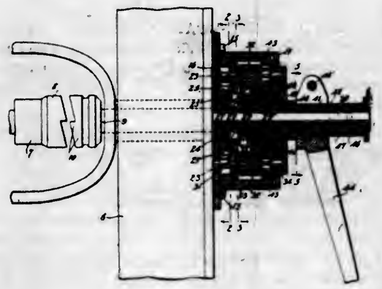
1,374,111. CONCRETE CAR CONSTRUCTION. EDWARD JENNESS PUTNAM, Atlanta, Ga. Filed Nov. 14, 1918. Serial No. 262,497. 12 Claims. (Cl. 105—405.)



1. A fabricated concrete car structure comprising a metallic form having projecting reinforcing ribs and expanded small metal fabric sections connecting the ribs, and a concrete envelop.

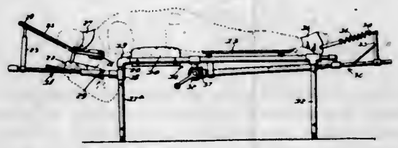
1,374,112. COATED PAPER. HAROLD ROBERT RAFSKY, Lawrence, Mass. Original application filed Mar. 29, 1916, Serial No. 87,624. Divided and this application filed Aug. 7, 1917, Serial No. 184,825. Renewed Aug. 19, 1920. Serial No. 404,714. 2 Claims. (Cl. 91—68.)

2. A paper comprising a paper "body stock" having its surface coated with a pigment produced by the interaction of a slaked lime containing magnesia and sodium carbonate in an aqueous medium, and an adhesive.



1,374,113. RESILIENT AND DEMOUNTABLE WHEEL-RIM. BENJAMIN A. RAYNOR, Muskogee, Okla. Filed Nov. 21, 1919. Serial No. 339,535. 1 Claim. (Cl. 152—32.)

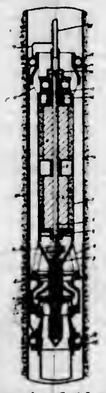
A wheel rim comprising an inner metallic annulus, an outer metallic annulus surrounding and spaced from the inner annulus, and radially-disposed cushioning units interposed between the inner and outer annuli and separated by intervening spaces; each of the said units being made up of a radial socket member having base flanges connected to the inner annulus and also having an interior thread, a cap member having a central radial aperture and also having a reduced and threaded tubular portion arranged in and connected by the threads to the socket member, a bearing member connected to the inner side of the outer annulus and having a transverse aperture of circular form in cross section and also having a longitudinal slot at right angles to said aperture, a plunger rod extending loosely through the central aperture in the cap and having an enlargement at its inner end housed in the tubular portion of the cap and also having a T-head of circular form in cross section journaled in the aperture



of the bearing member, a spring interposed between the enlargement of the plunger and the base of the socket member, and a spring surrounding the plunger rod and interposed between said enlargement and the outer end of the cap member; said springs housed in the tubular portion of the cap member.

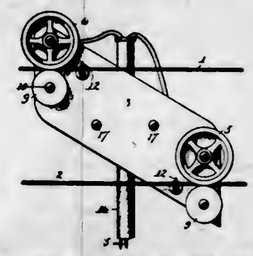
1,374,114. STARTING-CRANK FOR MOTORS. FRANK FULTON REDDING, New York, N. Y. Filed Sept. 10, 1919. Serial No. 324,753. 3 Claims. (Cl. 123—185.)

1. A starting device comprising a shaft adapted to be directly connected to the crank shaft of the motor to be started, a sleeve loosely mounted on said shaft, a plurality of members carried by said shaft and adapted for driving interengagement with each other, one of said members being keyed to the shaft and the other free to rotate thereabout, means operated by the sleeve for driving the member keyed to the shaft when said sleeve is rotated in one direction, and means for preventing movement of the other of said members upon movement of the sleeve in the opposite direction.



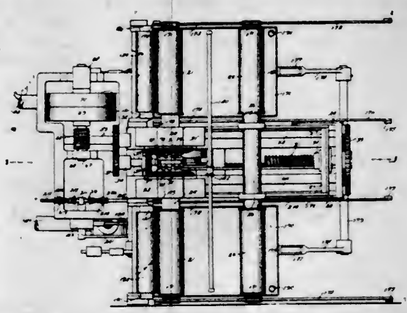
1,374,115. TENSION-TABLE. JACOB F. ROEMER, Waukegan, Ill. Filed July 23, 1918. Serial No. 246,272. 2 Claims. (Cl. 128—71.)

2. An apparatus for the purpose indicated having a main body supporting frame, body receiving rests carried thereby, a head frame supported by the main frame and carrying a head rest, a head harness carried by the head frame, a foot extension having a threaded shank, a rotatably mounted tubular member carried by the main frame and surrounding and threadingly engaging the said shank, and a foot harness carried by the said foot extension.



1,374,116. DIRECT-DRIVEN DEEP-WELL PUMP. ROBERT SCHORR, San Francisco, Calif. Filed May 26, 1919. Serial No. 299,752. 17 Claims. (Cl. 253—199.)

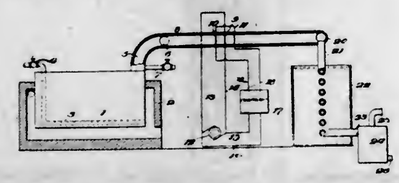
1. In combination with a well casing, an adjustably mounted pumping unit consisting of a vertical motor in a water-tight housing and a rotary pump directly connected to the motor-shaft, said well casing forming the



discharge conduit for the fluid pumped, the fluid pumped surrounding said motor in the water-tight housing.

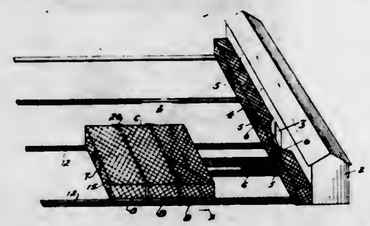
1,374,117. TROLLEY CONSTRUCTION FOR BARBERS' ELECTRICAL EQUIPMENT. JOSEPH ASA SHELTON, Henderson, Ky. Filed Aug. 14, 1919. Serial No. 317,462. 7 Claims. (Cl. 191—536.)

1. In a trolley construction, superposed spaced electric conductors together constituting a track, and a carriage mounted on the conductors and comprising a rigid body member disposed diagonally of the conductors with grooved trolley wheels at opposite ends, each wheel being above and engaging a respective one of the conductors and each grooved wheel having a retaining wheel associated therewith in underlying relation to the respective conductor.



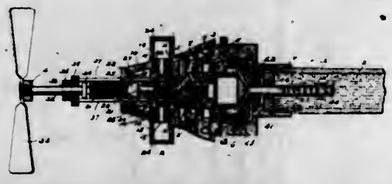
1,374,118. MERCERIZING-MACHINE. JACOB SPITZER, New York, N. Y., assignor to Universal Mercerizing & Dyeing Co., Inc., a Corporation of New York. Filed Feb. 12, 1920. Serial No. 358,025. 3 Claims. (Cl. 8—20.)

1. In a mercerizing machine a pair of drums adapted to support a batch of cotton yarn to be mercerized, a carriage



carrying one drum to move the latter toward and from the other drum, a reversing motor connected with the said carriage to intermittently reciprocate the same, starting and stopping means for the said motor and including a timer cam and mechanism controlled by the said carriage, and driving means for one of the said drums to impart a traveling motion to the yarn, the said driving means turning the said timer cam.

1,374,119. PROCESS OF CATALYSIS. ELBRIDGE W. STEVENS, Baltimore, Md., assignor to Chemical Fuel Company of America, Inc., Louisville, Ky., a Corporation of Delaware. Filed Mar. 18, 1920. Serial No. 366,840. 9 Claims. (Cl. 204—31.)

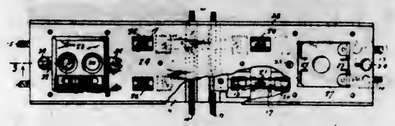


1. In the catalysis of gaseous or vaporous carbon compounds by hot metal catalysts maintained at temperatures and under conditions where carbon would normally deposit, the process which comprises sparking the surface of such catalyst during its period of operation.

1,374,120. POULTRY-RUN. FRITZ OSCAR STROMBORG, Los Angeles, Calif. Filed Dec. 11, 1919. Serial No. 344,157. 5 Claims. (Cl. 119—21.)

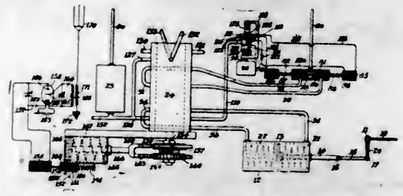
1. A poultry run apparatus including a poultry house, tracks extending from said poultry house, a cage composed of a plurality of sections, wheels upon which said sections are mounted to travel on said tracks, the frames of said sections having notches in the upper part thereof, T-shaped bars formed with down turned ends on their cross members adapted to fit in notches in adjacent frames to hold adjacent sections together, the lower end of said bars being bent under said tracks, said poultry house having an outlet, said cage having an inlet, and a guide passage connecting said outlet and said inlet.

1,374,121. COMBINATION ALL-WAYS IMPACT AND TIME FUSE. JOHN H. SWAN, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed July 25, 1919. Serial No. 313,370. 3 Claims. (Cl. 102—2.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In a drop bomb, a firing mechanism comprising a firing pin, safety plungers coöperating therewith, means for locking the safety member in unarmed position, a shaft, and propeller blades secured to said shaft for automatically releasing said safety plungers while the bomb is in flight.

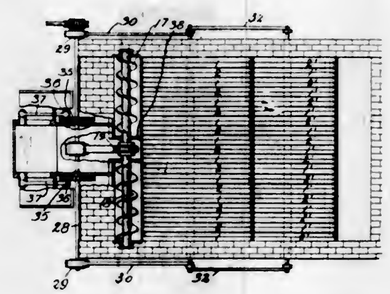
1,374,122. PROCESS FOR DYEING AND WATER-PROOFING. ALFRED O. TATE, New York, N. Y. Filed Apr. 20, 1920. Serial No. 375,348. 2 Claims. (Cl. 204—1.)



2. The process for dyeing and waterproofing fabric which consists in impregnating the fabric with the ordinary aniliu black dye-stuffs, aging the fabric so treated, impregnating the fabric with sodium palmitate and aluminum salt and subjecting the fabric to an electric current while passing between electrodes, one of which is aluminum.

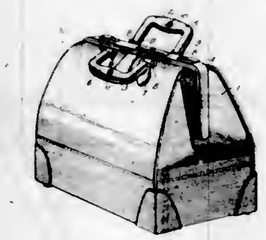
1,374,123. PANEL-BOARD FITTING. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 12, 1917. Serial No. 206,792. 5 Claims. (Cl. 175—208.)

1. A panel board fitting having a base chambered to receive a removable switch mechanism, a cover plate substantially coextensive with said base and apertured in register with said chamber in the base, a cap plate overlying said aperture, said cap plate being provided with slotted end lugs, and screws clamping said end lugs to the cover plate, one of said screws being longitudinally displaceable in the cover plate to free the coöperating end lug of the cap plate without detaching said screw from the cover plate.



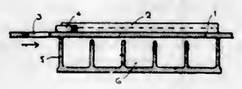
1,374,124. SYSTEM FOR THE CONTROL OF DIRIGIBLE DEVICES FROM A DISTANCE. ALBERT D. TRENOR, New York, N. Y., assignor to John Hays Hammond, Jr., Gloucester, Mass. Filed June 3, 1918, Serial No. 237,921. Renewed June 24, 1920. Serial No. 391,552. 11 Claims. (Cl. 114—21.)

1. The combination with a plurality of independently operative fluid-actuated devices, of a source of pressure fluid, and means including a single rotatable valve member operative in response to an impulse of energy to cause the distribution of pressure fluid from said source to one of said devices to actuate the same and operative upon the cessation of said impulse to cause the distribution of pressure fluid from said source to another of said devices to operate the same.



1,374,125. STOKER-FURNACE. JUDSON E. WAGONER, Monongahela, Pa., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1919. Serial No. 339,118. 6 Claims. (Cl. 110—47.)

1. In a stoker furnace, the combination of a series of inclined grate bars arranged adjacent to one another, some of which are movable, a retort adjacent to the upper ends of said bars and transverse to the axes of said bars, a passage located at the central portion of said retort for feeding fuel thereto, a hopper for fuel to be fed, means for feeding fuel from said hopper through said passage to said retort, a double spiral conveyer in the bottom of said

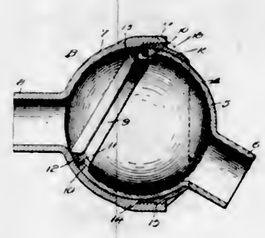


retort for distributing fuel fed through said passage to both ends of said retort, and means for actuating said double conveyer.

1,374,126. HANDBAG-HANDLE. HORACE EVERETT WALTER, Richmond, Va. Filed Oct. 12, 1920. Serial No. 416,373. 2 Claims. (Cl. 190—57.)

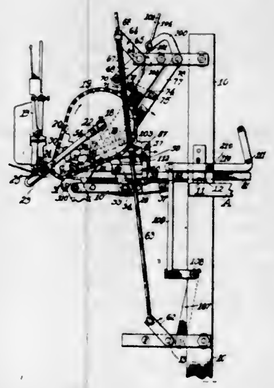
1. A hand bag handle comprising a pair of handle members adapted to be hingedly secured to a hand bag at opposite sides of the mouth thereof, and means for removably locking said members together when the bag is in closed position, said means comprising coacting locking devices positioned on the opposed inner faces of the handle members and registering with each other.

1,374,127. APPARATUS FOR CALIBRATING ROLLERS FOR ANTIFRICTION ROLLER-BEARINGS. ERNST HJALMAR WALODDI WEIBULL, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed July 1, 1920. Serial No. 393,395. 4 Claims. (Cl. 83—92.)



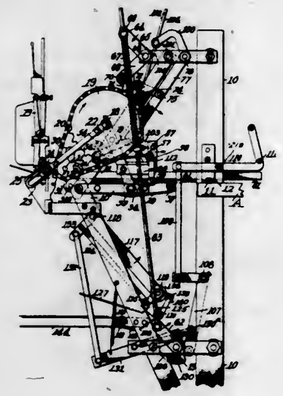
1. An apparatus for assorting disks comprising a supporting means provided with an aperture through which a disk supported by said means may pass and converging means coöperating with the other means and designed to engage the opposite sides of a disk supported by the supporting means, one of said means being movable relatively to the other means for the purpose of bringing the disk and aperture into alinement.

1,374,128. PAINT. HORACE NELSON WELLS, Hoboken, N. J. Filed Sept. 11, 1920. Serial No. 409,649. 4 Claims. (Cl. 134—46.)



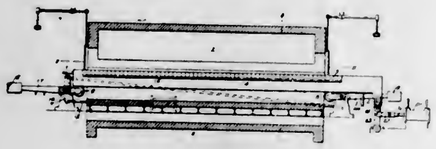
1. The herein described paint, comprising the following ingredients in substantially the proportions of soap—nine ounces, whitening—two and one-half pounds, lime—twenty-three and one-quarter pounds, salt—one and one-quarter pounds, and water—four gallons.

1,374,129. FLEXIBLE METAL JOINT. HIRAM WILSON, Mondovi, Wis. Filed Aug. 25, 1919. Serial No. 319,760½. 2 Claims. (Cl. 285—95.)



1. A universal joint of the character described comprising male and female members, each being formed with a ball-shaped end and a pipe extension, the ball-shaped end of the male member being fitted within the ball-shaped end of the female member, a retaining collar having screw-threaded engagement with the interior of the ball-shaped end of the female member and holding the ball-shaped end of the male member fitted therein, said ball-shaped end of the female member and the collar being formed with angular registering openings and adapted to receive a locking pin for securing the collar engaged with the ball-shaped end of the female member.

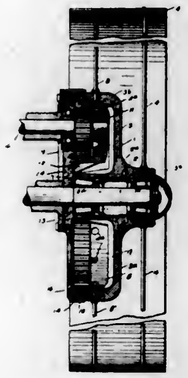
1,374,130. SHEET-FEEDING MACHINE. JOHN E. WOODBURY, Worcester, Mass. Original application filed Oct. 26, 1916, Serial No. 127,960. Divided and this application filed July 9, 1920. Serial No. 395,107. 25 Claims. (Cl. 271—54.)



5. The combination of means for registering the sheets, means for positively gripping them at a distance from their edges and advancing the sheets, means for operating the gripping means to locate the sheets in the press as the impression is made, and stationary means for supporting the sheets until they are gripped.

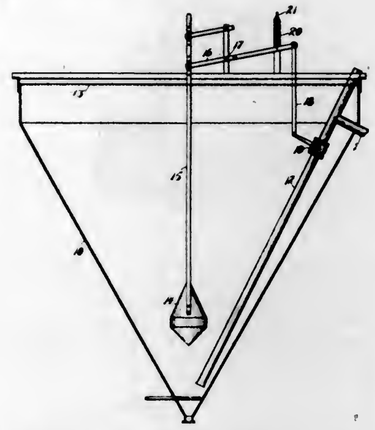
1,374,131. AUTOMATIC DELIVERY FOR DIE-PRESSES. JOHN E. WOODBURY, Worcester, Mass. Filed Oct. 26, 1916, Serial No. 127,960. Renewed July 9, 1920. Serial No. 395,121. 21 Claims. (Cl. 271—82.)

21. In a sheet delivery device, the combination of an oscillatable frame, sheet supporting bars pivoted thereon, means for swinging said bars on their pivot as the frame oscillates, a pair of pivoted grippers on the frame engaging said bars, and frictional means for holding the grippers against said bars so that the turning motion of the bars tends to keep the sheets gripped and for holding the grippers open at a later time.



1,374,132. CONTINUOUS HEATING-FURNACE. JOHN S. WORTH, Coatesville, Pa., assignor to Worth Bros., Coatesville, Pa., a Firm. Filed Mar. 20, 1919. Serial No. 283,697. 4 Claims. (Cl. 214—18.)

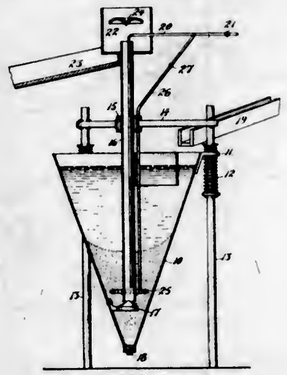
1. The combination in a continuous heating furnace, of a furnace structure; a beam extending longitudinally through the furnace and projecting beyond each end thereof; a transverse shaft at each end of the furnace; an arm on the shaft; a roller carried by the arm; means for turning the two shafts in unison so as to raise the beam; a pivoted lever at one end of the shaft and connected to the beam; and means for moving said lever to reciprocate the beam so that material placed on the beam will be intermittently fed through the furnace.



1,374,133. WHEEL-HUB. BENJAMIN C. ZUHARS and HARRY D. CLARKE, Columbus, Ohio, assignors to The Ohio Tractor Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 6, 1920. Serial No. 356,747. 3 Claims. (Cl. 301—6.)

1. A wheel hub comprising a spindle housing, a drum formed integrally with the forward end of the housing and increasing the thickness thereof and having openings to receive the outer series of spokes of a wheel, said drum extending radially and inwardly over the rear portion of the housing and having openings in its inner portion to receive the inner series of spokes of the wheel, and reinforc-

ing elements on the inner face of the drum and inner portion of the housing.

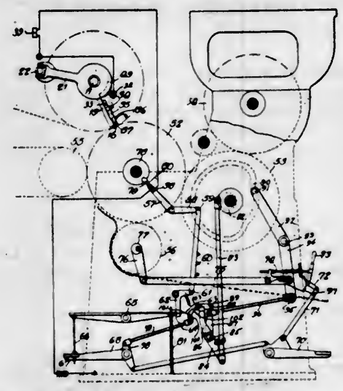


1,374,134. THICKENER, (SEWAGE TYPE.) CHARLES ALLEN, El Paso, Tex. Filed Mar. 11, 1920. Serial No. 365,081. 4 Claims. (Cl. 210—54.)

1. In a device of the character described, a vessel having an overflow rim to permit liquid and slowly settling solids to overflow while allowing the remainder of the material to accumulate in the bottom of the vessel, a discharge pipe for the accumulated material in the bottom of the vessel extending upwardly to a point near the top of the vessel, means for controlling the area of the passageway through the pipe, and means automatically responsive to variations in the density of the accumulated material in the bottom of the vessel to actuate said controlling means whereby to maintain the discharge through the pipe at an approximately constant density.

1,374,135. AUTOMATIC SEPARATOR AND EVAPORATOR. CHARLES ALLEN, El Paso, Tex. Filed June 8, 1920. Serial No. 387,482. 3 Claims. (Cl. 83—82.)

3. In a device of the character described, a vessel into which material to be separated or concentrated is fed, a vertical discharge pipe for the accumulated material in the vessel extending downwardly within the latter to a point near the bottom thereof, means to initially close the inlet end of said pipe, said means being actuated automatically to open the same when the accumulated material reaches a predetermined weight, and a fluid pressure

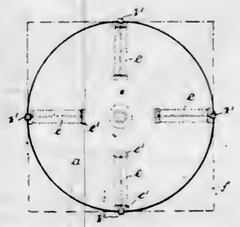


pipe opening into the discharge pipe at a point near the bottom thereof to lift the material therein and cause it to be discharged over the top of said pipe.

1,374,136. TRANSLUCID ANTISLIPPING TILE. MILTON F. BEECHER, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 3, 1918. Serial No. 248,223. 10 Claims. (Cl. 106—7.5.)

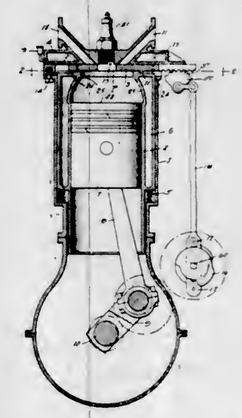
1. A safety tread comprising a translucid body containing hard, wear-resisting, anti-slipping, granular material intimately incorporated in the body by fusion.

1,374,137. SHEET-REGISTER DETECTOR. JOSEPH R. BLAINE, Chicago, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1917. Serial No. 190,473. 13 Claims. (Cl. 101—233.)



1. In a printing press, the combination with the usual sheet-register gages, of means to automatically trip the press upon failure of the sheet to register at any one of the gages, and means to indicate to the pressman the particular gage at which such failure occurs, said indicating means comprising a normally open electric circuit for each gage including an annunciator, each of said circuits arranged to be closed upon the failure of the sheet to register at its particular gage.

1,374,138. COMPOSITION OF DRIED MODIFIED CULTURED MILK POWDER TO BE USED IN COOKING AND BAKING HUMAN FOODS. ARTHUR RICHARD COULSON, San Quentin, Calif. Filed July 1, 1920. Serial No. 393,231. 1 Claim. (Cl. 99—5.)

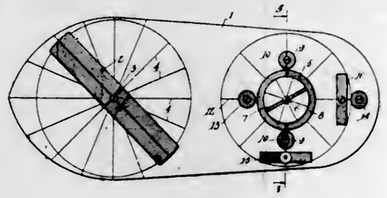


A dried modified cultured milk powder to be used in baking and cooking foods for human consumption, consisting of the solids of a modified cultured milk mixture comprising sweetened curdled skim milk, fifty (50) to eighty (80) per cent., and salted buttermilk twenty (20) to fifty (50) per cent., said solids being the residue that is left after the modified cultured milk mixture is dried.

1,374,139. REVOLVING CHESSBOARD AND THE LIKE. GEORGE LAKE TALBOT DENNISS, London, England. Filed Mar. 27, 1920. Serial No. 369,383. 6 Claims. (Cl. 46—64.)

1. A revolving chess board, comprising a supporting frame, a rotatable table on said frame adapted to rotate about a vertical axis, members mounted rotatably between the upper surface of such frame and the under surface of said table, and fastening means on said table for securing the chess board thereto, for the purposes described.

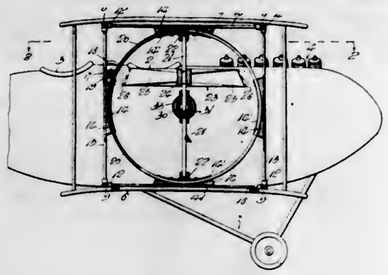
1,374,140. INTERNAL-COMBUSTION ENGINE. HERMAN DOCK, Pleasantville, N. Y., assignor to Lorenzo O. Bucklin, trustee, Little Falls, N. Y. Filed Jan. 26, 1920. Serial No. 354,187. 6 Claims. (Cl. 123—75.)



1. In an internal combustion engine, the combination of a casing having ports, a movable cylinder open at both ends and constricted at its firing end, a ported valve plate between the cylinder and casing closing the constricted end of the cylinder, means for operating said valve, a piston in said cylinder, said cylinder having on its contact face a relief groove inclosing an area less than the area of the piston.

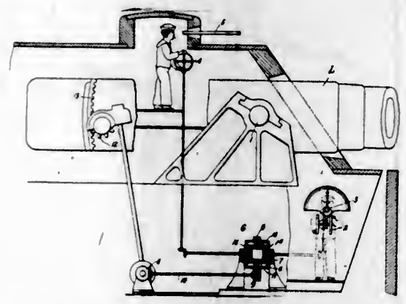
1,374,141. PROCESS OF STERILIZING CHEESE. ELMER E. ELDREDGE, Sidney, N. Y. Filed Sept. 24, 1919. Serial No. 326,038. 6 Claims. (Cl. 99—1.)

1. In a process of sterilizing cheese, the steps which comprise mixing approximately 98% of the cheese with 2% of sodium phosphate, then heating the mass to a sterilizing temperature.



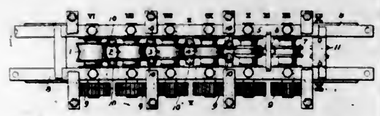
6. A sterilized cheese mass consisting substantially of 98% of cheese and 2% of sodium phosphate.

1,374,142. DEVIASCOPE. SOREN A. ELLINGS, New York, N. Y. Filed July 8, 1920. Serial No. 394,674. 4 Claims. (Cl. 35—16.)



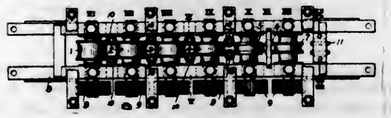
1. A device of the character stated, comprising a plate representing in plan the hull of a ship, means thereon for indicating the lines of magnetic force through a ship, and means on the plate for indicating the manner of correcting compass deviation due to such lines of indicated magnetic force.

1,374,143. AEROCYCLE. WILLIAM EVERSON, Alma, Nebr. Filed June 21, 1920. Serial No. 390,527. 8 Claims. (Cl. 244—14.)



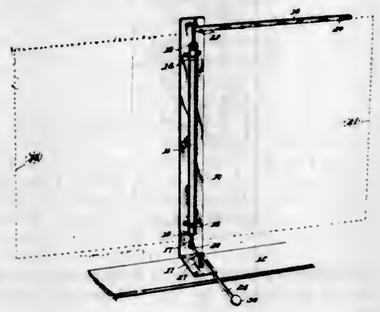
5. A propelling means for an aeroplane having a fuselage and wings, said propelling means comprising a frame for extending transversely of and beyond opposite sides of the fuselage, said frame having longitudinally extending bars and standards and cross bars connecting the longitudinally extending bars, rings positioned vertically in the frame, shoes carried by certain of the cross bars and vertically extending bars and engaging the rings to rotatably mount the rings and hold the rings against transverse movement, a rotatable shaft extending longitudinally of the frame and having gears engaging gear teeth of the rings for imparting rotary movement to the rings, propeller shafts journaled in the rings, a driving shaft rotatably mounted and extending longitudinally of the frame and having gears engaging gears carried by the propeller shaft, and propellers carried by the shafts for imparting vertical movement to an aeroplane when the propeller shafts are vertical and for imparting forward movement to the aeroplane when the propeller shafts are horizontal.

1,374,144. CONTROL MEANS FOR GUNS OR THE LIKE. STEPHEN A. FARRELL, Brooklyn, N. Y., assignor to Automatic Gun Control Company, a Corporation of New York. Filed Nov. 23, 1916. Serial No. 132,968. 1 Claim. (Cl. 89—41.)



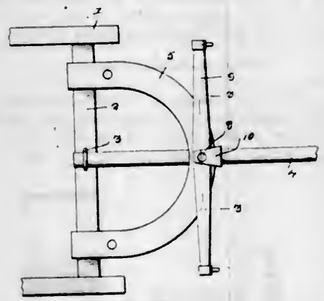
In a device of the class described, the combination with a member to be trained, of a motor for training said member, connections between the motor and the member including a tilting-box having a control element associated therewith for modifying the effect of the motor upon the member, a manually operable hand wheel, connections from the hand wheel to the control element for operating the control element, and means associated with the member and with said last mentioned connections for modifying the effect of the hand wheel upon the control element in response to the movements of the member.

1,374,145. MILL FOR COLD-ROLLING SKELP. JOHN W. FREE, Woodlawn, Pa., assignor to Jones & Laughlin Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 11, 1920. Serial No. 365,009. 5 Claims. (Cl. 153—54.)



1. A skelp-bending mill wherein the shaping instrumentalities consist only and entirely of a plurality of pairs of rolls, shaped to engage the skelp upon its faces only and in such engagement to shape to a tubular blank with overlapped edges ready for lap-welding a length of skelp with scarfed edges.

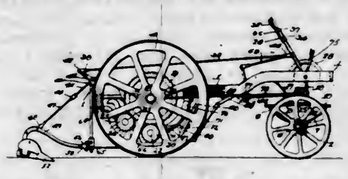
1,374,146. METHOD OF BENDING SKELP. JOHN W. FREE, Woodlawn, Pa., assignor to Jones & Laughlin Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 24, 1920. Serial No. 405,758. 2 Claims. (Cl. 153—32.)



1. The method herein described of developing an unheated length of skelp into a tuoular blank with overlapped edges, which consists in, first, bending the skelp transversely into a tubular blank of uniform radius, second, by externally exerted pressure resisted only by the rigidity of the material, reducing the radius of curvature of one margin of the blank to a greater degree than the remainder, and, finally, by externally exerted pressure resisted only by the rigidity of the material, reducing the radius of curvature of the remainder of the blank.

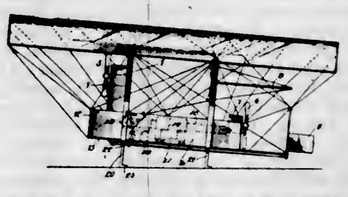
1,374,147. SHEET-MUSIC TURNER. GLENN C. GEER, Elmira, N. Y. Filed June 18, 1919. Serial No. 305,013. 2 Claims. (Cl. 84—496.)

2. A music leaf turner of the type described comprising a mounting bracket, a tubular housing fixed to the bracket, a tensioned shaft rotatably and slidably mounted in the tubular housing, a music leaf engaging arm carried by the upper end of the shaft, a lug carried by the mounting bracket normally engaging the music leaf arm for holding the shaft under tension and a lever pivoted to the lower end of the mounting bracket with the lower end of the tensioned shaft seated on the inner end thereof whereby movement of the lever will elevate the shaft to free the music leaf carrying arm from engagement with the retaining lug.



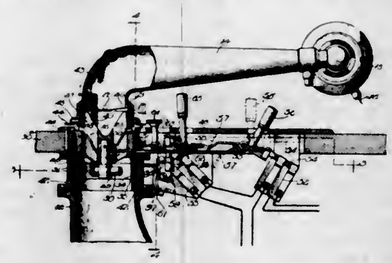
1,374,148. SELF-SUPPORTING SLED-TONGUE. LEONARD M. HELLEMS and GILBERT C. SHAFER, McClungs, W. Va. Filed Oct. 18, 1919. Serial No. 331,582. 1 Claim. (Cl. 278—24.)

In combination with a sleigh, a yoke member having its ends rigidly connected with the stationary front cross bar thereof, said yoke member having a centrally arranged socket and a hole passing vertically through said socketed part, a loop member on the cross bar, a tongue engaging said socket and loop member, a double tree, a bracket carried by the tongue and engaging said double tree and a pin passing through the bracket, double tree and the hole in the yoke member and through the tongue.



1,374,149. MACHINE FOR PICKING AND CUTTING CANE-STRAW AND PLOWING UNDER THE SAME. CLAUDIO GARCIA HUELVES, Santa Clara, Cuba. Filed Jan. 29, 1919. Serial No. 273,856. 3 Claims. (Cl. 55—118.)

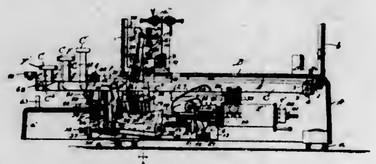
1. In a straw picking and cutting machine, a wheeled frame, a spur gear, means to cause said spur gear to be rotated when the frame is in motion, a set of cutters mounted for rotation in relatively fixed bearings and having a gear engaging the first named gear, a shiftable shaft, a second set of cutters mounted thereon, a gear on said shiftable shaft engaging the first named gear, guide elements carried by the frame and having curved slots



concentric with the first named gear, bearings for the shiftable shaft and mounted for movement in said slots, a lever, and connections between said lever and said bearings to enable said shiftable shaft to be moved by said lever to cause the second set of cutters to be moved toward and from the first named set of cutters.

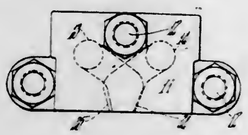
1,374,150. AIRCRAFT. LOUIS V. JOHNSON, Orange, Tex. Filed July 3, 1919. Serial No. 308,464. 1 Claim. (Cl. 244—29.)

In an air craft, the combination with a transversely bowed sustaining plane, of a main body carried by and arranged beneath said plane and disposed completely within the lines of the same, a fixed pilot seat arranged in the forward portion of the body, a track carried by the said main body and extending longitudinally of the same, a passenger body mounted upon said track and movable longitudinally within the first named body rearwardly of the fixed pilot seat and provided with a plurality of passenger seats disposed in the longitudinal plane of the pilot seat, a flexible element connected to the ends of the passenger body, guides supporting said flexible element and disposed adjacent the ends of the main body, and means arranged adjacent the pilot seat and connection to said flexible element whereby the pilot may shift said passenger body and the passengers within the same longitudinally of the main body without leaving the pilot seat, said passenger body and the controlling means for the same being disposed entirely within the lines of and housed by the main body.



1,374,151. OPERATING MECHANISM FOR PHONOGRAPHS. WILLIAM W. KIDENEY, Chicago, Ill., assignor to American Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 7, 1917. Serial No. 152,992. 15 Claims. (Cl. 274—15.)

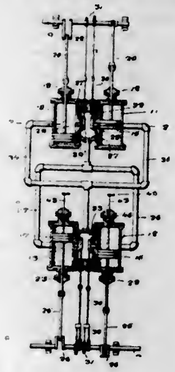
1. In a phonograph, a record, driving means therefor including a speed governor, a tone arm, and mechanical



connections to said arm controlled directly by said governor for automatically moving said tone arm toward and away from said record.

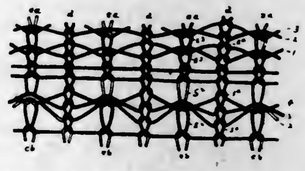
1,374,152. TELEGRAPH-TRANSMITTER. CHARLES L. KRUM and HOWARD L. KRUM, Chicago, Ill., assignors to Morkrum Company, Chicago, Ill., a Corporation. Original application filed Nov. 29, 1909, Serial No. 530,455. Patent No. 1,232,045. Divided and this application filed Sept. 18, 1916, Serial No. 120,606. Renewed Mar. 19, 1920. Serial No. 367,122. 15 Claims. (Cl. 178—33.)

1. In a telegraph system in which the characters are represented by different permutations of a definite number of impulses of opposite polarity, a key-board transmitter comprising a set of pole changers, said pole changers having normally engaged and disengaged contacts connected to current sources of opposite polarity, a set of branch conductors connected to said pole changers, a set of separate transmitter switches having fixed and shiftable members connected to said conductors, and means controlled by the key-board transmitter for automatically and successively operating the shiftable of said set of transmitter switches to impart the permutations to the line.



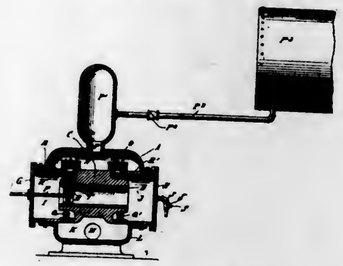
1,374,153. BURNER. HANNIBAL ALEXANDER KUNITZ, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 8, 1920. Serial No. 350,154. 10 Claims. (Cl. 158—75.)

7. A burner comprising a body having a pair of spaced passages formed therein, a cap, and a plurality of plates secured between said body and cap, certain of said plates having each an angular slot found therein and extending inwardly from one edge thereof and so formed as to be capable of communication with one or the other of said passages by reversing the position of the plate.



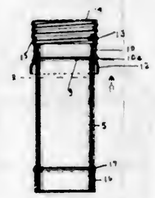
1,374,154. TRANSMISSION MECHANISM. PAUL F. MUELLER, Norfolk, Va., assignor to Norfolk Power Appliance Corporation, a Corporation of the United States. Filed Mar. 24, 1919. Serial No. 284,584. 2 Claims. (Cl. 60—62.)

1. The combination with a drive shaft and a driven shaft, of fluid contained cylinders, pistons operating within said cylinders, means for connecting the pistons to the drive shaft, other fluid contained cylinders, pistons operating within the latter, means for connecting the last mentioned pistons to the driven shaft, means whereby the fluid may be alternately forced from one set of cylinders to the other to impart motion from the drive shaft to the driven shaft and means including piston carried valves whereby the action of the fluid in the



second mentioned cylinders may be neutralized to stop the operation of the pistons in the said second mentioned cylinders.

1,374,155. KNIT GARMENT. WALTER L. SIEWERS, Winston-Salem, N. C., assignor to The Indera Mills, Winston-Salem, N. C., a Copartnership composed of W. L. Siewers and F. H. Fries. Filed Mar. 19, 1920. Serial No. 367,263. 5 Claims. (Cl. 66—4.)



3. A fabric having a rib knit border in which successive courses of yarn are interlooped to form face ribs, and groups of the yarn courses radiate to the face rib loops from points in the back ribs intermediate of said face ribs.

1,374,156. PUMP. RALPH B. CARTER, Haworth, N. J., assignor to Ralph B. Carter Company, New York, N. Y., a Corporation of New York. Filed Feb. 2, 1918. Serial No. 215,070. 15 Claims. (Cl. 103—61.)

1. In a force pump, the combination of a cylinder, a casing having chambers in communication with each end of the cylinder, an air inlet to one of said chambers, a piston reciprocating in said cylinder, and means adapted to permit the escape of an appreciable amount of air or very small amount of water from one chamber to the other during the movement of the piston away from said air inlet and to prevent the same on the return movement.

1,374,157. HOLDER FOR SHAVING-SOAP STICKS. FRANK GRANT, Westfield, Mass. Filed Oct. 29, 1919. Serial No. 334,323. 5 Claims. (Cl. 206—56.)

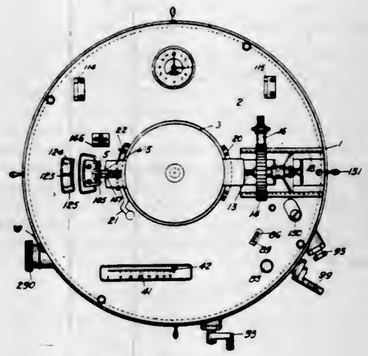
5. In combination, a tube having a longitudinal key to engage the soap stick or the like contained therein, a second tube mounted for rotation on said first tube and provided with a screw thread for propelling the article, and an article contained in said tubes and having on one end a recess and on the opposite end a lug adapted to form a key to fit in a recess of corresponding shape, whereby the remnant of a partly used article may be locked for rotation to the end of a new article.

1,374,158. VALVULAR ARRANGEMENT OF INTERNAL-COMBUSTION ENGINES. GEORGE RICHARD INSHAW, Pollokshields, near Glasgow, Scotland. Filed Jan. 27, 1921. Serial No. 440,490. 5 Claims. (Cl. 123—79.)

1. In an internal combustion engine having an explosion cylinder at one end of which admission and exhaust take place, a valve casing consisting of a casting for attachment to said end of the cylinder, said casting having an induction port and an exhaust port arranged within the area defined by the bore of the cylinder, and a port communicating with the cylinder and with the two ports aforesaid, said cylinder port and exhaust port being substantially in line with the axis of the cylinder to afford a free escape for the exhaust gases, a circular seating between the three ports, a rotary distributing valve mounted in said seating on an axis at right angles to the axis of the cylinder, an inclined tappet-valve seating arranged between the cylinder end and the rotary valve port communicating with the cylinder and in close proximity to the latter, an inclined tappet valve engaging said tappet-valve seating to control the port to and from the cylinder, and an inclined guide for the stem of the valve, substantially as described.

1,374,159. [WITHDRAWN.]

1,374,160. COMPOSITION OF SUGAR AND METHOD OF PREPARING THE SAME. NATHANIEL C. FOWLER, Jr., Somerville, Mass.; Fannie A. Fowler administratrix of said Nathaniel C. Fowler, Jr., deceased. Filed Aug. 8, 1916, Serial No. 113,763. Renewed Apr. 16, 1918. Serial No. 228,969. 8 Claims. (Cl. 99—16.)



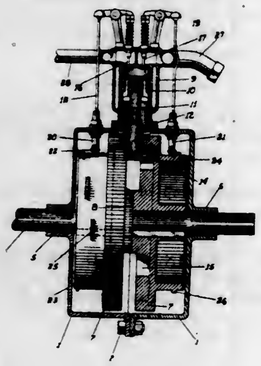
1. A composition comprising a mixture of sugar and fruit, in form suitable for domestic uses, consisting mainly of sugar in finely divided state, with which is combined a product derived from the fine grinding of fruit and so free from lumps and fibers that the particles thereof are not readily distinguishable in the mixture.

8. A process of making a sugar composition, including the partial drying of fruit until its natural juices have mostly disappeared as juices, the comminuting of it with addition of water and mixing with sugar, the further drying of it in presence of sugar, and the fine grinding of the dried comminuted material.

1,374,161. PAINT. CHESTER S. HATHAWAY, Quincy, Mass., assignor to Joseph A. Locke, Boston, Mass. Filed Mar. 24, 1920. Serial No. 368,281. 25 Claims. (Cl. 134—45.)

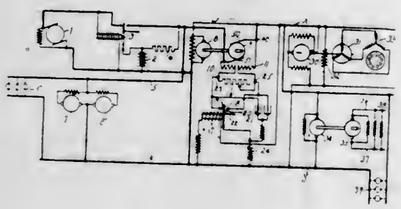
24. A composition adapted to harden containing water gas tar.

1,374,162. TESTING-STAND FOR GYROSCOPES. ELEMER MEITNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 6, 1915. Serial No. 54,319. 14 Claims. (Cl. 73—51.)



1. An apparatus for testing gyroscopes, comprising relatively movable members constant speed mechanism for causing relative movement of said members at a rate equal to the apparent movement in azimuth of a line moving with the earth but parallel to itself, a clutch in the connections between the movable member and said mechanism and means for automatically throwing out said clutch after said member has turned through a predetermined angle.

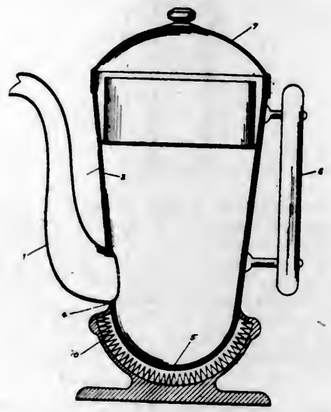
1,374,163. CIRCULAR-KNITTING MACHINE. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed July 2, 1917. Serial No. 178,196. 4 Claims. (Cl. 66—24.)



1. A circular knitting machine, having, in combination, two vertically yielding stitch cams, cover cams forming therewith needle passages which are alternately opened by the needle butts as they pass over the backs of the stitch cams, and a single double-acting picker arranged between the stitch cams.

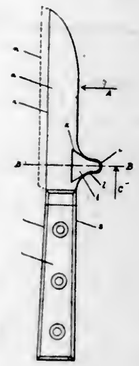
1,374,164. INTERNAL-COMBUSTION ENGINE. HENRY A. NORDWICK, Stockton, Calif., assignor of one-half to Frank Seppi, Stockton, Calif. Filed Nov. 20, 1919. Serial No. 339,279. 2 Claims. (Cl. 123—55.)

1. A four cycle gas engine comprising a casing, a shaft turnably mounted therein, a plurality of cylinders secured to the casing in radial alinement with the shaft, pistons in the cylinders, spaced disks fixed to the shaft, means for moving the pistons in and out with the rotation of the disks, circular extensions projecting from the outer faces of the disks, each cylinder having valve tappets projecting radially toward the shaft and slidably mounted in the casing, and each tappet on a side being in offset alinement from the remainder, and cams on the extensions positioned to lift each tappet at predetermined periods in the rotation of the disks.



1,374,165. POTENTIAL-REGULATING SYSTEM. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1915. Serial No. 59,299. 34 Claims. (Cl. 171—225.)

1. Means, for regulating the voltage of a supply line, comprising a dynamo-electric machine, means for causing said machine to either aid or oppose the voltage in said supply line and means controlled by the E. M. F. generated by said machine for strengthening the field thereof when said E. M. F. exceeds a predetermined amount.

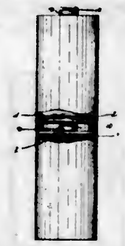


1,374,166. PERCOLATOR. EDWARD TOWE, Rochester, N. Y., assignor to Frederick J. Weider, Rochester, N. Y. Filed Feb. 7, 1921. Serial No. 443,263. 6 Claims. (Cl. 53—8.)

1. In a percolator the combination of an outer and an inner shell one nesting within the other, said inner shell having an opening in the bottom thereof communicating

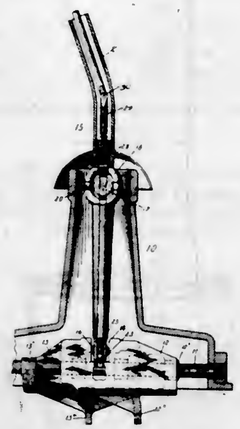
with the space between said inner and said outer shell and means to apply heat to said outer shell.

1,374,167. PARING-KNIFE. FRANK D. WARREN, Colorado Springs, Colo., assignor to The Domestic Utility Corporation, Colorado Springs, Colo. Filed Jan. 22, 1919. Serial No. 272,598. 1 Claim. (Cl. 146—6.)



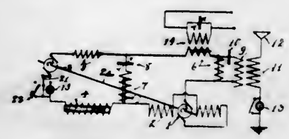
A knife comprising a blade and a semi-circular loop having its two ends secured to the back of the said blade.

1,374,168. CORRUGATED DRY-BATTERY CUP. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Sept. 20, 1919. Serial No. 325,211. 2 Claims. (Cl. 204—38.)



1. A dry-battery cell having a circumferentially-corrugated zinc cup, an electrolyte located therein, a relatively thick closure located within the cup and held in

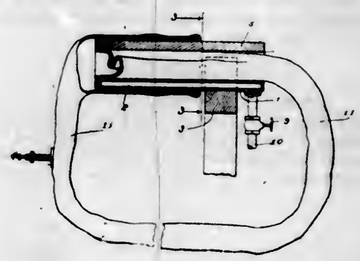
place therein by the entrance of one or more of the corrugations thereof into the edge of the closure, and a carbon



electrode or pencil mounted in and supported by the said closure and extending into the electrolyte.

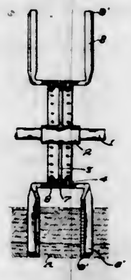
1,374,169. LOCK FOR GEAR-SHIFT LEVERS. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 19, 1919. Serial No. 345,936. 7 Claims. (Cl. 70—128.)

6. In combination with a gear shift lever, a supporting bracket, means for swingingly mounting said lever within said bracket including trunnions extending at right angles to each other, and locking means for said lever positioned at the lower end of said lever, said locking means operated by a rod extending longitudinally within said lever and between said trunnions.



1,374,170. GENERATING SYSTEM FOR ELECTRIC CURRENTS. AUGUST J. KLONECK, New York, N. Y. Filed Mar. 27, 1916. Serial No. 86,963. 12 Claims. (Cl. 250—36.)

1. A system for generating high frequency currents comprising a dynamo generator, a source of electrical current and suitable reactances in an electric circuit, said dynamo generator having the field reversed to be inoperative by an armature current of said generator but operative by a current from a source of electrical current, a means for utilizing the resultant current and means for varying the generating of currents for a desired purpose.



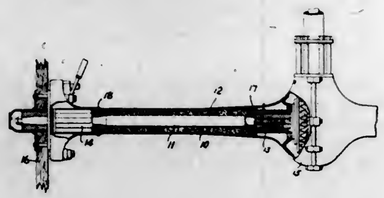
REISSUES.

15,076. VULCANIZING APPARATUS AND PROCESS. EDWARD FETTER, Baltimore, Md., assignor to The Pneumatic Tube Steam Splicer Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 10, 1921. Serial No. 436,355. Original No. 1,312,029, dated Aug. 5, 1919, Serial No. 262,351, filed Nov. 13, 1918. 5 Claims. (Cl. 18—45.)

5. The process of splicing the ends of a tube of rubber or similar material to form an inner tube for pneumatic tires which consists in forming the ends of the tube and cuffing the tube into a vulcanizable splice over a mandrel bringing the splice directly in contact with the outer surface of the mandrel and supplying heat to the said outer surface of the mandrel to cure and vulcanize the splice.

15,077. TRACTION-WHEEL. RUSH E. HAMILTON, Geyserville, Calif., assignor to Hamilton Tractor Company, a Corporation of California. Filed June 12, 1919, Serial No. 303,781. Original No. 1,139,968, dated May 18, 1915, Serial No. 876,619, filed Dec. 11, 1914. 4 Claims. (Cl. 301—41.)

1. In combination, a wheel, a plurality of tractors detachably secured thereto and each comprising a base member extending transversely of the wheel for the full width thereof and formed at each end with an integral prong, said prongs extending therefrom at substantially right angles to the face of the periphery of the wheel and the faces thereof disposed at an angle to each other.



2. In combination with a wheel formed with transverse depressions extending the full width thereof, a tractor detachably secured in each of said depressions and each comprising a base member extending transversely of the wheel rim and projecting beyond the side edges thereof, a substantially flat prong formed integral with each end of said base member and extending therefrom outwardly at right angles to the periphery of the wheel, the said prongs at the joint with said base being twisted to dispose the faces thereof at an angle to the path of travel of the wheel.

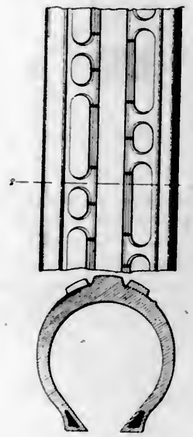
3. A tractor attachment for securing to the tread of a wheel, comprising an inverted substantially U-shaped member formed with a base portion and integral parallel

spaced substantially flat faced prong members extending at right angles to the base member, and the faces of said prongs disposed at an angle to each other.

4. In combination, a wheel, a plurality of tractors detachably secured thereto, each of said tractors comprising a base member extending transversely of the wheel and formed at each end with an integral prong, said prongs extending therefrom at substantially right angles to the face of the periphery of the wheel and being relatively long and unobstructed throughout their length whereby they are adapted to penetrate loose soil to such a depth as to engage with the packed under-surface to support the full load of the wheel.

15,078. LUBRICATING-PACKING. HARRY A. LACERDA, Jersey City, N. J., assignor to Ralph W. Benson, New York, N. Y. Filed Dec. 21, 1920. Serial No. 432,369. Original No. 1,347,388, dated July 20, 1920, Serial No. 197,068, filed Oct. 17, 1917. 3 Claims. (Cl. 286—7.)

1. In a vehicle having a driving axle, a housing through which extends the driving axle, and a bearing at each end of said driving axle, a tubular packing filling the annular space between the axle and the housing, said packing being made in short sections and pliable to permit of tightly packing it in said annular space so as to completely fill said space from one bearing to the other, said packing having lubricating qualities to lubricate the axle and being of a fatty nature so as to resist the flow of a lubricating medium.

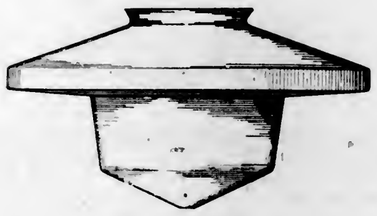


DESIGNS.

57,460. PLAQUE OR THERMOMETER-SUPPORT. CARL J. BALLIETT, Buffalo, N. Y., assignor to Foster-Milburn Company, Buffalo, N. Y. Filed Feb. 16, 1915. Serial No. 8,637. Term of patent 14 years.

The ornamental design for a plaque or thermometer support, as shown and described.

57,461. TIRE-CASING. FRANK H. BREWSTER, Buffalo, N. Y., assignor to Madison Tire & Rubber Co., Inc., Buffalo, N. Y., a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,688. Term of patent 14 years.



The ornamental design for a tire casing, as shown.

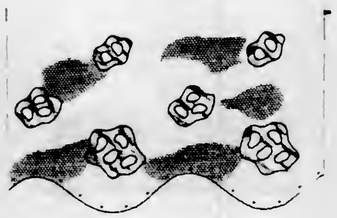
57,462. LAMP-GLOBE. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1920. Serial No. 366,124. Term of patent 14 years.

The ornamental design for a lamp globe as shown and described.

57,463. LIGHTING-GLOBE. WARD HARRISON, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1919. Serial No. 282,992. Term of patent 14 years.

The ornamental design for a lighting globe substantially as shown.

57,464. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,620. Term of patent 3½ years.

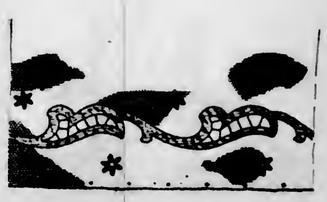


The ornamental design for lace as herein shown and described.

57,465. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,621. Term of patent 3½ years.

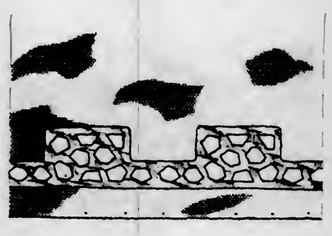
The ornamental design for lace as herein shown and described.

57,466. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler Filed Dec. 1, 1920. Serial No. 427,622. Term of patent 3½ years.



The ornamental design for lace as herein shown and described.

57,467. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,623. Term of patent 3½ years.



The ornamental design for lace as herein shown and described.

57,468. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,624. Term of patent 3½ years.

The ornamental design for lace as herein shown and described.

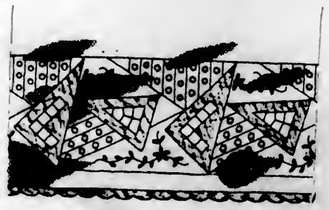
57,469. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,625. Term of patent 3½ years.

The ornamental design for lace as herein shown and described.

57,470. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,626. Term of patent 3½ years.

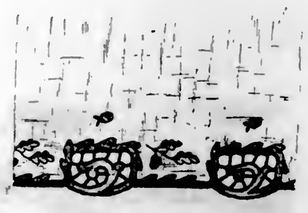
The ornamental design for lace as herein shown and described.

57,471. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,627. Term of patent 3½ years.



The ornamental design for lace as herein shown and described.

57,472. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,628. Term of patent 3½ years.



The ornamental design for lace as herein shown and described.

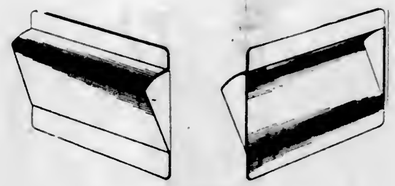
57,473. LACE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Dec. 1, 1920. Serial No. 427,629. Term of patent 3½ years.

The ornamental design for lace as herein shown and described.

57,474. EMBROIDERY. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, New York, N. Y., a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Jan. 7, 1921. Serial No. 435,747. Term of patent 3½ years.

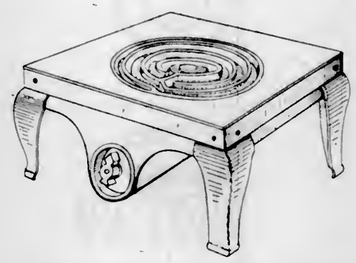
The ornamental design for embroidery as herein shown and described.

57,475. EMBROIDERY. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, New York, N. Y., a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Jan. 7, 1921. Serial No. 435,748. Term of patent 3½ years.



The ornamental design for embroidery as herein shown and described.

57,476. EMBROIDERY. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, New York, N. Y., a Firm composed of William A. Tobler, Franz Hoenig, and Walter R. Tobler. Filed Jan. 7, 1921. Serial No. 435,749. Term of patent 3½ years.



The ornamental design for embroidery as herein shown and described.

57,477. HANDHOLE-COVER FOR BOXES. JOHN JANUCHOWSKY, St. Louis, Mo. Filed May 31, 1916. Serial No. 100,974. Term of patent 3½ years.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE PRATT FOOD CO.

Decided September 6, 1920.

1. TRADE-MARKS—ABANDONED APPLICATION—ATTEMPT TO REVIVE AND CONVERT INTO APPLICATION UNDER NEW LAW—UNAVOIDABLE DELAY.

A petition accompanied by a filing fee of ten dollars to revive an application for the registration of a trade-mark filed under the Trade-Mark Act of 1905, which had become abandoned for failure to take in time an appeal from a final rejection, and to convert it into an application under the act of March 19, 1920, denied where no showing was made of unavoidable delay.

2. SAME—SAME—TRANSFER OF FEE FILED WITH PETITION TO REVIVE TO NEW APPLICATION.

Where a petition accompanied by a filing fee of ten dollars to revive an abandoned application filed under the Trade-Mark Act of 1905 is denied on account of lack of showing of unavoidable delay and a new application under the act of March 19, 1920, is filed, the fee accompanying the petition to revive may be transferred to the new application.

ON PETITION.

TRADE-MARK FOR FOOD, TONICS, REGULATORS, SUPPLIES, AND REMEDIES FOR HORSES, CATTLE, HOGS, ETC.

Mr. Geo. R. Hamlin for the applicant.

WHITEHEAD, *Commissioner:*

Petition is taken to revive this application and after revival to convert the same into an application under the act of March 19, 1920. A fee of ten dollars accompanies this petition to cover the new registration.

The petition makes no showing of unavoidable delay in not appealing from the final rejection of September 21, 1915. On the contrary, it discloses deliberate intention not to appeal within the year.

The petition is accordingly denied.

If a new application is filed under the act of March 19, 1920, the fee accompanying this petition may be transferred to the credit of the new case.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

DE FOREST *v.* MILLER.

Decided January 3, 1921.

PATENTS—INTERFERENCE—INVENTION BY THIRD PARTY.

A party to an interference cannot defeat his opponent by showing that another party not a party to the proceeding was the real inventor, although the successful party might have to meet this question *ex parte* after the termination of the interference proceeding.

Mr. S. E. Darby for De Forest.

Mr. Leonard Day for Miller.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents in an interference proceeding awarding to appellee priority of invention, for a device described by the Commissioner as—

a system for producing musical tones, making use of an audion and a loud speaking telephone.

It is unnecessary to set out the counts of the issue, since we concur with the tribunals of the Patent Office on the questions of fact and conclusions thereon. Appellant, however, seeks to prevail upon the ground that it is shown by the record, as he contends, that appellee is not, in fact, the real inventor, but the invention which he here claims was made by a third person not a party to this proceeding. Without stopping to consider whether this contention is supported by the record, it is sufficient that it cannot here be raised. This proceeding can only settle the issue of priority as between the parties before the court, and appellant cannot defeat his opponent by showing that a party other than appellee was the real inventor. (*Foster* v. *Antisdel*, 14 App. D. C., 552; *Luellen* v. *Claussen*, 43 App. D. C., 444.)

Appellee, in the light of this record, may have difficulty in securing a patent, but that is a question to arise later between appellee as an applicant and the Commissioner of Patents. In that proceeding, however, appellant would have no standing to be heard. (*Foster* v. *Antisdel, supra.*)

The decision of the Commissioner of Patents is affirmed, and the clerk is directed to certify these proceedings as by law required.

Affirmed.

Court of Appeals of the District of Columbia.

DEWSON AND BROWN *v.* TOMLINSON.

Decided January 3, 1921.

PATENTS—INTERFERENCE ISSUE—COUNTS GIVEN THEIR BROADEST CONSTRUCTION.

Giving the counts of the interference issue the broadest interpretation of which they are susceptible, the

universal rule in interference cases, *Held* that T.'s disclosure is sufficient to sustain the issue, and priority awarded to him.

Mr. E. A. Wright and *Mr. H. A. Coombe* for Dewson and Brown.

Mr. F. T. Brown, *Mr. C. M. Nissen*, and *Mr. A. J. Crane* for Tomlinson.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding awarding priority of invention to the senior party Tomlinson.

Of the four counts in issue, counts 1 and 4 are sufficiently illustrative and are here reproduced:

1. In a car coupling, the combination with a casing containing a plurality of fixed contacts connected to train line circuits, and a movable carrier having corresponding contact bars, of fluid pressure means for projecting said carrier to electrically connect the corresponding contacts of counterpart couplers, and a valve device for controlling the return movement of said carrier.

4. In a car coupling, the combination of a casing having an opening and containing electrical contacts connected to train line circuits, a movable carrier having corresponding contact bars, mechanism for projecting said carrier through said opening to electrically connect corresponding contacts of counterpart couplers, and a movable shutter for protecting said opening when said carrier is withdrawn.

No testimony has been taken, the contention of appellants being that the counts contain limitations not found in the Tomlinson disclosure. The tribunals of the Patent Office, in carefully prepared opinions, have ruled that, giving to the counts the broadest interpretation of which they are susceptible, the universal rule in interference cases, Tomlinson's disclosure is sufficient. We adopt this view and affirm the decision. (See *Brown* v. *Tomlinson*, 265 Fed., 460, April 5, 1920.)

Affirmed.

The decision of the Assistant Commissioner reads as follows:

COULSTON, *Assistant Commissioner:*

Dewson and Brown appeal from the decision of the Examiners-in-Chief affirming the decision of the Examiner of Interferences awarding priority of invention to Tomlinson.

The counts in issue are as follows:

1. In a car coupling, the combination with a casing containing a plurality of fixed contacts connected to train line circuits, and a movable carrier having corresponding contact bars, of fluid pressure means for projecting said carrier to electrically connect the corresponding contacts of counterpart couplers, and a valve device for controlling the return movement of said carrier.

2. In a car coupling, the combination with a casing containing a plurality of fixed contacts connected to train line circuits, and a movable carrier having corresponding contact bars, of fluid pressure means for projecting said carrier to electrically connect the corresponding contacts of counterpart couplers, and a manually controlled valve device for releasing fluid from said fluid pressure means to effect a return movement of said carrier.

3. In a car coupling, the combination with a casing containing a plurality of fixed contacts connected to train line circuits, and a movable carrier having corresponding contact bars, of fluid pressure means for projecting said carrier to electrically connect the corresponding contacts of counterpart couplers, a valve device for controlling the release movement of said carrier and a conduit establishing communication between said valve devices of the counterpart couplers.

4. In a car coupling, the combination of a casing having an opening and containing electrical contacts connected to train line circuits, a movable carrier having corresponding contact bars, mechanism for projecting said carrier through said opening to electrically connect corresponding contacts of counterpart couplers, and a movable shutter for protecting said opening when said carrier is withdrawn.

No testimony has been taken. The appellants are contending for priority on the sole ground that the counts contain limitations which are not found in the disclosure of Tomlinson. The first feature of this character relied on by Dewson and Brown is a limitation in the counts which requires that the contact-carriers be actuated to—

electrically connect the *corresponding* contacts of counterpart couplers.

In the Dewson and Brown construction there are two contacts on each coupler. When two of these couplers are in alinement, the respective contacts carried thereby—*i. e.*, the "corresponding" contacts identified with the same train-line circuits—are diagonally opposite each other. There are also contact-carriers on the respective couplers positioned opposite each other and so arranged that when one of them is projected forward actual physical as well as electrical contact is made with corresponding contacts on the opposite couplers. In Tomlinson's construction, on the other hand, four contacts on each coupler are connected in pairs. The contact-carriers are arranged diagonally opposite each other and not in direct alinement, and when one of these is projected it does not make actual physical contact with the contacts on the other, but it does establish an electrical connection with them. The electrical connection so established is between contacts or terminals belonging to the same train-line circuit. This is all that the language of the count requires, and I think that the tribunals below were right in holding that Tomlinson has a right to make these counts.

The second feature of construction relied on by Dewson and Brown to establish that Tomlinson has no right to make the claims is the valve for controlling the return of the projected contact-carrier to inoperative position called for in counts 1, 2, and 3. In Tomlinson's construction the valves 51 in the brake-pipe have been held to answer to the terms of the counts in issue. The appellants contend that this holding is erroneous because in order to operate the valves 51 to release the carriers it is necessary to cut off the stopcocks 50. This operation interrupts the action of the brake-circuit. It is urged that this construction cannot be regarded as the equivalent of the arrangement in the Dewson and Brown patent, in which claims corresponding to the counts were originally made. I think that this argument overlooks the scope of the counts, which are very broadly drawn. It seems to me that Tomlinson's construction answers the requirements.

The third point raised by Dewson and Brown refers to the movable shutter for protecting the contact-carrier in its casing when the carrier is withdrawn. In the appellants' device this shutter is automatically actuated upon movement of the carrier. In the case of the appellee the shutter is a swinging door, which has to be operated by hand to close the opening which contains the carrier. The appellants contend that the language of count 4—

a movable shutter for protecting said opening when said carrier is withdrawn—

implies an automatic action which characterizes the Dewson and Brown device. I do not agree that this contention is well taken.

It is urged that if a broader meaning such as would enable the counts to be read on the Tomlinson device is given the counts would be unpatentable in view of certain references called to attention. I have not looked into the question of patentability, as that is not properly raised at this time, but I understand that it has been carefully considered in connection with the motion for dissolution, and the counts have been found allowable over the prior art.

The decision of the Examiners-in-Chief is affirmed.

Court of Appeals of the District of Columbia.

HALBLEIB *v.* BENDIX AND CONRAD. SAME *v.* BENDIX, BIJUR, AND CONRAD. CONRAD *v.* BENDIX AND HALBLEIB. SAME *v.* BENDIX, BIJUR, AND HALBLEIB. BIJUR *v.* BENDIX, CONRAD, AND HALBLEIB. SAME *v.* BENDIX.

Decided February 7, 1921.

1. PATENTS—PRIORITY—ACTUAL REDUCTION TO PRACTICE—TEST.

Where an engine-starter was constructed by Bijur with a view to securing the business of the Packard Company and in 1912 was put on a car furnished by this company and tested, the result being that it broke frequently during the test, although witnesses claimed that it was successful, explaining that it was broken because purposely subjected to a destructive test, and immediately following the test the Packard Company adopted a different kind of starter, and the Bijur Company, although engaged in the business, did not put such construction on the market, but prepared in 1913 to supply a different device, and Bijur filed ten applications relating to starters, but made no attempt to commercialize the device tested until he saw an exhibit of his rival, *Held* that the conclusion must be drawn that the inventor himself did not regard the test in 1912 as successful and that it was no more than an abandoned experiment.

2. SAME—SAME—DILIGENCE—EXPERIMENTING TO PERFECT ONE FEATURE OF THE INVENTION.

Where Bendix conceived and disclosed the invention in 1910, and the record of the interference proceedings is replete with evidence of his activities in experimenting from March to November, 1913, when he filed his application, with one of the features of the invention to which the parties financing his operations made objections, *Held* that he is entitled to an award of priority over one later to conceive who reduced the invention to practice in May, 1913.

Mr. A. G. Davis and *Mr. J. Edgar Bull* for Bijur.

Mr. W. G. Carr, *Mr. O. S. Schaurer*, and *Mr. C. L. Sturtevant* for Conrad.

Mr. S. E. Hibben, *Mr. S. T. Cameron*, and *Mr. W. B. Kerkam* for Bendix.

Mr. Melville Church for Halbleib.

PATENT appeals Nos. 1,367, 1,368, 1,369, 1,370, 1,371, 1,372, 1,373, and 1,374.

VAN ORSDEL, *J.:*

These appeals grow out of a four-party interference, in which priority of invention was awarded generally to the party Bendix by each of the three tribunals of the Patent Office.

The application of Bijur was filed November 5, 1914; of Conrad, December 26, 1913; of Halbleib, May 28, 1913, and of Bendix, November 24, 1913. A patent was granted to Bendix January 12, 1915.

The issue is set forth in two counts, as follows:

1. An engine starter comprising, in combination with a member operatively connected with the engine, a motor, a driving member operated thereby and adapted to coöperate with and drive the other member but normally out of engagement therewith, means whereby relative movement between the motor and the driving member automatically moves the latter into driving engagement with the other member, and a yielding driving connection interposed between the motor and the driving member.

2. An engine starter comprising, in combination with a member operatively connected with the engine, a motor, a driving member operated thereby and adapted to coöperate with and drive the other member but normally out of engagement therewith, means whereby relative movement between the motor and the driving member automatically moves the latter into driving engagement with the other member, and a yielding clutch interposed between the motor and said driving member.

The invention relates to a transmission for an electric starting-motor for cranking an internal-combustion engine. Each of the interfering applications discloses a starter in which an electric motor rotates a screw-shaft on which a nut is mounted. The nut is so adjusted, either by a weight or spring, that it will not rotate until it advances along the shaft to the proper point where teeth on the nut engage teeth upon the flywheel of the gas-engine. When this occurs the nut is forced to rotate with the shaft and thus start the engine. The engine gear-wheel will then reversely rotate the pinion-nut on the screw-threaded shaft until it moves out of gear with the engine-wheel, thus leaving the engine in operation.

The first five cases may be treated in a single group, and turn solely upon issues of fact. The tribunals below being in accord upon the facts, manifest error must appear to justify a reversal. We will consider the parties in order.

Bijur relies wholly upon reduction to practice early in 1912. If this point is established, he must prevail. If not, he fails. He produced in court a starter (Exhibit No. 2) which meets the issues of this interference. He has unquestionably proven that this device was constructed and tested in the early part of 1912 on a Packard car which had been furnished by the Packard Company for that purpose. The witnesses testified that it worked successfully. While it appears that it broke frequently during the test, it is explained that this was caused by purposely subjecting it to destructive tests. If Bijur's succeeding conduct was such as to corroborate his proof of a successful test, reduction to practice could readily be inferred; but it was not.

Exhibit 2 was designed with a view of securing the business of the Packard Company. But immediately following the test of 1912 that company adopted a different kind of a starter. Though the Bijur Company was engaged in the business, they never put a device like Exhibit 2 on the market. In 1913, they prepared to supply the Vaughn Company with a starter which was different from the one in question. During this period of delay, Bijur, who was a prolific inventor, filed seventeen applications in the Patent Office, ten of which relate to starters, and all seem to have some relation to the art. Nowhere is it established that Bijur made any attempt to resurrect or commercialize his device as shown

by Exhibit 2, until Bendix's device was exhibited at an automobile show in January and February, 1914, where it is claimed Bijur saw it. A full description of the Bendix device was also published in the *Motor Age* at the same time.

From the foregoing facts, but one conclusion can be drawn—that Bijur himself did not regard the 1912 test a success. In the light of his conduct, the court cannot be called upon at this late date to give it a status which the inventor did not attribute to it at the time. The conclusion reached by the tribunals below that what Bijur did in 1912 resulted only in an abandoned experiment must, in view of his subsequent conduct, be accepted as correct.

With Bijur eliminated from the controversy, we will now consider the cases of the remaining interferants. The party Halbleib took no testimony, but stands upon his filing date, May 28, 1913. Conrad is accorded a date of conception and reduction to practice in May, 1913. Bendix has clearly proven conception and disclosure as early as 1910. To entitle him to prevail, it must appear that he was exercising diligence just before Conrad and Halbleib came into the field in May, 1913.

While Bendix claims that he reduced his invention to practice in the fall of 1912 in what is known as his Nashville machine, it is unnecessary to consider this test in detail, since we think from this date until he filed one year later he was at no time lacking in diligence. In 1912 he became associated with parties who financed his operations until the end in 1913. It appears that these parties objected to the use of the spring which interfered to some extent with the speedy development of the invention. He states that, out of consideration for the views of his associates, he was delayed to some extent in developing the spring feature of the invention. But the record is replete with evidence of his activities in experimenting with springs from March to November, 1913. It may be suggested that the discouragement Bendix encountered from his financial backers emanated from a view commonly held at that time by mechanicians in respect of the use of the spring in connection with the screw-shaft to establish a "yielding driving connection" or a "yielding clutch."

Coming to the remaining three cases which involve features of the general invention in issue, the contest is limited to the parties Bijur and Bendix. The issues in these cases relate to details which exclude the devices of Conrad and Halbleib. But they are clearly as readable on the Bendix invention as on the Bijur 1912 device, and since Bijur has failed to establish his right to priority over Bendix by reason of his failure to reduce to practice in 1912, he cannot prevail in the present cases.

The decisions of the Commissioner of Patents awarding priority of invention to the party Bendix in all of the cases is, therefore, affirmed.

Affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ohio.) The Scherer patent, No. 729,964, claims 1, 3, 8–10, for a machine for cutting irregular shapes of sheet metal, *Held* invalid in view of the prior art; but claims 2, 4–7, which included as an element a secondary guiding means not found in the prior art, *Held* valid and infringed. *Excelsior Steel Furnace Co.* v. *Williamson Heater Co.*, 269 Fed. Rep., 614.

(U. S. C. C. A. Ohio.) The Patterson patent, No. 950,341, for a method of treating metal pipes for use as conduits for electric wires, claim 1 *Held* void for lack of invention in view of the prior art and also for prior public use. *Enameled Metals Co.* v. *Western Conduit Co. et al.*, 269 Fed. Rep., 620.

(U. S. C. C. A. Ohio.) The McIlroy patent, No. 1,120,731, for a process of treating conduit-pipes by providing a sleeve of paper or other fragile material for the threaded portion of the pipe and couplings to protect the threads during the enameling process and prevent their being filled with enamel and the resulting product of such process, *Held* void for lack of invention and for prior use. *Enameled Metals Co.* v. *Western Conduit Co. et al.*, 269 Fed. Rep., 620.

Adverse Decisions in Interference.

PATENT NO. 1,325,234.

On March 7, 1921, a decision was rendered that Forrest J. Couch and James F. Wallace were not the first inventors of the subject-matter covered by claims 1, 3, and 11 of their Patent No. 1,325,234, subject, "Wringer mechanism for clothes-washers," and no appeal having been taken within the time allowed such decision has become final.

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; from July 1, 1883, to December 31, 1902, in quarterly volumes; from January 1, 1903, to December 31, 1908, in bimonthly volumes; since January 1, 1909, in monthly volumes. Terms: Annual subscriptions, $5; monthly, 50 cents. For postage upon foreign subscriptions, except those from Canada and Mexico, $5 or more, as required. Moneys received from foreign subscribers in excess of the subscription price of $5 will be deposited to the credit of the subscriber and applied to postage upon the subscription as incurred. Single copies, 10 cents; if mailed to foreign countries, excepting Canada and Mexico, 10 cents additional for postage. *Payment in advance required. No club rates. No discount to newsdealers. No sample copies.* All subscriptions must commence with the beginning of a volume. None taken for less than an entire volume. All orders should be addressed to "The Superintendent of Documents, Government Printing Office, Washington, D. C."

Amendment to Rules of Practice—Rule 194.

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, Rule 194 of the Rules of Practice of the United States Patent Office is amended in the following particulars:

In the first sentence thereof the words "certificates of deposit" are canceled.

The third sentence, which reads as follows, is canceled:

"Payment may also be made to the Treasurer, or to any of the Assistant Treasurers of the United States, or to any of the depositaries, national banks, or receivers of public money, designated by the Secretary of the Treasury for that purpose, who will issue a certificate of deposit in triplicate and will forward the original and the duplicate certificates to the Secretary of the Treasury and the Commissioner of Patents, respectively, and will give the triplicate certificate to the depositor."

The rule as amended reads as follows:

194. All payments of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money-orders and checks should be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. Letters containing money should be registered. In no case should money be sent with models.

Patent Office Publications.

The stock of the following publications is held for sale by the Patent Office, and orders for same should be addressed to the Commissioner of Patents:

Weekly Index—Annual subscription	$1.00
Commissioner's Decisions:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Trade-Mark Supplements:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Manual of Classification of the German Patent Office, (translated,) paper cover	1.00
Index to German Classification	1.00
Definitions of Revised Classes and Subclasses, edition of 1912, (Bulletins 1 to 27, inclusive)	.50
Bulletins, excepting Nos. 28 and 29, (now out of print,) published since 1912, each	.10

Other publications than those above named, exclusive of printed copies of patents, trade-mark registrations, etc., formerly held for sale by the Patent Office, have been transferred to the Superintendent of Documents, Government Printing Office. Orders for such publications should NOT be sent to the Patent Office, but to the Superintendent of Documents, to whom all remittances for such publications should be made payable.

Printed copies of specifications and drawings of patents, trade-mark registrations, etc., will be furnished by the Patent Office, as heretofore.

Correspondence by Mail.

Notice is hereby given to attorneys and others transacting business with the Patent Office that all mail-matter arriving at the Washington post-office up to the hour of closing business at the Patent Office each day will be entered as received on that day.

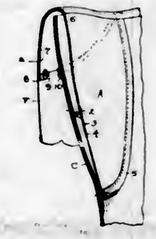
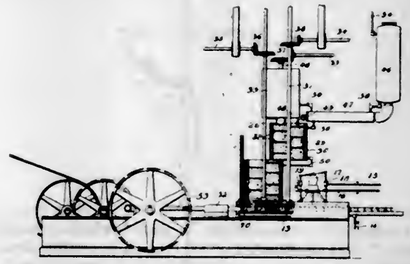
PATENTS



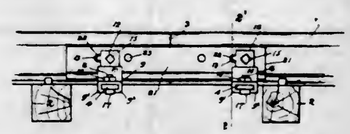
GRANTED APRIL 12, 1921.

1,374,171. ELECTRIC MOTOR. GEORGE W. AMANN, Jr., Little Black, Wis. Filed Dec. 21, 1917. Serial No. 208,282. 1 Claim. (Cl. 172—126.)

In an electric motor the combination of two pairs of electro-magnets being in the same plane and out of alinement with one another, movable armatures adapted to be acted on by said electro-magnets, a crank shaft rotatably mounted in the same plane with and between said pairs of electro-magnets and provided with spaced contacts lying in the same plane, a lever provided with a yoke adapted to overlie and to be intermittently engaged by one of the spaced contacts on the shaft, a second lever provided with a yoke adapted to be intermittently engaged by the other spaced contact on the shaft, means connecting the armatures with the shaft to impart a rotary movement thereto when said armatures are moved, and circuits including the electro-magneta, said circuits provided with terminals.



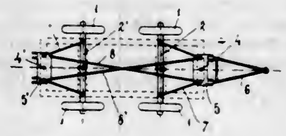
1,374,172. POCKET FOR CORSETS. L MAUDE ANDREWS, Seattle, Wash. Filed Dec. 10, 1919. Serial No. 343,881. 3 Claims. (Cl. 2—73.)



2. An article of manufacture comprising a fabric member adapted to provide a pocket when stitched upon the inside of a corset, said member having a flap at its upper edge adapted to extend outwardly and downwardly over the upper edge of the corset and means for detachably securing the free end of said flap to the outer face of the corset.

1,374,173. BRICKMAKING APPARATUS. MARCUS PEYTAN ANDREWS, Petersburg, Va. Filed June 1, 1920. Serial No. 385,503. 4 Claims. (Cl. 25—12.)

1. In an apparatus of the class described, the combination with the agitating and feeding vat into which the mixture is deposited, of a tunnelway having a throut connected with the vat, a plunger for forcing the material through the tunnelway, a plate feeding mechanism for delivering separating plates to the tunnelway on the recession of the plunger, means for reciprocating the plunger, an agitator and mixer in the vat, said agitator and mixer including a feed propeller extending partly across the throat so as to leave a portion of the throat out of the influence of the propeller substantially as shown and for the purposes described.

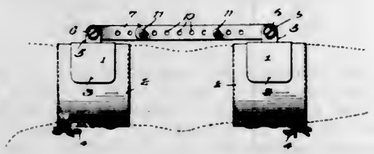


1,374,174. REPAIR-CLAMP. WILLIAM ANDREW ROBERT ANGUS, Winnipeg, Manitoba, Canada. Filed Mar. 8, 1920. Serial No. 364,113. 2 Claims. (Cl. 238—263.)

1. The combination with the broken ends of a rail and angle bars disposed at opposite sides of the rail at the break, of a repair clamp presenting a shank passing beneath the rail, a stationary jaw extending from the shank and engaging with one of the angle bars, a removable adjustable jaw engageable with the other of the angle bars, an adjusting screw carried by the adjustable jaw and alining studs extending from the jaws.

1,374,175. STEERING-GEAR FOR TRAILERS. ACHILLE ARATO, Turin, Italy, assignor to Ferruccio Botta, Turin, Italy. Filed June 1, 1920. Serial No. 385,733. 5 Claims. (Cl. 280—33.5.)

1. In a trailer having wheels mounted on steering parts, a member pivoted to swing at each end of the trailer around a vertical axis distinct from the axis of rotation of said steering parts, means for connecting either of said members with a tractor, and means interconnecting said steering parts and swinging end members, said means comprising ties transmitting the deviations of said swinging member connected with the tractor to the steering

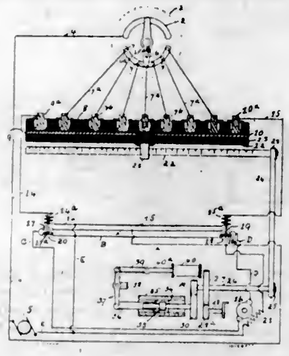


parts carrying the adjacent wheels in the same direction and under a reduced ratio, and to the steering parts carrying the other wheels in the opposite direction and under the same reduced ratio.

1,374,176. FRUIT-PICKER. LIONEL M. BARNES, Paget West, Bermuda. Filed July 22, 1918. Serial No. 246,242. 1 Claim. (Cl. 56—340.)

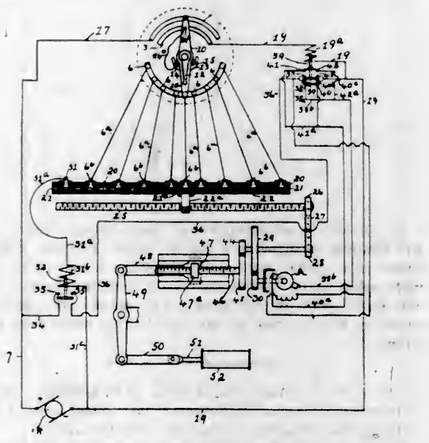
A fruit picker comprising a ring having a receptacle secured to and depending therefrom, a collar disposed centrally below the ring and having outwardly and upwardly directed arms terminating in eyes engaged with the ring, and a rod slidably disposed vertically through the collar and centrally through the ring and having fingers above the ring radiating from the upper end from all sides of the rod, and means for holding the rod at different points of its sliding movement through the collar to dispose the fingers at different distances from the ring, for the reception of fruits of different characters between them and the ring.

1,374,177. ORTHOPEDIC APPLIANCE. JOSEPH F. BARRY, New York, N. Y. Filed June 11, 1919. Serial No. 303,470. 5 Claims. (Cl. 128—88.)



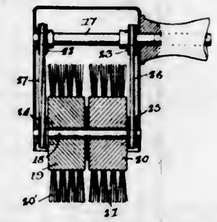
1. An orthopedic appliance comprising a pair of body supporting members, a rigid connecting member pivotally connected at its ends to the respective body supporting members whereby the latter may be adjusted from one side to the other side of the rigid member, and means for fixedly clamping the pivotal connections between said members whereby the three members will constitute a rigid structure.

1,374,178. OPHTHALMIC MOUNTING AND METHOD OF MAKING THE SAME. EDWARD BELLAIR, Southbridge, Mass., assignor to Dupaul, Young Optical Co., Southbridge, Mass., a Corporation of Massachusetts. Filed July 28, 1920. Serial No. 399,485. 9 Claims. (Cl. 88—47.)



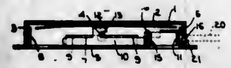
7. An ophthalmic mounting constituted of two elements only, one an inner metal rim of substantially circular cross section having an inner lens-receiving groove, and the other an outer non-metallic rim having an inner annular slot within which the metal rim is mounted, the rims being formed with coacting means for locking the rims together.

1,374,179. TELEMOTOR. MELVIN B. BENSON, Superior, Wis. Filed Dec. 27, 1916. Serial No. 139,128. 5 Claims. (Cl. 172—8.)



3. The combination with a source of electricity and the armature of a motor in circuit therewith, said circuit including a normally open contact; a second electric circuit including a source of electricity, a normally open contact, a normally closed contact and only one relay coil; manually operatable means for closing the normally open contact of said second circuit, exclusively mechanical means adapted to be operated by said motor for opening the normally closed contact of said second circuit, means governed by said coil for closing the normally open contact of said first circuit.

1,374,180. TELEMOTOR. MELVIN B. BENSON, Superior, Wis. Filed Dec. 29, 1916. Serial No. 139,528. 4 Claims. (Cl. 172—8.)

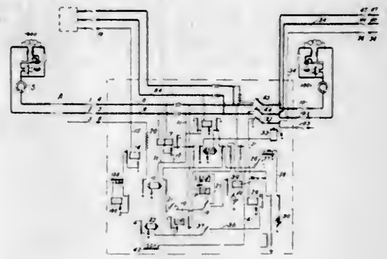


1. The combination of a source of electricity and a motor in circuit therewith, said circuit including a normally open contact, a second normally open contact and a third normally open contact; a second circuit including said source, a normally open contact and a relay coil; a third circuit including said source, a normally open contact, a normally closed contact and a relay coil; manually operable means for closing the normally open contact of said second and third circuits respectively, means adapted to be automatically operated by said motor for opening the normally closed contact of said third circuit after the closing of the normally open contact of said third circuit, means governed by the coil of said third circuit for closing one of the normally open contacts of said first circuit, and means governed by the coil of said second circuit for closing the other normally open contacts of said first circuit.

1,374,181. POWER-DRIVEN SHOE-SHINE BRUSH. HULDREICH A. BOHLMAN, Milwaukee, Wis. Filed Jan. 7, 1920. Serial No. 349,904. 4 Claims. (Cl. 15—37.)

1. A portable device for shining shoes comprising a pair of axially alined, juxtaposed brushes; means for simultaneously causing said brushes to rotate in opposite directions; and manual means for positioning said brushes upon the shoe, whereby shoes may be polished without removing them from the feet of the wearer.

1,374,182. HOLDER FOR AUTOMOBILE-LICENSES. GEORGE W. BOYNTON, Watertown, Mass. Filed Oct. 7, 1918, Serial No. 257,136. Renewed Aug. 23, 1920. Serial No. 405,486. 4 Claims. (Cl. 40—15.)

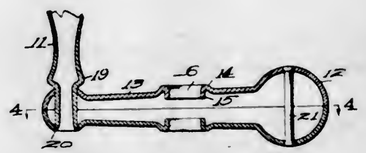


2. A license holder comprising a supporting plate, a latch mounted thereon for movement parallel thereto, a license-retaining member having a license-receiving pocket and also having a rod extending across said pocket for retaining the license therein, said rod being adapted to be engaged by said latch thereby to lock said member to the plate, said plate having positioning lugs to engage the license-retaining member and prevent movement of the latter transversely of the plate.

1,374,183. DENTAL IMPRESSION-TRAY. JOSIAH S. BRIDGES, Chicago, Ill. Filed Aug. 28, 1918, Serial No. 251,717. Renewed Aug. 28, 1920. Serial No. 407,060. 7 Claims. (Cl. 32—6.)

1. A dental impression tray comprising in combination a cup, a handle therefor, a reinforcing means for and separate from the cup and means detachably connecting the handle with the cup and reinforcing means.

1,374,184. TELEPHONE SYSTEM. ERNEST C. BRITTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 9, 1917. Serial No. 179,418. 16 Claims. (Cl. 179—18.)

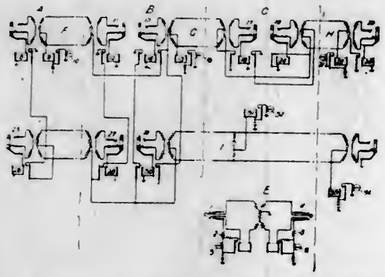


1. In a telephone exchange system, a switch arranged to perform the functions of either a selector switch or of a connector switch, said first mentioned switch being reached by a plurality of paths, and means controlled by the path over which connection is made to said switch for determining which of said functions said switch will perform.

1,374,185. WHOLE-WHEAT FOOD PRODUCT. CHARLES F. BROCKMEYER, Bennett, Iowa. Filed Nov. 15, 1920. Serial No. 424,158. 2 Claims. (Cl. 99—10.)

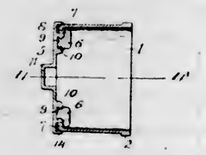
2. The hull or bran and the cracked kernels or endosperm are now united or mixed together as in making Graham flour and sufficient pure water is added to form a stiff batter which is tastefully seasoned with salt.

1,374,186. PRESSED-STEEL BALL CRANK-HANDLE. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1919. Serial No. 339,989. 7 Claims. (Cl. 74—33.)



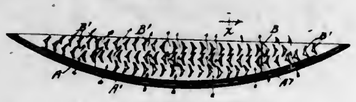
5. As an article of manufacture, a crank handle comprising two pressed steel halves secured together, the walls at the center being turned in to provide a non-circular perforation in each half, said perforations being in alinement.

1,374,187. ROOFING-FELT. ALBERT L. CLAPP, Marblehead, Mass., assignor to Reginald W. Bird, Framingham, Mass. Filed Feb. 7, 1918. Serial No. 215,891. 6 Claims. (Cl. 92—3.)



1. As a new article of manufacture, a flexible sheet composed of a mixture of rag fiber and sawdust intimately commingled in such proportions as to result in a product of high penetrability and tensile strength so as to adapt it as a foundation for prepared roofing.

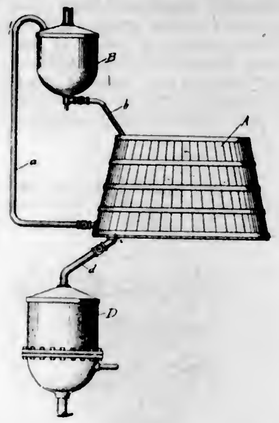
1,374,188. TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 11, 1918. Serial No. 233,970. 7 Claims. (Cl. 179—43.)



6. In a telephone system, a plurality of exchanges, a plurality of trunk circuits for establishing connections between said exchanges, and means at each exchange for indicating the condition of the trunk circuits interconnecting other exchanges.

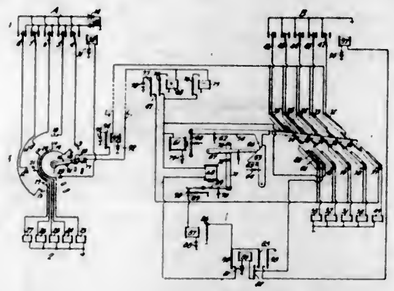
1,374,189. PLUMBER'S CLEAN-OUT. ROBERT CLOW, Kansas City, Kans. Filed Jan. 8, 1918. Serial No. 210,837. 1 Claim. (Cl. 220—40.)

In a plumber's clean-out, a cover comprising a cast body and a locking lug of softer material than the body, the lug having an outwardly extending arm spaced apart from the body, so that a locking flange may be received between the lug and the body, the lug having a shank at right angles to the arm, the shank having a peripheral groove portion embedded in the body.



1,374,190. AIRPLANE-RADIATOR. EDWARD T. CURRAN, Detroit, Mich. Filed Oct. 19, 1918. Serial No. 258,815. 3 Claims. (Cl. 257—129.)

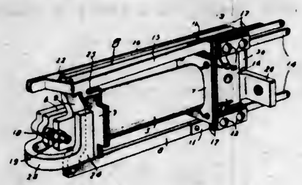
1. In a radiator, the combination of a double outer shell, a space adapted to be filled with cooling liquid between the walls thereof, said double outer shell having perforations therethrough for the passage of air, said space being adapted to communicate with the water jacket of an engine by means of tanks, a series of crescent shaped pipes connecting the said tanks and so arranged as to form tortuous air passages therethrough and coöperating with the air passages through the double shell.



1,374,191. MASHING PROCESS. HENRY E. DECKEBACH, Cincinnati, Ohio. Filed Sept. 20, 1919. Serial No. 325,143. 2 Claims. (Cl. 195—32.)

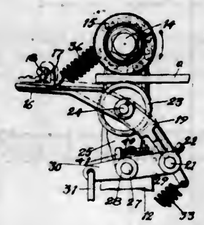
1. A mashing process which consists of heating ground malt and water in a mash tun, simultaneously heating grits and water in a converter, instituting a circulation of the materials from the mash tun into the converter

and from the converter into the mash tun, maintaining the circulation until the starch is converted and then discharging the material from the mash tun.



1,374,192. SELECTIVE SYSTEM. AMOS F. DIXON, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 2, 1917. Serial No. 178,225. 4 Claims. (Cl. 178—33.)

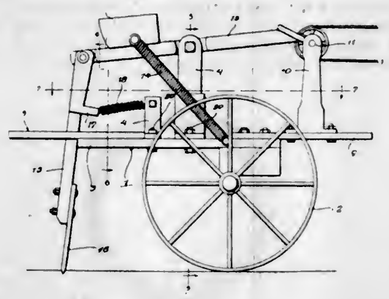
1. In a selecting system, a plurality of stations, a pair of line conductors connecting said stations, an impulse transmitting mechanism at each station comprising a group of selectively operated contacts, a selecting mechanism at each station comprising a group of magnets selectively operated in accordance with impulses transmitted over a line conductor by the transmitting mechanism at another station, and a distributer at each station operable to connect the transmitting mechanism at that station with one of said line conductors and to connect the selecting mechanism at that station with the other of said line conductors, one of said distributers including means for impressing current impulses upon the line circuit for operating said other distributer in unison therewith.



1,374,193. ELECTROMAGNETIC RELAY. WILLIAM H. D. FORD, Yonkers, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 13, 1918. Serial No. 228,407. 3 Claims. (Cl. 200—94.)

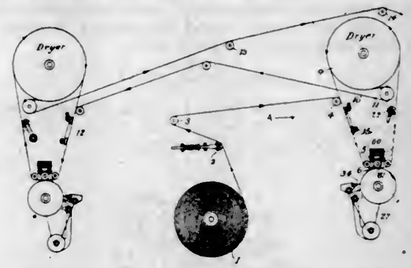
1. An electromagnetic relay comprising a core, a magnetizing coil about said core, an armature actuated by said coil, contact springs controlled by the movement of said armature, and an extension on said core and in

magnetic contact therewith adapted upon energization of the coil to exert a magnetic pull upon said armature in a direction opposite to that exerted by the core itself.



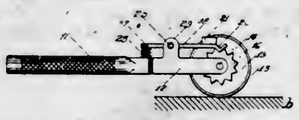
1,374,194. SURFACE-SCOURING MACHINE. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 4, 1919. Serial No. 315,085. 14 Claims. (Cl. 51—240.)

1. A machine for scouring rubber soles, comprising an abrading roll, a movable support opposite said roll, means carried by said movable support to determine the initial position of the work, and means to rotate the abrading roll in a direction to oppose the withdrawal of the work.



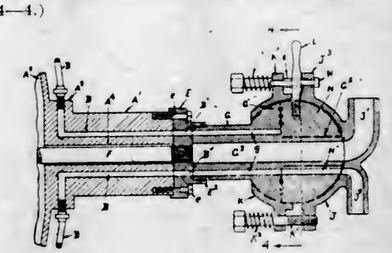
2. A machine for scouring rubber soles, comprising an abrading roll, a support opposite said roll and including a loosely mounted presser roll, means to determine the initial position of the work, and means to rotate the abrading roll in a direction to oppose the withdrawal of the work.

1,374,195. SPADING-MACHINE. LUIGI FURNARI, Ravenna, Ohio. Filed July 6, 1920. Serial No. 394,179. 2 Claims. (Cl. 97—53.)



2. An apparatus of the class described comprising a wheeled frame, a pair of uprights adjustably supported thereon, a walking beam carried by one upright, a spade carrying member pivoted to the outer end of said walking beam, a spring connecting the upper part of said spade carrying member with the other upright, spaced guiding bars for guiding said spade carrying member and means for actuating the walking beam, such means consisting of a crank shaft for engaging one end of the beam and springs and a weight connected with the other end.

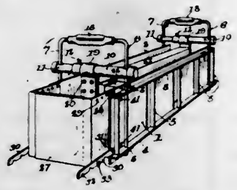
1,374,196. PERFECTING MULTICOLOR WEB-PRESS. RAYMOND N. GETCHES, Glen Ridge, and ISIDOR TORNBERG, Plainfield, N. J. Filed June 11, 1919. Serial No. 303,440. 8 Claims. (Cl. 101—152.)



1. The combination in a web press of a means for supporting a plurality of forms in alinement and impression means coöperating therewith, and means for passing a web to each of the forms comprising means intermediate each two forms for offsetting the web and a heated revoluble drum around which the web passes, said drum being of sufficient size and temperature that the ink is dried when the web passes around the drum once at printing speed.

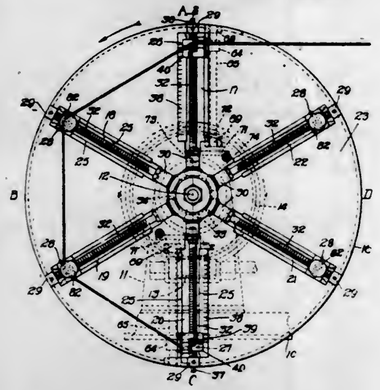
1,374,197. MECHANICAL VIBRATOR. WILLARD H. GILMAN, New York, N. Y., and MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed Feb. 2, 1920. Serial No. 355,644. 11 Claims. (Cl. 128—57.)

1. In a mechanical vibrator for massage purposes, the combination of a handle with a roller engaging the skin, a spring controlled member secured to said handle, means for causing said member to vibrate as said roller is rotated, the effect from said vibrations being transmitted to the skin through said roller.



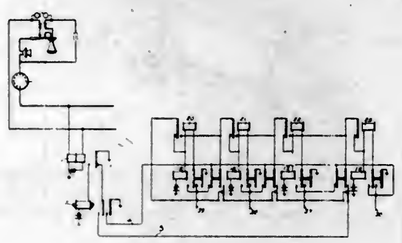
1,374,198. DEWATERING MECHANISM FOR PAPER-MACHINE DRUMS. JOHN C. GLENN, Erie, Pa. Filed Jan. 5, 1920. Serial No. 349,358. 5 Claims. (Cl. 34—4.)

5. In a drier drum for paper making machines, axial supporting journals, a stem secured on the end of one or



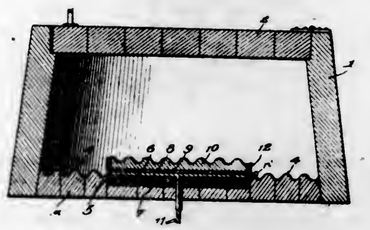
both of said journals, a central longitudinal opening through said stem and journal, through which steam may be admitted to said drum, longitudinal ducts in said stem and journal eccentric to said central opening, tubular connections leading from said ducts to the interior of said drum, dipper means within said drum and secured adjacent to the inner cylindrical wall thereof and communicating with said tubular connections, a ball shaped journal on said stem, a housing inclosing said ball shaped journal and having a steam inlet passage coinciding with said central longitudinal opening, and a water and steam outlet passage adapted to coincide alternately with each of said longitudinal ducts at each revolution of said drum, when said dipper means is immersed in water in said drum substantially as set forth.

1,374,199. CONCRETE-MOLD. ARTHUR S. GREENE, North Milwaukee, Wis. Filed Jan. 14, 1920. Serial No. 351,327. 8 Claims. (Cl. 25—131.)



2. A mold for concrete work, comprising side walls, means for adjustably spacing said side walls, and an end gate composed of two relatively movable spring pressed members arranged to fit between said side walls and close one end thereof.

1,374,200. MECHANISM FOR CUTTING CORDS OR STRANDS. HANS HENRIK C. GRONDAHL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,064. 7 Claims. (Cl. 164—47.)

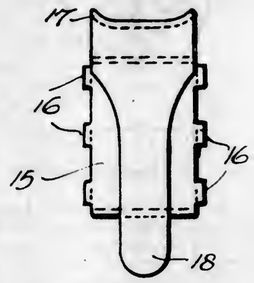


1. In a machine for cutting a continuous strand or cord into given lengths, means for drawing said cord or strand from a supply reel at a substantially constant speed, mechanically operated means associated with said drawing means for cutting said cord into lengths as it is drawn from said supply reel, and means carried by said drawing means for varying the position of said cutting means whereby the length of cord to be cut may be varied.

1,374,201. SELECTOR. JOHN A. HALL, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1919. Serial No. 324,913. 6 Claims. (Cl. 179—16.)

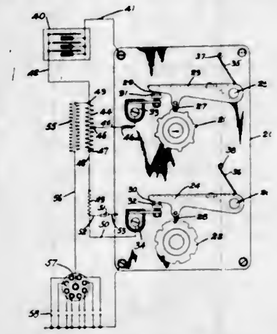
1. A selector comprising a series of switching relays, an impulse circuit for energizing said relays in succession, and means for deënergizing a previously energized relay upon the beginning of the impulse for energizing the next one of said relays.

1,374,202. HEATING UNIT FOR WASHING-MACHINES. IRVIN H. HARRIS, Evanston, Wyo. Filed Jan. 14, 1920. Serial No. 351,467. 3 Claims. (Cl. 219—43.)



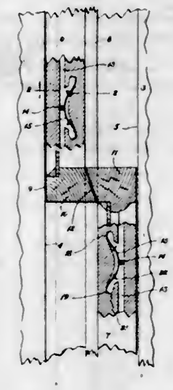
1. A washing machine having a bottom provided with a socket therein, and a corrugated surface surrounding said socket, said socket being of circular formation, and an electrical water heating device seated within the socket and having a resistance element therein, said water heating device being of a circular formation, and engaging the side walls of the socket and provided along its upper surface with a transversely corrugated plate conforming to the upstanding washing elements in the bottom of the machine.

1,374,203. KILN AND FIRE-BRICK THEREFOR. SIMON HENRY HARRISON, Easton, Pa., assignor of one-half to S. Warren Hartwell, Easton, Pa. Filed Feb. 24, 1920. Serial No. 360,653. 8 Claims. (Cl. 222—7.)



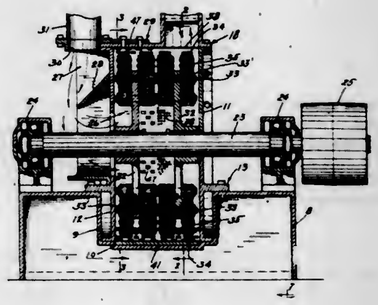
1. In an iron-incased brick lined, calcining chamber or furnace, the novelty which consists in wedge shaped bricks having the area of contact between the lining brick and the inclosing casing reduced to flanges only, the structure being sealed against passage of gases longitudinally of the casing and the bricks being held in position by their mutual wedging actions.

1,374,204. GARMENT-SUPPORTER. JAMES B. HUCLE, Columbus, Ohio, assignor of one-fourth to Russell H. Ross, Columbus, Ohio. Filed Oct. 11, 1920. Serial No. 416,180. 2 Claims. (Cl. 24—84.)



1. A garment supporter formed of a single elongated blank and having a downwardly opening body portion of inverted U-shape whose spaced apart walls are adapted to embrace the upper edge of trousers, and a downwardly opening belt receiving hook of inverted U-shape whose inner wall parallels, and forms an upward continuation of the lower end of the outer wall of the body portion and is in closely contacting relation therewith, said inner wall of said belt hook having lengthwise series of angular spurs along opposite sides projecting at the opposite sides of the body portion and terminating at their free ends beyond the inner wall of the body whereby their said free ends may be crimped inwardly toward one another along the inner wall of the body, as described.

1,374,205. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed July 11, 1918, Serial No. 244,371. Renewed May 14, 1919. Serial No. 297,156. 11 Claims. (Cl. 123—148.)

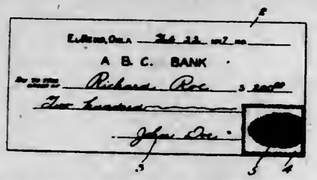


1. In an ignition system, the combination with a source of current; of a device for accumulating spark impulse energy, and also for transforming the current passing through it; of electric circuits for connecting the device with the source of current; and circuit controlling means for controlling the passage of current through the said device to produce the energy accumulating operation, and to produce the current transforming operation, and for interrupting the passage of current to said device whereby the spark impulse energy is released.

1,374,206. ANTI-WINDOW-RATTLER. EMIL H. JACOB, Chicago, Ill. Filed Aug. 20, 1919. Serial No. 318,749. 2 Claims. (Cl. 292—76.)

1. In combination with a sliding window sash and its casing, anti-rattling construction including a pin in one of the members adapted to relatively traverse a path defined by a groove in the other member, said groove being covered throughout the normal path of the pin by a single wall of the pin carrying member, and a bowed spring extending into the path of the pin and freely retained in a recess in a side wall of the groove.

1,374,207. GRINDING-MILL. AXEL E. JACOBSON, Minneapolis, Minn. Filed Apr. 7, 1919. Serial No. 288,106. 3 Claims. (Cl. 83—11.)

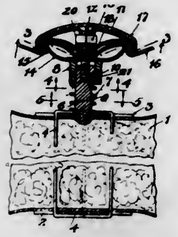


1. The combination with a housing, of a segmental plate in the housing having cut and pressed therefrom loops which constitute a grinding surface thereon, both ends of the loops being integral with the plate, the under faces of said loops being spaced above the upper face of the plate, and revoluble beaters mounted in the housing for coöperation with said grinding surface and arranged to move transversely over said loops.

1,374,208. METHOD OF PROTECTING DOCUMENTS. JOHN WILLIAM JONES, El Reno, Okla. Filed Mar. 7, 1917. Serial No. 153,154. 1 Claim. (Cl. 95—5.)

A method of protecting a document which has a limited portion of the area of its face coated with a light

sensitive material which method consists in pressing upon said light sensitive area a portion of the skin of the

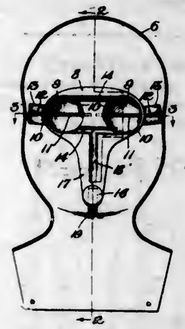


party to the document and then exposing such sensitized area to light to make such skin impression visible.

1,374,209. PROCESS OF MAKING ALKALINE SULFID. WILLIAM H. LANDERS, New York, N. Y., assignor of one-half to Henry S. Loud, New York, N. Y. Filed Nov. 17, 1919. Serial No. 338,724. 6 Claims. (Cl. 23—13.)

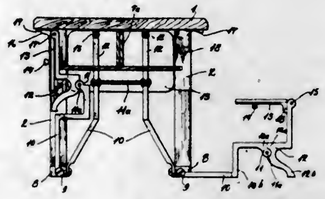
1. The process of making an alkali-metal sulfid which consists in intimately mixing and effecting a reaction between an alkali-metal salt of a volatile strong mineral acid and carboniferous sludge acid, normally containing at least five per cent. of homogeneously distributed carbon, subjecting the carboniferous sulfate produced to a sufficient temperature to promote the reduction of the greater part of such sulfate to sulfid and then recovering the resultant alkali-metal sulfid.

1,374,210. DEVICE FOR ATTACHING COVERS TO CUSHIONS. JOSEPH H. LANGROCK, New York, N. Y. Filed Jan. 7, 1921. Serial No. 435,673. 10 Claims. (Cl. 24—113.)



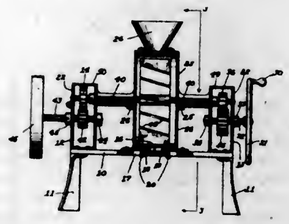
10. A device of the class described comprising a button having a domed head, a threaded shank extending from to detachably receive said shank, a clamping plate on the under side of said head, a spring for forcing said clamping plate against the button head and a plurality of thread-receiving recesses in the plate.

1,374,211. CONCEALED-STITCHED BINDING FOR SEWED ARTICLES. CHESTER MCNEIL, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1919. Serial No. 284,718. 7 Claims. (Cl. 112—262.)



1. A stitched article comprising a fabric strip having its edge folded underneath the body portion of the strip, said body portion of the strip being folded around and beneath the folded in edge of the same, concealed stitches for securing the parts of the fabric strip in fixed relation to each other, said stitches including a thread disposed between the folded in edge of the strip and the body portion of the strip and having loops extending through said folded in edge and the portion of the fabric strip extending beneath said folded in edge.

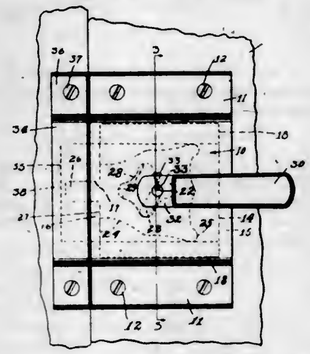
1,374,212. EYES FOR DOLLS. ISIDORE MARKS, Dorchester, Mass. Filed June 3, 1920. Serial No. 386,248. 3 Claims. (Cl. 46—40.)



1. An eye structure for dolls' heads comprising spaced apart hemispherical protuberances integrally formed on a piece of sheet material, and a pair of rods for pivotally securing the eyes in the head, the rods being axially alined and severally extended through the protuberances at diametrically opposite points thereon and being severally secured at their outer ends to the opposite sides of the head.

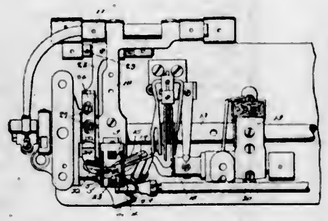
1,374,213. FOLDING CHAIR. FRANK MARZAK, Brooklyn, N. Y., assignor of one-half to Anton Samokiszczuk, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,497. 1 Claim. (Cl. 155—80.)

A device of the class described comprising a frame, standards supporting said frame, collapsible chairs pivotally attached to said standards and adapted to be concealed under said frame, said chairs comprising substantially Z-shaped members having pivotal attachment with said standards, leg members pivotally attached to said Z-shaped members, upward extensions on said leg members, seat panels pivotally attached to said extensions, and means on said seat panels for retaining the latter in horizontal position when said seat is extended.



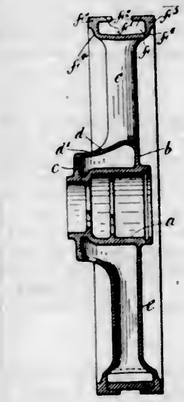
1,374,214. DRIVING MECHANISM. BARTLOMIEJ MAZURYK, Tugaske, Saskatchewan, Canada. Filed Oct. 15, 1919. Serial No. 330,938. 1 Claims. (Cl. 74—7.)

In a driving mechanism of the character described, the combination of two casings and a shaft journaled within



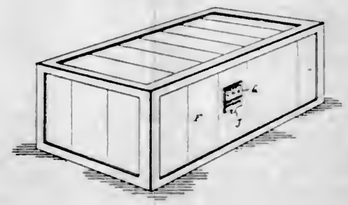
said casings at both of its ends, with pinions on said shaft within said casings, a stub shaft journaled in one of said casings, a hand wheel at the outer end of said stub shaft, a pinion on said stub shaft within said casing in mesh with one of said first named pinions, a stub shaft within the other casing carrying a pinion in mesh with the other of said first named pinions, an outer extension for the first named stub shaft and a balance wheel at the outer extremity of said extension, substantially as described and for the purpose set forth.

1,374,215. DOOR-CATCH. IRVIN U. MINEHART, Coggon, Iowa. Filed Feb. 3, 1920. Serial No. 355,915. 1 Claim. (Cl. 292—187.)



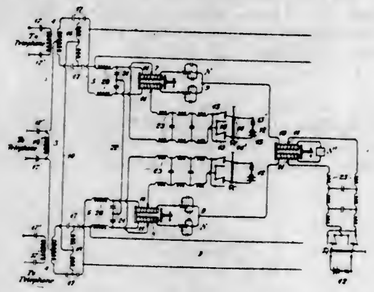
A door catch of the gravity type embodying a keeper having attaching means, a casing having attaching means, said keeper and casing conforming in shape in end elevation, said casing having a cut-out producing top and bottom walls and side walls, one of said side walls disposed toward the keeper being provided with a recess, said top and bottom walls being provided with rabbeted recesses, a detachable cover plate secured in said rabbeted recesses, over the cut-out at the back of the casing, a latch bolt of tapered-like formation movably mounted in the cutout, the enlarged end thereof being slidably supported at the bottom of the cut-out and the reduced end thereof being formed with a beveled engaging portion with shouldered walls above and below the same, said bolt having a cross shaped opening therethrough having a series of extensions of concaved-formation extending vertically and horizontally, an arbor rotatably mounted through the casing and having a radially projecting bit designed to engage said opening and extension recesses thereof whereby when the arbor is turned said bit engages the walls of said recesses to shift said bolt to engaging or disengaging positions with respect to the keeper, and handles mounted on the arbor.

1,374,216. STITCH-FORMING MECHANISM FOR SEWING-MACHINES. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1918. Serial No. 240,586. 4 Claims. (Cl. 112—200.)



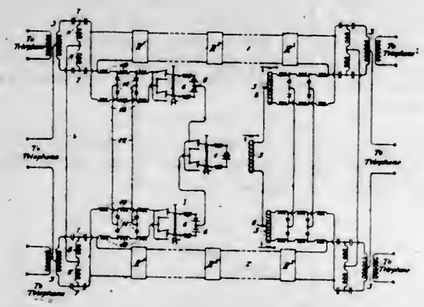
1. The combination of a feeding mechanism and a stitching mechanism including a pair of needles arranged in a line diagonally of the line of feed, and a single threaded looper adapted to coöperate with said pair of needles, said looper being mounted so as to move in a line diagonal of the line of feed and parallel with the line of the needles as it enters the needle thread loops, and means for moving the looper laterally as it is retracted, whereby the diagonal face of the looper operates to draw the needle thread loops about the looper to one side so as to insure both needles entering the thread triangle in advance of the needle thread loops.

1,374,217. WHEEL. HERMAN C. MUHLBACH, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 30, 1920. Serial No. 434,172. 1 Claim. (Cl. 301—65.)



A cast metal wheel comprising a hub, hollow spokes and a tire-supporting rim, the hub having an inner tubular wall to receive bearings and an outer spoke-supporting wall extended beyond the spokes toward the outer end of the hub to form a substantially cylindrical wall and merged into the walls of the spokes, and circumferential flanges near the ends of the hub to which said outer wall is joined.

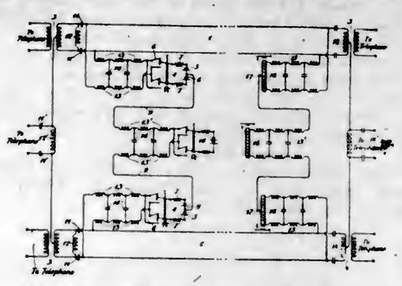
1,374,218. C. O. D. ENVELOP CONTAINER. WILLIAM P. NOBLE, Detroit, Mich. Filed Feb. 26, 1919. Serial No. 279,230. 2 Claims. (Cl. 40—7.)



1. In a C. O. D. envelop container, the combination of a portion of the envelop, the edges of which are folded over upon such portion in such a manner as to form a pocket, such pocket portion adapted to be permanently attached to a package, and a covering portion adapted to fold over such pocket portion so as to hold in their folded over relation the pocket forming edges of such pocket portion and adapted to be independently fastened in such covering relation to the C. O. D. package.

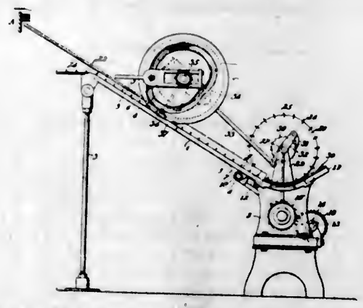
1,374,219. COMPOSITE TRANSMISSION SYSTEM. HAROLD S. OSBORNE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 12, 1919. Serial No. 276,485. 10 Claims. (Cl. 179—4.)

1. In an electrical signaling system in which side and phantom telegraph circuits are formed on conductors carrying telephone currents, means for transmitting telegraph signaling currents in both directions over the conductors of the system concurrently with the telephone currents, low pass filters connected in the branches leading to the respective side circuits each of said filters being provided with a neutral point, means joining said neutral points whereby said filters act upon both the side and phantom circuits and other low pass filters connected in and affecting only the separate side circuit and phantom circuit respectively.



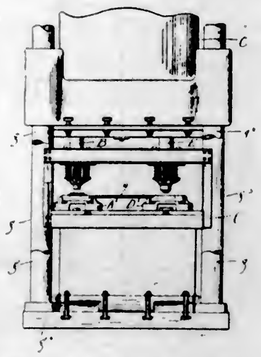
1,374,220. COMPOSITE SIGNALING SYSTEM. HAROLD S. OSBORNE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 12, 1919. Serial No. 276,486. 5 Claims. (Cl. 179—4.)

5. In a signaling system, two pairs of conductors arranged to provide two side and one phantom circuit for telephone currents and the telegraph currents and means common to both the side and phantom circuits for separating the telephone and telegraph currents.



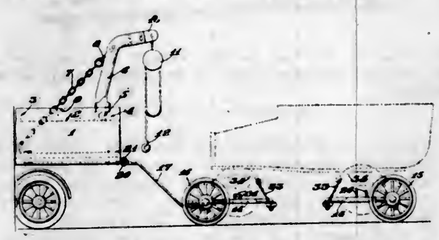
1,374,221. COMPOSITE PHANTOM CIRCUITS. HAROLD S. OSBORNE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 12, 1919. Serial No. 276,487. 3 Claims. (Cl. 179—4.)

1. In a signaling system, the combination of two pairs of line conductors, telephone apparatus connected to said conductors to provide two side circuits and one phantom circuit, telegraph apparatus bridged across each pair of conductors forming one of said side circuits, said apparatus including a sending set whose elements are arranged



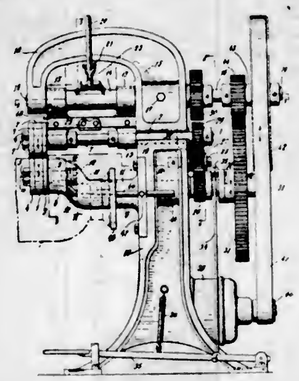
to provide a mid or neutral point with respect to the side circuit conductors, and other telegraph apparatus connected between said neutral points.

1,374,222. MACHINE FOR PACKING MATCHES. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Feb. 4, 1920. Serial No. 356,298. 14 Claims. (Cl. 226—12.)



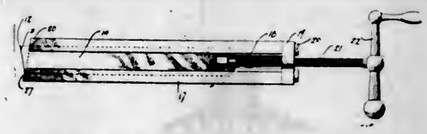
1. In a machine for packing matches and other articles in boxes, an inclined bed provided with guideways for the boxes, means to advance the boxes lengthwise of said bed, and means to cause the articles to approach the boxes in a direction opposite to the movement of the boxes.

1,374,223. MACHINE FOR FORMING METAL BLANKS. EDWARD J. PAQUE, Cincinnati, Ohio, assignor to The Pollak Steel Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 17, 1919. Serial No. 338,577. 2 Claims. (Cl. 164—13.)



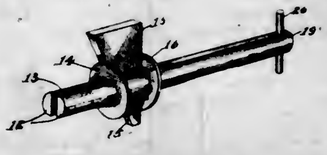
1. In a machine of the character described the combination of a die, a hydraulic punch adapted to coöperate with the die for removing the center from a disk to form a ring, and a second die, a hydraulic punch having a tapered end adapted to be projected through the center of the ring and to center the aforesaid ring upon the second die, and to cut a ring from the center thereof.

1,374,224. APPARATUS FOR TRANSPORTING CRIPPLED OR DAMAGED AUTOMOBILES. WILLIAM LACY PATTERSON, St. Louis, Mo., assignor to Henry Motor Service Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 1, 1918. Serial No. 225,869. 4 Claims. (Cl. 214—86.)



1. In an apparatus of the character described, a trucking device comprising a wheeled axle, a pair of supporting bars adjustably mounted at one end on said axle so as to be movable toward and from each other, and having means at their opposite ends for flexible attachment to the vehicle to be transported, said bars having means between their ends for engagement with the axle of the vehicle.

1,374,225. CAN-EMBOSSING MACHINE. EDWARD M. PEACOCK, Jersey City, N. J., assignor to Davis-Watkins Dairymen's Manufacturing Company, Jersey City, N. J., a Corporation of Maryland. Filed Nov. 25, 1919. Serial No. 340,604. 11 Claims. (Cl. 101—6.)



1. A can embossing machine having, in combination, a movable die-supporting member, a rotative die-supporting member having dies complementary to and adapted to register with the dies of the said movable die-supporting member, means for moving radially and parallel to itself one of said die-supporting members to move the dies carried thereby out of and back into coöperative relation with the complementary dies of the other die-supporting member to separate the dies, a support for the supporting member on which it can then be swung to carry its die off to enable a can to be easily withdrawn, and means for assuring that the complementary dies shall be brought back into register with each other when the movable die-supporting member is swung and moved to bring the dies back into coöperative relation.

1,374,226. CUTTING-OFF TOOL. ROBERT A. PEACOCK, Delaware City, Del. Filed May 17, 1920. Serial No. 382,164. 5 Claims. (Cl. 29—96.)

1. In a tool holder, the combination with a cutter bar provided with a forward cutting edge and a socket in its inner end, a body portion of greater length than the cutter bar and provided in one side with an undercut slot adapted to receive said cutter bar, a head mounted on the inner end of said body portion, a feed screw threaded through the head and projecting into said slot, and a swivel connection between the feed screw and said cutter bar and arranged detachably in said socket for moving the cutter bar in said body portion.

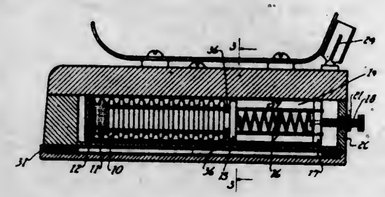
1,374,227. CLAMP-BOLT. CHARLES S. PEET, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,695. 9 Claims. (Cl. 85—7.)

1. A fastening device of the bolt type including a shank, an abutment member on said shank adapted to engage one side of an object, a unitary integral clamping member adapted to engage the shank adjacent the opposite side of the object, and clamping means adapted to engage said opposite side of the object and bear against the clamping member, the outward pressure of said means against said member maintaining the latter in locked engagement with the shank.

1,374,228. MOUNT FOR SAFETY-RAZOR BLADES. DANIEL B. PERKINS, Providence, R. I., assignor of one-half to William F. Almy, Providence, R. I. Filed Oct. 16, 1920. Serial No. 417,431. 2 Claims. (Cl. 30—12.)

1. In a razor blade mount, a plate, a lip integral with the plate and formed therefrom, arms formed from the plate at each side of the lip and extending in a plane parallel with the plane of the lip, a comb bar upon the ends of the arms inclined toward the lip and spaced therefrom, and lateral lugs on the arms.

1,374,229. WIRE CONNECTION FOR STRAIN-INSULATORS. PETER L. PETERSON, Worcester, Mass. Filed Aug. 15, 1919. Serial No. 317,829. 1 Claim. (Cl. 287—75.)

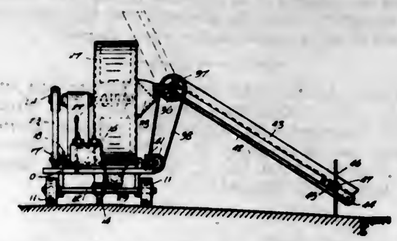


A separable wire connection for a strain insulator comprising a pair of duplicate independent side plates, a

grooved roller positioned between said plates at one end thereof, and detachable connections between said plates, said connections comprising a pin extending through said plates at one end thereof and forming a bearing for said

roller, a second pin extending through the opposite ends of said plates by which said plates may be connected to a support, and removable fastening devices for holding said pins in position.

1,374,230. TEMPERATURE-CONTROLLER. FRED J. PETROVICS, Chicago, Ill. Filed July 17, 1920. Serial No. 397,105. 7 Claims. (Cl. 219—25.)



1. Means for controlling the temperature of an electrically heated device comprising a hermetically sealed vessel having resilient walls and containing a fluid, one end of said vessel being fixed, a plurality of electric heating coils mounted in said device, and means operatively connecting the free end of said vessel with said coils for varying the length of the coils in series as the vessel expands or contracts under the varying temperature of said vessel.

1,374,231. PROCESS OF TREATING RUBBER. JOSEPH PORZEL, Buffalo, N. Y., assignor, by mesne assignments, to Superior Rubber Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1918, Serial No. 248,700. Renewed Oct. 9, 1920. Serial No. 415,950. 5 Claims. (Cl. 18—52.)

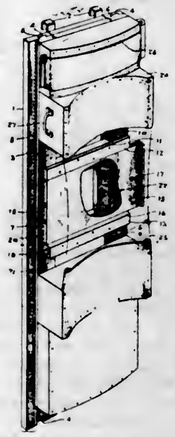
1. The process of treating vulcanized rubber consisting of reducing the same to a finely divided state under conditions of exclusion of oxygen, adding thereto a small quantity of new, unvulcanized rubber sufficient merely to film the particles of old rubber, which new rubber has been dissolved in an excess quantity of solvent sufficient to distribute said new rubber over said particles, driving off said solvent, and forming and vulcanizing in the usual manner.

1,374,232. PORTABLE BLOWER. HASTINGS C. REED, Cedarville, Ohio. Filed Jan. 29, 1920. Serial No. 354,903. 3 Claims. (Cl. 302—37.)

1. An apparatus of the character described comprising a portable frame, a blower casing therein having an intake at one side and a discharge spout, a blower therein, connections for rotating the blower, a chute carried by the casing adjacent to its intake, a laterally projecting conveyer whose inner end is hingedly connected adjacent to the said chute permitting the conveyer to swing vertically, and connections for operating the conveyer, said

chute having a screen therein between the inner end of the conveyer and the intake of the blower casing as described.

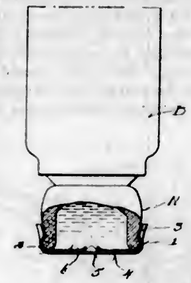
1,374,233. COMPOSITION OF MATTER. OTTO FRITZ REINHOLD, Maplewood, N. J., assignor, by meane assignments, to Foster-Reinhold Laboratories, Newark, N. J., a Corporation of New Jersey. Filed Apr. 15, 1919. Serial No. 290,119. 12 Claims. (Cl. 148—23.)



1. A composition of matter comprising metallic salts and an amido-substitution-compound of meta-carbonic acid.

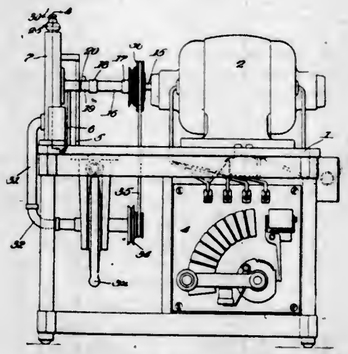
1,374,234. FEED-CARRIAGE FOR STENCIL-MACHINES. GEORGE REMNSNIDER, Belleville, Ill. Filed May 24, 1920. Serial No. 383,628. 9 Claims. (Cl. 197—6.7.)

1. In a device of the class described, the combination with a stencil supporting member, of a feed carriage movable relative thereto, a stencil gripping finger mounted on said carriage and provided with a recess, and a boss on said stencil supporting member for forcing the stencil into said recess.



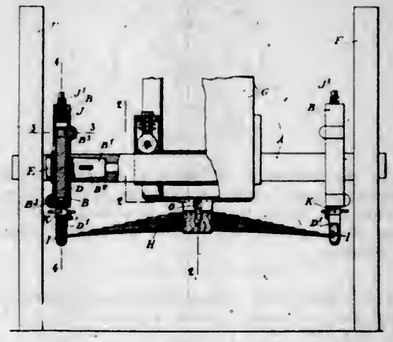
1,374,235. X-RAY PHOTOGRAPHING APPLIANCE. GORDON E. RICHARDS, Toronto, Ontario, Canada. Filed June 20, 1919. Serial No. 305,576. 7 Claims. (Cl. 250—34.)

1. In an X-ray photographing appliance, the combination with the operating table, of a frame longitudinally



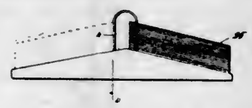
adjustable upon the table and adapted to support the patient, and a plate holding member supported on said adjustable frame and longitudinally and transversely adjustable in relation to said frame.

1,374,236. COMBINED CONTAINER AND LIQUID-SPREADER. ROBERT R. RITZ, Milwaukee, Wis. Filed Mar. 22, 1920. Serial No. 367,843. 1 Claim. (Cl. 91—67.4.)



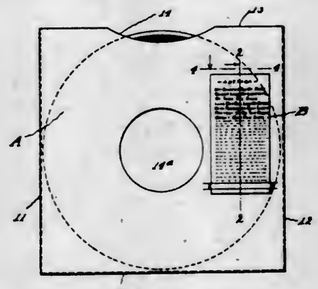
In an original package comprising a container having a discharge mouth, a permanent puncturable membrane fitted over the mouth of the container, an apertured sealing cap permanently secured about the mouth of the container over the membrane, the membrane being adapted to be broken by the introduction of a suitable instrument through the sealing cap aperture to produce ragged ears about the membrane puncture, whereby the opening thus formed in the membrane is materially restricted by contraction of the ears, when the container is inverted to thus retard flow of the container contents.

1,374,237. ELECTRIC GAS-GENERATOR. RUDOLF ROSNER, Chicago, Ill. Filed June 17, 1920. Serial No. 389,684. 12 Claims. (Cl. 204—32.)



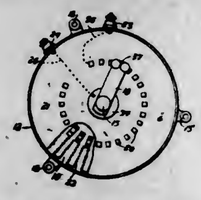
1. In combination, a rotor of incombustible dielectric material provided with an electrode, an inclosing case for said rotor also formed of incombustible dielectric material and carrying a fixed electrode adjacent the path of travel of the rotor electrode, a source of high potential alternating current connected to the electrodes of the rotor and its casing, the casing having a gas generating chamber extending from the fixed electrode adjacent the path of the rotor electrode to an outlet, with an inlet for admitting air to said chamber at the fixed electrode, and means for turning the rotor in direction to carry its electrode past the fixed electrode and thence through the gas generating chamber.

1,374,238. WHEELED AXLE FOR GUN-CARRIAGES AND OTHER VEHICLES SUSPENDED ON SPRINGS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Joint-Stock Company of France. Filed Feb. 28, 1920. Serial No. 362,117. 12 Claims. (Cl. 301—133.)



1. The combination with a wheeled axle for gun carriages and other vehicles, comprising a main axle portion carrying the load and journals at the ends of said portion carrying the wheels, a mutual vertical guide between each journal and the main axle portion, and an elastic device normally interposed between the load carried by the main axle portion and the journals, of means for transmitting the load of the main axle portion directly to the journals without the interposition of the elastic device.

1,374,239. MEMORANDUM-CALENDAR. HENRY A. SCHRAMM and JACKSON D. HAWKINS, San Antonio, Tex. Filed June 11, 1920. Serial No. 388,094. 3 Claims. (Cl. 40—120.)

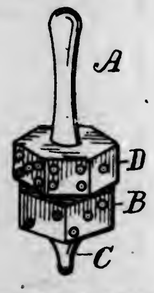


1. In a device of the class described the combination of a pair of slanting tables having a space therebetween, a block carried within said space, a bolt passing transversely through said block, strips carried by said bolt, a wire file carried between said block and said strips.

1,374,240. HOLDER FOR DISK RECORDS. CHARLES SCHULTZ, New York, N. Y. Filed Oct. 6, 1920. Serial No. 415,001. 3 Claims. (Cl. 35—12.)

1. In combination, with a record disk, an envelop for inclosing the record disk; and matter associated with the rendering of the disk record, and in separable parts, secured to said envelop and arranged for stripping therefrom for distribution when the disk record is rendered.

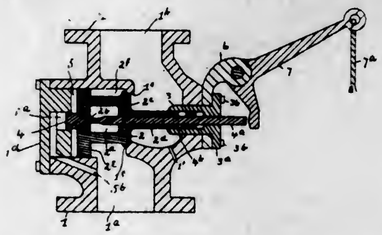
1,374,241. RHEOSTAT. WILLIAM SCHWAGERMANN, Yonkers, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed June 27, 1917. Serial No. 177,245. 22 Claims. (Cl. 219—53.)



1. In the method of adjusting a rheostat so that its arm may smoothly engage the contact buttons in succession, the step which consists in deforming these contact buttons simultaneously and thereby bringing their surfaces into registry.

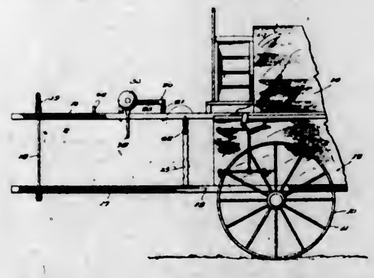
1,374,242. TOY GUN. ANDREW SEKULA, Washington, Pa. Filed Dec. 16, 1920. Serial No. 431,101. 5 Claims. (Cl. 124—12.)

1. In a toy gun, a barrel presenting an enlarged chamber at its outer end, a magazine element removably fitted into said outer end, and a plunger device in the barrel presenting an enlarged disk at its forward end located in the said chamber.



1,374,243. ROTATABLE DICE. FREDERICK W. SIEGEL, Newark, FREDERICK J. BOYLE, Harrison, and JOHN M. SIPP, Newark, N. J. Filed May 5, 1920. Serial No. 379,000. 6 Claims. (Cl. 46—56.)

1. A game implement used by spinning, comprising a central stem with spinning point at one end, a numbered die attached rigidly to the atem, and a die mounted rotatably upon the stem so as to be turned by the fixed die when the implement falls down.

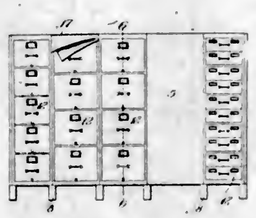


1,374,244. VALVE. WILLIAM N. SILVERNALE, Kawkawlin, Mich., assignor to Benson Electric Company, a Corporation of Minnesota. Filed Oct. 8, 1918. Serial No. 257,395. 1 Claim. (Cl. 137—139.)

In a valve, the combination of a housing comprising a body portion and a cover, said housing having a main valve seat formed therein, said housing having a main intake port formed therein at one side of said seat and a main exhaust port formed therein at the opposite side of said seat, a main valve head within said housing adapted to bear against said seat on the intake side thereof, said valve head being provided with a tubular valve stem extending through said seat and spaced therefrom, a stationary sleeve extending into one of the walls of said housing and engaging the free end of said stem, said main valve head having a steam chamber formed therein, said main valve head having an exhaust port formed therein leading from the steam chamber therein to said main exhaust port, the rearward end of said main valve head being spaced from the opposing inner face of said cover portion to form a steam chamber in rear of said main valve head when said valve head is closed against its seat, said main valve head having an intake port formed therein extending from the steam chamber in rear thereof to the chamber within said valve head, said housing having an intake port formed therein extending from said main intake port to said chamber in rear of said valve head, said main valve head having a valve seat formed in its rearward face concentric with the intake port through its rearward wall and concentric with the inward end of the port leading from

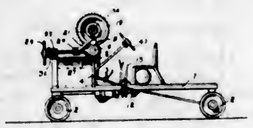
said main intake port to said rearward steam chamber, a supplementary valve head, extending into said rearward steam chamber and adapted to be seated against the seat formed on the rearward face of said main valve head and to close the intake port leading into the chamber in said valve head, said supplementary valve head being provided with a valve stem extending through the intake port in said main valve head and spaced therefrom and extending through the forward wall of said main valve head and main valve stem and sleeve longitudinally thereof and thence outwardly of said housing, travel limiting means mounted upon said auxiliary valve stem within said sleeve forward of said main valve stem, said main valve head having an annular external flange formed thereon adapted to contact with the side walls of said housing whereby a chamber or space is formed between said side walls and said main valve head forward of said flange, the latter chamber or space being open to said main intake port, and means for retracting said auxiliary valve head.

1,374,245. FEED-INDICATING APPARATUS FOR BALING-PRESSES. CHARLES E. SMITH, The Dalles, Oreg. Filed Oct. 30, 1919. Serial No. 334,470. 17 Claims. (Cl. 116—67.)



1. A feed indicator for baling presses including a signal, a plurality of signal operating members, and means to simultaneously engage and periodically release said signal operating members.

1,374,246. FUSE. ERNEST W. SNOW, Rochester, N. Y. Filed Aug. 14, 1919. Serial No. 317,525. 8 Claims. (Cl. 200—128.)



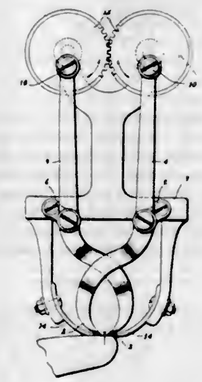
1. A support for a renewable fuse strip and adapted for insertion in an inclosing casing, comprising a body of rigid insulating material having surfaces in the same plane on its outer ends and adapted to support the laterally projecting ends of a fuse strip on said surfaces and provided with a recess between said ends through which the strip extends out of contact with the body.

1,374,247. FURNITURE-MODEL. ISAAC STEVENS, Rochester, N. Y., assignor to Yawman and Erbe Mfg. Co., Rochester, N. Y., a Corporation of New York. Filed Oct. 9, 1919. Serial No. 329,511. 2 Claims. (Cl. 46—37.)

1. An illustrative furniture model comprising a front, a top and two end portions of sheet material and a plurality of separate picture strips each representative of a section of elastic furniture pasted to the face of the front portion, the latter and the top being cut to a length that equals the sum of the widths of the picture strips.

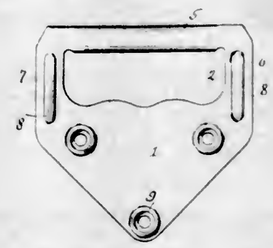
1,374,248. DOOR-OPERATING DEVICE FOR HOPPER-CARS. SYLVESTER GEO. STEVENS, Duluth, Minn. Filed May 16, 1917. Serial No. 169,151. Renewed Dec. 9, 1920. Serial No. 429,583. 8 Claims. (Cl. 180—53.)

6. In a device of the character described, a supporting vehicle, a superimposed horizontally disposed reciprocable pivotally supported clutch carrying shaft carried by the vehicle and means for mechanically rotating same.



1,374,249. WINDOW FOR AUTOMOBILES. HORACE T. THOMAS, Lansing, Mich. Filed Jan. 13, 1919. Serial No. 270,826. 2 Claims. (Cl. 296—145.)

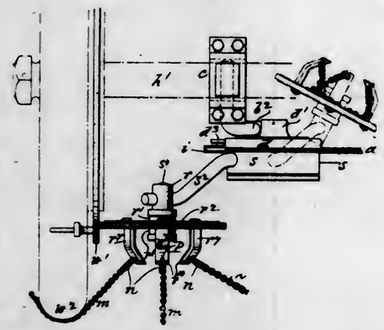
1. The top curtain for vehicles having a window opening therein, guides at the sides of said opening adapted to slidably receive and retain a window pane, a flexible transparent window pane adapted to cover said opening and have its side edges slidably engage in said guides, said pane being provided with a narrow stiffening part extending transversely thereof and rigidly secured thereto, the ends of said stiffening part slidably engaging in said



guides as as to prevent the displacement of said pane in a direction at right angles to the plane of said opening.

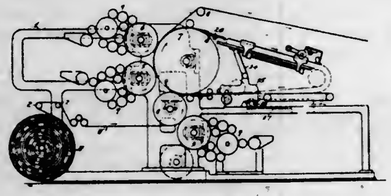
1,374,250. TACK-PULLING MACHINE. FRANK H. THOMPSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 11, 1919. Serial No. 303,293. 6 Claims. (Cl. 12—16.)

1. A tack pulling machine, comprising a pair of levers, oppositely rotating cranks connected to the ends of the levers, a tack pulling jaw supported upon the opposite end of each lever and a swinging link connected to each lever intermediate its ends.



1,374,251. HANDLE. HARRY G. THOMPSON, Cleveland, Ohio. Filed Mar. 6, 1920. Serial No. 363,861. 2 Claims. (Cl. 16—10.)

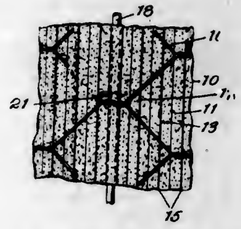
1. A handle made of sheet metal comprising an integral body portion the body portion being provided with an



opening adjacent one end thereof and provided with a grip part which is formed by bending opposite flanges of metal so that they meet above the lower portion of the handle, the parts of the handle which connect the grip with the body portion being formed with upstanding ribs or beads, the body portion being provided with openings adapted to receive a fastening means, the metal surrounding the said openings being formed as a circular bead all for the purpose described.

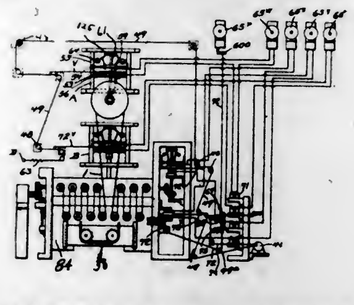
1,374,252. ANTISKID DEVICE FOR AUTOMOBILES, &C. HAROLD THORNE, New York, and NICHOLAS D. MANOILOVICH, Astoria, N. Y.; said Manoilovich assignor to said Thorne. Filed Dec. 19, 1919. Serial No. 346,024. 16 Claims. (Cl. 188—4.)

1. In anti-skid mechanism, a rotor of the character designated formed with a contact disk having a frictional deterrent holder formed with a countersunk socket having a contracted entrance, and in combination therewith a frictional deterrent formed with a coupling pin having a head adapted to fit in said socket and a shank portion adapted to be passed through said contracted entrance to the countersunk socket, for the purpose described.



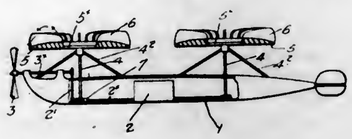
1,374,253. OFFSET-PREVENTING MECHANISM FOR PRINTING-MACHINES. ISIDOR TORNBERG, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Sept. 6, 1917. Serial No. 189,935. 15 Claims. (Cl. 101—419.)

1. In a printing machine, the combination with a printing couple, of a pile of offset sheets, and means for feeding offset sheets continuously thereto from the bottom of the pile, one such sheet being fed for each impression operation of the impression member of the couple.



1,374,254. REINFORCED SHEATHING. ALFRED TURTON, Brooklyn, N. Y. Filed Oct. 21, 1919. Serial No. 332,184. 4 Claims. (Cl. 20—13.)

3. A sheathing, comprising a base element composed of a moisture resisting sheet member with a moisture resisting grooved sheet member on one of its faces providing air cells between the members, spaced metallic stays in a

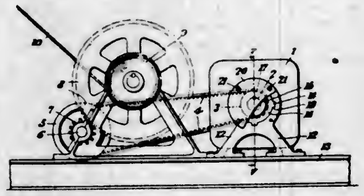


number of the air cells, and a metallic intersticed surface element on the exterior of the grooved member.

1,374,255. BURGLAR-ALARM SYSTEM. ROBERT W. VAIL, New York, N. Y. Filed July 11, 1917. Serial No. 179,864. 15 Claims. (Cl. 177—314.)

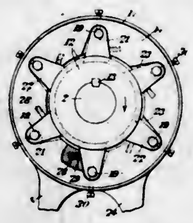
14. In a burglar alarm system the combination with an endless traveling element adapted to sound an alarm, of a governor operated by the endless cable, means adapted to electrically connect the governor with the alarm upon interruption of the movement of the cable, and means for preventing such electrical connection to defer the sounding of the alarm to a predetermined period, the last named means comprising a spring controlled insulating disk having orifices, and a clock to which the aforesaid rotatable disk is operatively connected and by which it is released at the desired time to permit of electrical connection between the governor device and the signal device being made through the orificed portions of the rotatable disk substantially as illustrated.

1,374,256. AERIAL LIFTING DEVICE. CORNELIS HENDRICK VAN ASPEREN, Toronto, Ontario, Canada. Filed May 6, 1918, Serial No. 232,985. Renewed Sept. 23, 1920. Serial No. 412,412. 1 Claim. (Cl. 244—19.)



An aerial lifting device comprising an annular element rotatably mounted upon a vertical axis and having its upper surface curved outwardly and downwardly from its inner portion to its outer edge, and vertically disposed radial vanes carried by said upper surface and projecting upwardly therefrom and extending from said inner portion to said outer edge having free upper edges exposed to the atmosphere.

1,374,257. GLOVE. ARTHUR VAN RAALTE, New York, N. Y., assignor to Van Raalte Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 405,938. 2 Claims. (Cl. 2—9.)

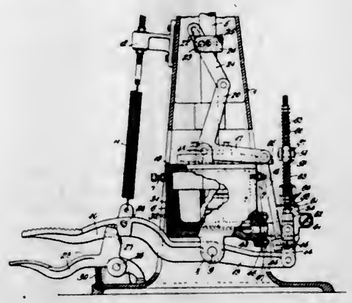


1. A glove having an opening over the position in which a wrist watch is worn, and a flap on said glove detachably secured over said opening.

1,374,258. BRAKE FOR ELECTRIC-MOTOR-OPERATED HOISTS. LUXA CARLO VITTORIO, Emerson, N. J., assignor to Thomas & Buckley Hoisting Co., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1920. Serial No. 404,766. 10 Claims. (Cl. 188—82.)

1. In an electric motor operated hoisting apparatus, the combination of a spiral gear fixed on the motor shaft, an annular gear having internal spiral teeth adapted to mesh with the teeth of the gear on the motor shaft, and means for guiding the annular gear to move endwise relatively to the other gear into and out of mesh therewith.

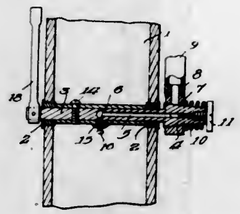
1,374,259. BRAKE FOR ELECTRIC-MOTOR-OPERATED HOISTS. LUXA CARLO VITTORIO, Emerson, N. J., assignor to Thomas & Buckley Hoisting Co., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1920. Serial No. 404,767. 5 Claims. (Cl. 188—82.)



1. In an electric motor operated hoisting apparatus, the combination with the armature shaft of the motor of a brake drum fixed on the shaft having an external friction surface, a series of brake shoes around the perimeter of the drum pivotally supported adjacent their outer ends to swing about axes extending transversely of the drum and each having a drum-engaging friction surface at its inner end curved on the same arc as the friction surface of the drum, and means for limiting the pivotal movement of the brake shoes in one direction to positions in which the friction surfaces thereof are concentric with the friction surface of the drum.

1,374,260. COMBINATION CLOTHES HANGER AND STRETCHER. THEODORE VRBIC, Chicago, Ill. Filed June 16, 1920. Serial No. 389,372. 1 Claim. (Cl. 223—19.)

A combination clothes-hanger and stretcher comprising a substantially triangular clothes-hanger; a stretching bar mortised with one end into the base-bar of the clothes-hanger at the middle thereof and extending a right angles therefrom; a second stretching bar of substantially equal length with the first mentioned stretching bar hinged to the other end of the first mentioned stretching bar, and carrying a cross-bar at its other end, being mortised into the same; clamping bars, of substantially equal length with said base-bar and cross-bar, hinged thereto, respectively; screw-eyes in the base-bar and cross-bar, respectively, adapted to project into slots in the free ends of said clamping bars; pins adapted to coöperate with said screw-eyes for locking said clamping bars; screw-eyes projecting from the rear of the stretching bars near their middle; a locking bar pivoted with one end on a pin engaging the screw-eye projecting from one of said stretching bars and adapted to have its other end engaged by a pin entered into the screw-eye projecting from the other of said stretching bars; and a hook attached to the clothes-hanger; substantially as and for the purpose described.



1,374,261. PRESSING-MACHINE. CHARLES E. WARREAM and GEORGE N. LINK, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed July 10, 1918. Serial No. 244,204. 5 Claims. (Cl. 68—9.)

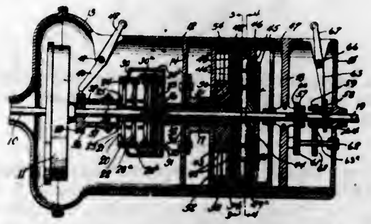
1. In a press, a frame, a stationary pressing member carried thereby, a lower pressing member guided for move-

ment vertically into pressing engagement with the stationary member, an operating shaft mounted vertically in the frame and operatively connected to said lower pressing member, a fluid cylinder and piston motor in alinement with said operating shaft and having connections therewith for directly operating the same, treadle mechanism for moving said lower pressing member into engagement with the stationary member, and means for controlling said fluid cylinder and piston motor.

1,374,262. FUEL-CONTROL VALVE FOR CARBURETERS. VICTOR E. WASSERLEIN, New York, N. Y., assignor to Wasserlein, Froes Company, Inc., a Corporation of New York. Filed Apr. 9, 1917. Serial No. 160,778. 1 Claim. (Cl. 261—51.)

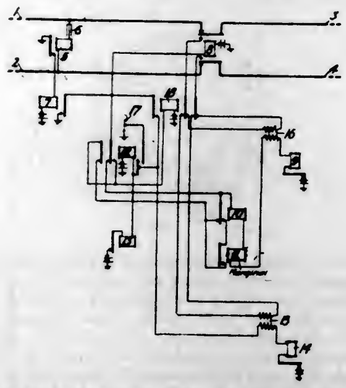
The combination with a casing, of a valve stem journaled transversely therein and having an external plug valve portion, said stem being formed for a major portion of its length with a bore having lateral portions opening through said stem and the plug valve, a fuel supply means fitted on the plug valve, means active upon said fuel supply means to effect a fluid tight joint between the same and the plug valve, a butterfly valve fitted upon the valve stem and movable therewith, said butterfly valve being formed with a discharge way communicating with the bore in the valve stem and disposed at right angles to said bore, an enlargement formed on the butterfly valve and having outwardly divergent air ducts communicating with said bore, and a screw adjustably fitted within the enlargement and adapted to intersect the ducts.

1,374,263. GREASE-GUN. WILLIAM U. WATSON, Chicago, Ill. Filed Aug. 22, 1919. Serial No. 319,106. 14 Claims. (Cl. 221—79.)



1. A grease gun having a cylinder, a piston rod and plunger, an apertured cylinder head through which the grease may be ejected, and a stripping ring slidable along the cylinder for stripping the grease from the external surfaces of the cylinder after it has been plunged into a body of grease.

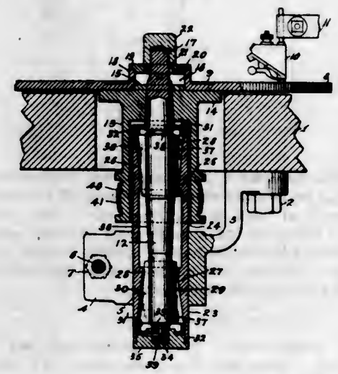
1,374,264. HAIRPIN. GEORGE W. WEBER, Watertown, Wis. Filed Aug. 23, 1920. Serial No. 405,488. 4 Claims. (Cl. 132—22.)



1. A hairpin or the like having a pair of legs, a portion of one leg being of greater width than the adjacent portion of the other, the leg of the lesser width being in cooperation with one surface of the widened portion of the other leg between the longitudinal edges thereof.

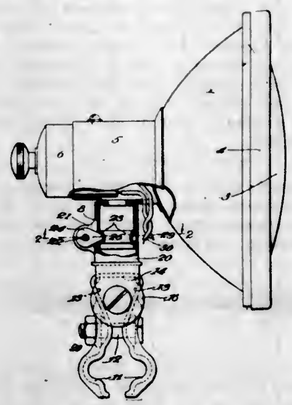
1,374,265. TRANSMISSION MECHANISM FOR AUTOMOBILES. WILLIAM I. WHEELER, Scottsville, Ill. Filed Apr. 28, 1919. Serial No. 293,200. 10 Claims. (Cl. 74—34.)

1. A speed changing mechanism including a driving shaft, a driven shaft, a plurality of clutch members mounted upon the driving shaft and including radially disposed arms, clutch members mounted upon said driven shaft corresponding in number and relation to the clutch members of said driving shaft, an expansible and contractible circular band operatively supported on the arms, crossed levers operatively connected to said band, the long arms of said levers extending across the radial arms and being guided thereon, a spring engaging the long arms of the levers and drawing them toward each other to cause a contraction of the band, and an actuating member mounted to rotate with the driving shaft but longitudinally shiftable therealong and having cam faces engaging between the long arms of the levers to thereby expand the band connected thereto and engage any one of the clutch members on the driving shaft with the corresponding clutch member operatively connected to the driving shaft.



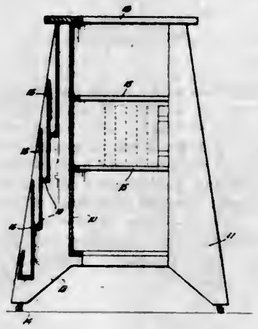
1,374,266. GENERATING SYSTEM. CHARLES WHITE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1918. Serial No. 259,366. 5 Claims. (Cl. 171—97.)

3. In a generating system, a transmission line circuit, a source of current adapted for association therewith,



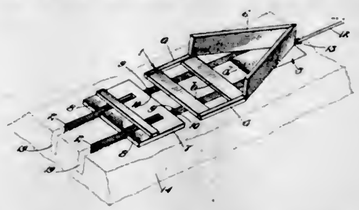
controlling means associated with the line for connecting such source with the line, another source of current, switching means controlled by the inoperative condition of the first mentioned source for removing such source from the control of the first mentioned means and for placing the other source under the control of such means, independently controlled means for maintaining such other source under the control of the first mentioned means, and a signaling device controlled thereby.

1,374,267. DIAMOND-POLISHING MACHINE. GEORGE R. WHITEHEAD, New York, N. Y. Filed Apr. 28, 1920. Serial No. 377,171. 16 Claims. (Cl. 64—56.)



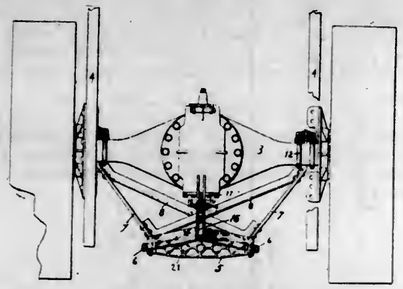
1. In a diamond polishing machine, the combination of a horizontal polishing wheel, a sleeve located below the wheel, means for securing the wheel to the sleeve, a spindle fast to the sleeve, means for driving the sleeve, a lubricant holding casing below the wheel, upper and lower bearings in the casing in which the spindle rotates, and means for lubricating both bearings.

1,374,268. LAMP-SUPPORTING DEVICE. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corp., Chicago, Ill., a Corporation of Virginia. Original application filed Dec. 5, 1919, Serial No. 342,586. Divided and this application filed June 23, 1920. Serial No. 391,128. 3 Claims. (Cl. 240—57.)



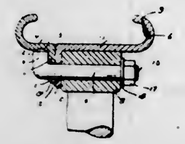
1. In combination with a vehicle lamp provided with a supporting stem, a holder embracing said stem and provided with a pair of perforated ears spaced apart, a clamp comprising a pair of jaws formed integrally of the respective ends of a sheet metal member folded at two places near the middle of its length, to leave a transverse middle portion connecting the two jaw-carrying parts, perforated ears bent from the edges from said middle portion on to the adjacent edges of the jaw-carrying part to provide bearing area for the ears of the stem holder which are lapped over them and a pivot bolt extending through the ears of both parts holding them in frictional engagement.

1,374,269. BOOKCASE AND MAGAZINE-HOLDER. WALTER CLEMENT WILSON, Johnson City, Tenn. Filed June 14, 1920. Serial No. 388,815. 1 Claim. (Cl. 45—1.)



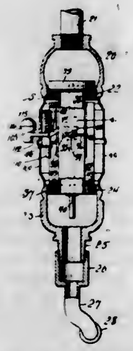
An article of manufacture including a central frame having vertically spaced shelves, uprights supporting the frame and arranged to extend laterally thereof at the forward and rear portions of its sides, vertically and laterally offset panels in series between the said uprights at opposite sides of the frame, and bottom strips between the several panels and forming therewith periodical holding compartments, said panels having vertical series of openings, and adjustable connecting pins extending through openings in the bottom strips and adapted to be projected through selected openings of the panels in order to adjustably hold the bottom strips and in this way regulate the depth of the compartments.

1,374,270. METHOD OF AND APPARATUS FOR MAKING BUILDING-BLOCKS. ANTHONY M. ZOTTOLI, Quincy, Mass. Filed Mar. 15, 1919. Serial No. 282,857. 22 Claims. (Cl. 25—155.)



20. A method of casting concrete characterized by presenting to an unconfined mass of sand a pattern device having a cavity forming portion and a sustaining portion, moving the device along the unconfined mass of sand to advance the cavity forming portion through the sand to produce an elongated cavity, while the sustaining portion rests on the surface of the unconfined mass of sand adjacent the elongated cavity, placing partition members at intervals in the elongated cavity to divide the same into a plurality of molds, and then pouring plastic concrete in the molds thus formed.

1,374,271. HITCH FOR TRACTORS. HERBERT W. ALDEN, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Sept. 15, 1919. Serial No. 323,833. 10 Claims. (Cl. 213—67.)

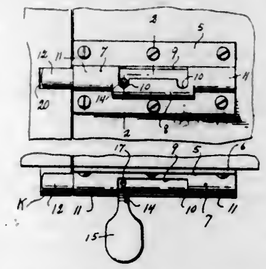


1. The combination with an axle having brackets rigidly mounted thereon, of a hitch pivotally attached to said brackets to swing vertically, said hitch comprising side frame members, a draft beam supported thereby, and a suspending hanger therefor, said hanger being adjustably connected to the axle and adapted to be held in adjusted position to prevent vertical movement of said hitch.

1,374,272. WHEEL-RIM. HENRY CLAY BABEL, Buffalo, N. Y. Filed Jan. 31, 1919. Serial No. 274,215. 3 Claims. (Cl. 152—21.)

1. A wheel rim comprising a stationary member, a detachable member, and fastening means for the detachable member comprising a plurality of pivot-bolts, each having an L-shaped head, the underside of the detachable member being provided with means for effecting a springing engagement with the ends of the L-shaped heads, whereby they are locked in place.

1,374,273. AUTOMATIC VALVE-CLOSER. AURELIO BARCHIESI, Jersey City, N. J., assignor of one-fifth to Angelo Baratta, Jersey City, N. J., and one-fifth to Giovanni Squarcialupi and one-fifth to Louis L. Bolline, New York, N. Y. Filed May 28, 1920. Serial No. 384,797. 4 Claims. (Cl. 67—117.)



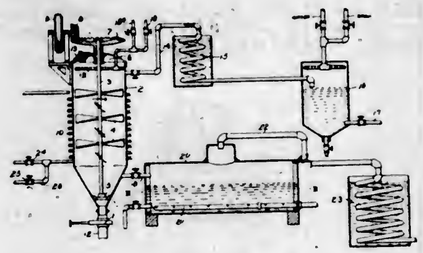
1. In a valve closer the combination of a valve, a slide plate moving with the valve, means to manually raise the valve with the slide plate, a pair of locking heels in the slide plate, a pair of bell cranks, pivoted adjacent to the slide plate, a locking pin on one of the arms of each bell crank and a pair of springs within the heat zone of the light to be controlled, one of said springs coacting with one of said bell cranks and the other spring coacting with the other bell crank.

1,374,274. SPRAYER ATTACHMENT. JAMES BARRETT, Murdock, Minn. Filed June 5, 1920. Serial No. 386,754. 1 Claim. (Cl. 299—30.)

In combination with a wheel supported implement having a pair of rearwardly extending beams, of a transverse brace secured at each end to the rear of one of said beams, said brace having a rearwardly inclined aperture at its middle adapted to hold a nozzle, a hose having said nozzle at one end, and means at the other end of the hose for forcing liquid therethrough.

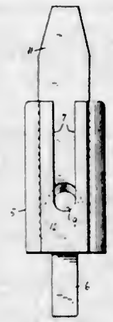
1,374,275. DOOR-BOLT. HARRY A. BECKER, San Francisco, Calif. Filed May 24, 1920. Serial No. 383,905. 4 Claims. (Cl. 292—57.)

1. A door bolt comprising a base including a housing, a portion of said housing being enlarged, the portion of said housing opposite the enlarged portion being slotted, a locking bolt rotatably and slidably mounted in said housing, said bolt having a laterally extending threaded opening, and an adjustable latch pin extending through said opening and slidable through said slot and within said enlarged portion to prevent unobstructed movement of the locking bolt.



1,374,276. SOFT-COLLAR HOLDER. ARTHUR L. BOTTOMLEY, Attleboro, Mass., assignor to F. H. Sadler Company, Attleboro, Mass. Filed Feb. 12, 1921. Serial No. 444,332. 5 Claims. (Cl. 24—81.)

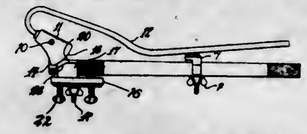
1. In a soft collar holder, a central member having spaced top and bottom rearwardly extending flanges, a looped member having its sides at the center thereof pinched together and engaged between said flanges, the looped ends of said member projecting beyond the respective ends of the central member, and a gripping member



having approximately V-shaped jaws adjacent its ends extending into the looped ends of the loop member, the ends of the gripping member being curved outwardly and spaced from the looped ends of the loop member, the flanges of the central member being bent inwardly to clamp the central part of the gripping member against the rear side edges of the central part of the loop member.

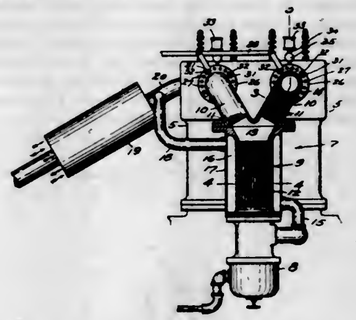
1,374,277. LUBRICATING-OIL. ROY H. BROWNLEE, Pittsburgh, Pa. Original application filed May 13, 1918, Serial No. 234,077. Divided and this application filed Nov. 23, 1918. Serial No. 263,829. 9 Claims. (Cl. 196—22.)

1. A lubricating oil of synthetic production having a high flash point and low cold test in relation to its viscosity; such relations being indicated by a flash of 425° Fahrenheit to 450° Fahrenheit and a cold test of approximately −4° Fahrenheit for a cut having a viscosity of 76 at 212° Fahrenheit.



1,374,278. DEVICE FOR CUTTING WIRE CABLE. JULIUS GORDON BURCH, Bartlesville, Okla. Filed Aug. 25, 1919. Serial No. 319,649. 1 Claim. (Cl. 164—47.)

In a device for cutting cable, a member furcated to form spaced side walls adapted to receive therebetween said member being provided with a cable, a rigid arcuately curved base upon which the cable rests, the side walls having registering grooves formed therein, the base having formed therein a recess connecting the lower ends of said grooves, said recess combining with the base to form at one end thereof a cutting edge and a cutting member slidably mounted in said grooves and slidably engaging with one of its side faces the cutting edge of said base, said cutting member having the lower edge thereof tapering downwardly toward the last named face to provide a cutting edge coacting with the cutting edge of said base.



1,374,279. SAW-SET. GARRETT BYRNS and HENRI SANCHE, Rainy River, Ontario, Canada. Filed Mar. 31, 1920. Serial No. 370,216. 1 Claim. (Cl. 76—63.)

A saw set consisting of a base, an upright portion at one side of said base, a slot in said upright portion, an operative head hingedly connected in said slot, said head having a handle attached thereto, said head having a rounded eccentric inner face, a slot cut in said base, an adjustable member carried in last said slot and adapted to hold a saw against said upright portion, a setting block carried on a suitable base, a suitable opening under said

head in said base for the reception of said setting block, a means for attaching said setting base to said first base, a means for changing the relative position between said setting block and said head when in closed position so that various settings of saws may be accomplished.

1,374,280. HEATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. DANIEL G. CHISHOLM, Seattle, Wash. Filed June 24, 1920. Serial No. 391,408. 4 Claims. (Cl. 123—122.)

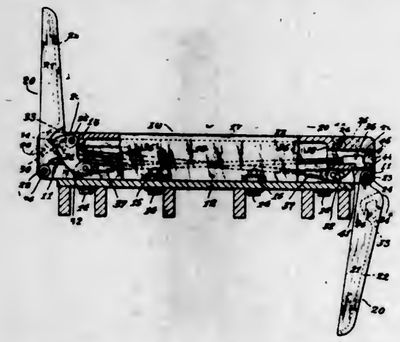
1. In an internal combustion engine, the combination with the engine body, an intake manifold, an exhaust pipe and a carbureter connected to said manifold, of an air heating drum surrounding said exhaust pipe, an air heating casing surrounding said manifold, pipe connections between said drum and the casing and also between the latter and the air intake opening of the carbureter, groups of tubes provided within said manifold, said groups being disposed in spaced relations with each other, said manifold being provided adjacent to its outlet ends with air inlet openings, and means for regulating the effective sizes of said inlet openings.

1,374,281. SPARK-PLUG. ERNEST L. COLBY, Pueblo, Colo. Filed Mar. 16, 1920. Serial No. 366,285. 6 Claims. (Cl. 123—169.)

1. A spark plug including with a shell having a chamber at its inner end, a plurality of obliquely arranged

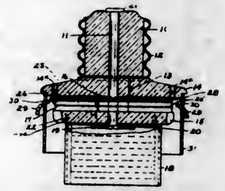
baffles in staggered relation within said chamber with their inner edges extending past the axial center of said chamber and angularly toward the open end thereof.

1,374,282. ADVERTISING-SIGN. RICHARD MORGAN CRAIG, San Antonio, Tex. Filed May 7, 1917. Serial No. 166,995. 6 Claims. (Cl. 40—130.)



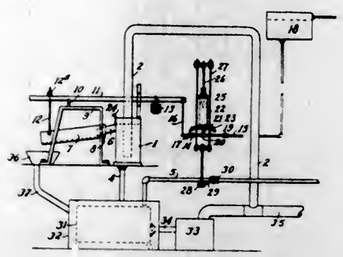
6. In a device of the class described, a display surface bearing in different colors different matters to be displayed, the components of the two matters being arranged without regard to the arrangement of each other, means for imparting travel to the said surface, and means for independently displaying each of said matters by displaying said surface successively in the presence of color media each capable of absorbing a respective one of said colors.

1,374,283. KNOTTER. ALBERT EARL CRANSTON, Spokane, Wash. Filed Sept. 6, 1919. Serial No. 322,086. 11 Claims. (Cl. 140—101.)



10. A knotter comprising, a stationary member, a pair of movable members coacting with the stationary member to receive and grip the ends of a loop of wire in a manner to effect a twisting and cutting thereof, and a plate biased toward one of the movable members and coacting therewith to frictionally hold one of the cut ends of the wire within the knotter when said movable member is moved.

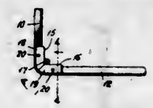
1,374,284. LOG-BUNK. CHARLES O. DALE, Seattle, Wash., assignor of one-half to Axel Peterson, Seattle, Wash. Filed Feb. 7, 1920. Serial No. 357,020. 1 Claim. (Cl. 105—384.)



In combination with a log bunk having end passages therein, a stake pivoted adjacent each end passage, the bottom wall of each passage being cut away at the outer ends of the bunk to provide an abrupt shoulder, a locking member pivotally mounted at each end of the bunk and adapted to engage the adjacent stake to hold the same in vertical position, an extensible locking rod connected to each locking member, a latch device carried by the end of the locking rod and extending through the end passage of the bunk and constructed for engagement with the abrupt passage shoulder of the bottom wall of the passage at the opposite end of the bunk, and means carried by the bunk within the passage for holding the latch device in engagement with the shoulder.

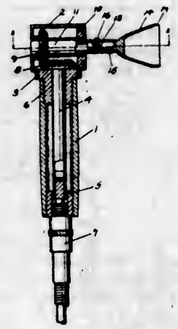
1,374,285. ELECTRIC REGULATOR. RHYS DAVIES, Fort Wayne, Ind. Filed May 9, 1919. Serial No. 295,960. 5 Claims. (Cl. 219—48.)

1. In an electric regulator a resistance coil, a series of contacts, on the coil having connection with the resistance at selected points thereof and arranged in a curved line extending outwardly from the center of the coil, a movable contact adapted to be moved into successive engagement with the contacts, and an electrical circuit having connection with the movable contact and with the resistance coil.



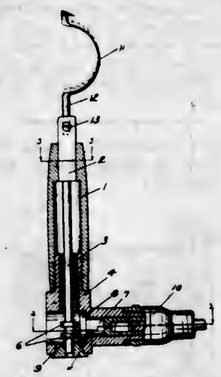
1,374,286. STUFF-REGULATOR. LEMUEL B. DECKER, KENOGAMI, Quebec, Canada. Filed Nov. 19, 1919. Serial No. 339,189. 5 Claims. (Cl. 92—46.)

1. A stuff regulator comprising a receptacle; means for introducing pulp into said receptacle; a discharge outlet from said receptacle; a water pipe; and a movable member positioned to receive the discharge from said outlet; in combination with a vertically positioned cylinder; a piston within said cylinder; means for introducing liquid under pressure beneath said piston; means whereby the movements of said member may vary the liquid pressure beneath said piston; and means whereby the said variations in pressure may automatically vary the flow in said pipe.



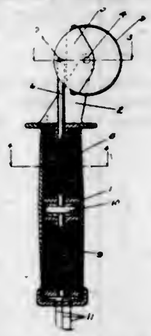
1,374,287. SPECTACLES. LOUIS DUNKELSBERG, Brooklyn, N. Y. Filed Sept. 24, 1919. Serial No. 325,851. 4 Claims. (Cl. 88—53.)

1. The combination of lens frames of the kind described; lugs projecting outwardly therefrom, a pair of temples and hinges constituting units distinct from said lugs and temples comprising channeled members one of which is



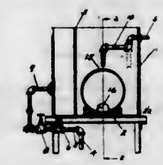
fitted over one of said lugs and the other of which is fitted over one of said temples whereby the latter are pivotally connected with said lens frames.

1,374,288. PEACH-PITTING TOOL. SAMUEL J. DUNKLEY, Kalamazoo, Mich., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Jan. 28, 1919. Serial No. 273,590. 1 Claim. (Cl. 146—6.)



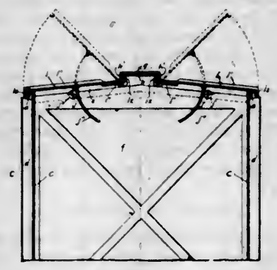
In a pitting or coring tool, the combination of a suitable handle, an axially disposed driving shaft therein, a head on the handle with a transversely disposed shaft, a hollow conical cutting tool with shank from the apex and with peripheral cutting edge beveled from the outside carried by the said driven shaft, coacting substantially as described for the purpose specified.

1,374,289. PARING AND PITTING KNIFE. SAMUEL J. DUNKLEY, Kalamazoo, Mich., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Jan. 28, 1919. Serial No. 273,591. 1 Claim. (Cl. 146—6.)



In a paring and pitting knife, the combination of a handle, a slide axially disposed within the handle and a means to reciprocate the slide, and a curved knife axially disposed to said handle and carried by said slide and adapted to be reciprocated thereby, as specified.

1,374,290. PITTER-KNIFE. SAMUEL J. DUNKLEY, Kalamazoo, Mich., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Jan. 28, 1919. Serial No. 273,594. 1 Claim. (Cl. 146—6.)



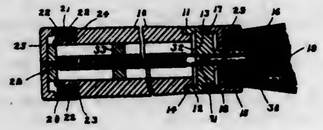
In a pitting knife, the combination of a hollow handle, a reciprocating bar disposed longitudinally thereof, with an armature thereon, electro-magnets disposed to act upon the said armature alternately to cause vibration, a fork on the end of said handle, a rocker pivoted between the arms of said fork and connected to said reciprocating bar, and a curved blade carried by the said rocker, the blade being the arc of a circle, the center of which is the pivot of oscillation, all coacting substantially as described for the purpose specified.

1,374,291. MIXING-TANK. SAMUEL J. DUNKLEY, Kalamazoo, Mich., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Jan. 28, 1919. Serial No. 273,600. 6 Claims. (Cl. 23—31.)

3. The combination of a mixing tank, a screen partition therein to separate a portion therefrom, a discharge pipe with valved connections at the bottom and at one side of the tank for discharging the contents of the tank, and a drum with open top side and ends on a supporting cradle, coacting as specified.

1,374,292. FREIGHT-CAR. HARRY M. FARRAND, Cleveland, Ohio. Filed July 20, 1917. Serial No. 181,758. 17 Claims. (Cl. 105—377.)

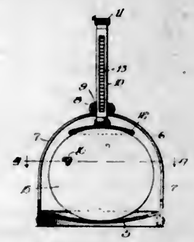
2. In a top-dumping car, the combination with a carbody affording substantially unobstructed sides, of roof-



sections having down-turned edges hinged near the center of the car and extending beyond and interlocking with its sides, and selective individual elevating and locking mechanism respectively associated with the roof-sections upon either side of the car, adapted alternatively to raise, lower and lock said sections as required, substantially as set forth.

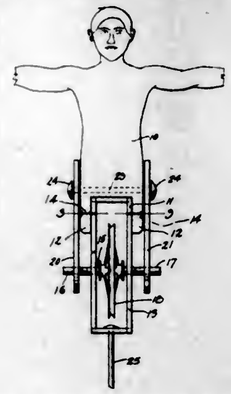
1,374,293. WIRELESS DIRECTION-FINDER. REGINALD A. FESSENDEN, Chestnut Hill, Mass. Filed July 28, 1919. Serial No. 313,726. 1 Claim. (Cl. 250—11.)

In the art of direction finding, the method of determining the direction of a source of radiant energy from an observing station, which consists in taking a plurality of observations at the observing station, at different wave frequencies of the energy emitted from the radiant station, of the direction of the waves received from said radiant station, and from the amount of the discrepancy between said observations, determining the amount of bending, of said waves and the true direction of the radiant station.



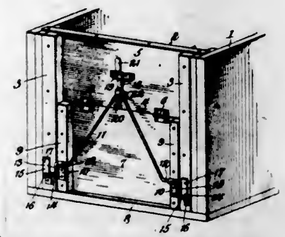
1,374,294. FOUNTAIN-BRUSH. RICHARD J. D. FISHER, Philadelphia, and ISABEL DE A. HOLT, Mount Airy, Pa. Filed Jan. 24, 1921. Serial No. 439,461. 5 Claims. (Cl. 15—50.)

1. A fountain brush comprising a reservoir, a closure at one end of said reservoir including a feed-tube having spaced valve seats therein, a brush adapted for fitment on said closure, spiral grooves formed on the other end of the reservoir and interrupted at intervals, a threaded rod axially mounted in the reservoir, said rod including spaced valve portions for coöperation with the aforesaid valve seats, a follower on said threaded rod and a manipulating cap having inwardly projecting pins for engagement in the spiral grooves, said cap being adapted when turned in one direction to intermittently open the valves for feeding material from the reservoir to the brush and when turned in the opposite direction to lock the valves closed upon their seats.



1,374,295. PNEUMATIC JACK. LOUIS A. FLEURY, Indianapolis, Ind. Filed Apr. 28, 1919. Serial No. 293,235. 3 Claims. (Cl. 138—9.)

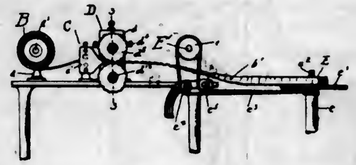
3. In a lifting jack, the combination, of a base, a frame secured thereto, a single substantially spherical collapsible chamber mounted on said base and within said frame, a lifting member extensibly and retractably mounted in



said frame and seated on said spherical chamber, and means for controlling the movement of said lifting member.

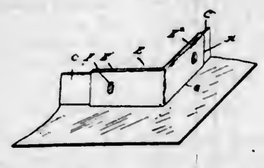
1,374,296. FIGURE WHEELED TOY. HARRY E. GREEN, Hampton, New Brunswick, Canada. Filed July 17, 1919. Serial No. 311,589. 3 Claims. (Cl. 46—45.)

1. In a toy, the combination, of a body, simulating a human torso provided with a recess extending upwardly thereinto from its lower end, a supporting frame extending into said recess, a crank axle rotatably carried by said supporting frame, and having crank portions on each end, a wheel mounted on said crank axle for rotating the crank axle, legs for said body connected to the front portions of said axle, said legs provided with inclined slots in their upper portions opening out to their upper ends, a pin extending transversely through said body and engaging through said slot to connect the legs to the body for permitting limited oscillatory movement of the legs upon rotation of the axle.



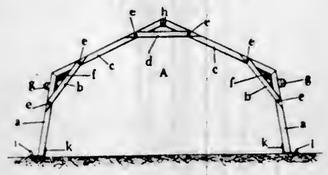
1,374,297. WAGON END-GATE. JOHN GROSS, Carroll, Iowa. Filed May 24, 1919. Serial No. 299,456. 5 Claims. (Cl. 296—51.)

1. An end gate structure comprising a hinged gate-board, a latch above the gate-board, and means on the



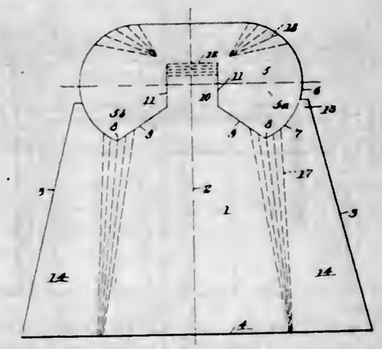
gate-board for locking the same in closed position or for sustaining the same in wide-open position, said means being engageable with one end of the latch when functioning as a lock and being engageable with the opposite end of the latch when functioning as a support.

1,374,298. MACHINE FOR CORRUGATING RADIATOR-PLATES. VITA HABIB and LEON BENMAYOR, Cincinnati, Ohio. Filed Nov. 1, 1919. Serial No. 335,070. 2 Claims. (Cl. 153—77.)



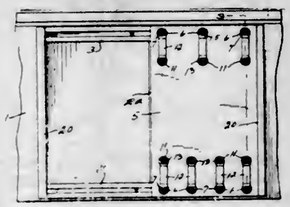
2. A machine for corrugating automobile radiator plates comprising a corrugating mechanism and a guide mechanism, the corrugating mechanism consisting of rolls built up by a series of corrugating disks, and the guide mechanism consisting of parallel plates adapted to support a width of radiator plate material between them, and means for adjusting the plates.

1,374,299. ROOFING-SHEET. DAVID W. HAWKSWORTH, Detroit, Mich., assignor to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Filed June 21, 1919. Serial No. 305,790. 4 Claims. (Cl. 105—377.)



3. The combination with a roofing sheet having an aperture therein, of upstanding bent flanges on angling sides of said aperture, said flanges being severed from each other at the corner, and a complementary corner section overlapping the adjacent upstanding flanges and mechanically locked thereto, said section being soldered at its edges to form a water-proof joint.

1,374,300. TENT OR THE LIKE. RENÉ ACHILLE HENRY, Paris, France. Filed June 26, 1919. Serial No. 306,988. 2 Claims. (Cl. 135—4.)

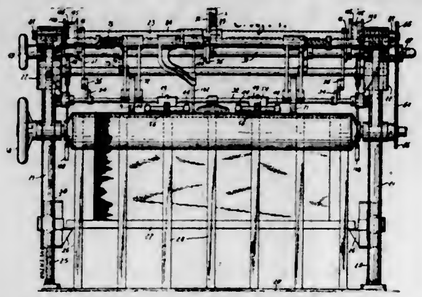


2. A tent having a series of similar truss members each comprising a pair of posts, a pair of rafters, angle braces connecting adjacent posts and rafters and a tie beam connecting the rafters all permanently jointed together so as to be capable of folding against each other, fixed hooks for connecting the posts and rafters when the truss is erected, fixed bolts on the posts, and connecting straps having slots for engaging the said fixed bolts so as to retain the trusses in the erected position.

1,374,301. RAINCOAT. FRANK W. HOWARD, New York, N. Y. Filed Oct. 16, 1919. Serial No. 330,970. 6 Claims. (Cl. 2—60.)

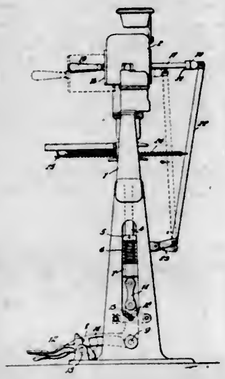
1. A rain-coat having an armless skirt-portion with a back extending upwardly at the rear, said skirt-portion having a pair of forwardly disposed flaps overlapping each other at the front lower portion, and having inclined forward edges diverging from each other from an elevated point at the front of the garment whereby an increased width of overlap of said flaps is produced at the lower edge of the skirt-portion, a cape having two front flaps and a collar connecting with said back at the upper end thereof whereby the rear portion of the cape is suspended from said collar, said skirt-portion having forward extensions extending upwardly under said cape and attached respectively to the front flaps of said cape, said skirt-portion having plaits at the sides thereof, and a cord passing around the outer side of the skirt at said plaits.

1,374,302. HANGER FOR CAR-DOORS. CHARLES H. JORDAN, San Antonio, Tex. Filed Dec. 15, 1920. Serial No. 431,030. 3 Claims. (Cl. 16—7.)



1. In a car door hanger, the combination with upper and lower channel guides, of a door arranged adjacent the door opening of the car, journals adjacent the upper and lower parts of the door and extending transversely at right angles thereto, said journals having inwardly and outwardly extending parts, rollers or wheels mounted on the inwardly extending parts, means for holding the wheels or rollers thereon, straps connected to the outer face of the door and having their ends engaged with the end portions of the outwardly extending parts of the journals, sleeves mounted on the outwardly extending parts under the extremities of the straps, and means such as nuts engaging the extremities of the outwardly extending parts to hold the straps and sleeves in position, thereby reinforcing the journals rigidly at right angles to the door.

1,374,303. PAPER-FEEDING MACHINE. JOSEPH KLEIDMAN, New York, N. Y. Filed Jan. 24, 1918. Serial No. 213,546. 17 Claims. (Cl. 271—43.)

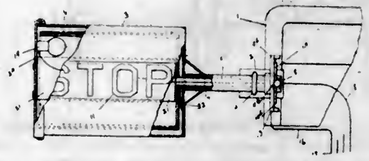


4. In a machine for feeding sheets of paper from a pile, the combination with a frame having a bodily motion to

and from the front edge of the sheets, of a shaft oscillatably mounted on said frame, a roller on said shaft adapted to engage the sheet to be fed on the feeding

stroke of said frame, a block attached to said shaft, and means for causing said block to engage said sheet at a predetermined point from the front edge of the latter.

1,374,304. WORK-HOLDER FOR SMALL PRESSES. GEORGE N. LINK, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed May 7, 1919. Serial No. 295,284. 4 Claims. (Cl. 68—9.)

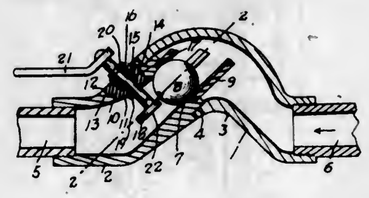


2. A pressing machine, comprising a stationary pressing head, a coöperating bed vertically movable beneath the same, a work holding table movable relatively to said bed into and out of registering relation with said head, and yielding means normally moving said table to said latter position.

1,374,305. ART OF BOOKBINDING. OTTO LÜTOLF, St. Gallen, Switzerland, assignor to Johanna Lütolf-Bill, St. Gallen, Switzerland. Filed Jan. 27, 1920. Serial No. 354,395. 2 Claims. (Cl. 281—25.)

2. The herein described method of wire-stitching sheets or signatures to the cross-tapes, which consists in driving the staple, which comprises a bridge portion and two rectangularly extending shanks, through the fold of the sheets or signatures from within outwardly, sharply inbending the free extremities of the staple shanks at a slightly acute angle and their inbent portion being longer than the combined thickness of cross-tape and sheets, inserting the cross-tape between the shanks, bending down the shanks onto the tape, forcing thereby the said inbent shank extremities through the tape and underlying sheets and causing them to be clenchingly deflected by the staple bridge.

1,374,306. AUTOMOBILE-SIGNAL. DANIEL F. MCGILL, Portland, Oreg. Filed Jan. 29, 1917, Serial No. 145,280. Renewed June 15, 1920. Serial No. 407,260. 2 Claims. (Cl. 177—327.)



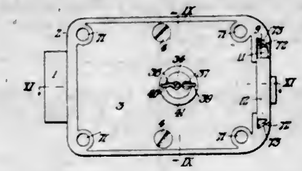
1. A signal device of the character referred to, comprising in combination, an outer casing provided at one end with a supporting arm, and at its opposite sides with display openings, an inner casing provided at one end with a supporting arm extending through the supporting arm of said outer casing and revoluble therein, said inner casing being provided with signal words adapted to be turned into register with said display openings, an electric lamp within said inner casing, a source of electric energy connected therewith, an operating member secured to the arm of said inner casing for turning the same, positioning means adapted to hold said operating member in different positions of adjustment, and means whereby said operating member completes the circuit connections to said lamp when moved into its different signaling positions, substantially as described.

1,374,307. TUBING CATCHER OR HOLDER. WILLIAM H. MCKISSICK, Tulsa, Okla., assignor of one-half to Dunn Manufacturing Company, Oxnard, Calif., a Corporation of California. Filed July 2, 1919. Serial No. 308,079. 11 Claims. (Cl. 105—65.)

1. The combination, with well casing, and a string of tubing in the well casing; of a wedge body mounted in connection with the tubing, a slip mounted in connection with the wedge body and adapted to be expanded thereby into position to engage with the casing and suspend the tubing, a weight slidable upon the tubing beneath and independent of the slip, the weight being frictionally engaged with the casing; whereupon the slip will be held to wedge action by the temporarily arrested weight upon abrupt fall of the tubing.

1,374,308. VALVE. ALBERT HAROLD MACISAAC and THOMAS CHAMPAGNE, Toronto, Ontario, Canada. Filed July 9, 1920. Serial No. 395,151. 1 Claim. (Cl. 251—131.)

A valve casing, comprising a tubular body formed in two portions one of such portions having an upwardly inclined bent end terminating in an exteriorly threaded reduced portion and provided with an internal valve seat within such reduced portion, and the other valve body portion bent upward and then downward and provided at its extremity with an internally threaded portion engaging the aforesaid exteriorly threaded portion, a valve for the seat, and means operating beneath the valve for lifting the valve off its seat against fluid pressure.



1,374,309. MILK AERATOR AND COOLER. CYRUS W. MACKENZIE, Waverly, Ind. Filed Apr. 24, 1920. Serial No. 376,301. 5 Claims. (Cl. 230—27.)

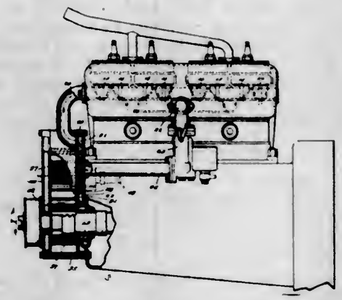
1. An aerating device comprising a pump, outlets projecting from the sides of the pump adjacent one end thereof, an air inlet member carried by and communicating with the pump, and a valve in the pump and the air inlet member.

1,374,310. CHANGEABLE-COMBINATION KEY-LOCK. EDWARD WILLEY MARVEL, Philadelphia, Pa. Filed Jan. 7, 1920. Serial No. 349,930. 22 Claims. (Cl. 70—70.)

22. In a changeable combination lock, the combination with a reciprocatory locking bolt; of tumbler mechanism arranged to detain and release said bolt in accordance with the position thereof; a change element, movable to change the combination of said tumblers; an auxiliary lock normally preventing movement of said change element, and having a key way extending parallel with the direction of reciprocation of said bolt; and a key for said

auxiliary lock arranged to release said change element when inserted in said key way, parallel with the direction of movement of said lock bolt.

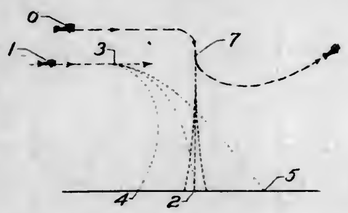
1,374,311. SOFT-COLLAR HOLDER. ALPHA H. METCALF, Attleboro, Mass., assignor to H. A. Allen & Company, Attleboro, Mass. Filed Dec. 31, 1920. Serial No. 434,273. 4 Claims. (Cl. 24—81.)



1. In a soft collar holder, a pair of approximately U-shaped members having hinged knuckles formed on their closed ends which knuckles interengage, and a stud for pivotally connecting the members passed through the closed end of each member and having heads on its ends disposed below the top and bottom edges of the members.

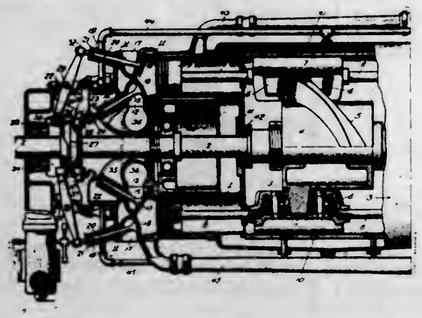
1,374,312. SOFT-COLLAR HOLDER. ALPHA H. METCALF, Attleboro, Mass., assignor to H. A. Allen & Company, Attleboro, Mass. Filed Dec. 31, 1920. Serial No. 434,274. 5 Claims. (Cl. 24—81.)

1. In a soft collar holder, a pair of substantially U-shaped members having their closed ends abutted, said members having intermediate collar gripping parts, and a C-shaped clip tightly secured about said abutted portions and engaged at its ends with the inner side faces of each of the two members.



1,374,313. INTERNAL-COMBUSTION ENGINE. VEON I. MONCRIEFF, Indianapolis, Ind. Filed June 7, 1920. Serial No. 386,958. 5 Claims. (Cl. 123—52.)

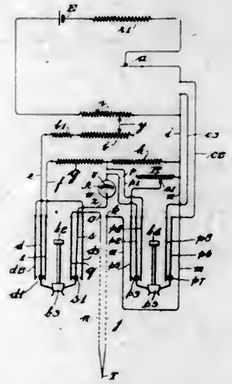
1. In an internal combustion engine, the combination with a cylinder and piston, wherein the cylinder is pro-



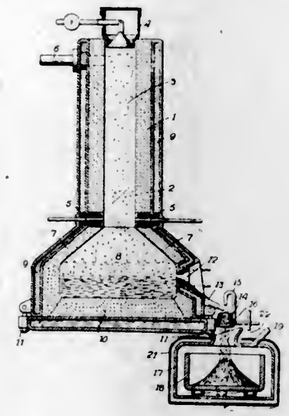
vided with an exhaust port covered and uncovered by the piston, of two inlet valves, means for opening and closing said inlet valves in succession, means for delivering flushing air to one of said valves under pressure, and means for delivering fuel under pressure to the other of said valves.

1,374,314. BOMB-DROPPING SYSTEM. ROBERT V. MORSE, Ithaca, N. Y. Filed Jan. 4, 1918. Serial No. 210,386. 2 Claims. (Cl. 244—1.)

1. The method of dropping bombs from aircraft, which consists in pointing the aircraft downward when substantially over the target and in dropping a bomb while the aircraft is diving rapidly downward, whereby the bomb is dropped with a high initial velocity downward and a comparatively small velocity component in a horizontal direction.



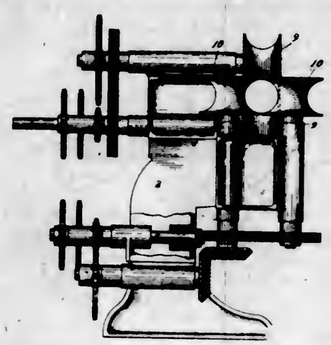
1,374,315. MULTIPLE HEAD AND VALVE-HOUSING. PETER W. MURPHY, Chicago, Ill., assignor to Murphy Engineering Company, Chicago, Ill., a Corporation of Michigan. Filed Mar. 19, 1919. Serial No. 283,481. 12 Claims. (Cl. 123—58.)



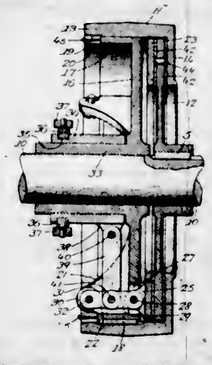
1. In an internal combustion motor, a main shaft, cylinders disposed in a circle around the shaft in parallel relation thereto, pistons for the cylinders operatively connected to the main shaft to cause inter-rotation between the shaft and cylinders, a multiple head closing the cylinders and having intake and exhaust ports for the cylinders, closures controlling the ports, a housing mounted on the head, valve mechanism mounted on the housing and operatively engaging cams on the shaft to operate the closure, and a multiple manifold mounted on the housing and provided with intake ducts extending through the housing to the respective intake ports of the head.

1,374,316. METHOD OF ELECTRICAL MEASUREMENT. EDWIN F. NORTHRUP, Princeton, N. J., assignor to Pyrolectric Instrument Co., Trenton, N. J., a Corporation of New Jersey. Filed Feb. 15, 1919. Serial No. 277,132. 4 Claims. (Cl. 73—32.)

1. The method of determining the value of an unknown electro-motive-force, which consists in passing current through a resistance path, connecting the source of electro-motive-force of unknown value in series with a galvanometer in a shunt on said resistance path to produce a balance between the electro-motive-force of said source and the fall of potential through the part of said resistance path bridged by said shunt, thereafter disconnecting said source of electro-motive-force from said galvanometer, and associating said galvanometer with said resistance path to cause a deflection indicative of the value of the electro-motive-force of said source.



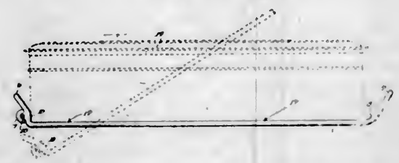
1,374,317. PROCESS AND APPARATUS FOR THE MANUFACTURE OF CARBIDS AND DERIVATIVES THEREOF. FRED E. NORTON, Worcester, Mass. Filed Apr. 1, 1918. Serial No. 226,076. 33 Claims. (Cl. 204—62.)



1. The herein described process for the continuous manufacture of carbids, from a mixture of carbon and the desired oxid or hydroxid, by the combustion of a portion of the carbon in said mixture in the presence of oxygen alone.

1,374,318. MACHINE FOR STRAIGHTENING AND SIZING TUBULAR BODIES MADE FROM PULP. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of New Hampshire. Filed Mar. 1, 1920. Serial No. 362,598. 10 Claims. (Cl. 93—83.)

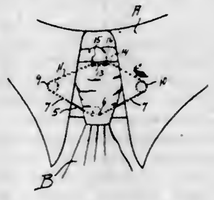
4. In a machine of the character described, a plurality of sets of rolls, the rolls of each set having concave surfaces coöperatively positioned to define a substantially complete circle, said sets of rolls being arranged in sequence with the axes of the circles defined by the coöperating rolls of each set coincident producing in effect a cylindrical passage for tubes of pulp through the machine, said passage being unobstructed and devoid of tube supporting mandrels and the like.



1,374,319. CLUTCH. CARL F. PEARSON, Chicago, Ill., assignor to Chicago Machine & Motor Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1919. Serial No. 321,006. 2 Claims. (Cl. 192—68.)

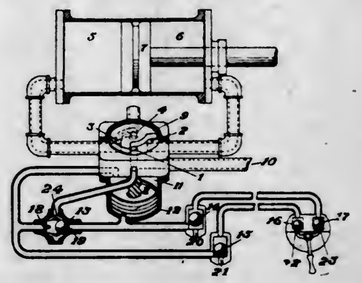
2. A clutch having in combination an axially movable clutch member providing a flange in a radial plane and an integral surrounding pulley flange; a disk, axially adjustable with respect to said clutch member and rotatable therewith; another clutch member between the disk and the first mentioned clutch member; an axially movable ring between the disk and the last mentioned clutch member; a toggle having one link connected to the ring and the other link connected to the disk and a three part threaded ring (20) engaging the inner surface of the pulley flange to adjust the position of the disk (16) with respect to the clutch member (14).

1,374,320. CASKET-CARRIER. CLEOPHAS F. PETTKOSKE, Chicago, Ill. Filed Sept. 20, 1920. Serial No. 411,506. 1 Claim. (Cl. 280—53.)



A casket carrier comprising an elongated rectangular frame, having end members and side members, said end members extending upwardly from the side members and serving as end handles for the casket to be carried thereon, a pair of fixed shoulders formed by bending the side members vertically and outwardly at the junction of one end member and each side member and a wheel pivoted near each shoulder.

1,374,321. METHOD OF RENEWING AND REPAIRING WORN METAL SURFACES. JOHN WILLIAM PHILLIPS, Verona, N. J. Filed June 14, 1919. Serial No. 304,257. 6 Claims. (Cl. 22—203.)

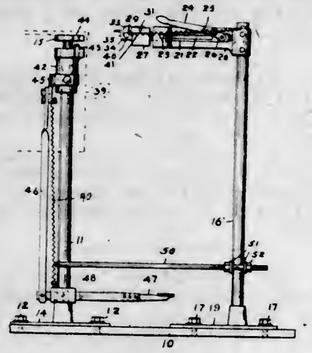


1. The method of filling a cavity in a cylinder or the like which consists in providing the cavity with a metallic lining by electro-deposition, and then filling the cavity by flowing metal into it, substantially as and for the purpose set forth.

1,374,322. NECKTIE-HOLDER. ARTHUR C. POTTER, Mission, Tex. Filed June 10, 1920. Serial No. 388,084. 3 Claims. (Cl. 2—84.)

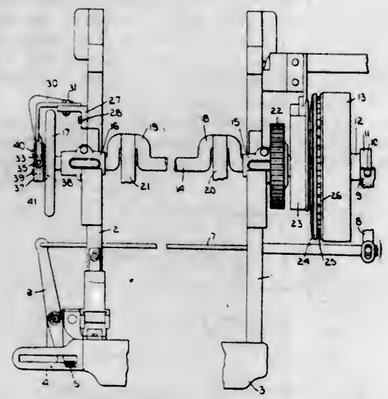
1. A neck-tie holder comprising a length of material having an eye formed in its intermediate portion adapted to engage a collar button, springs formed in the length between said eye and the end portions of the length, said end portions extending in angular relation to said length to provide penetrating means for insertion in a neck-tie.

1,374,323. FLUID-PRESSURE-CONTROL SYSTEM. EMORY LEE RATHBURN, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 367,010. 6 Claims. (Cl. 121—38.)



1. In a fluid pressure actuated device; a system of remote control comprising an automatic main valve unit, suitably located controller valves and a line of hollow conductors connecting the automatic main unit to said remote controllers; such connecting conduit being required to transmit less than 10% of the total fluid supplied to the main unit, through which main unit the fractional supply is derived entirely.

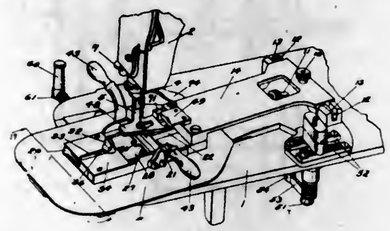
1,374,324. METAL PUNCHING AND BENDING MACHINE. GEORGE F. REZNOR, Mercer, Pa. Filed Dec. 3, 1919, Serial No. 342,296. Renewed Mar. 3, 1921. Serial No. 449,504. 3 Claims. (Cl. 153—1.)



1. A table adapted to contact with the inner walls of a trihedral corner of a hollow body, a clamping-head movable into engagement with a trihedral corner-piece on the said corner, a punch-head insertible between the clamping-

head and the table and carried with the clamping-head, dies carried by the punch-head and arranged to punch holes in two of the sides of said body, and means for

bending up against the inner walls of the said two sides of the body tongues extending from the corner-piece through the said holes while the said clamping-head is in clamping engagement with the corner-piece.

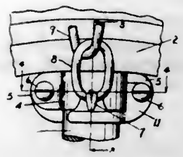


1,374,325. FRICTION-REDUCER FOR LOOM-SHAFTS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 8, 1919. Serial No. 288,458. 8 Claims. (Cl. 64—50.)

8. In a loom comprising a driving shaft having a frictional member thereon, a driving pulley having a complementary frictional member rotatably and slidably mounted upon said shaft, means for shifting said pulley endwise of said shaft to engage and disengage said frictional members; an end thrust bearing for compensating the endwise thrust of said pulley when in driving engagement comprising a hand wheel upon the end of said shaft having a flat race of larger diameter than said shaft, a bracket adjustably secured to the loom side, a thrust block mounted in trunnions in said bracket normal to the axis of said shaft, and antifriction means between said thrust block and said race.

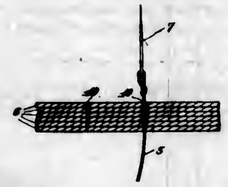
1,374,326. SEWING-MACHINE. ARTHUR ROSENTHAL, Grand Rapids, Mich., and MORRIS G. ROSENTHAL, Cincinnati, Ohio, assignors to The Tag Sewing Machine Company, Grand Rapids, Mich. Filed Apr. 21, 1919. Serial No. 291,444. 21 Claims. (Cl. 112—104.)

8. In a sewing machine, the combination with the bed thereof, of a post on said bed, a supporting slide slotted to engage said post for longitudinal and swinging movement, guide means whereby the said supporting slide may be manually moved in a determined path, a work shoe carried by said slide having a label opening therein, a label holder coacting with said shoe to clamp a label around the edges of the label opening therein, and a feed control means for said supporting slide.



17. In a sewing machine, the combination with a bed, of a work holding means adapted to be manually actuated, and a feed control to secure intermittent movement for said work holding means causing a step by step movement thereof.

1,374,327. CASKET-HANDLE. EDWARD R. SARGENT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Feb. 6, 1919. Serial No. 275,391. 5 Claims. (Cl. 16—103.)

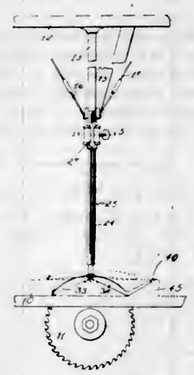


1. A composite arm for casket handles or the like, comprising a main plate, a finishing plate embracing the edge of said main plate to cover the same, and means for securing said finishing plate in place upon said main plate, comprising laterally projecting lugs upon one of said plates, and tongues upon the other plate bent into embracing engagement with said lugs.

1,374,328. ANTISLIP DEVICE FOR VEHICLE-WHEELS. FRANK W. SMITH, Kalamazoo, Mich. Filed June 22, 1920. Serial No. 390,744. 2 Claims. (Cl. 152—14.)

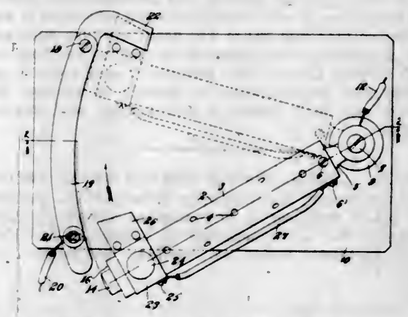
2. In an anti-slipping attachment for vehicle wheels the combination of a pair of spoke clamping members having opposed ears disposed longitudinally of the rim, each member having a central laterally offset hook adapted to receive a link of a tread member, clamping bolts disposed through said clamping member ears, and blade spring guards for said hooks supported by said bolts.

1,374,329. METHOD OF MARKING MATERIALS. NATHAN SMITH, New York, N. Y. Filed Sept. 4, 1919. Serial No. 321,601. 3 Claims. (Cl. 41—26.)



1. A method of marking material for operations to be performed thereon which consists in superimposing a plurality of layers of the material, coating a thread with an adhesive substance substantially unaffected by water, water vapor or heat and contrasting in color with the material, and drawing said thread through the layers of material and thereby leaving a portion of said substance visible on each layer at a point to be marked.

1,374,330. BRUSH. ARTHUR G. STEVENSON, Rochester, N. Y. Filed May 12, 1919. Serial No. 296,386. 10 Claims. (Cl. 132—84.)

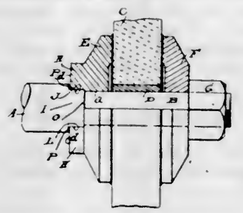


1. The combination with a brush head of a detachable handle formed to provide a reservoir having an opening, a plunger in said reservoir, and operating means for said plunger to dispense the reservoir contents through said opening, said brush head being formed to protect said operating means and close said opening when the head and handle are attached.

1,374,331. SAW-GUARD. FRED STINES, Newton, Iowa. Filed Mar. 18, 1919. Serial No. 283,409. 1 Claim. (Cl. 143—159.)

In a saw guard structure, an upright member having formed at the lower end thereof a downwardly opening U-shaped yoke, the arms of said yoke having at their lower portions inwardly projecting lugs, saw guard members comprising downwardly opening channel-shaped members, each provided at its upper portion with a bearing received between the arms of said yoke and projecting away from the body of the saw guard member, a common bolt extended through said arms, and through said bearings, the walls of said channel-shaped saw guard members, having notches to receive said lugs.

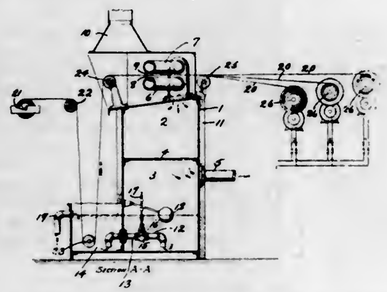
1,374,332. RHEOSTAT. CLARENCE C. STIRLING, Hartford, Conn. Filed Jan. 14, 1920. Serial No. 351,372. 10 Claims. (Cl. 219—51.)



1. A rheostat comprising a movable tubular member, a series of superimposed conducting elements in the tubular member, a plug of conducting material fitted in the tubular member and against which the elements bear, a contact, the tubular element being provided with a movable plug to engage the conducting elements and the contact being formed to cause the movement of the movable plug to effect the compression of the elements on one movement of the movable member and their contraction on another movement of said movable member, a part to arrest the movement of the movable member, and means for by-passing current around the conducting elements when the tubular member is thus arrested.

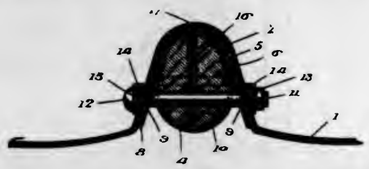
1,374,333. NURSERY-NEST. FRANK W. STOTLER and RICHARD H. JAMISON, Wilkinsburg, Pa. Filed Apr. 10, 1919. Serial No. 288,900. 7 Claims. (Cl. 5—32.)

2. A portable device of the kind described comprising a collapsible frame consisting of a central base member, radial members detachably secured thereto, uprights collapsibly connected to the radial members, and a fabric body having a bottom and sides suspended between and held taut by the said uprights.



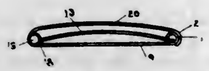
1,374,334. MOUNTING MEANS FOR GRINDING-WHEELS. WILLIAM HENRY SUMBLING, Toronto, Ontario, Canada. Filed Mar. 9, 1920. Serial No. 364,575. 3 Claims. (Cl. 51—168.)

1. In combination, an arbor provided with a reduced bearing end which terminates at its inner end circular in cross-section at an annular shoulder formed in said arbor with its face at right angles to the longitudinal axis thereof, opposite sides of said annular shoulder being cut away longitudinally of the arbor to form two parallel flat



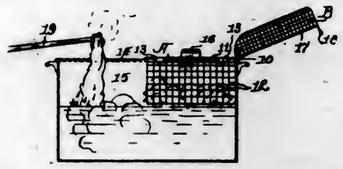
faces which are located outside of said shoulder; an inner circular bored flange mounted on said reduced end and having its inner end cut transversely through at one end of said bore to provide two substantially parallel faces spaced apart which coact with the said faces of said shoulder so that said flange will positively turn with said arbor; a grinding-wheel mounted on said reduced end, and means carried by the outer portion of said reduced end whereby said grinding-wheel is clamped in position, and whereby said inner flange is held against said annular shoulder.

1,374,335. APPARATUS FOR DRYING METAL STRIPS. AUGUST SUNDH, Hastings-upon-Hudson, N. Y., assignor to Sundh Engineering and Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 6, 1920. Serial No. 349,787. 5 Claims. (Cl. 141—1.)



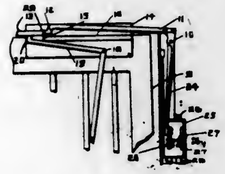
2. In a machine for drying metal strips, the combination of a tank, means for supplying steam under pressure to said tank, means for discharging the steam from said tank, a tank for receiving condensed steam from the first tank, and means for conveying a strip of metal through the condensed steam in the second-named tank and through a blast of steam from the first-named tank.

1,374,336. HANDLE AND BLADE CONNECTION. JOHN S. SURBAUGH, Vincennes, Ind. Filed Dec. 13, 1919. Serial No. 344,684. 13 Claims. (Cl. 306—31.)



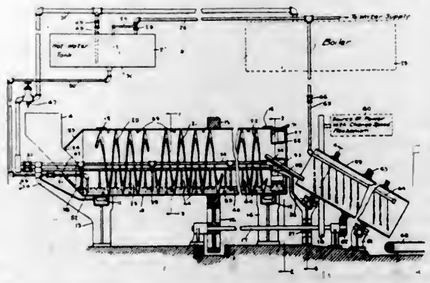
6. A tool including a blade having a roll, a handle member fitted within the roll, and means extending through the sides of the roll and arranged to hold the handle member against the crown of the roll, said means and sides of the roll having coöperating portions operable for shifting said means toward the crown of the roll to clamp the handle member against said crown.

1,374,337. CLASP. FRED M. SWARTZ, Providence, R. I. Filed July 31, 1920. Serial No. 400,426. 1 Claim. (Cl. 24—259.)



In a clasp, a stationary jaw comprising a base, an arched resilient bearing arm, and a circular loop uniting one end of the base with the bearing arm, a loop integral with the other end of the base provided with a slot adapted to loosely receive the free end of the arm, a pivot member embraced by the first loop, a movable jaw, sleeves on the movable jaw embracing the pivot member, and a hook on the movable jaw engaging the second loop.

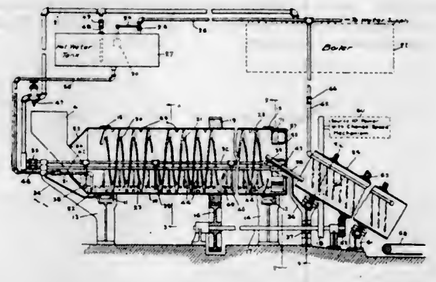
1,374,338. LAUNDRY-STRAINER. LENA J. SYVERSON, Ironton, Minn. Filed June 19, 1919. Serial No. 305,303. 2 Claims. (Cl. 68—30.)



2. A foraminous receptacle formed and arranged to fit into and partially occupy the opening in the top of a boiler and provided with hangers for engagement with the upper edges of a boiler, a foraminous basket-shaped squeezer adapted to fit snugly into the upper portion thereof and a handle upon the upper side of the squeezer for pressing the same upon the contents of said receptacle.

1,374,339. DOOR-INTERLOCK. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed July 19, 1920. Serial No. 397,383. 6 Claims. (Cl. 187—31.)

1. An actuator, means driven by the actuator, a cut-out for the actuator as to the means, and a shiftable member provided with an arm movable to release the member for shifting and simultaneously operating the cut-out, said member carrying means holding the arm in moved position as long as the member is shifted.

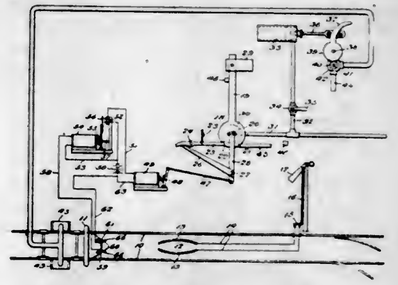


1,374,340. APPARATUS FOR BLANCHING OR COOKING VEGETABLES. EDWARD J. VAUDREUIL, Eau Claire, Wis. Filed Feb. 23, 1921. Serial No. 446,991. 20 Claims. (Cl. 99—2.)

2. An apparatus for cooking vegetables comprising a drum, means for rotating said drum, means for feeding vegetables into and through and from the drum as the drum is rotated, means for introducing hot water at one end and discharging water from the other end of said drum to maintain a moving shallow body of water within the drum, and means for maintaining the temperature of said water at or near the boiling point.

20. An apparatus for cooking vegetables comprising a rotating drum, means for introducing vegetables into the drum, means for causing the vegetables to move along the drum in an extended body or sheet to the discharge end thereof, a steam pipe fixedly supported within the drum having connection with a source of steam supply under pressure, and nozzles extending from said steam pipe for directing blasts of steam under pressure to impact upon said sheet of vegetables, said nozzles being angularly disposed from the vertical in the direction of movement upwardly of said body of vegetables as the drum is rotated.

1,374,341. PROCESS OF BLANCHING OR COOKING VEGETABLES. EDWARD J. VAUDREUIL, Eau Claire, Wis. Filed Feb. 23, 1921. Serial No. 446,992. 9 Claims. (Cl. 99—11.)

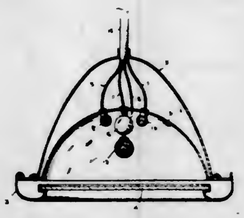


2. The process of cooking vegetables, or the like, for canning, which consists in providing a relatively extended and shallow body of hot water, introducing said vegetables at one end of said body, causing said vegetables to move in and along said body of hot water to the other end thereof in a predetermined period of time sufficient to cook said vegetables, maintaining the temperature of all the water in said body at or near the boiling point throughout said period, discharging the vegetables from the body of water at the end of said period, and introducing hot water at one end and discharging it from the other end of said body at a rate proportional to the quantity of said vegetables in and subject to the cooking action of said body of water.

8. The process of cooking vegetables or the like for canning, which consists in delivering hot water at one point and discharging water at a point removed therefrom so as to produce a slow moving stream of water of a depth and bulk and subject to change at a rate proportional to the amount of vegetables in said stream, maintaining the temperature of said water throughout the extent of the stream at or near the boiling point, introducing said vegetables at one end of said stream, causing said vegetables to move along said stream to the other end thereof in a predetermined period of time sufficient to cook said vegetables, and separating said vegetables from said other end of the stream.

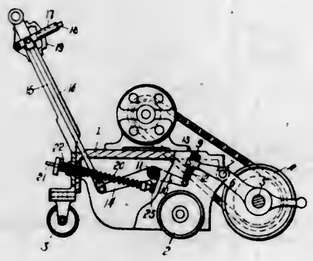
1,374,342. AUTOMATIC TRAIN-STOP. FRANK A. WALTON, Portland, Oreg., assignor of one-half to Fred W. Steiner, Sparks, Nev. Filed Sept. 20, 1920. Serial No. 411,399. 3 Claims. (Cl. 246—187.)

1. The combination with a train control apparatus comprising spaced pivotally mounted contact arms, a bar normally connecting said arms and stationary means located in the path of the switch for engagement with the



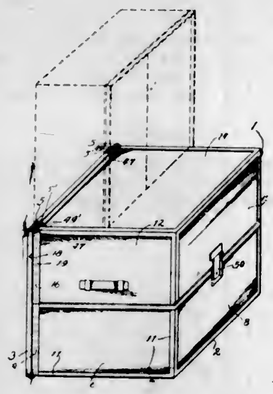
contact arms to operate the latter and disengage the connecting rod to open the switch.

1,374,343. DOLL. DAVID WIENER, New York, N. Y. Filed Dec. 28, 1918. Serial No. 268,590. 1 Claim. (Cl. 46—40.)



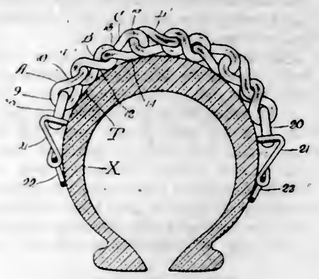
In a stuffed doll, the combination of a stuffed body, a shoulder piece secured thereto, and a head formed separately from the shoulder piece, said shoulder piece being provided with one element of a detachable connection and said head being provided with another element of said connection, said elements coöperating to hold the head rigidly on the shoulder piece so that the head and shoulder piece constitute in effect a single rigid structure, and said elements being readily connectible to permit ready application of the head to the shoulder piece and being readily separable to permit ready detachment of the head from the shoulder piece.

1,374,344. HEADLIGHT FOR VEHICLES. CLARENCE D. WILLIAMS, Mountain Park, Okla. Filed June 30, 1917. Serial No. 177,946. 2 Claims. (Cl. 177—327.)



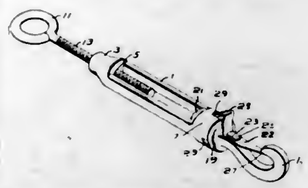
1. A signal headlight including a concaved reflector, a clear electric light bulb within the reflector at the center thereof, electric light bulbs of different colors at the right and left hand sides of the first named bulb for signaling the intentions to turn toward the right or the left and directing the light rays of different colors accordingly, and an electric light bulb of still another color within the reflector below the first named bulb for indicating the intentions to stop the vehicle.

1,374,345. TENSION MEANS FOR FLOOR-SURFACING MACHINES. HARRY H. WOLFE, Toledo, Ohio, assignor to The American Floor Surfacing Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1920. Serial No. 393,875. 4 Claims. (Cl. 51—176.)



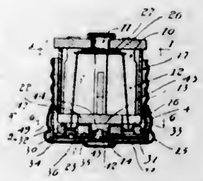
1. In a machine of the class described, a portable frame, a surfacing drum, means carried by the frame and in turn carrying the drum for different movement relative to the frame, a manual control means for the drum carrying means having a lever fulcrumed to the frame, yielding connection between the control means lever and the drum carrying means, and spring pressure means manually adjustable as to its tension and coacting with the control means to communicate a uniform surfacing pressure on the drum in any position of its movement.

1,374,346. CONVERTIBLE TRUNK. WILHELMINE ANDERSON, West New York, N. J. Filed Sept. 2, 1919. Serial No. 321,132. 7 Claims. (Cl. 190—3.)



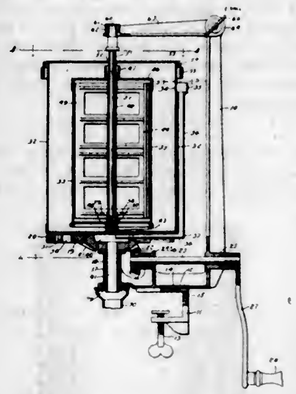
2. A trunk comprising in its construction a pair of opposite main trunk sections each having a front wall, end walls, and a hinged inner back wall adapted to form a section cover, and a hinged outer connecting back member connected at its opposite edges with the hinged margins of said hinged inner back wall members and the corresponding adjacent hinged margins of said main trunk sections, and acting to overlap, engage and inclose and hold the opposite margins of the main trunk sections and hinged inner back wall members in engagement with each other in trunk-closing position.

1,374,347. TIRE-CHAIN. CHARLES S. BARRELL, Boston, Mass. Filed Sept. 12, 1916. Serial No. 119,692. 6 Claims. (Cl. 152—14.)



1. A traction device for tires, comprising a cross chain having links so twisted that corresponding portions of successive links occupy progressive angular positions giving the chain an outer contour for rolling contact with the tire.

1,374,348. SWIVEL-TURNBUCKLE DEVICE. CHARLES S. BARRELL, Boston, Mass. Filed May 11, 1920. Serial No. 380,693. 6 Claims. (Cl. 85—36.5.)

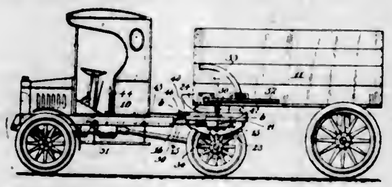


1. A swivel-turn-buckle device for tire chains and other purposes, comprising a nut member having a swivel eye and a threaded eye, an eye member having a shank threaded in the threaded eye of said nut member, and a snap hook having a shank swiveled in the swivel eye of said nut member, said snap hook and nut member having interengaging locking elements automatically to lock said nut member in different positions of rotative adjustment in respect to said hook member.

1,374,349. FUSE-PLUG. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1918. Serial No. 232,437. 21 Claims. (Cl. 200—125.)

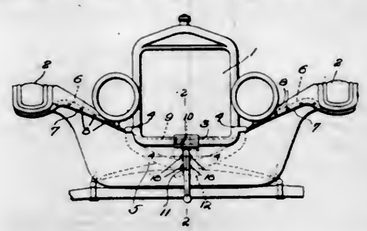
1. A fuse plug comprising a threaded shell contact, a combined fuse and center contact support comprising a cylindrical shell of insulating sheet material telescoping inside said threaded shell contact, and a disk of insulating sheet material extending across the inner end of said insulating shell, a center contact secured to said disk, and a fuse located in said insulating shell and carried by said fuse support and electrically connected with said center contact, said disk being secured to and carried by said insulating shell, and removable therewith as a unit from said threaded shell.

1,374,350. ICE-CREAM FREEZER. ERNEST BLASSER, Allston, Mass., assignor of one-half to George I. Clayton, Boston, Mass. Filed Jan. 10, 1918. Serial No. 211,281. 10 Claims. (Cl. 259—46.)



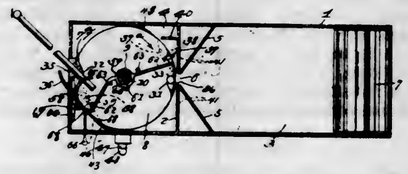
1. In a device of the character described a rotatable outer receptacle, a stationary inner container housed in said outer receptacle and spaced therefrom, a beater rotatably mounted in said inner container, means for engaging said beater with said outer receptacle to rotate therewith, means for rotatably supporting said outer receptacle and said beater and for holding said inner container against rotation, and means for rotating said outer receptacle with said beater.

1,374,351. COMBINED COLLAR-BUTTON AND TIE-SLIP. ORVILLE M. BLOOD, Chicago, Ill. Filed Sept. 23, 1918. Serial No. 255,290. 1 Claim. (Cl. 24—61.)



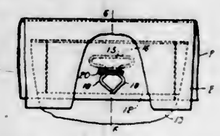
A collar button made from a single strip of sheet metal, said strip being provided at one end with an enlarged depending button head of greater width than the width of the body of said strip and said strip being bent from the upper edge of said head, outwardly, then downwardly, then outwardly, then upwardly the end of said last mentioned upwardly extending portion terminating opposite said button head and being extended outwardly to rest against the outer fold of a turnover collar, substantially as described.

1,374,352. VEHICLE. ANDREW J. BORST, Jr., Buffalo, N. Y. Filed May 28, 1918. Serial No. 236,986. 16 Claims. (Cl. 280—33.1.)



2. The combination of a tractor having a platform normally inclined rearwardly, a coupling member on said platform, a trailer having a skid-like member adapted to be engaged by the upper face of said platform when said platform is moved backwardly underneath the front end of said trailer, said skid-like coupling member being adapted to swing said platform into horizontal position when said platform is moved underneath said trailer, and means for connecting said coupling member.

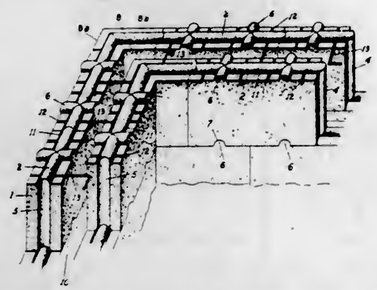
1,374,353. APRON FOR AUTOMOBILES. GEORGE W. BOYNTON, Watertown, Mass. Filed Mar. 24, 1920. Serial No. 368,370. 3 Claims. (Cl. 180—1.)



1. In an automobile, the combination with a radiator having a finish strip at its lower edge disconnected therefrom, of an apron having its upper edge loosely retained between the finish strip and radiator, and a retaining member adapted to be inserted between the radiator and apron and having a U-shaped resilient portion to embrace the upper edge of said apron and said finish strip and hold them in firm contact.

1,374,354. MATCH-SAFE AND COMBINED DISPENSING AND STRIKING MECHANISM THEREFOR. GEORGE H. BRUINGTON, Albuquerque, N. Mex. Filed Aug. 11, 1920. Serial No. 402,883. 14 Claims. (Cl. 206—22.)

1. In a match safe and combined dispensing and striking mechanism therefor, a casing having a match receiving compartment, feeding means for the matches, an intermittent rotating cylinder having crevices for receiving and dispensing matches from the match compartment, means for moving the match into the crevices, means for tilting the match out of the crevice and holding it at one end of the cylinder at a point diametrically opposite where the match first enters the crevice, and means under torsional strain for actuating the cylinder.

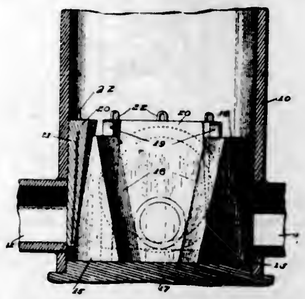


1,374,355. COLLAR-BUTTON. SAMUEL BUTTERWORTH, Newton, Mass. Filed Aug. 30, 1920. Serial No. 406,975. 1 Claim. (Cl. 24—101.)

A back collar-button composed of a length of resilient wire having free ends, and bent to form an elongated loop-shaped foot formed to stand between the plies of the button foot-receiving pocket of a shirt neck-band, above a button-hole in one of said plies, a two-part neck, nar-

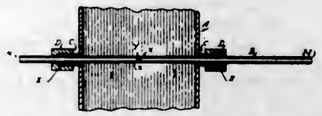
rower than the length of the foot and in the same plane therewith, the neck being formed to enter said button-hole, and a two-part compressible head formed from the free ends of the wire and formed to project downwardly from the neck when the foot and neck are in their operative positions, said ends diverging from the neck to the central portion of the head, and converging from said central portion to the outer extremity of the head, so that the outer portion of the head is wedge-shaped, and adapted to be compressed by contact with the ends of a button-hole, the neck being narrower than the central portion of the head.

1,374,356. REINFORCED CONCRETE CONSTRUCTION. HARRY E. CLOUSER and EDGAR R. THORNTON, Stockton, Calif., assignors of one-fifth to Nettie Harrison, Stockton, Calif. Filed Feb. 9, 1920. Serial No. 357,458. 1 Claim. (Cl. 72—43.)



In building blocks having each a longitudinally and centrally positioned ridge along one horizontal edge and a corresponding groove along the opposite edge, longitudinal channels on each side of the ridges and grooves, transverse connecting channels between the longitudinal channels and the faces of the blocks, the latter being adapted to be laid in horizontally spaced rows to form the building, and Z-shaped metal binders arranged to seat in the adjacent transverse channels of spaced blocks and in the corresponding longitudinal channels thereof.

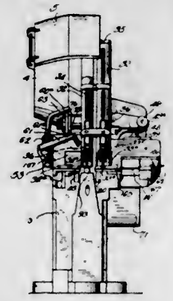
1,374,357. APPARATUS FOR TREATING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla., assignor to The Process Company, Tulsa, Okla., a Corporation of Maryland. Filed May 31, 1917. Serial No. 172,037. 2 Claims. (Cl. 196—5.)



1. An air cooled fractional condenser comprising a drum provided with baffles extending from the top to points near the bottom of the drum, baffles extending from the bottom to points near the top of the drum so as to divide the drum into a series of successive fractional condensing chambers, individual condensate conductors leading from the respective condensing chambers, a collection of approximately horizontal air conducting tubes passing through said baffles and extending from one end of the drum to the other to serve as baffles for the vapor in all of said condensing chambers, the condensing chambers near the discharge ends of said air conducting tubes having a vapor inlet for the admission of vapor to the drum, the condensing chamber near the inlet ends of said air conducting tubes having a vapor outlet for the discharge of vapor from the drum, said parts being so arranged that vapor passing through said vapor inlet will flow back and forth across the outer faces of the air conducting tubes and at the same time flow from one end of the drum to the other in a general direction opposite to the direction of the air currents in said tubes, and a hot air flue arranged to receive the heated air passing from said tubes, said hot air flue being extended upwardly so that the hot air rising therein will create an induced draft in said air conducting tubes.

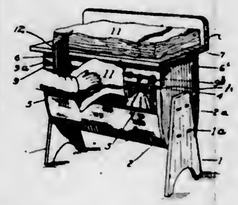
1,374,358. VALVE FOR IRRIGATION PROJECTS. WILLIAM JOHN COLEBURN, Beaufort, N. C. Filed Mar. 31, 1919. Serial No. 286,614. 6 Claims. (Cl. 137—13.)

1. In an arrangement of the character described, a valve box having openings in its walls, for the connection of irrigation tiles, and having internal seat blocks provided with valve seats inclined downwardly and toward the inner surface of the valve box, said seats being arranged at opposite sides of the valve box openings and out of a line connecting the said openings, and valve gates having flat outer faces for movement against the inner surfaces of the valve box around its opening and provided with inclined rear faces for coöperation with the inclined valve seats, for the purpose described.



1,374,359. FLOW-INDICATING DEVICE. ARTHUR L. COLLINS, Santa Cruz, Calif. Filed Aug. 22, 1919. Serial No. 319,081. 3 Claims. (Cl. 73—167.)

1. A tube of uniform diameter and having intermediate its ends a closure plug, there being two openings in the walls of the tube adjacent to and separated by the plug, the two openings being diametrically placed in the walls of said tube, a pipe having diametrically placed perforations provided with stuffing boxes, the tube being inserted through said stuffing boxes.

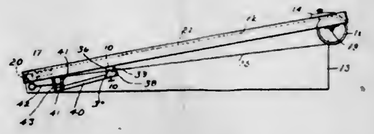


1,374,360. BUTTON-SETTING MACHINE. ADELBERT F. COOK and LLOYD R. REED, Urbana, Ohio, assignors to The W. B. Marvin Manufacturing Company, Urbana, Ohio, a Corporation of Ohio. Filed Aug. 20, 1917. Serial No. 187,170. 12 Claims. (Cl. 218—8.)

2. In a machine of the character described, a movable hopper, a plurality of raceways movable with said hopper, one of said raceways being in communication with the interior of said hopper, stapling mechanism to which said raceways extend, and means for moving said hopper and raceways laterally and also for raising said raceways above said stapling mechanism during such movement to bring one or the other of said raceways in proper feeding relation to said mechanism.

9. In a machine of the character described, a main operating device, wire feeding devices, and button feeding devices, said button feeding devices comprising a rotatable spring-pressed shaft, a button engaging member arranged to engage the top of a button, a detent for said shaft, and connections operated by said shaft whereby an abnormal movement of said shaft to button engaging position throws said wire feeding devices out of operation.

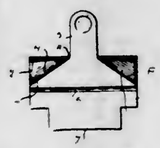
1,374,361. TOWEL-TABLE. JOHN L. COX, San Diego, Calif. Filed Oct. 6, 1919. Serial No. 328,844. 1 Claim. (Cl. 45—32.)



A towel table, including a top member adapted to receive the towels, leg members supporting the same at opposite ends provided with curved portions, a screen secured to said curved portions at opposite ends forming a basket for receiving the soiled towels and a rod pivotally mounted at one end of said table and extending across said table between the top and basket and a lock means for securing the free end of said rod whereby towels may be strung on said rod and taken from said table, used and the end thrown into said basket and their unauthorized removal from said rod prevented.

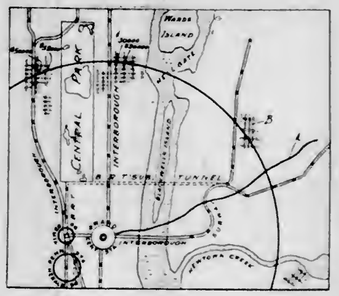
1,374,362. METHOD OF FILLING POROUS MATERIAL WITH LIQUID. CHARLES W. DAVIS, Edgeworth, and WILLIAM S. BROWN, Pittsburgh, Pa., assignors to Standard Underground Cable Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 2, 1919. Serial No. 308,307. 3 Claims. (Cl. 91—68.)

1. The method herein described of filling fibrous material with fluid, which consists in immersing the one in the other, and, as absorption progresses, subjecting the bath to repeated sudden drops in pressure, whereby entangled gaseous bubbles are released and escape from the fibrous material.



1,374,363. DRAWING APPARATUS. GEORGE H. E. DAVIS, Lynn, Mass. Filed Jan. 19, 1920. Serial No. 352,458. 6 Claims. (Cl. 33—80.)

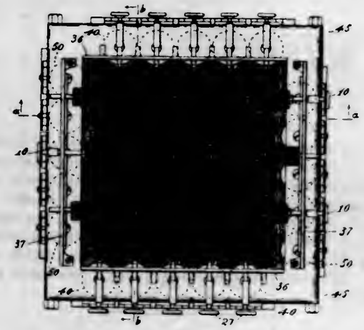
1. In a drawing apparatus, in combination, a drawing-board, a ruler movable on the top surface of the board, a pair of main pulleys, a shaft to which said pulleys are fixed, said shaft being supported by fixed bearings at one end portion of the board, a pair of tension pulleys supported by movable bearings at the opposite end portion of the board, elongated inextensible flexible strips, having end portions coiled on, and positively secured to said main pulleys, and intermediate portions maintained by the tension pulleys in the form of loops or bights, having



upper and lower stretches, the upper stretches extending along the upper side of the board, and clamps carried by the end portions of the ruler and engaging the said upper stretches, said strips, main pulleys, shaft, tension pulleys and clamps constituting a controlling mechanism, adapted to positively maintain a predetermined angularity of the ruler relatively to the board, and to permit movement of the ruler on the board without variation of its angularity.

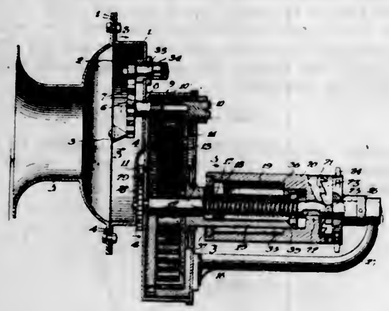
1,374,364. TAIL-HOLDER. THOMAS A. DAVIS, Grandview, Wash. Filed Jan. 11, 1919. Serial No. 270,678. 1 Claim. (Cl. 24—259.)

A tail holder comprising a pair of jaw members, a supplemental jaw projecting from the front portion of each of said jaws in the plane of said jaw, the corner portions at the rear of each of the first mentioned jaw members being extended in angular relation to the jaw and toward the opposite jaw member, and resilient means for connecting said jaw members.



1,374,365. ADVERTISING-CHART. JOSEPH P. DAY, Millburn, N. J. Filed Nov. 24, 1920. Serial No. 426,164. 1 Claim. (Cl. 35—6.)

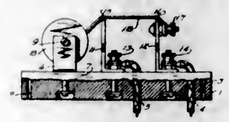
An advertising chart illustrating such localities as the plan of streets of a city with property values at different points indicated thereon having a string attached to a



recognized central point on said chart for showing radial distances of points on the chart from said center and comparing values.

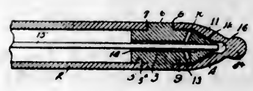
1,374,366. TELEPHONE-SWITCH. GEORGE W. DICKERSON, Galion, Ohio, assignor to The North Electric Manufacturing Company, Galion, Ohio, a Corporation of Ohio. Filed June 26, 1916. Serial No. 105,781. 30 Claims. (Cl. 179—27.5.)

1. In a telephone switch, a plurality of sets of contacts arranged in a row independent of one another, each set of contacts comprising a plurality of flexible springs, a plurality of other contacts arranged in rows, means for operating a row of individual flexible contacts, and means for operating the second mentioned contacts for coöperating with an individual set of flexible contacts independent of the other contacts in the row.



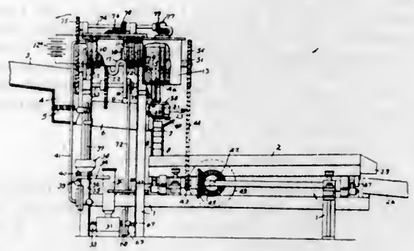
1,374,367. AUDIBLE SIGNAL. ALVIN H. DODD, Chicago, Ill. Filed Dec. 22, 1915. Serial No. 68,206. 6 Claims. (Cl. 116—145.)

1. An audible signal, comprising a vibratable diaphragm, a rotatable member positioned in parallelism with the flat plane of the diaphragm for vibrating the diaphragm, a spring motor from which the rotatable member derives momentum, and a device acting in opposition to the motor to hold the same under restraint.



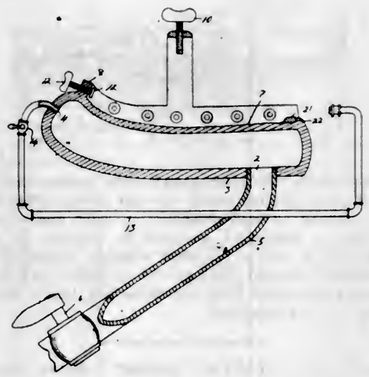
1,374,368. FUSE-WIRE REEL. LE ROY DRAKE, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,695. 2 Claims. (Cl. 200—125.)

1. In a device of the type described, the combination with an insulating base, two L shaped members mounted thereon, each having fuse receiving means in its free end, one of said members having a binding post mounted thereon adjacent to its fuse receiving means, of a fuse holding reel on which a fuse wire may be wound, a section of said



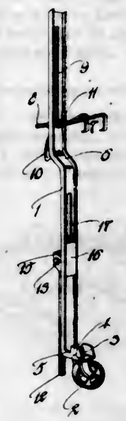
fuse wire being adapted to be held by said means, with its free end secured by said binding post, and means, frictionally to hold said fuse wire in said receiving means, all substantially as described.

1,374,369. TOOL FOR PIERCING BILLETS. LUTHER D. EARL, Shelby, Ohio. Filed Mar. 29, 1919. Serial No. 286,202. 9 Claims. (Cl. 78—9.)



1. In a tool of the character described, the combination of a hollow bar or shank, a chambered point at the forward end of said bar or shank, a fluid supply extending to the chamber of said point, and a plurality of passageways in said point communicating with the chamber and conducting fluid therefrom in cooling relation to said point.

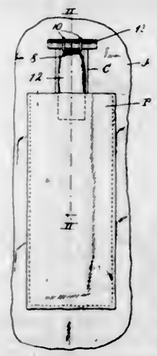
1,374,370. ELECTROCHEMICAL GOLD-SEPARATOR. HERBERT P. EWELL, Los Angeles, Calif. Filed Nov. 7, 1918. Serial No. 261,443. 5 Claims. (Cl. 83—67.)



1. In a gold separator, the combination with a gold amalgamating chamber and means for continuously feeding ore pulp into said chamber, of a chamber for forming liquid sodium amalgam, means for continuously supplying the liquid amalgam from the last named to the first named chamber, a shaking pan receiving the gold amalgam, surplus mercury and tailings from the gold amalgamating chamber, a well draining the gold amalgam and mercury from said pan, means for separating the gold amalgam from the mercury, and means for returning the mercury to the chamber in which sodium amalgam is formed.

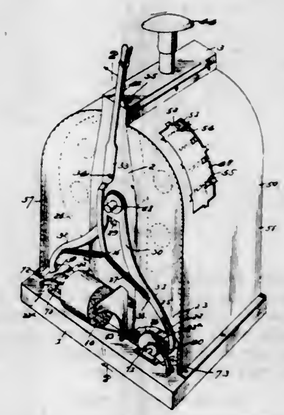
1,374,371. FOOTWEAR-VULCANIZER. WADE H. FOSTER, Bad Axe, Mich. Filed May 5, 1919. Serial No. 294,755. 14 Claims. (Cl. 18—17.)

1. In a vulcanizer, the combination with a hollow work support, adapted for the passage of a hot fluid, of a pliable hollow member engaging the work and also adapted for the passage of a hot fluid.



1,374,372. CARRIER. LOUIS L. FREUND, Spokane, Wash. Filed Apr. 19, 1920. Serial No. 375,026. 4 Claims. (Cl. 294—15.)

1. The combination in a carirer as described comprising a plurality of units, each unit including an upright, slotted post having a foot and a caster journaled therein, a hook fashioned at the top of the foot, a screw shank in the slotted post and an integral hook therefor, and meaus for clamping the shank to the post for the purpose described.

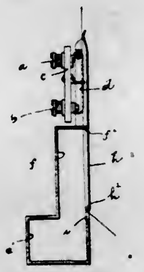


1,374,373. RULE-HOLDER. JOHN HERICK, Kansas City, Mo. Filed June 1, 1920. Serial No. 385,411. 4 Claims. (Cl. 2—151.)

1. A safety device for holding a rule in the pocket of a garment consisting of a suitable length of elastic adapted to be secured to the garment, and a clamp swingably con-

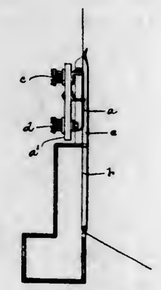
nected to said elastic and adapted to engage over the upper end of a rule to hold the same in the pocket.

1,374,374. LABEL PRINTING OR STAMPING MACHINE. HUGH F. HURST, Richmond, Va. Filed June 3, 1920. Serial No. 386,341. 21 Claims. (Cl. 101—102.)



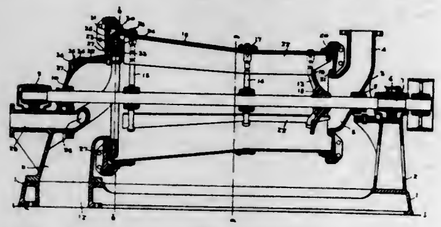
1. In a label printing machine, a frame having a base, a platen roller journaled in bearings of the base, a label guide positioned over the platen roller and provided with upper and lower openings and through which the label passes, said guide being constructed of a single piece of sheet metal bent upon itself causing to be formed the upper and lower parts which have said openings, a printing ribbon extending across the guide over the face of the label, and a printing member movable in guides of the frame and adapted when depressed to cause an impression of a type bar on the label.

1,374,375. SINGEING APPARATUS. THEODORE F. HUSSA, Montclair, N. J. Filed Jan. 15, 1918. Serial No. 211,917. 8 Claims. (Cl. 28—7.)



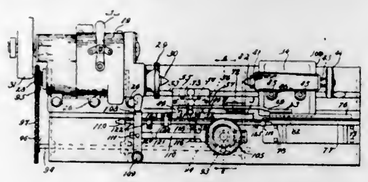
1. A singeing apparatus embodying therein an extended base, a troughed resistance member mounted thereon, and having its axis extending substantially vertically, a casing inclosing said resistance member having air inlet passages adjacent one end, and extending substantially

the full length, of said troughed member, and an air outlet passage adjacent the other end of said member, said casing being so formed as to direct air across the top edges of said troughed member, a conduit com-



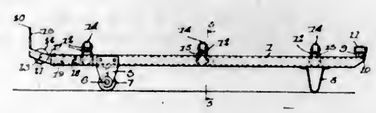
municating with the air outlet passage of said casing, and means creating sub-atmospheric pressure in said conduit whereby an induced current of air at a low rate of flow, is created about said resistance member.

1,374,376. METHOD OR ART OF SINGEING THREADS. THEODORE F. HUSSA, Montclair, N. J. Filed Jan. 15, 1918. Serial No. 211,918. 4 Claims. (Cl. 28—7.)



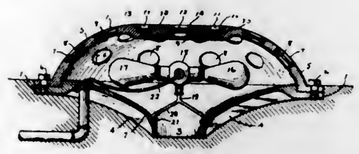
1. The herein described method or art of singeing threads consisting in passing a thread in close juxtaposition to a vertically extending incandescent, electrical resistance member while causing an induced current of air having a low rate of flow to pass axially of, and transversely about, said resistance member.

1,374,377. CENTRIFUGAL PULP-THICKENER. JULIUS T. JAEGER, Iroquois Falls, Ontario, Canada. Filed July 14, 1919. Serial No. 310,645. 8 Claims. (Cl. 233—21.)



2. A centrifugal pulp thickener, comprising, a rotatable tubular member flaring outwardly toward the discharge end, a centrally located stationary conduit adapted to conduct the waste water from the center of said tubular member, and means rigid with said stationary conduit for conducting the pulp from the inner perimeter of the inner rotatable member at its outwardly flaring end.

1,374,378. LATHE. JOHN E. JOHNSON, Elgin, Ill. Filed May 24, 1919. Serial No. 299,660. 14 Claims. (Cl. 82—32.)



1. In a lathe, the combination with a lathe bed, of a back frame projecting above the bed at one side, and a track arranged on said extension at right angles to the lathe bed, a head-stock mounted in position to travel over the lathe bed, a tail-stock slidably connected with the vertically exposed track on the extension, and projecting over and spaced from the lathe bed, and a carriage movable on said lathe bed.

1,374,379. HAND-TRUCK. HERBERT F. KLEIN, Deerfield, Wis. Filed May 15, 1920. Serial No. 381,603. 6 Claims. (Cl. 280—56.)

4. A hand truck comprising side frame members, cross members joining said side frame members, a plurality of members pivotally joined to said cross frame members and each arranged to move about an axis substantially parallel to the longitudinal axis of said truck, and pairs of rollers carried by each of said pivotally mounted members, said rollers having their axes parallel to the pivotal axes of said members.

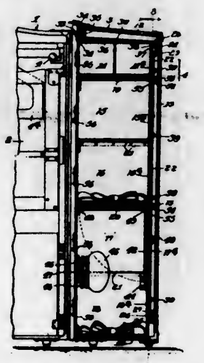
1,374,380. TRAFFIC-INDICATOR. JOHN H. LEHMAN, Elkhart, Ind.; Bessie A. Lehman administratrix of said John H. Lehman, deceased. Filed Dec. 22, 1919. Serial No. 346,511. 2 Claims. (Cl. 240—1.)

1. In a traffic indicator, a hollow body member provided with a domed top portion, said domed top being provided with a plurality of windows and an opening adapted to serve as a hand-hole, said opening being relatively smaller than said domed top, said body being provided also with an opening in its bottom wall adapted for draining moisture from the interior of said body member; a hand-hole cover plate; means connecting the cover plate with the domed top for detachably securing the former to the latter; and a light mounted within said body member.

1,374,381. CONNECTING RAILS. JOHN C. H. LUBKEN, Westmont borough, Pa. Filed Dec. 12, 1919. Serial No. 344,423. 17 Claims. (Cl. 173—262.)

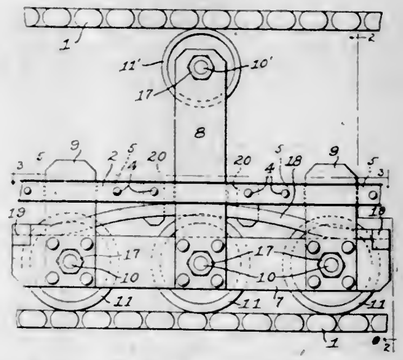
7. A rail joint comprising a pair of angle bars secured thereto, portions of the lower flange of one of said bars

being bent upwardly away from the rail flanges while integral with the other portions of said splice bar flange, an electrical bond secured within holes provided in the



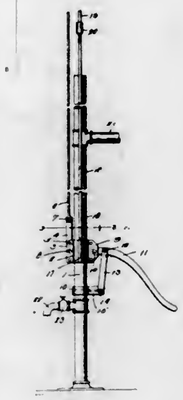
rail flanges adjacent to the bent-up portions of said splice bar flange and fused or welded therein by means operating within the spaces between the splice bar flange and the rail flanges.

1,374,382. AIR-CHILL FOR VEHICLE-TIRES. ROBERT W. MELLOR, Girard, Ohio. Filed Nov. 3, 1919. Serial No. 335,383. 2 Claims. (Cl. 152—13.)



1. In a device of the class described an outer casing, a corded casing within the outer casing the corded casing constructed of large and small cords, the large cords running transversely of the inner portion of the casing, while the small cords extend lengthwise with the circumference of the casing, a perforated partition located between the inner tube and the corded casing substantially as described for the purpose set forth.

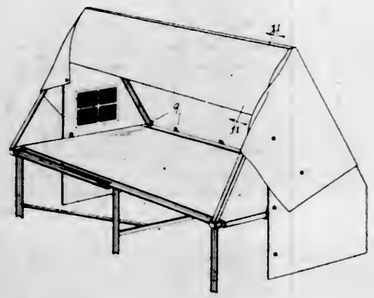
1,374,383. DRAWER-LOCKING MECHANISM FOR TRUNKS. FRANK W. MEYER, Oshkosh, Wis., assignor to The Oshkosh Trunk Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Sept. 14, 1918. Serial No. 254,027. 5 Claims. (Cl. 45—94.)



1. In a trunk having a section containing drawers, a locking bar located to the rear of said drawers and adapted to be moved into and out of locking engagement with locking members on said drawers, a rotatable rod for moving said bar, and means including a lost motion construction connecting said rod with said bar.

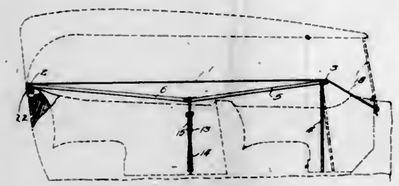
1,374,384. TRACTOR-CARRIAGE. FRANK MOON, Oakland, Calif., assignor to Moon Tractor Co., San Francisco, Calif., a Corporation of California. Filed Oct. 29, 1919. Serial No. 334,303. 3 Claims. (Cl. 305—9.)

1. In a tractor having an endless track-chain and a horizontal frame member provided with a vertically disposed guide-way; a carriage comprising a horizontal member disposed beneath and spaced from said frame member, a vertical member secured to said horizontal member and passing freely through said guide-way, a weight-supporting roller carried by the lower portion of said vertical member and adapted to operate on the lower run of the track-chain to support the carriage, an idler roller carried by the upper portion of said vertical member and adapted to support the upper run of the track-chain, and a resilient connection between said carriage and said frame member for supporting the latter from the former.



1,374,385. ATTACHMENT FOR WINDMILL-OPERATED PUMPS. WILLIAM R. NICHOLSON, Beaver City, Nebr., assignor of one-half to C. E. V. Smith, Beaver City, Nebr. Filed July 21, 1919. Serial No. 312,245. 2 Claims. (Cl. 103—62.)

1. In an attachment for windmill operated pumps, the combination with a pump, of a vertically slidable sleeve mounted on the pump, said sleeve having flanges, a pump handle pivotally mounted between the flanges, a collar attached to the pump shaft below the slidable sleeve, said sleeve having an extended ear, having a plurality of openings therein, a link adjustably connecting the pump handle to the extended ear of the aforesaid collar, means



for connecting the slidable sleeve to the reciprocating piston rod and means attached to the slidable sleeve and operatively connecting same with the windmill, substantially as and for the purpose described, whereby the device may be operated either by power or manually.

1,374,386. COLLAPSIBLE ROOFED COT. ISAAC S. PURCELL, Oak Park, Ill., assignor to Tentobed Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1916. Serial No. 134,854. 3 Claims. (Cl. 5—5.)

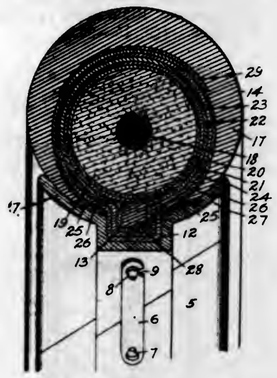
1. The combination with a bed-bottom frame having upwardly open sockets, of a tent-support including an angle-steel ridge member and frame-members supporting the ridge member, each frame-member comprising a pair of angle-steel bars pivoted respectively to the two webs of the ridge member at the same end of the latter, and each of these bars having at its free end one web thereof projecting beyond the other web to afford a projecting tip entering one of the said sockets, the end of the said other web affording a shoulder to limit the entry of the tip into the socket.

1,374,387. FOLDING COT. ISAAC S. PURCELL, Oak Park, Ill. Filed Sept. 25, 1918. Serial No. 255,696. 10 Claims. (Cl. 5—72.)

1. In an automobile cot, a frame having sides and ends, a bed bottom stretched between the ends, the sides having hingedly connected sections, separate means to secure the ends to extraneous supports, floor-engaging means to engage the hinged connections to restrict downward movement of the same, and floor engaging means engageable with one of the ends to raise the latter and thereby increase the tension on the bed bottom after initial tensioning thereof.

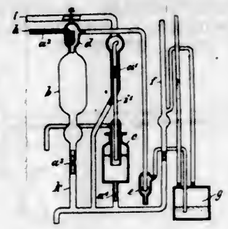
1,374,388. FINGERING ATTACHMENT FOR STRINGED INSTRUMENTS. CHARLES H. REED, San Francisco, Calif. Filed June 14, 1918. Serial No. 239,922. 3 Claims. (Cl. 84—315.)

2. A fingering attachment for stringed musical instruments having a neck including a transposing keyboard, means for attaching the keyboard to the neck of the instrument, keys on said keyboard for engaging the strings of the instrument, centering keepers yieldingly mounted



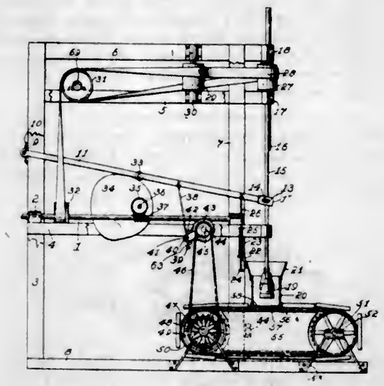
in the keyboard and provided with notches in their lower edges to receive and center the strings with relation to the keys.

1,374,389. CAN. GEORGE T. REICHENBACH, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,892. 3 Claims. (Cl. 220—42.)



1. A can having an outwardly and downwardly directed flange at its top, and a cover having a depending wall whose maximum internal diameter is less than the normal maximum external diameter of said flange, the inner periphery of said wall being concaved from top to bottom and the outer end of said flange contacting with and being displaced by said cover wall when said cover slides over said flange, such displacement maintaining contact between said flange and said cover wall.

1,374,390. VEHICLE-TIRE. GEORGE W. RODE, Jr., Brooklyn, N. Y. Filed Apr. 22, 1920. Serial No. 375,720. 4 Claims. (Cl. 152—5.)

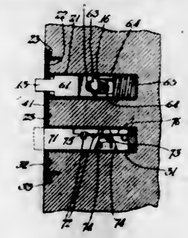


1. A tire comprising an outer shoe of resilient material, a core of solid rubber located in said shoe and arranged concentrically thereof and consisting of a continuous strip, a body of soft cellular-yieldable-material between the core and the walls of the shoe, a bead, and fabric materials separating the walls of the shoe from said cellular material and having interlocked connection with said bead, all of said parts vulcanized together.

1,374,391. APPARATUS FOR ANALYZING GAS. OLOF RODHE, Stockholm, Sweden, assignor to Aktiebolaget Ingeniörsfirma Fritz Egnell, Stockholm, Sweden. Filed Jan. 29, 1917. Serial No. 145,205. 2 Claims. (Cl. 23—3.)

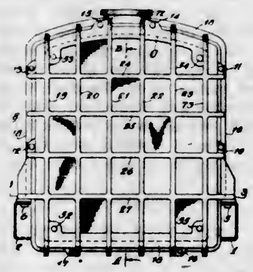
1. In a gas analyzing apparatus in which gas is physically or chemically transformed, a pump, a measuring vessel, fluid piping communicating with said pump and said vessel, and contractions in portions of said piping.

1,374,392. MACHINE FOR FORMING HOLLOW CONCRETE BLOCKS. FRANK A. ROOSA, Orange township, Blackhawk county, Iowa, assignor of one-half to John L. Zeidler, St. Joseph, Mo. Filed Mar. 18, 1920. Serial No. 366,843. 4 Claims. (Cl. 25—36.)



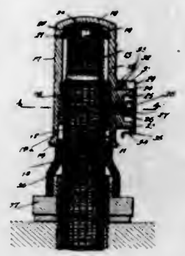
1. In a machine of the character described, an open mold, and a plurality of rotatable spaced troweling bodies movable therethrough, the said bodies being positioned in different relative planes of rotation.

4. In a machine of the character described, an endless carrier, a plurality of orificed pallets mounted thereon, an open top and bottom mold positioned on a pallet, a plurality of rotatable reciprocatory troweling former-heads movable back and forth through said mold and the orifices in the pallet on which the mold is supported, and mechanism to impart a step-by-step movement to said endless carrier, acting to produce each movement at the end of the return movement of the former-heads through said mold.



1,374,393. LOCK. FLOYD F. RORABECK, Azusa, Calif. Filed Mar. 7, 1918. Serial No. 221,081. 2 Claims. (Cl. 70—29.)

1. A lock comprising a latch mechanism, a bolt mechanism, each of said mechanisms being mounted inside a cylindrical tube of proper size to slip readily inside a standard wooden door, a flat latch plate rigidly secured to the tube which carries the latch mechanism, a flat bolt plate rigidly secured to the tube which carries the bolt

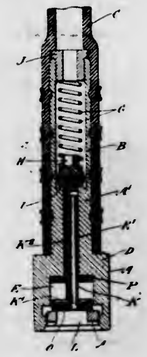


mechanism, and a lock plate fitting in the same mortise as said latch and said bolt plate completely hiding and covering said plates.

1,374,394. COMBINED AUTOMOBILE FENDER AND RADIATOR-PROTECTOR. OSCAR A. ROSS, New York, N. Y. Filed Feb. 15, 1919. Serial No. 277,335. 10 Claims. (Cl. 180—68.)

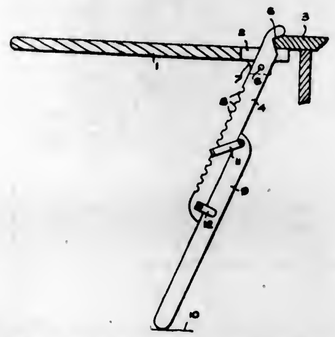
1. In a combined automobile fender and radiator protector, in combination: an automobile frame; a reticulated hollow structure securely attached to said frame, and a radiator supported and entirely protected over its front and rear faces by said structure.

1,374,395. VALVE-CAP. JOHN SCHMIDT, New York, N. Y. Filed Apr. 27, 1920. Serial No. 376,972. 4 Claims. (Cl. 152—12.)



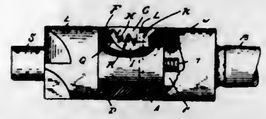
1. An improved cap comprising a tubular body portion having means to engage with the valve stem and being closed at one end, said closed end being provided with a concavity and a groove in the side wall of the body inwardly of the concavity, and an expansible gasket having its inner face substantially flat and adapted to rest on the end of the valve stem and having its outer face rounded on an arc of curvature struck from a radius of lesser length than the radius from which the concavity is struck whereby to provide an annular space about the edge of the concavity to receive the expanded portions of the gasket, the edge of the gasket adapted to fit in said groove.

1,374,396. VALVE-CAP. JOHN SCHMIDT, New York, N. Y. Filed May 28, 1920. Serial No. 384,816. 3 Claims. (Cl. 152—12.)



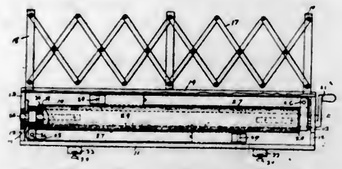
3. A valve cap comprising a tubular body portion provided at one end with a recess, and interiorly threaded to engage a screw threaded valve stem, a tubular extension secured at one end in said recess, a tubular cap member disposed within said tubular extension, having its outer wall spaced from the inner wall of the tubular extension, means to guide the cap member within the tubular extension and acting to maintain the spaced relation between these two parts, spring means disposed in the space between the cap member and tubular extension and engaging said means, said spring means normally holding said tubular cap in retracted position, said tubular cap member adapted to be projected relative to said tubular extension.

1,374,397. INFLATING-COUPLING. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, and HENRY P. KRAFT, Ridgewood, N. J. Original application filed Sept. 7, 1915, Serial No. 49,221. Patent No. 1,304,814, dated May 27, 1919. Divided and this application filed Apr. 2, 1919. Serial No. 286,965. 3 Claims. (Cl. 284—16.)



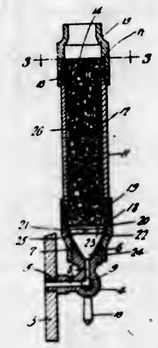
1. An inflating device for pneumatic tires, comprising a casing having a nipple for insertion within the hose, and a foot adapted to project beyond the end of the hose, and of larger diameter, said casing having a valve chamber formed within said nipple, and a lower chamber within said foot, with an intervening contracted passage and a valve seat at the junction of said passage and valve chamber, a check valve and spring in said valve chamber, an unseating member comprising a tubular stem movable in said passage, and a flanged portion movable within the chamber in said foot, and a retaining member closing the lower end of said chamber and having within it an unthreaded opening adapted, when the inflating device is applied to a tire valve, to receive and guide within it the nipple of such valve, whereby by pressing the inflating device endwise against a tire valve, the unseating member is displaced to unseat check valve and admit compressed air to the tire valve.

1,374,398. IRONING-BOARD. WILLIAM GEORGE SEMPLE, North Tonawanda, N. Y. Filed June 21, 1920. Serial No. 390,596. 1 Claim. (Cl. 68—10.)



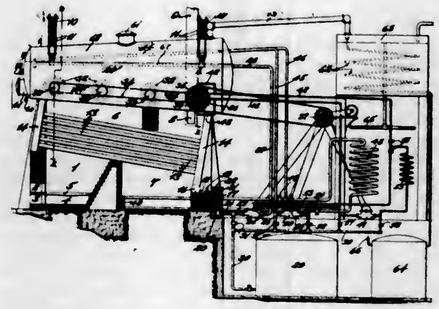
In an ironing board, the combination with the board portion having a longitudinally slotted end, of an upper leg portion having a notched upper end, said upper leg portion extending through the slot in the board portion and hinged to such board portion, guide plates on the sides of the upper leg portion, teeth on one face thereof, a lower leg portion slidably engaging the upper leg portion and a U shaped member hinged to the lower leg portion and straddling the upper leg portion, the cross bar of the U shaped member adapted to engage the respective teeth on the upper leg portion.

1,374,399. CHUCK OR HOLDER. FRANK E. SHAILOR, Detroit, Mich., assignor to George A. Gloor, Detroit, Mich. Filed Oct. 9, 1918. Serial No. 257,511. 8 Claims. (Cl. 279—77.)



1. The combination with a rotary holder having an axial recess, of a dog projecting into said recess and providing a shoulder at its inner end, and a tool having a shank for fitting said recess provided with a longitudinal slot for the passage of said dog, said slot having a lateral offset forming a shoulder for engaging the shoulder on said dog and means yieldably urging the dog into said recess.

1,374,400. COMBINATION AUTOMOBILE-BED. SIEGFRIED SHIREK and WILLIAM H. FENTON, Portland, Oreg. Filed June 14, 1920. Serial No. 388,951. 4 Claims. (Cl. 5—72.)

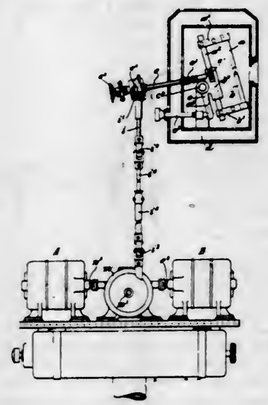


1. In combination, in an auto bed, a bed bottom roll, a roller member for receiving said bed roll, side rails for said auto bed, and means rotatably securing the side rails to the roller member and adapted to permit the side rails to lie in parallelism to said roller member.

1,374,401. PRIMING DEVICE. FRANK G. SLEMMER, Centerville, Md. Filed July 16, 1919. Serial No. 311,338. 2 Claims. (Cl. 123—180.)

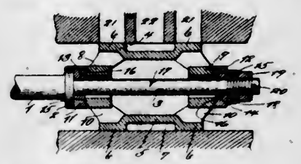
1. A portable primer for internal combustion engines, of sufficient bulk to hold heat during the transportation of the primer to the engine from a remote source of heat, said primer having means for effecting a slip-joint connection with an engine, and having a passageway so located that a priming charge may flow therethrough by gravity, one end of the passage being open to the atmosphere, to permit the introduction of a priming charge.

1,374,402. APPARATUS FOR DISTILLING PETROLEUM-OILS. ARTHUR D. SMITH, Arkansas City, Kans. Filed Mar. 13, 1917. Serial No. 154,469. 8 Claims. (Cl. 196—14.)



1. A still for treating petroleum oils comprising a main shell having a sloping bottom and sloping tubular portions connected to said shell at their ends and exposed to heat, so as to induce a cyclic circulation through said tubes and shell, and a well below and communicating with the lower end of said shell, said sloping bottom lessening carbon deposition by promoting continuous movement of the heavier parts of the still charge.

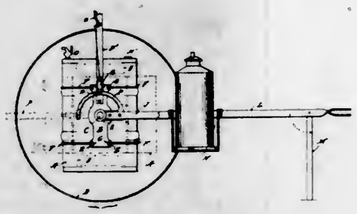
1,374,403. PROCESS OF CURING CEMENT. GODFREY LEWIS SMITH, Newport News, Va. Filed July 24, 1918. Serial No. 246,480. 5 Claims. (Cl. 18—47.5.)



1. A process of curing articles of cement, cement mortar or cement concrete, which consists of the application of heat and of the application and maintenance at all times of an air or gas pressure thereto and thereon in excess of the pressure of saturated steam having the temperature of the moisture within the pores of the cement, mortar or concrete.

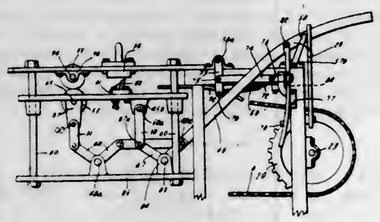
1,374,404. AUTOMATIC ARC-REGULATOR. JAMES E. SOONS, New York, and HARRY ROBINSON, Brooklyn, N. Y., assignors of one-half to Edward Caterson, Woodlawn, New York, N. Y. Filed Nov. 15, 1919. Serial No. 338,159. 12 Claims. (Cl. 176—74.)

1. An automatic arc regulator embodying therein means whereby relative movement may be imparted to the electrodes, a differential transmission mechanism, operative connections between said transmission mechanism and said means, a motor operative upon said transmission mechanism to impart thereto a normal tendency to separate the electrodes, means whereby continuous constant power is developed in said motor, and a motor having a different speed than said first named motor operative upon said transmission mechanism to impart thereto a normal tendency of the electrodes to approach each other and connected in shunt with said electrodes, whereby the normal difference in speed of said motors will impart gradual feeding movement to said electrodes and the speed of said last named motor will vary with the resistance at the arc to compensate for irregularities in said feed.



1,374,405. SELF-ALINING PISTON-VALVE. PHILIP HENRY STEINER, San Francisco, Calif. Filed Dec. 17, 1919. Serial No 345,562. 3 Claims. (Cl. 121—193.)

1. In a device as set forth, a reciprocating rod having a piston valve carrying end, a slide piston valve unit provided with opposite head members having axially alined openings, through which the valve carrying end passes, the exterior opposite ends of the head members having spherical convexed portions concentric with the center of the piston valve, said rod having a collar integral with one end of the valve carrying end, a removable collar on the valve carrying end adjacent said integral collar, a second removable collar on the opposite end of the valve carrying end of the rod, means for holding the second collar in position, said removable collars being axially



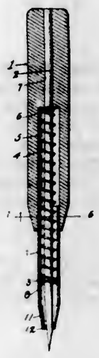
alined and having their adjacent faces spherically concaved concentric with and coöperatively engaging the spherical convexed portions of the head members, the axially alined openings of the head members being of diameters larger relatively to the diameter of the valve carrying end, whereby the valve is capable of rocking movements at right angles to the valve carrying end on a radius from an approximate center of the valve carrying end.

1,374,406. BARREL-CART. LAWRENCE L. STEINKE, Farmington, Ill. Filed Aug. 16, 1919. Serial No. 317,970. 6 Claims. (Cl. 280—51.)

1. In a barrel cart, the combination of a plurality of barrels, means embracing both barrels acting to clamp them in rigid relation, a spacing member clamped between the barrels by said embracing means, trunnions extending from the embracing means at opposite sides thereof, supporting wheels engaging the trunnions, and a draft frame engaging the trunnions.

1,374,407. DECORTICATING-MACHINE. CHARLES PARRIS STEWART, Manila, P. I. Filed June 30, 1919. Serial No. 307,773. 8 Claims. (Cl. 13—18.)

4. In a machine for extraction of vegetable fiber, means for stripping and squeezing fibrous material, means for drawing fibrous material through said first mentioned means, a pair of rollers between which the material is drawn, and means for rotating said rollers in a direction to assist the movement of the material and at a speed higher than that at which the material is drawn through the machine, said rolls being located close to the first mentioned means and serving to relieve the fiber from longitudinal strain as soon as it has passed through the rolls.

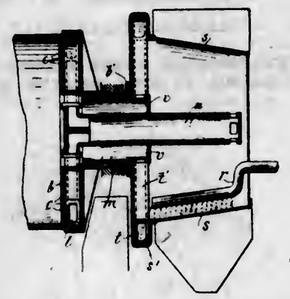


1,374,408. METHOD OF BUILDING TIRES. ROLAND S. TROGNER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 29, 1918. Serial No. 247,208. 7 Claims. (Cl. 154—14.)

1. The method of fabricating a tire carcass that comprises, superposing a helical winding of cord elements around a pair of spaced apart bend rings to form an annular wrapping therefor, folding the cords of the inner portion of the annulus into the outer portion thereof and

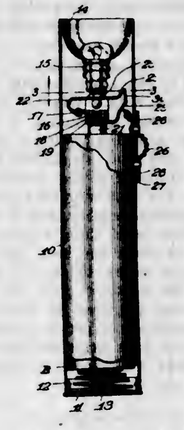
in angular relation with respect thereto, and shaping the structure thus formed into its ultimate cross-sectional contour.

1,374,409. TUFTING DEVICE. ROLLO H. VALENTINE, Clinton, Ill., assignor of one-half to Richard I. Hall, Clinton, Ill. Filed May 10, 1920. Serial No. 380,251. 1 Claim. (Cl. 112—80.)



A tufting device comprising a one piece rectilinear handle provided with a relatively large central longitudinal bore opening through its front end and occupying substantially half of its length, said handle having a smaller bore leading from its rear end into said larger bore, a one piece needle of uniform cross section and tubular form throughout its length, said needle being rigidly secured in said smaller bore and extending forwardly through said relatively large bore and beyond the front end of the handle, the front end of said needle being sharpened and having an eye, a one piece sleeve slidable in said relatively large bore and extending forwardly therefrom around and spaced from said needle, said sleeve having its front end contracted around said needle, a coil spring in said sleeve and said relatively large bore, means securing the outer end of said spring to said sleeve, and means securing its inner end to said needle.

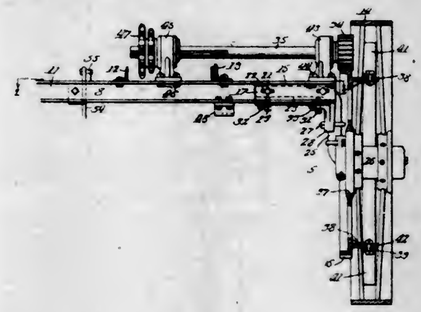
1,374,410. BALL-MILL FOR CRUSHING ORES. MIKAEL VOGEL-JØRGENSEN, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Aug. 20, 1919. Serial No. 318,789. 3 Claims. (Cl. 83—9.)



1. In a grinding mill, in combination with a supporting trunnion for the mill at the discharge end in open communication with the mill, but extending beyond the end wall thereof, a grate adjacent the discharge head through which the material is discharged, a discharge pipe extending through the trunnion and adapted to receive the material from the grate and to convey it beyond the end of

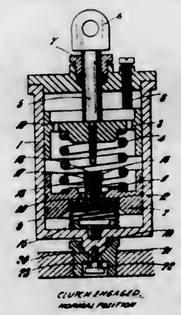
the trunnion, a screen supported at the end of the discharge trunnion to receive the material from the discharge pipe, and means to return the coarse material from

the screen to the trunnion whence it is conveyed therethrough in a direction counter to the direction of travel through the discharge pipe for return to the mill.



1,374,411. FLASHLIGHT. GEORGE V. C. VREELAND, East Orange, N. J., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Nov. 22, 1919. Serial No. 339,791. 2 Claims. (Cl. 240—8.5.)

1. In a flashlight, a circuit closing device comprising, in combination, a supporting member, a reversely bent spring contact element carried thereby and insulated therefrom, a movable spring contact element carried thereby and insulated therefrom and having an end extending adjacent the end of the first mentioned element and an inclined camming edge, and a sliding member having an insulated contact block upon the upper end thereof and adapted to coöperate with the inclined camming edge of the second mentioned element to cam the same into engagement with the first element and close the circuit.

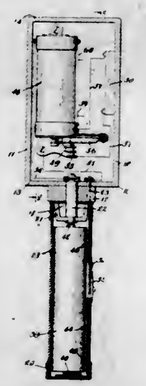


1,374,412. RUNNING-GEAR FOR MOTOR-VEHICLES. LEWIS E. WATERMAN, HARRY R. TRAPHAGEN, and HOWARD L. WATERMAN, Rockford, Ill., assignors to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Original application filed June 9, 1919, Serial No. 302,695. Divided and this application filed June 9, 1919. Serial No. 302,697. 14 Claims. (Cl. 180—70.)

1. In a motor vehicle, the combination of a frame including a pair of transverse beams at each side thereof, an axle bracket interposed between and bolted to the beams of each pair at the outer end thereof, a pair of traction wheels, an axle for each traction wheel having a horizontal portion mounted on one of said brackets, and adjust-

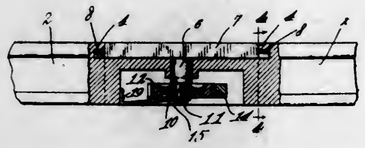
ing means operative between the bracket and said axle portions for adjusting the latter to change the position of its respective traction wheel relative to the frame.

1,374,413. CONTROLLING DEVICE FOR POWER-TRANSMISSION CLUTCHES. WILLIAM HUBERT WEBB, Randalstown, Ireland. Filed Feb. 18, 1918. Serial No. 217,980. 7 Claims. (Cl. 188—96.)



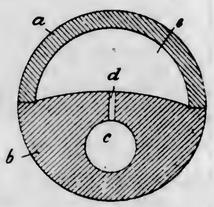
1. A dashpot device for use in controlling the engagement of power transmission clutch mechanism, said dashpot device comprising a cylinder adapted to contain fluid, a piston therein, a valve adapted to open to allow displacement of fluid past the piston as it moves in one direction, but to prevent the passage of the fluid in the other direction, a subsidiary valve adapted to allow the return flow of the fluid slowly when the pressure applied to the piston is comparatively high, and still more slowly when the pressure applied to the piston becomes less, a second additional valve device adapted to allow comparatively rapid return flow of the fluid when the pressure on the piston falls still lower, and mechanism including a resilient element adapted to effect the relative movements of the piston in the cylinder, and to communicate the reactions of said piston to the mechanism to which the dashpot device may be applied.

1,374,414. ELECTROMEDICAL BRUSH. HENRY WEISS, New York, N. Y. Filed July 25, 1919. Serial No. 313,141. 2 Claims. (Cl. 174—173.)



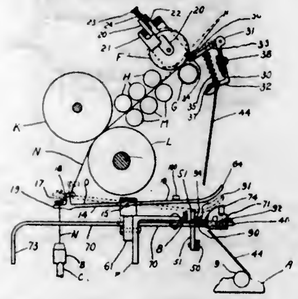
1. The combination, in an electro-medical brush, of a hollow back, a pair of electrodes each in the form of a conductive spiral spring yieldingly held lengthwise on the hollow back so that the convolutions of both springs be-

tween their ends will serve as brushing cushions, said electrodes being interposed in a high frequency electric circuit having its current waves stabilized and the elec-



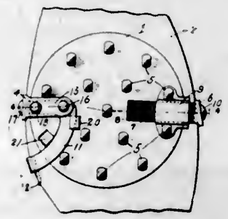
trodes being in spaced relation so that the circuit will be closed when the electrodes are brought into contact with the flesh of a person.

1,374,415. RAILROAD-CROSSING. CHARLES H. WHITE, Hanford, Calif. Filed Oct. 19, 1920. Serial No. 417,969. 3 Claims. (Cl. 246—378.)



1. In a device of the class described, a casing provided with pairs of alined rails; a rail section journaled on the casing and movable into and out of alinement with the rails of the respective pairs, the rail section being vertically movable on the casing; means for raising the rail section off the casing; means for swinging the rail section into alinement with the rails of the respective pairs; and interengaging elements on the ends of the rail section and on the rails for forcing the rail section downwardly upon the casing when the rail section is swung into alinement with the rails of either pair.

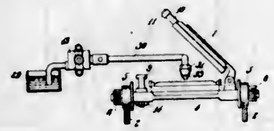
1,374,416. PLANT FOR WARMING AND MOISTENING THE SOIL-SURFACE. POUL WILDE, Strömmen, near Randers, Denmark. Filed July 11, 1918. Serial No. 244,359. 2 Claims. (Cl. 61—13.)



1. A device of the class described, comprising a base block of impervious material provided with a centrally located, longitudinal bore and a plurality of vertically extending openings communicating with said bore, and a shell of porous material semicircular in cross-section and having its edges in close contact with the edges of said block thereby to form with the upper side of the block a closed chamber in communication with said vertical openings.

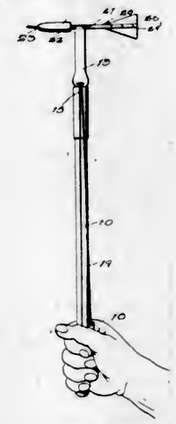
1,374,417. STOP-MOTION. GEORGE M. ABBAGG, Lawrence, Mass. Filed May 7, 1919. Serial No. 295,302. 10 Claims. (Cl. 19—25.)

1. In a spinning frame having back drawing rolls, front drawing rolls and a bobbin, the combination of a two-part rocking member, the front part terminating in a thread guide over the bobbin between the front drawing rolls and the bobbin so arranged that the roving will be given a double bend in passing therethrough, and being pivoted to rock vertically on the frame, and the rear part being pivoted to the front member so as to rock vertically independent thereof and to swing horizontally, both within the limits of suitable stops, with a vibrator, a stretcher plate in which is a slot having a shoulder, a hook carried by such stretcher plate, a spring having a slot in operative relation with the slot and shoulder of the stretcher plate so pivoted to the back of the stretcher plate that it can be caught under the hook with its front end under the rear part of the rocking member, and a flexible member which passes through both slots, together with a carriage adapted to slide under the back part of the rocking member and over the spring to set the flexible member on the shoulder of the stretcher plate and to depress and catch the spring under the hook by the same movement, and padded means held out of action by the flexible member for separating the back drawing rolls, and for holding the roving thereat whereby it is broken behind and close to the front rolls.



1,374,418. ICE-CREEPER. JOHN HAERMS BECKER, Bloomington, Ill. Filed July 19, 1920. Serial No. 397,175. 4 Claims. (Cl. 36—64.)

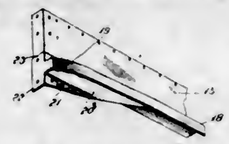
1. An ice creeper comprising a plate having a tongue extending therefrom, the plate and tongue being provided with transversely extending teeth and the tongue having a cutout at a point intermediate its length and being bent back at the cutout to provide a clamping bracket, a jaw having a shank extending between the plate and bracket through the cutout and having teeth engaged by the teeth



of the plate and bracket to releasably hold the jaw in a set position, and a movable clamping element connected with the oposite side portion of the plate.

1,374,419. WAFER-BAKING APPARATUS. MARTIN H. BERGEN, New York, N. Y., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed July 9, 1919. Serial No. 309,608. 3 Claims. (Cl. 107—58.)

1. In wafer-baking apparatus, the combination of an endless chain of elongated baking pans having movement in one direction, said pans having flat body portions with raised edge portions at their longitudinal edges only and lids adapted to press upon batter on said body portions between said edge portions, means for raising said lids at a point in the progression of said pans, means for placing a puddle of batter centrally on each of said pans, which puddle is continuous in the direction of the length of the pan, and means for thereafter pressing down said lids, said pans having their transverse edges out of contact with each other when said lids are pressed down, to afford space for the escape of steam.

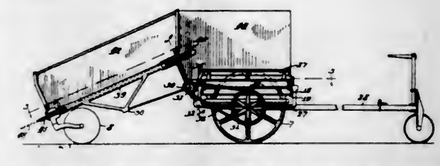


1,374,420. TOY. ANDREW PETER BERGGREEN, St. Paul, Minn. Filed Nov. 19, 1920. Serial No. 425,215. 5 Claims. (Cl. 124—1.)

1. A toy comprising in combination a projectile including a head provided with a point and a socket, a shaft having its forward end received in the socket of the head and provided with a cavity, a body of relatively heavy mass received in the cavity and a vane carried by the tail end of said shaft, a staff, and a projectile holder carried by the staff and including spring gripping members adapted to engage the shaft of the projectile.

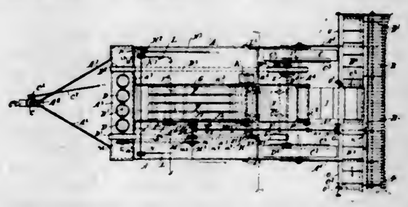
1,374,421. RAILWAY-CAR-WALL CONSTRUCTION. CHARLES D. BONSALL, Parnassus, Pa., assignor to Walter P. Murphy, New York, N. Y. Original application filed Nov. 14, 1919, Serial No. 338,075. Divided and this application filed Aug. 21, 1920. Serial No. 405,017. 14 Claims. (Cl. 105—410.)

1. A sheet metal end panel for a railway car comprising a metal sheet formed with a pressed rigidifying rib having an angle bar configuration at the middle and its ends bent over on diagonal lines to provide channeled por-



tions which taper in depth and which terminate with closed ends adjacent the sides of the car.

1,374,422. RECOVERY OF SULFUR FROM ITS ORES. GILBERT A. BRAGG, Thompson, Nev., assignor, by mesne assignments, to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Mar. 13, 1918, Serial No. 222,223. Renewed Sept. 12, 1919. Serial No. 323,438. 6 Claims. (Cl. 23—10.)



1. The method of recovering sulfur from its ores, which comprises heating an ore pulp, made up of a mixture of the finely divided ore in a suitable liquid medium, to the melting point of the sulfur contained in the ore pulp, agitating the mass so as to cause coalescence of individual melted sulfur particles into aggregates larger than the gangue particles, solidifying the sulfur aggregates thus formed, and ultimately separating the solidified sulfur aggregates from the gangue; substantially as described.

1,374,423. GRAIN-LOADER. EDWIN H. BREMER, Freeport, Ill. Filed June 20, 1919. Serial No. 305,674. 5 Claims. (Cl. 193—2.)

1. A bundle carrier of the character described comprising a pair of drive wheels, an axle supported thereby, a pair of front caster wheels, a frame supported by the drive and caster wheels, an endless transverse conveyer centrally above the axle and having a horizontal bundle-receiving portion and an inclined elevator portion, a transverse shaft on the frame in front of said conveyer, driving connections between one of the drive wheels and said shaft and between the latter and the conveyer, forward and rear pairs of laterally spaced sprocket wheels on the forward portion of the frame on inclined axes, endless bundle pick-up devices trained above said sprocket wheels and adapted to elevate bundles and deposit them on the horizontal bundle-receiving portion of the transverse conveyer, and driving connections between the rear sprocket wheels and said transverse shaft.

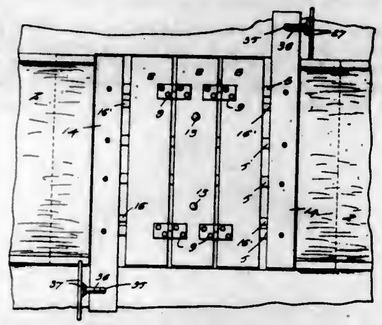
1,374,424. POWER-DRIVEN STRIPPER OR HEADER HARVESTER. JOHN OLIVER BROOK, Curban, New South Wales, Australia. Filed Jan. 19, 1918. Serial No. 212,661. 8 Claims. (Cl. 56—20.)

7. In a power-driven stripper harvester, the combination of a frame formed of detachably connected sections, a

motor mounted on one of said sections, a pair of traveling wheels supporting the other of said sections, means of transmitting motion from said motor to said wheels, and means for mounting a pair of wheels on said motor section when detached from the other section.

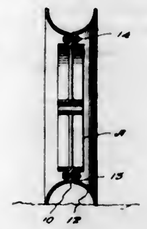
1,374,425. SANDPAPER-DRUM. WARREN L. BROWNE, Vallejo, Calif. Filed Oct. 2, 1920. Serial No. 414,172. 7 Claims. (Cl. 51—194.)

1. A device of the character described comprising a drum, a sheet of abrasive material on said drum, devices at the ends of the drum within which the sheet is clamped and held on the drum, and spring means urging said devices outwardly away from the ends of the drum.



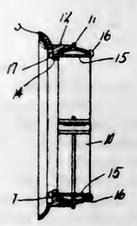
1,374,426. FOUNTAIN DRAWING-PEN. HERMANN BURKHARDT, Rueschlikon, Switzerland. Filed Oct. 16, 1919. Serial No. 331,165. 2 Claims. (Cl. 120—43.)

1. A fountain drawing pen comprising an ink receptacle, guided in an outer tube provided at the top with an opening for the admission of air, and which can be displaced therein in an axial direction and is normally pressed upwardly by a spring so that its upper open end is forced against a closing plug firmly connected to the outer guide-tube, thereby shutting off atmospheric air, said receptacle also carrying a button within easy reach of the fingers guiding the pen, in such a way that the upper end of the ink receptacle is removed from the closing plug by pressing the button downward, and said upper end is opened for the admission of atmospheric air.



1,374,427. SIGNAL. GEORGE V. BURRIS, Courtland, Calif. Filed Nov. 12, 1919. Serial No. 337,528. 1 Claim. (Cl. 116—67.)

A signal comprising a supporting frame adapted to be placed in a roadway and embedded therein, a sectional tread member mounted on said supporting frame, a signal supporting member positioned within said supporting frame beneath the central section of said tread member, a signal carried by said signal carrying member, an operating rod for said signal extending upwardly through said signal carrying member and engaging the under face of the central section of said tread member, means engaged around said signal operating rod to resiliently retain the latter in unoperated position and in engagement with the under face of said central section of the tread member, means positioned between said central section of the tread member and said signal carrying member to resiliently retain the central section of said tread member in raised

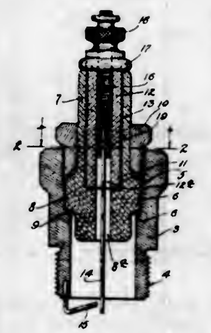


position, guide arms for said tread member connected with the outer sections thereof, and means to receive said guide arms and retain the latter against lateral movement during operation of the signal.

1,374,428. WHEEL ATTACHMENT. ELLIS H. CHADDERDON, Cambridge, Nebr. Filed Dec. 30, 1919. Serial No. 348,278. 3 Claims. (Cl. 301—39.)

1. An attachment for tractor wheels comprising two members arranged at the opposite sides of the wheel, a curved tread portion formed on each member, said curved tread portions being arranged to provide a concaved periphery for the wheel, and means for holding the members together and fixed upon the wheel.

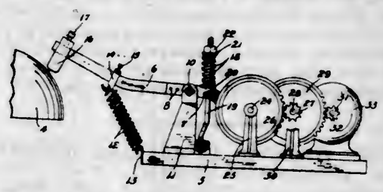
1,374,429. ATTACHMENT FOR TRACTOR-WHEELS. ELLIS H. CHADDERDON, Cambridge, Nebr. Filed June 19, 1920. Serial No. 390,124. 3 Claims. (Cl. 97—81.)



1. An attachment for tractor wheels having a centrally disposed rim, an attachment comprising an annulus adapted to surround a portion of the tread of the wheel, and formed to provide an outwardly curved or flared portion of greater diameter than the diameter of the wheel and wholly disposed to one side thereof, radially disposed apertured lugs carried by said annulus, and fastening elements engaging said lugs and the opposite side of the wheel for holding the attachment in position for use.

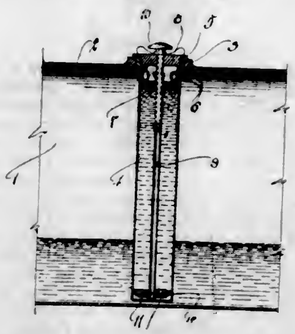
1,374,430. BATH-SPRAY. MARY F. CHEVALIER, Baldwin Park, Calif. Filed Sept. 22, 1919. Serial No. 325,532. 1 Claim. (Cl. 4—26.)

A bath spray comprising a soft flexible hose adapted for attachment at one end to a faucet, perforations adjacent the opposite end, a hook embedded in the extremity of said end, and an eye embedded in the hose adjacent said end, for connecting the ends of said perforated portion to form a loop.



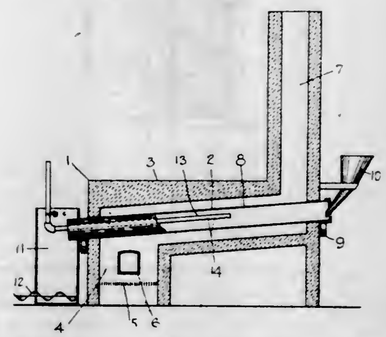
1,374,431. SPARK-PLUG. CHARLIE N. CLARK, Minneapolis, Minn., assignor to Anton V. Olson, Minneapolis, Minn. Filed Dec. 15, 1919. Serial No. 345,015. 3 Claims. (Cl. 123—169.)

1. In a spark plug, the combination with a tubular metallic shell, of a porcelain core extended into and anchored to said shell, a tubular glass bushing extended axially within said core and anchored therein, a metallic rod extended into and anchored to the outer portion of said core, and an axial electrode anchored to said rod extended axially therefrom through the inner portion of said glass bushing and through said core to the inner end of said shell, said axial electrode being spaced from the surrounding walls of said core bushing and shell, and a grounded electrode applied to the inner end of said shell for coöperation with the inner end of said axial electrode.



1,374,432. FIRE-ALARM-BELL ACTUATOR. WELLINGTON S. CLAY, Hutchinson, Minn. Filed June 21, 1919. Serial No. 305,851. 2 Claims. (Cl. 116—167.)

1. The combination with a bell, of a base support having pedestals thereon, a lever intermediately pivoted on one of said pedestals and provided at its long end with a bell striking hammer, and provided at its short ends with a roller, a main spring connecting the long end portion of said lever to said base support, a fixed post rising from said base and extending by the short end of said lever, a coiled spring on said post reacting against the short end of said lever and against an adjustable abutment on



the upper end of said post, and a motor actuated tappet operative on the roller of said lever to intermediately retract said lever and to release the same.

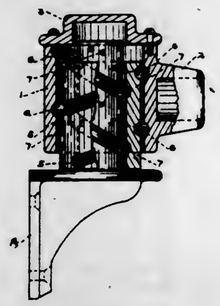
1,374,433. RESERVE SUPPLY-TANK. AMBROSE W. CODD, Spokane, Wash. Filed Mar. 24, 1920. Serial No. 368,276. 2 Claims. (Cl. 158—46.5.)

1. The combination with a main fuel supply tank having a threaded opening in its top wall, of an open end reserve supply tank secured in the opening and provided with upper overflow ports, a perforated cap secured in the open end of the reserve tank, a hollow lift stem supported in the cap and a valved lift head on the lower end of the stem, normally located at the bottom of the reserve tank.

1,374,434. PROCESS OF TREATING ORE. CALEB G. COLLINS, Woodmere, N. Y., assignor to C. Amory Stevens, New York, N. Y. Filed Jan. 13, 1920. Serial No. 351,221. 5 Claims. (Cl. 75—17.)

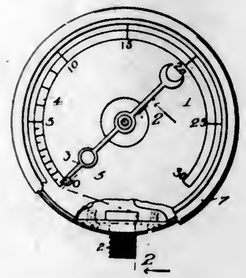
1. The method of preparing ore, which consists in heating the ore to drive off air and moisture, and treating it with material to prevent the reëntry of air and moisture, and thereafter concentrating the ore.

1,374,435. MANUFACTURE OF ZINC SULFID. PAUL COMMENT, Mulhouse, France. Filed Apr. 23, 1919. Serial No. 292,096. 4 Claims. (Cl. 134—78.)



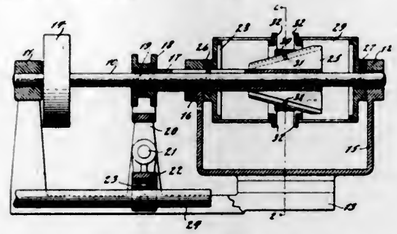
1. A process for preparing anhydrous sulfid of zinc, stable against atmospheric agents and applicable in painting, comprising calcining a mixture comprising a polysulfid of zinc other than the persulfid and a salt of zinc comprising an oxygenated compound of sulfur.

1,374,436. COMBINED PRIMER AND HUMIDIFIER FOR AUTOMOBILE-ENGINES. FRANK CONWAY, Schenectady, N. Y. Filed May 13, 1920. Serial No. 381,139. 1 Claim. (Cl. 277—57.



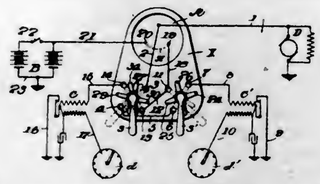
A device of the class described comprising a substantially cylindrical body provided with an attaching flange adapted for connection to an automobile dash-board; a plurality of screw-threaded bored extensions projecting from the outer face of the body, a central extension serving as an outlet and having its bore extending into and terminating at the center of the body, the bores of the remaining extensions extending entirely through the body and being increased in diameter at points intermediate their ends, forming shoulders which constitute valve seats, the enlarged portions of said last named bores being screw-threaded; screw-valves threaded into said bores and coöperating with the seats; said body being also provided with another screw-threaded bore extending from its center and opening through its inner face, and with a plurality of radial passages connecting all of the bores with said outlet bore; and a tubular screw-threaded stem extending into the last named bore, having its inner end reduced in diameter and engaging the closed inner end of this bore.

1,374,437. GATE-HINGE. JAMES W. COOMBS, Seattle, Wash., assignor of one-half to Thomas H. Major, Seattle, Wash. Filed Sept. 27, 1920. Serial No. 412,929. 2 Claims. (Cl. 16—163.)



2. A hinge, comprising a casing having a removable top, said casing provided interiorly with a spiral groove, mounted within the casing, a cylindrical member provided exteriorly with a spiral groove complementary to said groove in the casing and a spiral groove interiorly, said last named groove being located in reversed relation to the exterior groove of said member, a second cylindrical member rotatably mounted within the first member, provided with a spiral groove complementary to said interior groove of the first member, a plurality of ball bearings operatively located in said grooves, and means whereby lateral and up and down movements may be imparted to said hinge.

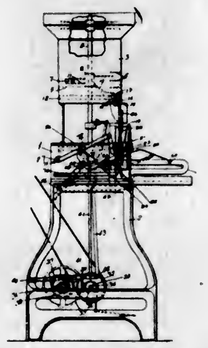
1,374,438. STOP-PIN FOR GAGE-DIALS. ERNEST B. CROCKER, Stratford, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Feb. 3, 1921. Serial No. 442,027. 11 Claims. (Cl. 116—129.)



1. In a gage, the combination with a dial face and a hand operating thereover, a cover for said dial face, a stop pin for said hand, and means for maintaining said stop pin in contact with said cover.

1,374,439. VARIABLE-SPEED DEVICE. JOHN DOHERTY, New York, N. Y., assignor to Morris I. Kopple, Far Rockaway, N. Y. Filed Oct. 25, 1919. Serial No. 333,174. 4 Claims. (Cl. 64—8.)

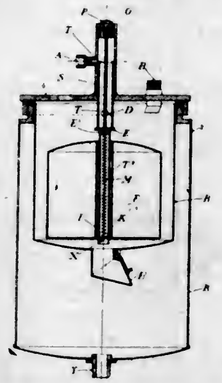
1. A shaft, a pair of fixed members spaced apart thereon and connected thereto, a sectional driving pulley located between said fixed members, the sections of said pulley being mounted for radial movement between said members, a member movable longitudinally of said shaft and constructed and arranged to change the radial positions of said sections and thereby change the working diameter of said pulley, and means for moving said member while said shaft is in motion, said fixed members comprising drums arranged to inclose said movable member.



1,374,440. IGNITION-SWITCH. FRANK M. FOSTER, Washington, D. C. Filed Apr. 10, 1920. Serial No. 372,842. 7 Claims. (Cl. 290—41.)

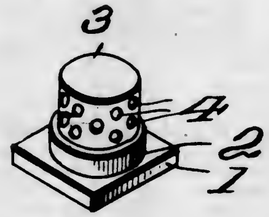
1. The combination with a generator, storage battery, and ignition device, of a pair of mechanically independent

switches arranged to electrically coöperate to connect the generator with the battery and ignition device, means whereby the generator connection may be broken by moving either switch, and means whereby one of said switches may connect the battery and ignition device only.



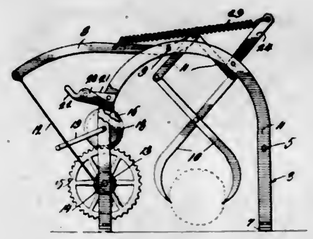
1,374,441. SCRAP-BUNCHING MACHINE. HARRY T. FROEHLICK, Philadelphia, Pa., assignor, by mesne assignments, to Charles F. Stauffen, Baltimore, Md. Filed June 26, 1917. Serial No. 177,008. 12 Claims. (Cl. 131—39.)

1. A cigar bunching machine comprising a supply means feeding into an approximate measuring means, an approximate measuring means feeding into a forming means, a forming means forming the tobacco into an approximate degree of compactness feeding into a measuring means, a measuring means and means for separating the tobacco in the measuring means from the forming means.



2. A cigar bunching machine comprising a supply means feeding into an approximate measuring means, an approximate measuring means feeding into a forming means, a forming means forming the tobacco into an approximate degree of compactness feeding into a measuring means, a measuring means, means for separating the tobacco in the measuring means from the forming means, a rolling belt provided with means to form the same into definite position and means for discharging from the measuring means into said belt.

1,374,442. VACUUM-FEED TANK FOR INTERNAL-COMBUSTION ENGINES. LEONCE GARNIER, San Sebastian, Spain. Filed Jan. 22, 1920. Serial No. 353,186. 6 Claims. (Cl. 158—36.)

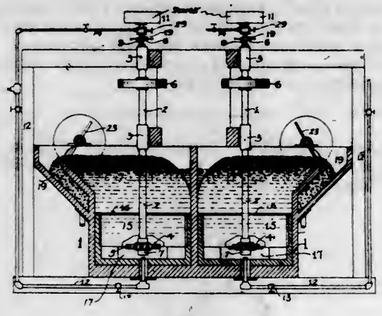


2. A vacuum feed tank for internal combustion engines, comprising, in combination, a float chamber, a float therein, a delivery chamber, a non return valve affording a communication between said chambers, a suction conduit and an air inlet both adapted to communicate with the float chamber, a sleeve opening into the float chamber and having a lateral suction opening in communication with the suction conduit, a tubular slide valve, movable in said sleeve under the action of the float and adapted to control said lateral suction opening, a puppet valve for controlling the air inlet independent of the tubular slide valve and a spring interposed between the float and the air inlet puppet valve and adapted to be progressively compressed by the float as the latter is rising.

1,374,443. MARKER. PEDRO GIORDANO, Buenos Aires, Argentina. Filed Nov. 13, 1919. Serial No. 337,812. 3 Claims. (Cl. 40—3.)

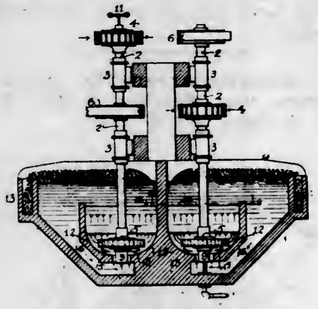
1. A marking ring, for identification and control purposes, comprising a pin provided on its shank with transverse orifices, designed to hold between its riveted extremities two safety washers which in their turn secure an identification plate also fitted on the shank of the said pin and a portion of the object which it is desired to identify, also traversed by the pin, between one of the said safety washers and the identification plate, substantially as has been described.

1,374,444. HOISTING APPARATUS. ANNIE GOLTRY, North Platte, Nebr. Filed Oct. 18, 1919. Serial No. 331,626. 3 Claims. (Cl. 254—145.)



1. A hoisting apparatus comprising a frame, a lever pivoted adjacent one end to the frame, grapple means connected to the end of the lever adjacent its fulcrum, means connected with the other end of the lever for actuating the same, and means for automatically lowering the grapple means.

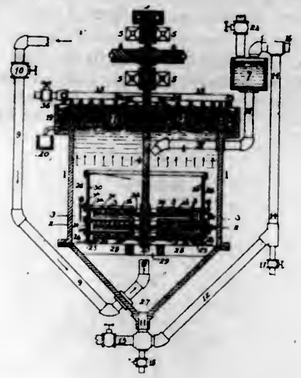
1,374,445. APPARATUS FOR TREATING LIQUIDS WITH GASES. WILLIAM E. GREENAWALT, Denver, Colo. Filed Nov. 4, 1919. Serial No. 335,760. 10 Claims. (Cl. 261—93.)



1. In apparatus for treating liquids with gases, a tank adapted to contain a liquid, a rotary atomizer having gas passages extending from its central portion toward its

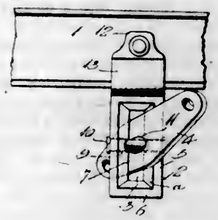
periphery suspended within the tank and submerged in the liquid, means for causing a flow of gas to the central portion of the atomizer, means for causing a flow of liquid in the tank to the central portion of the atomizer,

rotary means for mixing the gas and the liquid, means for ejecting the mixture of gas and liquid through the gas passages of the atomizer from its central portion toward the periphery and into the liquid in the tank, and means for rotating the atomizer about its vertical axis.



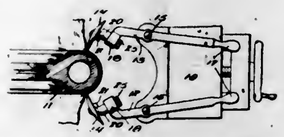
1,374,446. APPARATUS FOR TREATING LIQUIDS WITH GASES. WILLIAM E. GREENAWALT, Denver, Colo. Filed Oct. 16, 1918, Serial No. 258,462. Renewed May 25, 1920. Serial No. 384,157. 11 Claims. (Cl. 261—93.)

1. In apparatus for treating liquids with gases, a tank adapted to contain a liquid, a rotatably mounted hollow shaft, means attached to the shaft above the liquid for causing a flow of gas through the hollow shaft, means submerged in the liquid attached to the shaft and rotating with it for atomizing the gas in the liquid, and means for rotating the shaft.



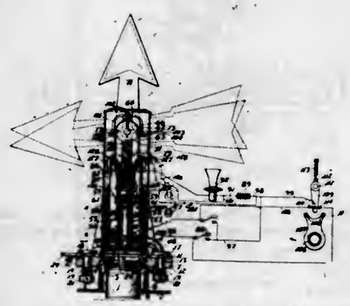
1,374,447. FLOTATION APPARATUS. WILLIAM E. GREENAWALT, Denver, Colo. Filed May 26, 1916, Serial No. 100,001. Renewed Mar. 22, 1920. Serial No. 367,829. 20 Claims. (Cl. 261—93.)

1. In apparatus for separating minerals from their gangue by flotation, a tank adapted to contain a liquid and the material to be treated, a shaft rotatably mounted suspended within the tank, a plurality of perforated disks mounted on said shaft, a plurality of perforated stationary plates interposed between the disks and alternating with them, means for rotating the shaft and disks, and means for introducing a gas into the liquid in the tank and by its own buoyancy passing it upwardly through



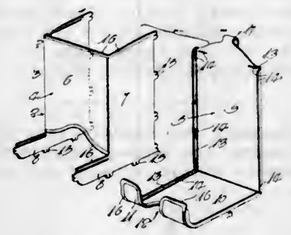
the perforated disks and plates, and thus by atomizing the gas in contact with the liquid causing the floatable material to rise to the surface of the liquid.

1,374,448. BRAKE-BEAM FULCRUM. GEORGE HARMAN, THOMAS E. CANNON, and NICHLAUS C. BETTENBURG, St. Paul, Minn. Filed Feb. 12, 1920. Serial No. 358,249. 2 Claims. (Cl. 188—232.)



1. A brake beam fulcrum comprising a frame provided with a slot for receiving a brake lever, the inner faces of each of the side bars of the frame being beveled in opposite directions from its longitudinal center to its edges, a centrally disposed pin extending transversely between said side bars, and a brake lever pivotally mounted on said pin, whereby it may be positioned for right hand, left hand or central connection to the brake-rigging.

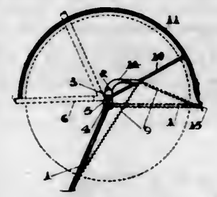
1,374,449. TIRE-MACHINE. WILLIAM B. HARSEL, Akron, Ohio, assignor to Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 8, 1918. Serial No. 243,924. 11 Claims. (Cl. 154—10.)



1. A stitcher mounting comprising a support, a member journaled in said support, an offset portion upon said journaled member, and a stitcher mounted for free rotation upon said offset portion and adjustable in a vertical plane concentrically about said journaled portion.

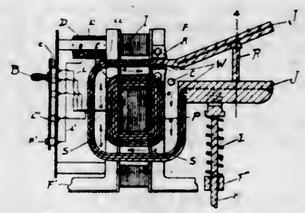
1,374,450. DIRECTION-SIGNALING DEVICE. EDWARD H. HEBBEN, Oakland, Calif. Filed Sept. 26, 1916. Serial No. 122,208. 7 Claims. (Cl. 177—327.)

2. In combination with a vibratory direction-indicating device, solenoids and cores operatively connected to said indicating device to move the same, when the cores are attracted, in opposite directions respectively, said operative connections permitting the device to move independently of said cores.



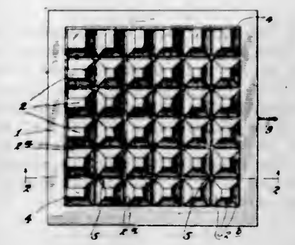
1,374,451. CLOTHESPIN-CONTAINER. ISAAC I. HEYMAN, Irvington, N. J. Filed May 28, 1920. Serial No. 385,000. 1 Claim. (Cl. 68—11.)

A clothes pin holder comprising a box and a trough arranged at the lower end of the latter and extending forwardly beyond it, said box and trough being made up of two pieces of sheet material, one piece of which is in the form of a channel which constitutes the front and side walls of the box, the front wall terminating at a point above the lower edges of the side walls and the last named walls carrying integral spaced extensions disposed in alinement therewith and forming the side walls of said trough, said other piece of material being L-shaped and forming the back wall and bottom of the box and also forming the bottom of the trough, the bottom of said trough being bifurcated at its free end to form a finger inserting opening, the front end of said trough bottom being bent up into substantial parallelism with the rear wall of the box and terminating in a substantially horizontal plane with the lower edge of the front wall of the box, and the upper end of said back wall of the box having a supporting hook.



1,374,452. STAND FOR BICYCLES. JOHN HUTCHINSON, Toronto, Ontario, Canada. Filed Dec. 16, 1919. Serial No. 345,201. 2 Claims. (Cl. 208—75.)

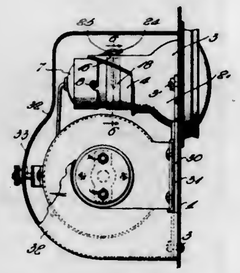
1. The combination with a bicycle, of stand connections secured to the rear of the bicycle; a U-shaped stand having its ends pivotally secured to said connections; an arm extending upwardly and rearwardly from one of said connections; a coil spring secured at one end to said arm and at its other end to said stand adjacent to the free end;



and a spring catch suitably supported from the frame of the bicycle adapted to releasably engage the middle of the stand to hold the latter in the operative position.

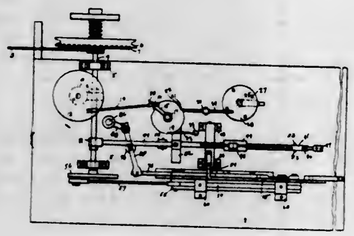
1,374,453. ELECTRIC RIVET-HEATER. FREDERICK T. KITT, Seattle, Wash., assignor, by mesne assignments, to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 26, 1919. Serial No. 319,983. 4 Claims. (Cl. 219—11.)

1. In an electric rivet heater, the combination of a magnetic core, a primary winding upon the same, a secondary in inductive relation thereto, relatively movable terminal jaws connected to said secondary, the opposing faces of the front ends of said jaws being farther separated than the inner portions thereof, and means for varying the distance between said jaws.



1,374,454. APPARATUS FOR ASSEMBLING CELLULAR FORMS. PETER KUCERA, South Connellsville, Pa., assignor to Capstan Glass Company, South Connellsville, Pa., a Corporation of Delaware. Filed May 21, 1920. Serial No. 383,140. 9 Claims. (Cl. 93—39.)

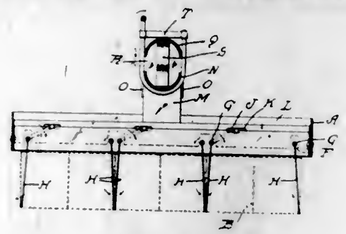
1. A device for assembling cellular partition forms comprising the combination of a support, spacing members associated therewith to sustain a plurality of partition strips in parallel relationship, said spacing members in-



cluding supporting portions disposed for coöperation with partition strips extending in angular relationship, said spacing members including guide portions arranged to direct partition strips into association with the supporting portions.

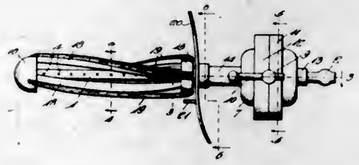
1,374,455. TROUBLE-HUNTER. DAVID C. LAMB, Detroit, Mich. Filed Jan. 7, 1920. Serial No. 349,923. 11 Claims. (Cl. 240—7.)

6. In a trouble hunter and dash lamp in combination, a flanged socket piece adapted to be inserted in the dash, a lamp holder adapted to be thrust into the socket piece, a lamp, a central core for said holder said lamp being mounted on said core, contacting means on said holder and core for turning on and off the lamp and means extending from said core to said socket piece whereby said core may be held from turning while the holder is turned.



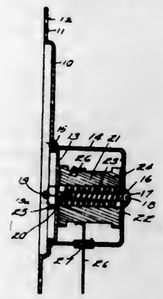
1,374,456. WEIGHING-MACHINE. THOMAS B. LAMBERT, Portland, Oreg. Filed May 24, 1920. Serial No. 383,785. 6 Claims. (Cl. 83—92.)

1. In a feed stop controlling mechanism, the combination of a feed stop controlling disk mounted on a vertical shaft and having on its upper surface a plurality of concentric pins, a feed controlling lever pivotally mounted along side and resting on said disk between said stop pins, an index plate mounted on a vertical shaft and above the other end of said lever, said index plate having a plurality of cam lobes on its under side adapted to depress said lever and raise its opposite end over said stop pins permitting only one pin to pass.



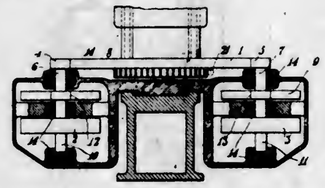
1,374,457. EGG-HANDLING DEVICE. JOSIAH WALLACE LANG, Floris, Iowa. Filed May 18, 1920. Serial No. 382,219. 5 Claims. (Cl. 294—87.)

1. A device for handling eggs, consisting of a frame, a series of rods having an oscillating connection with said frame, a series of egg grasping members carried by said rods, and means for oscillating said rods to engage and release the said grasping members consisting of a pair of



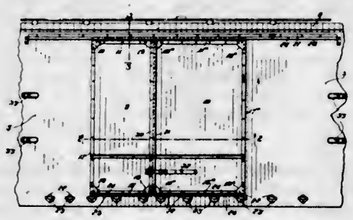
vertically moving plates, a two part grasping portion for moving said plates, and a locking device to secure said two part grasping portion.

1,374,458. VAGINAL WASHER. THEODORE HUBERT LARSON, Oshkosh, Wis. Filed Aug. 11, 1919. Serial No. 316,675. 11 Claims. (Cl. 128—242.)



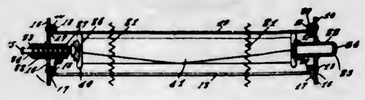
1. A vaginal washer comprising a stationary bearing, wiping means rotatably mounted in said bearing, means to feed and spray a cleansing liquid to said wiping means, and means to rotate said wiping means with respect to said means for feeding the cleansing liquid.

1,374,459. HANGER FOR TOWELS AND THE LIKE. CARROLL LICHTY, Des Moines, Iowa. Filed Oct. 9, 1920. Serial No. 415,863. 1 Claim. (Cl. 248—9.)



In a hanger for towels or the like, a support having a raised portion in its surface, a cover casing member of substantially the same size as said raised portion adapted to extend over said raised portion, a shaft having one of its ends journaled in said cover casing and its other end in said support, said cover casing being provided with an opening, a spool mounted on said shaft and on the inside of said cover casing, a spring on said shaft having one end fixed to said spool and the other end to said support, a cord fixed to said spool adapted to extend through said opening, a stop member on the extended end of said cord for preventing it from passing through said opening, the parts being so arranged that the tension of the spring may be varied by rotating the cover casing relative to the support.

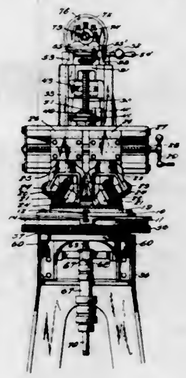
1,374,460. GEAR-CUTTING MACHINE. FREDRIK LJUNGSTRÖM, Brevik, Lidingön, Sweden, assignor to Aktiebolaget Ljungstrom Angturbin, Stockholm, Sweden, a Corporation. Filed May 8, 1920. Serial No. 379,807. 2 Claims. (Cl. 90—1.)



1. In a gear cutting machine, the combination with the operating mechanism and a gyrating mass, of a connection between the operating mechanism and said mass consisting of a friction gearing adapted to transmit an increased speed to said connection and mass.

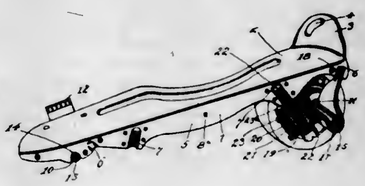
1,374,461. CAR-DOOR. EDWARD A. MAYHEW, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1919. Serial No. 295,962. 5 Claims. (Cl. 20—22.)

1. In combination with a railway box car having a door opening and a pair of sliding door sections to close said opening, of a combined weather strip and guiding member fastened to the meeting edge of one of said sections, having its free edge projecting toward the other section and bent outwardly to form a guide for the meeting edge of the other section, so as to insure proper alinement of said sections, and a baffle member fastened to said second mentioned section adjacent its meeting edge, and adapted in coöperation with the weather strip and guiding member to prevent rain and the like from entering the car between the meeting edges of the door sections.



1,374,462. PIANO-PLAYER-ROLL CONTAINER. FRED W. MILLER, Kenmore, N. Y., assignor to Climax Cabinet Company Inc., Buffalo, N. Y. Filed Apr. 17, 1919. Serial No. 290,801. 2 Claims. (Cl. 211—16.)

1. A device of the class described comprising a frame; a shaft journaled therein; wheels on the shaft and having peripheral notches; endless conveyers; tubular supports mounted intermediate their ends in the conveyers, the outer ends of the supports being received in the notches of the wheels to form a driving connection between the wheels and the conveyers, the inner end of one support constituting means for engaging one end of a music roll; and a plunger mounted in the other support and constituting means for engaging the opposite end of a music roll, the tubular construction of the supports permitting the plunger to be mounted in either support at the will of an operator.



2. A device of the class described comprising a frame; a shaft therein; endless conveyers coöperating with the shaft and having music roll supporting means; connections having their ends pivoted eccentrically to the conveyers, whereby the connections may be swung toward and away from each other, transversely, thereby to accommodate music rolls of different diameters; and retractile members uniting the connections and constituting retainers for the free ends of the sheets of the music rolls.

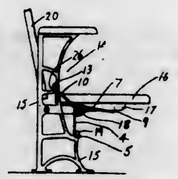
1,374,463. MACHINE FOR THE MANUFACTURE OF ASBESTOS GASKETS. EDWARD NALL, deceased, by Edith Alice Nall, executrix, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Feb. 15, 1917, Serial No. 148,830. Divided and this application filed July 31, 1918. Serial No. 247,698. 27 Claims. (Cl. 18—10.)

1. A machine for producing a packing strip comprising, rotatable shaping elements one of which is adapted to impart rotative movement to the other elements through engagement therewith, the elements having their axes arranged in relative angular relation, means for effecting engagement of the last element with the first element, and means for adjusting the last elements laterally of the first element.

1,374,464. ROLLER-SKATE. FREDERIC W. NALL, Cincinnati, Ohio. Filed June 9, 1919. Serial No. 302,709. 3 Claims. (Cl. 46—51.)

1. In a roller skate, a foot plate therefor comprising two longitudinal sections, extending from heel to toe, having depending flanges along their meeting edges extending their full length, said flanges being united together in abutment with each other along the median line of the foot plate, to complete the foot plate and provide a truss therefor.

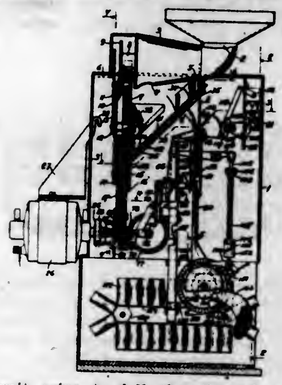
1,374,465. SOIL-PULVERIZER. GEORGE W. OAKES, Roseland, N. J. Filed May 17, 1920. Serial No. 381,836. 3 Claims. (Cl. 55—12.)



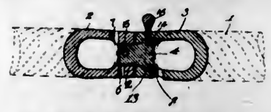
1. In a harrow, a pair of side bars, a series of cross bars secured to the side bars, each crossbar having a series of teeth, a set of rollers one mounted between each of the crossbars, each roller being provided with an adjustable bearing whereby it is independently and rigidly secured directly to the crossbar.

1,374,466. CIGARETTE. GEORGE PAPPANIKOLAOU, Petersburg, Va. Filed Dec. 13, 1919. Serial No. 344,539. 3 Claims. (Cl. 131—52.)

3. A cigarette having a flexible mouth piece inclosing a cylindrical piece of sponge which is exposed at one end of the cigarette and provides a resilient bit for the user's lips.



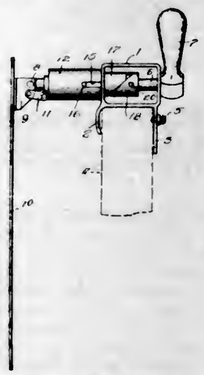
1,374,467. SEAT-RAISING ATTACHMENT FOR THEATER-CHAIRS OR THE LIKE. GEORGE IRWIN PARK, Burlington, Ontario, Canada, assignor of one-third to George Swanwick and one-third to Charles Montag, Hamilton, Ontario, Canada. Filed Oct. 23, 1920. Serial No. 419,129. 5 Claims. (Cl. 155—86.)



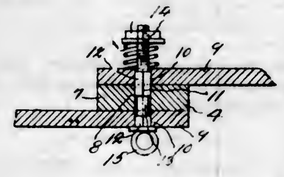
1. In a row of theater chairs, or the like, the combination with the hinged seats thereof and the frames of the chairs, of a spring attachment mounted upon the frame between adjacent chairs, said attachment coacting between the seats of said adjacent chairs and the frame for normally maintaining said seats in the raised position.

1,374,468. COIN-HANDLING APPARATUS. EDWARD B. PAUL, Lancaster, Pa., assignor to Lancaster Automatic Machine Company, Lancaster, Pa., a Corporation of Delaware. Original application filed Nov. 16, 1918, Serial No. 262,767. Divided and this application filed Mar. 28, 1919. Serial No. 285,928. 6 Claims. (Cl. 133—3.)

3. Apparatus for feeding coins to a coin handling mechanism, comprising a receptacle having a fixed vertical wall and an inclined circular rotary bottom provided with a plurality of coin receiving pockets, the outer portions of which lie adjacent to the fixed wall, an inclined fixed annular bottom portion upon which said rotatable bottom is supported, said fixed bottom portion being provided with an aperture in its upper part, and means for moving the said rotatable bottom to bring the coin-receiving pockets therein successively into register with the aperture to permit coins to fall therethrough and be discharged from the feeding apparatus.

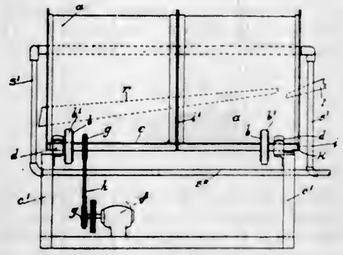


1,374,469. ROPE-COUPLING. CHARLES A. PETTIT, St. Louis, Mo., assignor to C. W. Hunt Company, Inc., West New Brighton, N. Y., a Corporation of New York. Filed May 2, 1919. Serial No. 294,198. 4 Claims. (Cl. 24—123.)



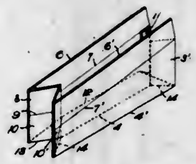
2. A rope coupling, including a pair of links, one of said links being formed with a screw-threaded opening, the screw threads thereof extending in a spiral in opposition to the twist of the rope adapted to be engaged by said links, a plug extending between said links and being formed with a shank provided with screw threads adapted to engage said screw-threaded opening, the opposite end of said plug engaging the second of said links and being freely rotatable with respect thereto, said plug being adapted to be held against rotation with respect to either of said links and being capable of drawing one of said links toward the other of said links and into firm engagement therewith, whereby to prevent movement of one with respect to the other.

1,374,470. DIRECTION-INDICATOR FOR AUTOMOBILES. CARL B. QUARFOOT, Chicago, Ill. Filed June 30, 1920. Serial No. 392,989. 9 Claims. (Cl. 116—52.)



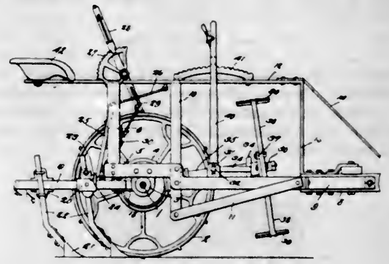
1. A direction indicator for a vehicle, comprising a supporting member, a horizontal shaft mounted thereon, and extending transversely of the vehicle, means operable from inside the vehicle for rotating the shaft, an indicating arm pivoted to the outer end of the shaft and having a substantially flat indicating portion normally depending in a plane substantially parallel to the side of the vehicle, and a pair of cams respectively fast upon the shaft and the supporting member, the said cams coöperating for causing a quarter rotation of the shaft to swing the indicating arm so as to bring the said indicating portion into a vertical plane transverse of the vehicle.

1,374,471. TRAFFIC-SIGNAL. JOHN REYNARD, Omaha, Nebr. Filed July 25, 1919, Serial No. 313,338. Renewed Feb. 21, 1921. Serial No. 446,863. 1 Claim. (Cl. 40—145.)



A traffic signal comprising a base, a standard, the lower end of which is rotatably mounted in the base and its upper end being provided with a horizontally disposed square opening, a pair of arms, each provided with a square opening near one end thereof and adapted to aline with said square opening in the standard, a bolt slidably mounted in the square openings in the arms and standard, said bolt being provided with relatively spaced squared portions for normally locking the said standard and the arms, reduced cylindrical portions on said bolt adapted to be moved into registration with said squared openings in the arms when it is desired to change the position of the arms and an enlarged hub integral with the bolt to limit its inward movement and terminating in a ring portion for permitting the bolt to be withdrawn to an inoperative position and a spring for holding the bolt in a normally locked position.

1,374,472. APPARATUS FOR CLASSIFYING AND CONCENTRATING MINERALS, ORES, AND THE LIKE, ALSO APPLICABLE TO THE REQUIREMENTS OF MINERAL-DREDGING. WILLIAM WHITEHEAD RICHARDSON, London, England. Filed July 7, 1919. Serial No. 309,164. 14 Claims. (Cl. 83—86.)

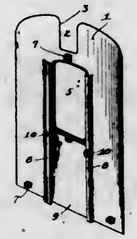


1. Apparatus for classifying and concentrating mineral ores comprising at least one trommel, riffle plates on the interior surface of said trommel, said riffle plates having a series of graduated ridges and grooves on their surfaces, arranged longitudinally of the trommel, the width over the ridges being greater than the width over the grooves, while the width and depth of the grooves increase from the forward moving edge of each riffle plate.

1,374,473. COLLAPSIBLE BOX. CHARLES A. SCOTCHER, Braintree Highlands, Mass., assignor to The A. O. Crawford Co., Inc., South Weymouth, Mass., a Corporation of Maine. Filed Jan. 22, 1920. Serial No. 353,295. 1 Claim. (Cl. 229—41.)

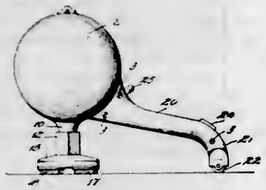
A collapsible box formed from a single integral sheet of flexible material, and consisting of a base, rectangular in outline and adapted to fold along a longitudinal, median line, and upstanding side and end walls, each of said side walls having one-half a complete cover integral therewith, and extending from the upper edge thereof, and one of the end walls having a prolongation constituting a partial cover, all of said cover portions being adapted when the box is filled to be folded inwardly upon the contents thereof, each of said end walls and including the cover extension of one end wall, being adapted to fold along a median line constituting a continuation of the said median line of the base, whereby the box may be collapsed along said median line to bring the cover portions extending from the sides into face contact with each other, but having the end cover extension folded upon itself between them, thus providing a collapsed box and cover of minimum thickness for packing purposes.

1,374,474. COTTON-CHOPPER. BRUNO SCHWAB, RICHARD SCHNEIDER, and HAVER HOEGENAUER, San Antonio, Tex. Filed June 21, 1919. Serial No. 305,799. 1 Claim. (Cl. 97—46.)



In a cotton chopping machine the combination with a frame and supporting wheels, of a housing interposed between the wheels and mounted for rotation, a sleeve extending radially from the housing, axles connected to the respective wheels and extending into the housing, a differential connecting the axles, a shaft geared to the differential and journaled within the sleeve, a chopping hoe connected to and revoluble with the shaft, means under the control of the operator and engaging the sleeve for swinging said sleeve upwardly or downwardly to a desired elevation and rotating the housing on the axles, said means operating to hold the sleeve and housing against rotation with the axles.

1,374,475. COMBINED MUD-GUARD AND MOTOR-COOLER. AMBROSE J. SHAUGHNESSY, Islip, N. Y. Filed May 20, 1920. Serial No. 382,850. 7 Claims. (Cl. 208—150.)



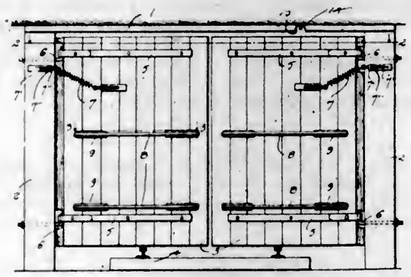
1. A guard for motorcycles comprising a plate, the plate consisting of a single piece of sheet metal of suf-

ficient length and breadth to protect the legs of the operator, said plate being concaved forwardly and provided

with an opening, said opening being entirely bounded by the plate and so located as to direct air on the motor.

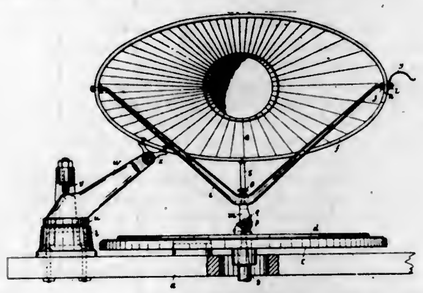
1,374,476. ROTARY SURFACE-BRUSH. MARY C. SHINN, Seattle, Wash. Filed Aug. 7, 1919. Serial No. 315,990. 4 Claims. (Cl. 15—14.)

3. In a rotary brush device, a motor provided with a housing, an extension formed on the housing and projecting therefrom to form a handle, a supporting roller at the outer end of the extension, a brush carrier provided with rotary brushes and means interconnecting said motor and brushes to rotate the brushes.



1,374,477. STORAGE-BATTERY PLATE OR ELECTRODE. EDWARD WANTON SMITH, Philadelphia, and CHARLES D. GALLOWAY and CORNELIUS AMBAUSTER, Roslyn, Pa. Filed Sept. 4, 1918. Serial No. 252,564. 1 Claim. (Cl. 204—29.)

In a storage battery plate or electrode, including metal rods surrounded with active material or material adapted to become active inclosed in ribbed and perforated insulating tubes or envelops, and in combination therewith an end construction consisting of imperforate and ribless cuffs at the ends of the tubes and a poured connecting bar fitting inequalities in the lengths of the tubes and fitting inequalities in the ends of the active material or material adapted to become active and contacting therewith, and said bar merging into the ends of said rods, substantially as described.



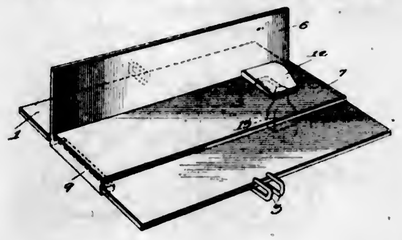
1,374,478. SELF-OPERATING MINE-DOOR FOR LOCOMOTIVES. PATRICK J. STANTON, Lundale, W. Va. Filed Aug. 18, 1920. Serial No. 404,441. 4 Claims. (Cl. 246—304.)

1. A mine door comprising posts arranged in the doorway of a mine, doors hinged to said posts and adapted to swing in opposite directions thereon, flexible connections between the hinged edges of said doors and said posts, means to resiliently retain said doors in closed position,

and guard members mounted on opposite sides of said doors for engagement by a locomotive to force said doors to swing to open position.

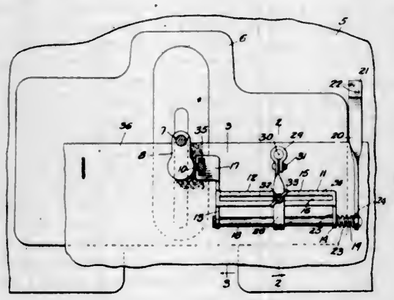
1,374,479. PHONOGRAPH-REPRODUCER. GASTON STROBINO, Paterson, N. J. Filed Mar. 5, 1920. Serial No. 363,367. 3 Claims. (Cl. 274—25.)

1. In combination, a reproducer including a vibratory membrane member and a forked-shaped free stylus device rigidly secured as to the arms of its fork and only at the extremities of said arms to said member in the line of substantially its greatest circumference, and means to support the reproducer in operative relation to a record.



1,374,480. VULCANIZED BOOT AND SHOE. LYMAN A. TRULL, Williamsport, Pa., assignor to Lycoming Rubber Company, a Corporation of Pennsylvania. Filed Nov. 19, 1919. Serial No. 339,021. 9 Claims. (Cl. 36—14.)

1. A shoe comprising an insole, an upper having its lower margin turned over upon the insole, a vulcanized outer sole, and a vulcanized welt strip intermediate the insole and outsole, the said welt strip being secured to the insole by metallic fastening devices extending through the said margin of the upper.

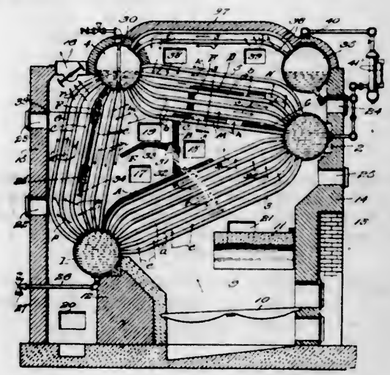


1,374,481. GROUSER. STANLEY MONTE WADE, Oakland, Calif. Filed May 4, 1920. Serial No. 378,741. 2 Claims. (Cl. 301—44.)

2. In combination, a grouser and an element to which the grouser is to be attached, said grouser having at one end a hook and at the other a pin mounted to slide laterally with respect thereto, the element having a slot through which the pin is adapted to pass, when the hook

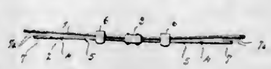
is engaged with the element, said pin having a head which will pass through the slot when in register therewith and will extend transversely of the slot when the hook is engaged with the element.

1,374,482. MARKING DEVICE. IKE WISNIPOLSKY, Brooklyn, N. Y. Filed Nov. 29, 1919. Serial No. 341,396. 2 Claims. (Cl. 112—75.)



1. A marking device of the class described comprising a shaft, means for supporting said shaft, a main frame composed of sheet metal fashioned to form end members joined by a longitudinal member having an elongated aperture, said shaft passing through apertures in said end members for rotatably supporting said main frame, a supplemental frame mounted on said shaft and adjustable longitudinally thereof and of the main frame, means passed through said supplemental frame and the longitudinal slot in the main frame for securing said supplemental frame in connection with the main frame in different positions of adjustment, tensional means for holding the main and supplemental frames normally in a raised position, and means on the supplemental frame for detachably and adjustably securing a marking element in connection therewith.

1,374,483. PHONOGRAPH ATTACHMENT. JAMES J. ANKER, Verona, Pa. Filed Apr. 3, 1918. Serial No. 226,536. 1 Claim. (Cl. 274—1.)

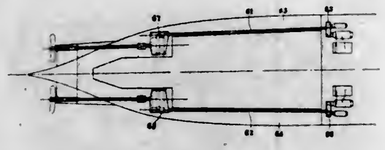


A reproducer head lifting device comprising a spider having a freely rotatable lifting button thereon centrally positioned with reference to the reproducer head for the purpose of insuring smooth operation of the latter when revolved about a pivotal point on the tone arm of a phonograph.

1,374,484. BOILER. JOHN P. BADENHAUSEN, Philadelphia, Pa. Filed Mar. 18, 1916. Serial No. 85,124. 5 Claims. (Cl. 122—297.)

1. A water tube boiler having a transverse mud drum, a transverse water drum, a transverse steam-and-water drum, a steam receiving drum, tubes connecting said mud drum with the water drum, tubes connecting said water drum with the steam-and-water drum, tubes connecting the steam-and-water drum with said mud drum, a plurality of steam conveying and superheating tubes connecting said steam-and-water drum with the receiving drum, and baffle means including a baffle extending forwardly over the top tubes of said first mentioned tubes, a baffle extending upwardly and forwardly therefrom into said second mentioned tubes, said last mentioned baffle provided with a rearwardly extending baffle, and a baffle in said third mentioned tubes extending from said steam-and-water drum downwardly toward said mud drum, whereby the gases of combustion pass downwardly along the forward part of said third mentioned tubes, transversely of the latter at the lower end thereof, upwardly along the rear part of said tubes and with a cross flow transversely of the upper part of the rear tubes thereof, said baffles arranged to provide therebetween contracted gas passages for effecting increased efficiency of operation and to change the course of the flow of the hot gases for the intimate contact of said hot gases with the tubes of said boiler.

1,374,485. SOFT-COLLAR HOLDER. WILLIAM BERECKY and GEORGE MUNTEANU, New York, N. Y. Filed Oct. 14, 1920. Serial No. 416,933. 2 Claims. (Cl. 24—81.)

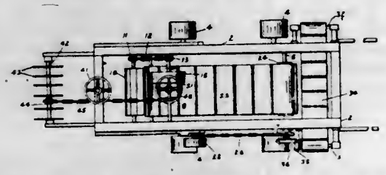


1. A device of the class described comprising a pair of resilient members, one of said members being of greater length than the other, a clamp rigidly joining said members at their centers, serrations on one of said members, a slidable sleeve on each side of said clamp, serrations on each sleeve adapted to engage said first-named serrations.

1,374,486. SHIP-PROPULSION INSTALLATIONS. DAVID CHRISTOPHER BLACK, Alloa, Scotland, assignor to Parsons Marine Steam Turbine Company Limited, Wallsend-on-Tyne, England. Filed Sept. 15, 1919. Serial No. 323,910. 1 Claim. (Cl. 115—37.)

In a marine propulsion installation, a plurality of propeller shafts, driving means located in an engine room, a shaft intermediate between said driving means and each of said propeller shafts, gearing in proximity to said driving means and connecting it to each intermediate shaft,

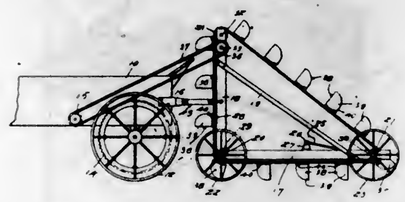
gearing widely spaced from the engine room and aft the hold connecting each intermediate shaft with the corresponding propeller shaft, the axial displacement of each



intermediate shaft with respect to the corresponding propeller shaft necessitated by the gearing being toward the side of the vessel in order to provide greater unbroken hold space.

1,374,487. AIRSHIP. DAVID FRANK BROWN, Boundbrook, N. J. Filed June 22, 1920. Serial No. 390,823. 5 Claims. (Cl. 244—15.)

1. In an airship a plurality of radially extending planes, a motor propelled propeller movable with each of the planes, said propellers being driven simultaneously to swing the planes about a common center, and means for shifting the propellers relative to the planes to vary the speed of rotation of the planes about said center and to propel the machine forward bodily.



1,374,488. DITCHING-MACHINE. E ANDERS CHATTSTROM, Davenport, Iowa. Filed May 29, 1919. Serial No. 300,750. 1 Claim. (Cl. 37—29.)

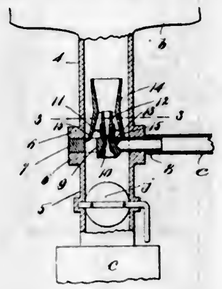
A device of the class described, comprising a main portable frame; a pair of auxiliary frames supported in said main frame so as to be capable of vertical adjustment therein, independently of each other, one of said auxiliary frames being in advance of the other; an excavating cylinder carried by the rear one of said frames, provided with a plurality of transverse blades; a series of spaced-apart serrated disks rotatably supported by the forward frame; and conveying mechanism adapted to receive material from said excavating cylinder and discharge it at the side of the machine.

1,374,489. STONE-PICKER. GEORGE CHERBA, Jeddo, Pa. Filed Dec. 27, 1919. Serial No. 347,674. 4 Claims. (Cl. 55—17.)

2. The combination with a vehicle including a body, and rear supporting wheels for the body, of a stone picker comprising a frame positioned to the rear of the vehicle body, an endless stone picking and conveying element movably associated with the frame for removing stones from the ground and conveying the stones upwardly and depositing the same in the vehicle body, a driving shaft for the picking element rotatably carried by said frame, sprockets carried by the driving shaft, idler sprockets carried by the vehicle body, sprocket chains passing about the sprocket wheels of the driving shaft and the vehicle body, and driving sprockets carried by the vehicle wheels and engaging the sprocket chains.

3. A stone picker comprising a frame having longitudinally extending side bars, vertically extending standards positioned at the forward ends of the side bars, front and rear axles carried by the side bars, supporting arms extending upwardly intermediate the length of the side bars, a cross bar carried by the supporting arms, bearing arms carried by the cross bar and extending rearwardly and terminating in bearings engaging the rear axle, a driven shaft rotatably supported by said standards, an endless picking and conveying element extending about the driven shaft and axles, and a driving shaft carried by the standards and having connection with the driven shaft for imparting rotary movement to the same.

4. A stone picker comprising a frame having side bars, vertical standards carried by the side bars, a driven shaft carried by the standards, axles carried by the forward and rear end portions of the side bars, sprocket wheels positioned upon the driven shaft and axles, an endless picking element having side chains passing about the sprocket wheels of the driven shaft and axles, and buckets positioned upon the side chains and having prongs positioned in spaced relation for engaging stones in a field as the buckets move rearwardly beneath the frame and lifting the stones from the field when the buckets reach the rear end of the frame and move upwardly.

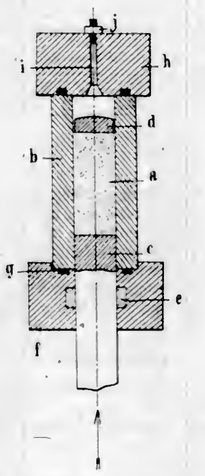


1,374,490. CHAMBER-HEAD. CHARLES S. CHRISMAN, West Chester, Pa. Filed May 1, 1917. Serial No. 165,720. 1 Claim. (Cl. 72—38.)

An internally conical head for a chamber comprising bricks of which the two opposite sides taper in the direction of the length of the brick and in the direction of the thickness of the brick and of which the top and bottom and the two ends are parallel respectively and said bricks having one of their end portions offset in respect to the other of their end portions, substantially as described.

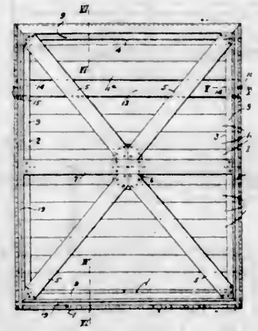
1,374,491. SUCTION-AUGMENTING DEVICE FOR VACUUM FEEDING SYSTEMS. JOSEPH C. COULOMBE, Dracut, Mass. Filed Dec. 22, 1919. Serial No. 346,719. 5 Claims. (Cl. 158—36.)

1. The combination with an internal combustion engine, its gas intake line and carbureter, and a liquid fuel feeding system of the kind having a vacuum chamber in which suction is induced by the operation of the engine, of means for augmenting the suction in said vacuum chamber comprising a constricted tube in the intake line to the engine, filling only part of the transverse space in the intake



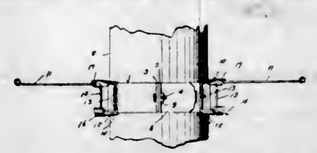
line to permit the passage of gas outside of the tube, and a duct connecting the vacuum chamber to the tube in the region of its constricted part.

1,374,492. FUSIBLE ADHERENT AND METHOD OF MAKING THE SAME. FRANK H. DAVIS, New York, N. Y., assignor of one-half to Francis R. Coughlin, New York, N. Y. Filed Feb. 4, 1919. Serial No. 274,856. 7 Claims. (Cl. 87—17.)



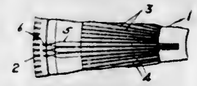
7. A fusible adherent of the class described derived from shellac or equivalent resinous product by boiling said product with ammonium hydroxid and sodium chlorid solution until a precipitate is formed, free from greasy or fatty substances and having fusible properties suitable for transferring gold leaf from its backing to the object upon which it is to be attached without discoloration of said gold leaf.

1,374,493. MANUFACTURE OF REFRACTORY AND INSULATING PRODUCTS. GEORGES LOUIS DIMITRI and JULES EDOUARD DELAUNAY, Paris, France. Filed June 21, 1920. Serial No. 390,581. 6 Claims. (Cl. 25—156.)



1. A process of manufacturing refractory and insulating products, comprising mixing together ceramic materials in a powdered slate, and molding the powdered mixture under pressure in a vacuum into the form of articles of definite shape; substantially as described.

1,374,494. CAR-DOOR. IRA S. DOWNING, Indianapolis, Ind., assignor to Camel Company, a Corporation of Maine. Filed July 10, 1919. Serial No. 309,978. 6 Claims. (Cl. 20—21.)

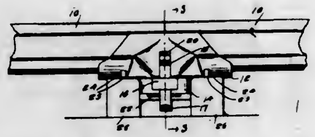


3. The combination with a sliding car door having slats removable through an opening in the vertical edge of the frame, of a detachable door stop projecting from the side of the car and secured thereto adapted to cover the opening in the frame when the door is in closed position.

1,374,495. CLOTHES-RACK ATTACHMENT FOR BOILERS. EMIL E. ETAN, Bozeman, Mont. Filed June 16, 1920. Serial No. 389,389. 1 Claim. (Cl. 126—341.)

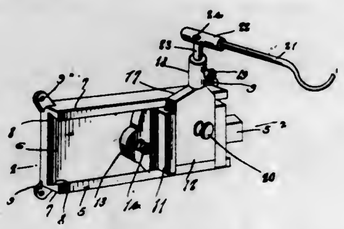
A clothes rack attachment comprising a band secured about a boiler, a plurality of clips adjustably secured to the band and each consisting of a single length of metal bent into substantially U-shape formation having its bight portion disposed against the band and having its arms slotted and bent upon themselves and parallel with the bight portion to form ears adapted to engage the inner face of the band, and clothes supporting arms extending through the slots.

1,374,496. WELT ATTACHMENT FOR KNITTING-MACHINES. EMIL J. FRANCK, Philadelphia, Pa. Filed Feb. 18, 1919. Serial No. 277,847. 1 Claim. (Cl. 66—32.)



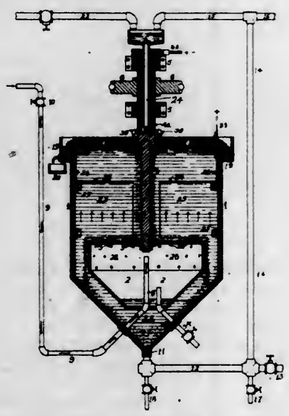
A welt attachment for knitting machines comprising the combination of a grooved dial or carrier, and transferrers each consisting of two parts whereof each is provided with a hook and with an off-set shank, and the hooks of each of the parts of a transferrer arranged face to face and the shanks of each of the parts of a transferrer arranged in different and adjoining grooves whereby space is provided between the parts of the transferrers all the way to the dial, substantially as described.

1,374,497. ANGLE-BAR FOR RAIL-JOINTS. WALTER E. GAUNTT, Pine Hill, Ky. Filed Apr. 24, 1920. Serial No. 376,339. 2 Claims. (Cl. 238—204.)



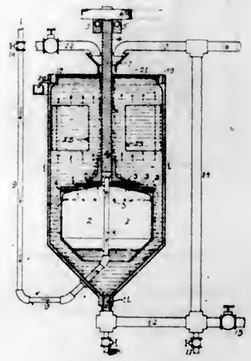
1. A rail joint comprising complemental sections to grip the rails, one of the sections having a base on which the

rails rest and an enlargement depending from the same and having a transverse slot therethrough, said enlargement having a recess, said recess extending vertically and



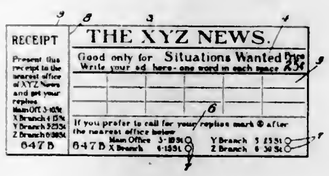
also completely through the section, the other section having a tongue disposed in the slot provided with an eye in registry with the recess, and fastening means coöperating with the recess and eye.

1,374,498. ADJUSTABLE SHADE-BRACKET. JOHN HENRY GILBERT, Plant City, Fla., assignor of one-half to Henry A. Driggers, Mulberry, Fla. Filed Oct. 13, 1917, Serial No. 196,465. Renewed Dec. 3, 1920. Serial No. 428,149. 1 Claim. (Cl. 156—24.)



A shade bracket comprising an attaching plate, a shade roller supporting plate mounted upon the attaching plate for horizontal adjustment with relation thereto, a third plate mounted upon said supporting plate for vertical adjustment with relation thereto, a curtain pole supporting rod, and means connecting said rod to said third plate for horizontal adjustment with relation thereto.

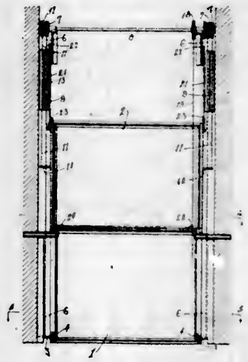
1,374,499. FLOTATION APPARATUS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Dec. 27, 1915. Serial No. 68,718. 2 Claims. (Cl. 261—93.)



1. In apparatus for treating liquids with gases, a tank adapted to contain the liquid, a rotary member journaled on a substantially vertical axis submerged in the liquid, stationary members in proximity to the rotary member, and means for passing an electric current from the rotary member to the stationary members.

1,374,500. APPARATUS FOR TREATING LIQUIDS WITH GASES. WILLIAM E. GREENAWALT, Denver, Colo. Filed Oct. 30, 1915. Serial No. 58,748. Renewed Feb. 12, 1920. Serial No. 358,130. 20 Claims. (Cl. 261—93.)

1. In apparatus for treating liquids with gases, a tank adapted to contain a liquid, a rotary member, having gas passages arranged with outlets at variable distances from the center and extending from its central portion toward its periphery, suspended within the tank and submerged in the liquid, and means arranged for introducing a gas into the central portion of the rotary member whereby liquid is displaced from the rotary member and gas is forced through the said passages.

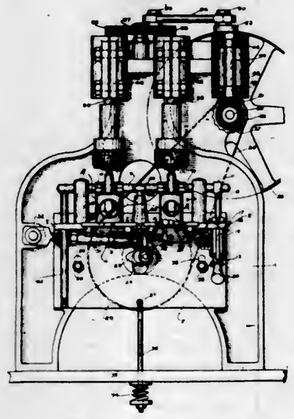


1,374,501. ADVERTISEMENT DEVICE. CARLISLE N. GREIG, Chicago, Ill. Filed Apr. 22, 1918. Serial No. 229,904. 9 Claims. (Cl. 283—56.)

1. As an article of manufacture, a card for conveying advertising copy to an advertising medium having an indicated valuation corresponding to the charge for publishing such copy and bearing an indication of the advertisement classification to which it pertains, an appropriately imilcated space on which said advertising copy is to be written and an indication of the number of words permissible in said copy.

1,374,502. MECHANISM FOR OPERATING SECTIONAL DOORS. EDWARD P. HAINES, Philadelphia, Pa., assignor to Patent Appliance Company, a Corporation of New Jersey. Filed May 3, 1919. Serial No. 294,621. 10 Claims. (Cl. 268—1.)

1. The combination with door sections, of means for raising one of said door sections and thereafter another section in unison with said one section, structure tilting said door sections into inclined position, and means for counterbalancing said door sections throughout their entire range of movement comprising counter-weighting means of constant magnitude, and means connecting said counterweighting means to one of said sections at a point between

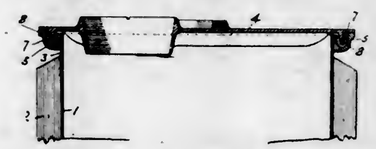


its top and bottom and adjacent the center of gravity of the door sections when in position in which they move in unison.

1,374,503. SEAMAN'S NET-NEEDLE. WILLIAM HENDRY, Tacoma, Wash. Filed May 29, 1920. Serial No. 385,277. 2 Claims. (Cl. 66—10.)

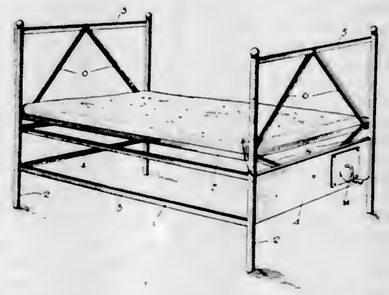
1. A needle of the character described comprising two elongated, opposite face plates, posts intermediate said plates rigidly spacing the same apart in substantial parallel relation, said plates being tapered to a point and drawn together at their forward ends, and spaced apart at their rearward ends and a thread holding plate fixed to one of said posts having a tapered slot therein for holding one end of a thread that may be wound about said posts.

1,374,504. MACHINE FOR GRINDING VALVES. GEORGE CLIFFORD HILL and FRANK COOPER, Seattle, Wash. Filed Feb. 14, 1920. Serial No. 358,610. 6 Claims. (Cl. 51—29.)



1. In a machine for grinding portable valves, means for holding the valve seat rigid and means for releasing the holding means at predetermined periods, with means for holding the valve portion against the seat with resilient pressure, and means for rotating the valve in alternate directions for predetermined limits of movement.

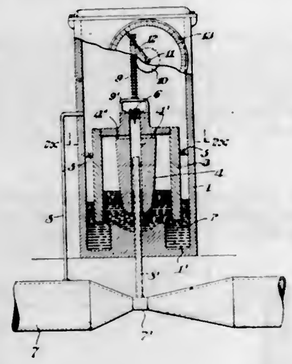
1,374,505. METHOD OF MAKING MOTOR-VEHICLE TIRES. ERNEST HOPKINSON, New York, N. Y. Filed Jan. 4, 1917. Serial No. 140,508. 29 Claims. (Cl. 154—14.)



19. In the method of making a tire casing for motor vehicles, the steps of wrapping a plurality of separate rubberized fabric plies around a drum to form a pulley band, folding over the edges of the pulley band, forming the pulley band into tire shape by inflating an expansible air bag within the band and afterward vulcanizing.

1,374,506. STORAGE-BATTERY CONTAINER. HERBERT E. HUNT, Philadelphia, Pa. Filed Nov. 15, 1918. Serial No. 262,637. 1 Claim. (Cl. 206—2.)

A battery container comprising the combination of a crown having provided therein an open gutter and sufficiently massive to maintain the gutter in open condition, a cover provided with a flange adapted to enter the gutter of the crown, sealing compound in the gutter, an exterior wooden receptacle of which the wall is thicker than the crown to protect the same, and a relatively thin single walled leaden vessel fitting and contacting with the interior of and supported by the receptacle and having its single wall extended above the top of the receptacle wall and connected with the crown and constituting the sole means for supporting the latter spaced above and clear of the top of the receptacle wall thus referring the weight of the contents of the vessel to the bottom of the receptacle, substantially as described.



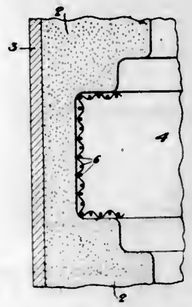
1,374,507. AUTOMATIC ROCKING CRADLE. AUBREY J. LAWSON, New York, N. Y. Filed Oct. 2, 1920. Serial No. 414,289. 1 Claim. (Cl. 5—57.)

An automatic rocking cradle comprising a supporting structure including pairs of end posts connected by longi-

tudinally and transversely extending members, transversely extending braces connecting the upper ends of the posts in pairs, hangers pivoted to the braces, a bed frame supported by said hangers, a substantially V-shaped actuating members secured to one end of the bed frame and having a slot in its apex, a wheel supported by the supporting structure, an eccentric wrist pin on said wheel and fitting in the slot, and means for rotating the wheel.

1,374,508. INTEGRATING MECHANISM. JOHN W. LEDOUX, Swarthmore, Pa. Filed Nov. 21, 1919. Serial No. 339,719. 7 Claims. (Cl. 73—167.)

1. An integrating mechanism comprising a case adapted for containing a fluid heavier than another to be measured, a reciprocatory bell in said case and adapted to be sealed by the heavier fluid, a displacement device movable with said bell and occupying a space therein of variable cross section, and means for communicating differential pressures from the lighter fluid to the interior of said case within and without said bell.



2. An integrating mechanism comprising a case containing a fluid heavier than another to be measured, a reciprocatory cylindrical bell in said case and sealed by the heavier fluid, a shaped displacement device fixed to and within said bell and forming a space therein of variable cross section, and means for communicating differential pressures from the lighter fluid to the interior of the case within and without said bell.

3. An integrating mechanism comprising a case containing a fluid heavier than another fluid to be measured, a cylindrical bell movable vertically in said case and sealed by the heavier fluid therein, a tapered displacement device fixed axially to and within said bell and forming a space therein of variable cross section within which the surface of the heavier fluid is movable, and means for differentiating the pressure of the lighter fluid and communicating differential pressures obtained thereby to the interior of the case within and without said bell.

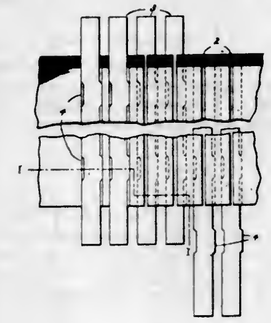
4. An integrating mechanism comprising a case provided with a dial, a shaft journaled in said case and a hand on said shaft movable thereby over said dial, in combination with a cylindrical bell movable in said case, means whereby said bell revolves said shaft, a tapered displacement device fixed to and within said bell so as to form a space therein which varies functionally in cross sectional area with the flow of a fluid to be measured, and means comprising conduits for communicating differential pressures from said fluid last named to the interior of said case within and without said bell.

5. An integrating mechanism comprising a case adapted for containing a fluid heavier than another to be measured, a reciprocatory bell in said case and adapted to be sealed by said heavier fluid, a device fixed to and within said bell for displacing said heavier fluid and forming therefor a space varying in cross section in functional relation with the flow of the fluid to be measured, and means comprising conduits for communicating differential pressures from said fluid to be measured to said heavier fluid within and without said bell.

1,374,509. ART OF HARDENING METAL. HAROLD A. LOMAX, Pittsburgh, Pa. Filed Oct. 10, 1919. Serial No. 329,700. 3 Claims. (Cl. 148—7.)

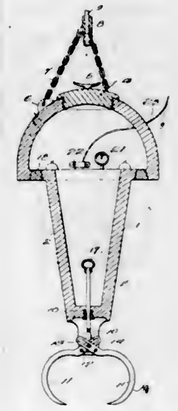
1. The process of casting metals consisting in supporting a portion of alloy within a mold at predetermined locations thereof and fusing the same with the molded metal of the casting.

1,374,510. FISHING-TOOL. JOHN FRANK MCDOWELL, Shreveport, La. Filed Apr. 26, 1920. Serial No. 376,697. 2 Claims. (Cl. 294—96.)



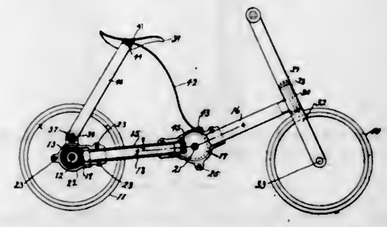
1. A tool of the character specified, comprising a body of cylindrical form having a tapering point, and having recesses extending longitudinally thereof from the upper end and inclining outwardly toward their lower ends and opening through the peripheral wall of the body, and balls in the recess, the openings in the recesses at the periphery of the body being at different levels and large enough to permit a portion of the balls to extrude and being too small to permit the entire ball to pass, the body being of a diameter and the balls of such size that when the holder is lowered into a well casing, the balls will grip the inner wall of the casing, said body having means for connecting it to a stem.

2. A fishing tool comprising a cylindrical body portion having a tapered lower end and a threaded upper end provided for engagement with means for raising and lowering the same, said body being also provided with a series of passages leading from the upper end thereof near the edge portion in a downwardly and outwardly extending



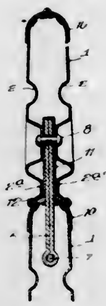
direction diverging from each other and communicating with and through the peripheral face of the body wall of the tool at different points or elevations in stepped-like relation and substantially spiral formation, the openings of the recesses on the periphery being smaller at the top than at the bottom and large enough to permit a considerable portion of the ball to extrude therefrom, but too small to permit the entire ball to pass, and balls in said passages or recesses.

1,374,511. WINDING FOR DYNAMO-ELECTRIC MACHINES. HARRY MATTHEWS, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 7, 1917. Serial No. 190,099. 11 Claims. (Cl. 170—120.)



1. In a dynamo-electric machine, the combination with a core member provided with a plurality of longitudinally extending slots, of conducting bars located in the slots and having offset portions thereof in positive engagement with the bounding surfaces of the slots.

1,374,512. SUBMARINE GRAPPLE. ARMOND J. MAYNARD, Waterbury, Conn. Filed Dec. 11, 1919. Serial No. 343,995. 1 Claim. (Cl. 61—69.)



In an apparatus of the class described, a one-piece housing having a body member tapered toward its lower end and being slightly larger than the body of a man, a dome-shaped head carried by the upper end of said body with an inwardly extending flange connecting the lower edge of said head with the upper end of said body offsetting one from the other and forming an instrument board, deadlights mounted in said flange, a manhole in the top of said dome, suspension means connected with said dome, and a grapple carried by the lower end of said body and equipped with an operating rod extending into the body to a position convenient for actuation.

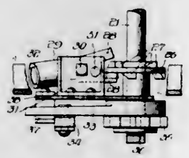
1,374,513. VELOCIPEDE. JOHN A. MOSHER and WILLIAM H. TOWNSEND, Wellington, Ohio. Filed Dec. 2, 1919. Serial No. 341,906. 4 Claims. (Cl. 208—55.)

1. In a velocipede, in combination, a rear axle having a ground wheel at each end thereof, driving gearing connected to the central portion of said axle, a gear case mounted on said axle and inclosing said gearing, a front steering head, and a frame comprising a single longitudinal member connected at its rear end to said gear case and at its front end to the steering head.

1,374,514. METALLIC CURTAIN. ANTIME MOTTEAU, Buenos Aires, Argentina. Filed Aug. 10, 1918. Serial No. 249,263. 2 Claims. (Cl. 189—56.)

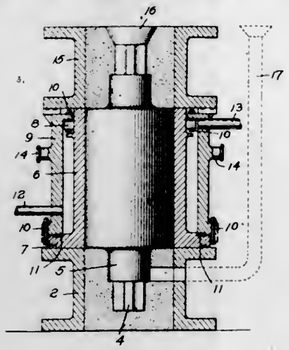
1 An all-metal curtain comprising a series of superposed U-shaped, sheet metal links arranged with their loop portions upward, the sides of each link being formed at diametrically-opposite points with inwardly extending parts, and the loop of each link being formed with an aperture, connecting means between the successive links arranged interiorly thereof and extending from each link through the aperture in the loop portion of the next lower link; and fastening devices inserted through the said inwardly extending parts of the links and through the adjacent portions of said connecting means for securing the latter immediately to the sides of said links.

1,374,515. CLIP FOR PENS, PENCILS, AND SIMILAR INSTRUMENTS. SYLVESTER M. NATHAN, Fitchburg, Mass. Filed Nov. 9, 1920. Serial No. 422,784. 13 Claims. (Cl. 24—11.)



8. A clip of the class described comprising, in combination, a band having an arm extending transversely thereof and provided with a longitudinal slot, a pivot extending across said slot and supported by said arm, a lever received in said slot and fulcrumed on said pivot, said lever being provided with a pair of arms having serrated, eccen-

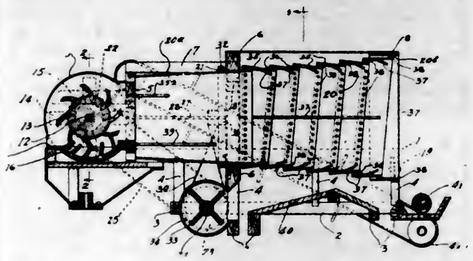
tric arms thereon and presenting an opening between them, a spring received in said opening and having one



end anchored on said pivot and the other connected to said lever to turn the latter about said pivot.

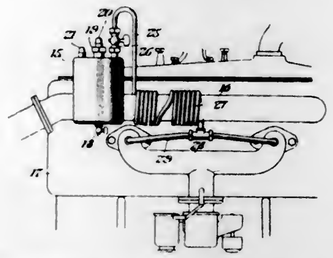
1,374,516. DOOR-OPERATING MECHANISM. JOHN O. NEIKIRK, Lombard, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 14, 1918. Serial No. 266,729. 8 Claims. (Cl. 105—312.)

1. A door operating mechanism comprising a shaft, a member rigidly mounted upon said shaft, said member being provided with stop members in diagonal relation to each other, and means for consecutively engaging said stop members.



1,374,517. METHOD OF MAKING CHILLED ROLLS. WILLIAM H. NICHOLS, Pittsburgh, Pa. Filed Aug. 18, 1919. Serial No. 318,380. 2 Claims. (Cl. 22—177.)

1. The method of making chilled rolls, consisting in cooling the chilled portion while the couplings and necks are still highly heated, removing the roll from the mold, and reheating the chilled portion by the heat permeating it from the couplings and necks.



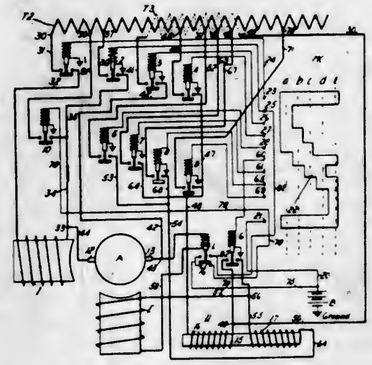
1,374,518. THRESHING-MACHINE OR THE LIKE. PETER ODA, Arcanum, Ohio. Filed May 5, 1920. Serial No. 379,089. 12 Claims. (Cl. 130—27.)

2. In a threshing machine the combination with a threshing cylinder, of a rotatable separator coöperating with the cylinder to receive the threshed grain and straw therefrom, and a blower arranged relative to the cylinder

and adapted to directly discharge a blast against the straw from beneath as it passes into the separator.

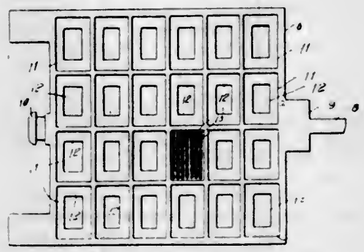
1,374,519. CARBON-REMOVER. CYRUS BYRON OLSON, Chicago, Ill., assignor to The Oxygenerator Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1916. Serial No. 77,663. 2 Claims. (Cl. 123—25.)

1. The combination with an internal combustion engine, of a supply tank seated on the exhaust manifold, said tank having a filling opening and a cap therefor, a safety valve and an air intake valve; and a pipe connecting the top of the tank with the intake manifold, a portion of said pipe being coiled about the exhaust manifold.



1,374,520. PACKING-GLAND FOR ROTATING BODIES. CHARLES ALGERNON PARSONS, STANLEY SMITH COOK, and LOUIS MORTIMER DOUGLAS, Wallsend, England; said Cook and Douglas assignors to said Parsons. Filed Mar. 30, 1920. Serial No. 370,035. 2 Claims. (Cl. 286—7.)

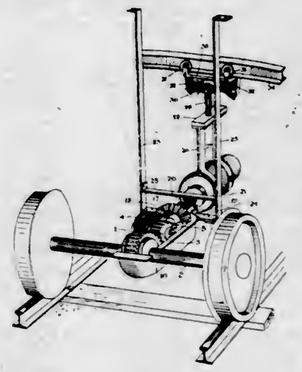
1. In a packing gland for rotating bodies, the combination of projections either on the stationary or the rotating member, said projections having a small clearance from the opposite member, with a stationary balanced divided ring or rings of carbon or like material in contact with the rotating member.



1,374,521. SYSTEM OF CONTROL. LAURENCE M. PERKINS, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 16, 1917. Serial No. 202,313. 6 Claims. (Cl. 172—276.)

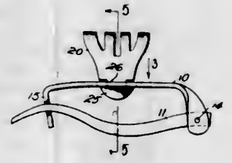
2. In a system of control, the combination with a transformer winding and a single-phase commutator motor having an armature and an exciting and an inducing field winding, of an inductive device, means for connecting said device in circuit to prevent short-circuits of said transformer wnding during motor acceleration, and means for connecting said device in series relation with said exciting

field winding and for connecting the inducing field winding across a section of the transformer winding for starting to weaken the exciting field strength while maintaining the exciting field-winding current substantially in phase with the armature current.



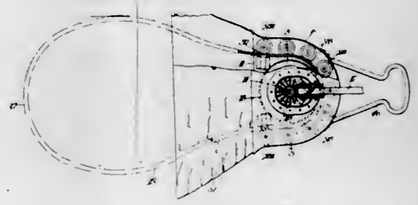
1,374,522. WAFER-TONGS. FERDINAND B. PETERSON, New York, N. Y. Filed Nov. 22, 1917. Serial No. 203,431. 1 Claim. (Cl. 53—10.)

Wafer tongs comprising complemental coextensive mold carrying irons connected at one side by spaced hinge members and provided at opposite edges with alined journals of which the common axis is perpendicular to the axis of the hinge members and in a plane midway between the parallel side edges of the irons, one of said journals being of unitary construction and carried by one of the irons and the other being of sectional construction with its complemental members carried respectively by the coöperating irons for registering contacting relation when the irons are closed, said members being longitudinally extended to form complemental handle members.



1,374,523. TRAIN-LIGHTING APPARATUS. WILLIAM ALEXANDER PITT, Montreal, Quebec, Canada. Filed May 5, 1920. Serial No. 379,147. 7 Claims. (Cl. 105—109.)

1. In a train lighting apparatus, an electric generator, a flexible support for said generator adjustably suspended from the car body, a gear wheel mounted on an axle of the car running gear, a train of gear wheels operatively con-



necting said axle gear with the shaft of said generator and independent supporting means for said train of gears from the car body.

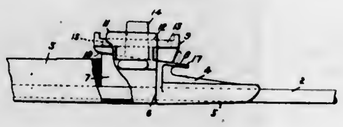
1,374,524. HAIR ORNAMENT. ALSTON L. PRESTON, Leominster, Mass. Filed June 21, 1920. Serial No. 390,537. 4 Claims. (Cl. 132—48.)

1. As an article of manufacture, a bow-holding hair ornament comprising a body formed of a sheet of celluloid having a bow-holding means thereon, an integral end extending backwardly at the center of the end of the body to form a single hook and an opposite integral end extending backwardly to form a support for a hair-retaining pin.

1,374,525. COAL-MINING MACHINE. JOHN D. PUGH, Harrisburg, Pa. Filed June 30, 1915. Serial No. 37,265. 8 Claims. (Cl. 262—28.)

1. In a cutting machine the combination with an endless flexible cutter having sufficient stiffness and resiliency to tend to assume the form of a circle, of holding means for engaging a section of said cutter and holding it bent on a curve having a diameter less than said circle leaving the balance of said cutter projecting from said holding means, and means for driving the cutter.

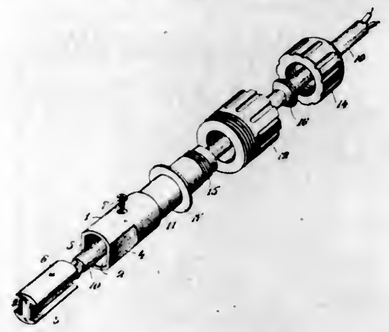
1,374,526. PROCESS OF PRODUCING A PHENOLIC CONDENSATION PRODUCT. LAWRENCE V. REDMAN, Evanston, and ARCHIE J. WEITH and FRANK P. BROCK, Chicago, Ill., assignors to Redmanol Chemical Products Company, Chicago, Ill, a Corporation of West Virginia. Filed Sept. 16, 1918. Serial No. 254,370. 2 Claims. (Cl. 106—22.)



1. The process of producing a phenolic condensation product, without the use of a condensing agent, which comprises: boiling together equal parts of a 40 per cent. formaldehyde solution and phenol until there is formed a viscous gummy lower layer and a supernatant aqueous layer containing approximately 10 per cent. of formaldehyde; discarding the aqueous layer; shaping and hardening the mass by subjecting to prolonged heat treatment at a temperature below 100° C. until the mass becomes hard and substantially insoluble and anhydrous throughout; and then subjecting the mass to further heat treatment at a temperature exceeding 100° C. for a relatively short period.

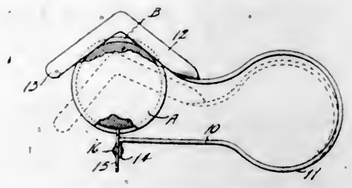
1,374,527. SECTION-CARRIER FOR STEAM-SHOVELS. WILLIAM N. ROWE, Hibbing, Minn. Filed Mar. 8, 1920. Serial No. 364,027. 13 Claims. (Cl. 104—3.)

1. In steam shovel equipment, the combination of a trolley track extending from the front to the rear of a steam shovel for carrying a track section over which the shovel moves, and a jib crane on the front end of the shovel having an arm which in one position registers with the trolley track and is sufficiently long to permit the carried track section to clear jack mechanism supporting the shovel and whereby said track section may be placed in proper position.



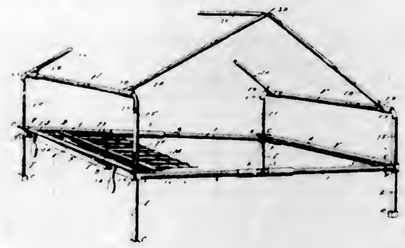
1,374,528. DEVICE FOR TROLLEY-CONDUCTORS. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 9, 1918. Serial No. 221,389. 9 Claims. (Cl. 191—38.)

1. An approach for a trolley frog comprising a trolley-conductor-engaging extension member disposed adjacent to the frog and having an inclined plane face, a wedge member engaging the plane face of the extension member and a member on the frog for coöperation with the wedge member to assist the latter in holding the extension member rigidly against the conductor.



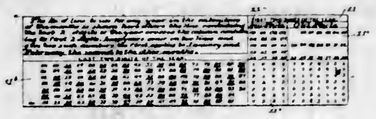
1,374,529. CONNECTOR-PLUG. FRANK L. SIMMONS, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Feb. 1, 1918. Serial No. 214,878. 2 Claims. (Cl. 173—361.)

1. As an article of manufacture, a connector plug for magnetic chucks and the like, comprising a body portion formed of an elongated member having a cylindrical portion and a non-cylindrical end, said non-cylindrical end being hollow, a blade block adapted to fit within said hollow non-cylindrical end, a pair of contact blades mounted on said block and on each side thereof, said body portion being provided with a passageway leading to said hollow portion and forming a conduit for a suitable waterproof



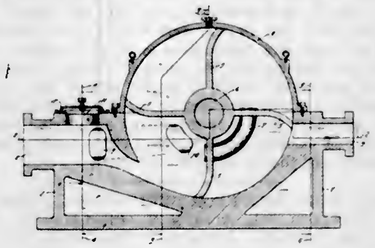
cable, a rotatable screw threaded member mounted on said cylindrical portion, and provided on its inner end with a gasket, a hood mounted on the outer end of said body portion and adapted to compress a gasket around a waterproof cable whereby a waterproof joint is formed between the plug and said cable.

1,374,530. CARBON-REMOVING TOOL. EUGENE H. SLAGLE, Ennis, Tex. Filed Sept. 28, 1920. Serial No. 413,274. 5 Claims. (Cl. 83—64.)



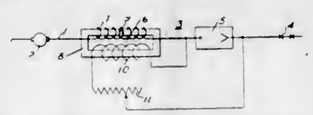
1. In a carbon removing tool, a resilient yoke-shaped member having a jaw at one end, and a scraper pivotally mounted on the opposite end of the member opposite the jaw and having a plurality of blades.

1,374,531. COLLAPSIBLE BED STRUCTURE. SAM R. SMITH, Los Angeles, Calif. Filed July 21, 1919. Serial No. 313,103. 2 Claims. (Cl. 5—5.)



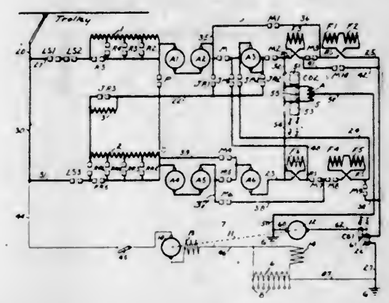
1. A canopy bed structure including end rails of L-shaped cross section, side rails for spacing said end rails, connectors at the corners for holding said side rails together, said end rails having sockets formed in the included angle between the sides, and said connectors having arms adapted to engage said sockets, for holding said side rails spaced apart.

1,374,532. PERPETUAL CALENDAR. WILLIAM J. SPILLMAN, Washington, D. C. Filed May 18, 1920. Serial No. 382,262. 5 Claims. (Cl. 283—2.)



1. A calendar comprising a table of numbers indicating years arranged consecutively in groups of seven spaces with two spaces for leap years, a series of month calendars each calendar having one of seven symbols, and a table of symbols arranged in groups of seven, the symbol for any given month calendar having the same position in its group as do those numbers in their groups of seven spaces which indicate years in which said month calendar is applicable.

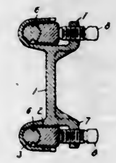
1,374,533. DREDGE-PUMP. ANDERS GUSTAF STENBERG, Galveston, Tex. Filed July 29, 1914. Serial No. 853,851. 3 Claims. (Cl. 253—176.)



3. A pump including a rotor chamber, having an inlet and an outlet, a rotor in said chamber having blades dividing the rotor into a series of pockets, said blades having recesses in their edges to allow of communication between said pockets, a reduced throat for delivering material from the inlet to the pockets through the periphery of the rotor, a by-pass having an intake port in communication with said inlet near said throat, and a discharge port leading into the rotor chamber for delivering material to the central portions of said pockets, said discharge port being arcuate and disposed to register with said recesses, and ribs in the rotor chamber near said outlet and adapted to be received by said recesses whereby to close the communication between preceding and following pockets at the point of evacuation.

1,374,534. CIRCUIT-INTERRUPTING DEVICE. NORMAN W. STOREY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 6, 1917. Serial No. 140,920. 11 Claims. (Cl. 175—294.)

1. In an electric circuit, the combination with a vacuum-electric apparatus normally traversed by current in one direction, of a transformer the primary winding of which is connected in series with the vacuum-electric apparatus, a resistor connected in series with the secondary winding of the transformer, the circuit thus constituted being so connected in parallel relation to the vacuum-electric apparatus as to tend to force current therethrough in the incorrect direction.



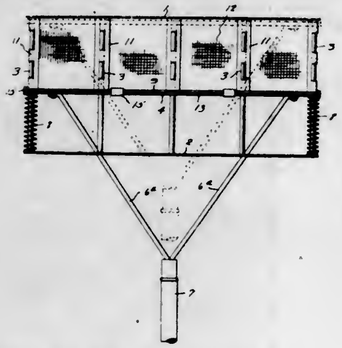
1,374,535. SYSTEM OF CONTROL. NORMAN W. STOREY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1917. Serial No. 193,687. 8 Claims. (Cl. 172—179.)

5. The method of operating a plurality of dynamo-electric machines from a supply circuit that consists in successively connecting the machines to the supply circuit in various groupings comprising parallel paths forming an arithmetical series and that further consists in maintaining closed-circuit transitions between steps.

1,374,536. [WITHDRAWN.]

1,374,537. STRUCTURE FOR TROLLEY-WIRE FITTINGS. NILS J. A. WAHLBERG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1917. Serial No. 184,806. 5 Claims. (Cl. 191—40.)

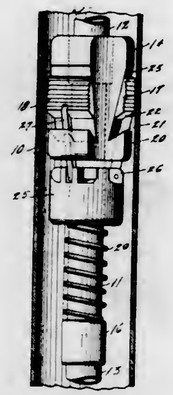
4. A trolley-line device for disposition at an intermediate portion of a trolley conductor comprising a body member having a groove for the reception of the conductor and an integral portion extending across said groove, a renewable approach member, and means coöperating between said integral portion and said approach member for securing the latter in position.



1,374,538. REFRACTORY INSULATION. PAUL G. WILLETTS, Fairmont, W. Va. Filed Dec. 17, 1919. Serial No. 345,470. 10 Claims. (Cl. 106—10.)

1. A composition of matter to be burned for the production of refractory heat-insulating material, containing finely divided lignite coal intimately mixed with plastic fire-clay having a high silica content.

1,374,539. FLYTRAP. MAURICE E. WILSON, Perry, Ohio. Filed Sept. 27, 1920. Serial No. 413,068. 4 Claims. (Cl. 43—136.)

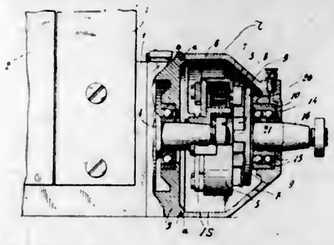


3. An insect destroying device comprising upper and lower frames and guide rods connecting the same, a flexible cage extending around said guide rods adjacent the upper frame, a paper holding frame slidably mounted on

said guide rods between the upper and lower frames, a handle connected to the paper holding frame to slide the

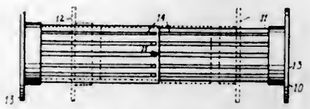
same toward the upper frame, and springs connected to the paper holding frame to return the same to original position.

1,374,540. WELL-TUBING CATCHER. ROBERT A. WILSON, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Feb. 20, 1920, Serial No. 360,031. Renewed Feb. 24, 1921. Serial No. 447,551. 3 Claims. (Cl. 103—65.)



1. A well tubing catcher comprising, a head having longitudinally extending inclined portions, converging downwardly, each portion having a face curved in cross section, said face being formed upon an arc having a constant radius throughout the entire length of the face, and gripping slips extending longitudinally of said portions, said slips having inner inclined faces converging downwardly, each slip face being curved in cross section and formed upon an arc having a radius constant throughout the entire length of the slip, whereby the slip face closely fits the face of said portion throughout its entire length and such close fitting is permanently maintained during the operation of the device.

1,374,541. ELECTROLYTIC PROCESS. FREDERICK S. WOODWARD, Richmond Hill, N. Y. Filed July 25, 1919. Serial No. 313,329. 3 Claims. (Cl. 204—10.)

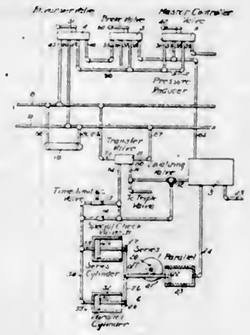


1. An electrolytic process comprising depositing copper from an acid bath with an anode insoluble in the bath, and neutralizing only the resulting increment of free acid while restoring the bath to normal strength and condition.

1,374,542. MAGNETO FOR GAS-ENGINES. FREDERICK WILLIAM ANDREW, Brooklyn, N. Y., assignor to Eisemann Magneto Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 23, 1920. Serial No. 391,133. 8 Claims. (Cl. 123—149.)

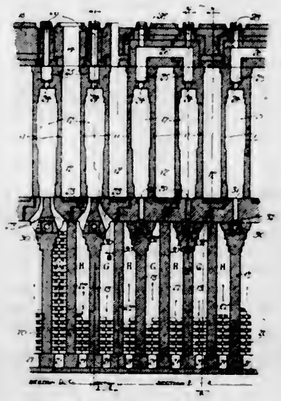
1. In a magneto for gas engines, a framework through which projects one end of the magneto shaft, an impulse starter operatively mounted on said projecting end of the shaft, said impulse starter comprising a driven member and a driving member, a casing or cover secured to said framework and inclosing said impulse starter, a stub-shaft journaled in said casing in axial alinement with the magneto shaft and projecting outside the casing for connection with the engine, said casing and stub-shaft being removable and replaceable as a unit without disturbing said members of the impulse starter, and automatically adjustable coupling means within said casing for connecting the driving member of the impulse starter to said stub-shaft, said coupling means comprising readily separable and unitable parts which permits ready removal and replacing of the casing and stub-shaft.

1,374,543. APPARATUS FOR DYEING TOPS, YARN, &c. ASA ASHWORTH, Salamanca, N. Y. Filed May 17, 1920. Serial No. 381,803. 6 Claims. (Cl. 8—19.)



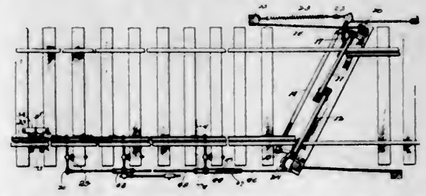
1. A yarn reel or spool comprising telescoping flanged parts having registering slots therein to permit the flow of the dye through the same, and means to hold said slots in register in different positions of said telescoping parts.

1,374,544. OVERSHOE-APPLICATOR. ERIK A. ASHLUND, Waukegan, Ill. Filed Jan. 24, 1921. Serial No. 439,337. 2 Claims. (Cl. 132—8.)



1. In a device of the class described, the combination with a hollow handle provided in its lower portion with a forwardly extended neck having its rear portion open, of a concavo convex clamping member on the lower end of said neck and extended downwardly therefrom, another clamping member curved to correspond with the curvature of the first mentioned clamping member and having at its upper portion a rearwardly and upwardly extended arm pivotally secured to the lower portion of said neck, a rod connected at its lower end to said arm above its pivot and extended through the hollow handle, and a spring connecting the neck and arm above the pivot of the latter.

1,374,545. CONTROL SYSTEM AND APPARATUS. BASCUM O. AUSTIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 11, 1919. Serial No. 330,122. 24 Claims. (Cl. 105—61.)

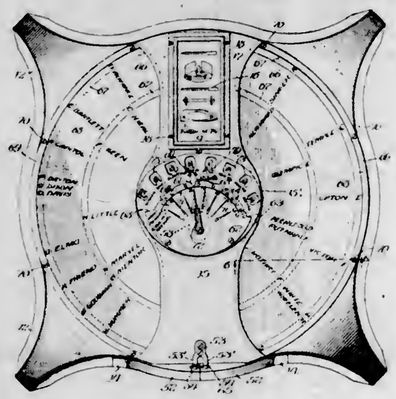


1. A control system comprising a circuit-governing member having a plurality of operative positions, and operating means for said member having a plurality of successive and unlike differential effects corresponding to the respective positions.

1,374,546. COKING RETORT-OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1920. Serial No. 422,422. 16 Claims. (Cl. 202—9.)

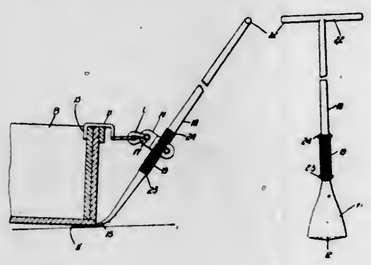
1. In a coking retort oven, in combination: a plurality of coking chambers; heating walls contiguous to such coking chambers and respectively constituted of vertical combustion flues; tapered horizontal flues in each heating wall and respectively connecting a plurality of the combustion flues of their respective heating walls; the horizontal flues being also communicably connected with the corresponding horizontal flues of an adjacent heating wall; individually regulable and reversible crosswise-extending regenerators parallel with the coking chamber and the heating walls, such regenerators being communicably connected in pairs with combustion flues of a single heating wall; and means for separably controlling the individual flow through individual regenerators and their connected groups of combustion flues; substantially as specified.

1,374,547. AUTOMATIC MINE-DOOR. NEWTON K. BOWMAN, Canton, Ohio. Filed Feb. 14, 1920. Serial No. 358,673. 11 Claims. (Cl. 246—307.)



2. A device of the character described including a door formed of companion leaves coupled to swing simultaneously in opposite directions, operating means for opening the door including a crank arm connected to one of said leaves, a spring connected to said crank arm normally holding the door closed, means whereby the leverage of the spring upon the door may be varied, and means for tensioning said spring.

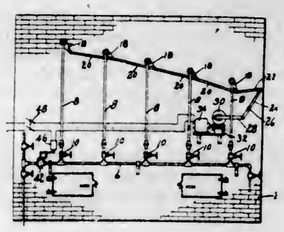
1,374,548. COMBINED STEPLADDER AND EXTENSION-LADDER. LITTLETON A. BOYD, Illiopolis, Ill. Filed May 25, 1920. Serial No. 384,106. 1 Claim. (Cl. 228—23.)



In a combined step ladder and extension ladder, the combination of ladder sections, each of the sections having steps or rounds disposed in substantially parallel relation when the sections are extended, the topmost steps or rounds being disposed in proximity to the hinge means but spaced sufficiently therefrom to permit the insertion of a board between the steps and hinge means, hinge means operatively connecting one end of each of the ladder sections, a board adapted to be inserted between said topmost steps or rounds and the hinge means to thereby lock the ladder in position for use as a step ladder, and means carried by one of the sections adapted to be rigidly connected to the other section to lock the sections in longitudinal alinement for use as an ordinary or straight ladder.

1,374,549. COMMODITY-CABINET. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 15, 1919. Serial No. 277,252. 3 Claims. (Cl. 211—7.)

1. In a commodity cabinet, the combination of a casing having a side wall formed with an opening, a carrier rotatably mounted in said casing, a group of radially sliding drawers mounted on the upper side of said carrier, a group of swinging commodity holders each pivotally mounted on the under side of said carrier at a point midway between two adjacent drawers, whereby any one of said drawers and the underlying holder may be withdrawn through said opening when brought opposite the latter.

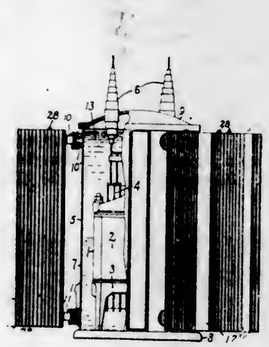


1,374,550. SKID. JOHN C. CHURLEY, Rankin, Pa. Filed May 18, 1918. Serial No. 235,415. 1 Claim. (Cl. 214—65.4.)

A receptacle-tilting-and-moving device comprising a bar having one end provided with a handle and its other end laterally curved and expanded to form a blade having a thin convex edge, a block clamped upon said bar intermediate its ends and adjustable thereon, a receptacle-engaging hook, and a link interposed between said block and said hook and loosely connected to each of said members.

1,374,551. SOOT-CLEANING APPARATUS. CHARLES W. E. CLARKE, Brookline, Mass. Filed Sept. 10, 1917. Serial No. 190,471. 3 Claims. (Cl. 122—392.)

1. A soot cleaning apparatus for boilers comprising, in combination, a plurality of steam supply pipes mounted in the boiler for movement about their longitudinal axes, each of said pipes being provided with one or more nozzles inside the boiler, a motor, and connections between said motor and said pipes to oscillate each pipe about its longitudinal axis, said connections including means to give



some of said pipes greater angular movements than the others.

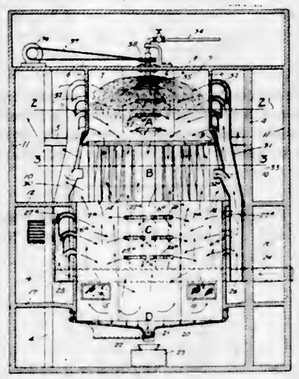
1,374,552. PICKLING PROCESS. JOHN COULSON, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 8, 1917. Serial No. 195,335. 8 Claims. (Cl. 148—24.)

1. The process that comprises subjecting a ferrous metal, as an electrode of one polarity and subsequently as an electrode of opposite polarity to the action of an electric current in the presence of an electrolyte containing sulfuric acid.

1,374,553. TRANSFORMER-TANK. WALTER M. DANN, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1915. Serial No. 8,997. 15 Claims. (Cl. 257—191.)

1. A liquid containing casing having a plurality of detachable heat radiators which connect its end portions and provide closed paths for the circulation of a body of liquid, the radiators comprising chambers having side-walls in which are formed longitudinally extending corrugations and end plates therefor which conform in shape to the cross sections of the end of said chambers in order to subject substantially all the exterior side-wall surfaces of the radiators to rising air currents.

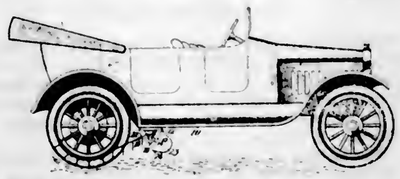
1,374,554. LOCKING DEVICE. WILLIAM F. DARBY, Jacksonville, Mo. Filed July 12, 1920. Serial No. 395,467. 4 Claims. (Cl. 151—30.)



2. A device of the class described comprising a split loop to encircle a member to be locked and having its end

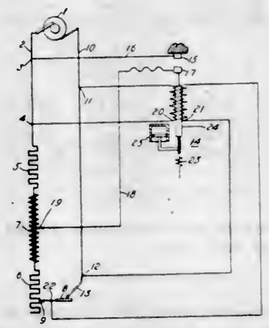
portions flared to form arms, the inner portion of said loop being provided with teeth to secure said member, and

an elliptical locking link adapted to be engaged with said arms and turned about the same to bind them together.



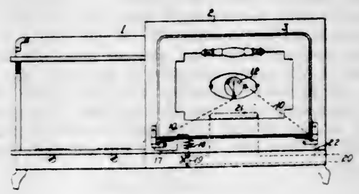
1,374,555. DEHYDRATED MILK AND PROCESS OF PRODUCING SAME. SAMUEL M. DICK, Minneapolis, Minn., assignor to International Dry Milk Company, Minneapolis, Minn., a Corporation of Delaware. Filed Jan. 31, 1920. Serial No. 355,358. 10 Claims. (Cl. 99—5.)

1. The process of producing a dry powder from whole milk consisting in atomizing milk without pressure in a suitable dehydrating cell, subjecting the atomized milk to the action of compound currents of heated air, thereby dehydrating the milk without breaking or injuring the globules of butter fat, and simultaneously coating or encysting said butter fat globules with casein, albumin and other colloidal constituents of the milk.



10. A powder made from milk in which the butter fat particles are maintained in their normal condition being encysted or coated with a film of casein or other constituents of the milk, such casein or other constituents being capable of ready solution, on addition of a requisite quantity of water, to produce a liquid substantially the same as normal milk and on which the cream will rise as on such milk.

1,374,556. CHAIN-CARRYING ATTACHMENT FOR MOTOR-VEHICLES. EDWARD L. DUNN, Worcester, Mass. Filed June 27, 1916. Serial No. 106,249. 9 Claims. (Cl. 152—14.)

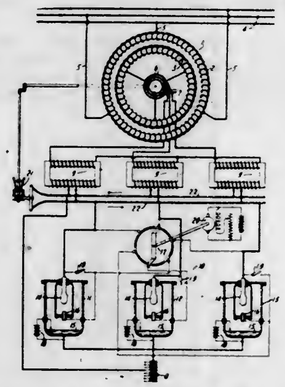


1. In an attachment for a vehicle, the combination of a casing, means within the casing for holding an anti-slipping device, and yielding means for engaging the anti-slipping device while on said holding means and preventing its rattling.

1,374,557. ARC-WELDING SYSTEM. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,328. 8 Claims. (Cl. 219—15.)

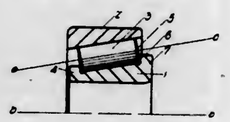
1. An electric-arc welding system comprising means for providing a relatively high starting current and means for automatically reducing the starting current to a desirable operating value when an arc is established.

1,374,558. ELECTRIC RANGE. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Sept. 25, 1919. Serial No. 326,305. 6 Claims. (Cl. 219—35.)



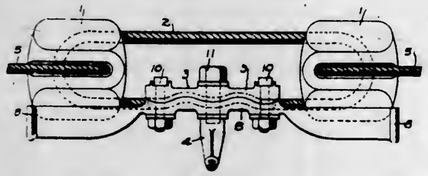
1. In an electrically-heated apparatus, the combination with a chamber, a hinged door for said chamber having hollow hinges, a thermostat mounted on said door, an electric circuit and stationary contact terminals mounted adjacent to said chamber, of means mounted in said hollow hinges for connecting said thermostat to said contact terminals by placing the door in its operative position.

1,374,559. INDUCTION-MOTOR CONTROL. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 9, 1915. Serial No. 54,952. 2 Claims. (Cl. 172—274.)



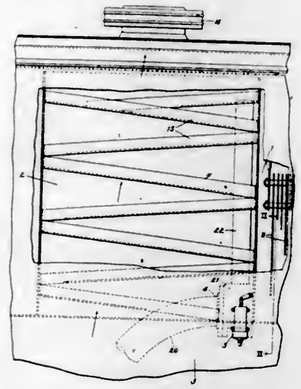
1. The combination with an induction motor provided with a wound secondary member, of a constant-potential device connected to said secondary member for absorbing energy therefrom in the speed control of said motor, a

transformer connected between said secondary member and said device, and automatic means for adjusting the ratio



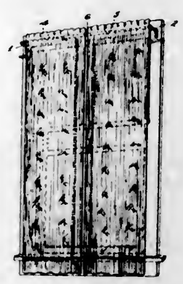
of transformation of said transformer, subject to control by the speed of said motor.

1,374,560. ROLLER-BEARING. JOSEPH A. GANSTER, Philadelphia, Pa. Filed Jan. 5, 1920. Serial No. 349,364. 1 Claim. (Cl. 64—62.)



A roller bearing comprising the combination of inner and outer rings having parallel opposed roller races inclined at the same angle in respect to the common axis of the rings and whereof the inner one is provided with a pair of spaced parallel shoulders, a circle of cylindrical rollers arranged between the races and between the shoulders and having their ends rounded on substantially the radius of one of the shoulders and arranged for continuous arcuate surface contact at one end with the rim of the last mentioned shoulder and for polar contact with the rim of the other shoulder to facilitate slip of the rollers due to their cylindrical form, and a cage or separator contacting over a large area with the cylindrical surface of the rollers inside and outside of the orbit described by their axes to control slip and maintain axial alinement.

1,374,561. TROLLEY-HANGER. HARRY L. GARBUTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1917. Serial No. 142,633. 7 Claims. (Cl. 191—42.)

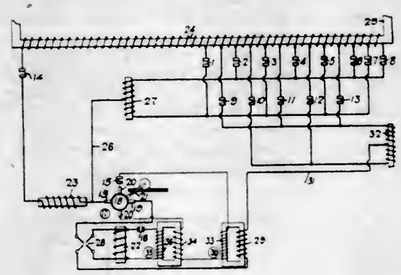


1. A trolley hanger comprising a looped cable, a clamp for securing the ends of said cable, insulating supporting means interlinking said cable at each end of the major axis thereof, and a trolley-conductor-supporting means secured to said clamp.

1,374,562. CONTROL APPARATUS. ARTHUR J. HALL, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1916. Serial No. 134,610. 14 Claims. (Cl. 219—57.)

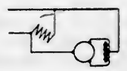
1. In a liquid-containing rheostat, the combination with an electrode-containing tank and a cooling tower, of means depending upon predetermined rheostatic operation for varying the volume of liquid traversing said cooling tower.

1,374,563. CURTAIN-ROD. AUGUST HARTMEYER, Los Angeles, Calif. Filed June 7, 1920. Serial No. 387,271. 1 Claim. (Cl. 156—22.)



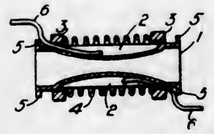
A window curtain rod including a pair of brackets, a telescoping rod comprising three tubular sections, a flat plate spring extending into the outer end of each end section, the inner end of each plate spring being bent to prevent it from pulling out of the section, pivots extending through the outer ends of said end sections and through the plate spring therein and through said brackets respectively, the intermediate rod section adapted to be telescoped over both of said end sections or over one only of said end sections to permit the end sections to be swung horizontally.

1,374,564. RECUPERATIVE SYSTEM FOR ALTERNATING-CURRENT COMMUTATOR-MOTORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 9, 1916. Serial No. 119,265. 6 Claims. (Cl. 172—276.)



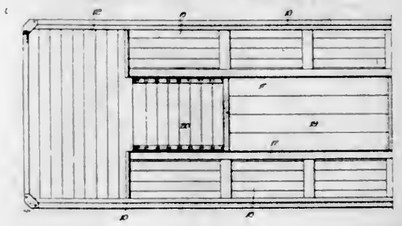
3. The method of recuperatively operating an alternating-current motor of the inducing-field commutator type provided with appropriate interconnected brushes for rotor-exciting field excitation connected to driving means

and further provided with means for introducing an electromotive force in the rotor-exciting field circuit proportional to the armature load current and with means for impressing an electromotive force across the stator-exciting field winding proportional to the current flowing



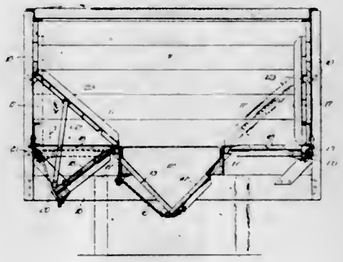
in the rotor-exciting field circuit which comprises, at high speeds, operating said motor with solely the inducing-field winding connected to the source and with purely rotor-exciting field excitation and, at lower speeds, establishing a doubly-fed connection wherein the exciting field is produced jointly by rotor and stator-exciting means.

1,374,565. ALTERNATING-CURRENT COMMUTATOR-MOTOR. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1917. Serial No. 140,733. 5 Claims. (Cl. 172—276.)



1. In an alternating-current commutator motor, a stator field winding, a rotor having an induced winding and a commutator to which said induced winding is connected and provided with sets of brushes, and mutually-inductive reactors connected to said brushes, said reactors being adapted to oppose the flow of exciting current between certain of said brushes without opposing the flow of load current through said brushes, said reactors having a magnetic circuit adapted to become magnetically saturated when a predetermined voltage exists between certain of said brushes.

1,374,566. CONNECTOR. PAUL M. HENGSTENBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 11, 1919. Serial No. 281,957. 8 Claims. (Cl. 287—115.)

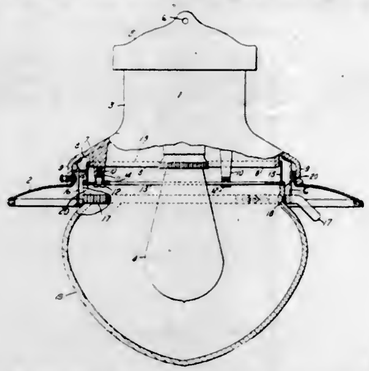


2. A connector comprising a cylindrical member having a plurality of longitudinal conductor-receiving grooves extending between points removed from the ends thereof, longitudinally-slidable rings embracing said member, a helical spring embracing said member between said rings to secure the conductors in position, and means for limiting the movement of said rings.

1,374,567. DUMP-CAR. DAVID HINDAHL, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 21, 1919. Serial No. 278,333. 16 Claims. (Cl. 105—243.)

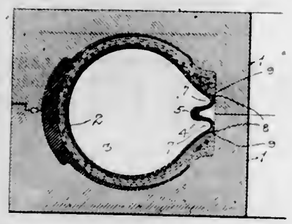
1. A car of the class described, having a hopper, the end cover sections of which hopper are changeable in position to enable them to serve as portions of the flat door of the converted car, said sections or portions in either position being arranged in a horizontal plane.

1,374,568. CONVERTIBLE BALLAST-CAR. DAVID HINDAHL, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 8, 1919. Serial No. 336,576. 7 Claims. (Cl. 105—243.)



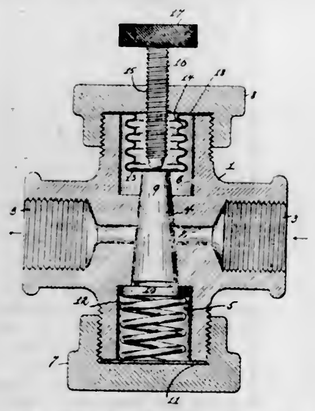
1. In a convertible car having sides, ends and a bottom which may be converted from a hopper bottom to a flat bottom, each side including a convertible member movable from an inclined position in which it forms a hopper wall, to a vertical position, said bottom including a dump door, and means whereby said convertible member may be shifted through an operation of said door.

1,374,569. LAMP-FIXTURE. SAMUEL C. HOEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1917. Serial No. 202,698. 10 Claims. (Cl. 240—115.)



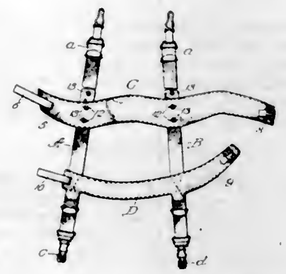
1. In a lamp, the combination with a lamp-supporting structure positioned at one side only of the globe, of a resiliently mounted globe seat on the supporting structure, said seat comprising a ring, against which a globe is

adapted to be held in abutting engagement, and means for compensating differences in the axial lengths of similar



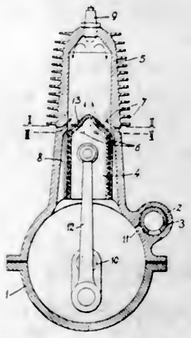
globes therefor in maintaining the same in said abutting engagement.

1,374,570. AIR-BAG FOR VEHICLE-TIRES. ANDREW HUETTER, Dayton, Ohio, assignor to The Allsteel Ridewell Tire and Rubber Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 19, 1920. Serial No. 374,983. 12 Claims. (Cl. 18—45.)



12. In a tire core, a tubular annulus, two parallel shoulder beads upon the inner circumference of the annulus, an expansible area between said shoulders, and means for applying internal pressure to the core.

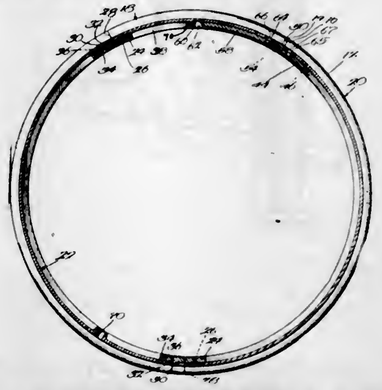
1,374,571. HIGH-PRESSURE VALVE. CHARLES F. HUMMEL, Roselle Park, N. J. Filed Feb. 7, 1920. Serial No. 356,809. 4 Claims. (Cl. 251—24.)



4. In a high pressure valve, the combination with a valve body having an axial pasasge therethrough, and further provided with a tapered bore intersecting and communicating directly with the said passage, said tapered bore communicating with diametrically oppositely arranged cavities in the ends of the valve body, removable closures for the ends of the valve body in which said cavities are located, a tapered valve disposed in the said tapered bore and movable axially therein, a spring abutting at its inner end against the valve and at its outer end against the said closure, a collapsible corrugated diaphragm closed at one end and provided with a flange at the open end, the closed end thereof abutting against the valve and the flanged end interposed between the valve body and the mentioned closure, and a screw-threaded stud in the closure movable into and out of engagement with the bottom of the said diaphragm.

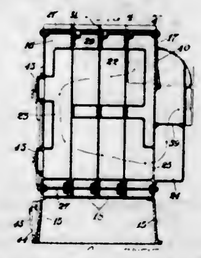
1,374,572. HOSE-SUPPORTER. NETTIE M. HURD, Chicago, Ill. Filed Nov. 18, 1918. Serial No. 262,978. Renewed Feb. 4, 1920. Serial No. 356,122. 5 Claims. (Cl. 241—1.)

1. A hose supporter comprising two supporting-straps, devices secured to their upper ends for suspending the same from the clothing, clasps on their lower ends for fastening the hose thereto, a transverse over-knee band, a transverse under-knee band connecting said supporting straps, and separable means for adjustably connecting together the ends of said bands extending beyond said straps; said over-knee band being curved upward between said straps.



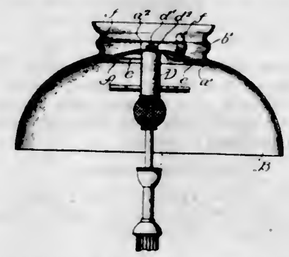
1,374,573. TWO-STROKE INTERNAL-COMBUSTION ENGINE. AUGUST MAX IMHOFF, Berne, Switzerland, assignor to Imhoff Motor Co., A. G., Interlaken, Switzerland, a Corporation of Switzerland. Filed Mar. 26, 1918. Serial No. 224,706. 1 Claim. (Cl. 123—73.)

A two cycle engine, comprising a crank casing wherein fuel is compressed, a cylinder carried by said casing and having a series of fuel inlet ports each of which decreases in width toward the interior of the cylinder whereby intact parts of relatively substantial area are present between adjacent inlet ports, and a piston reciprocable in said cylinder, said piston having its head



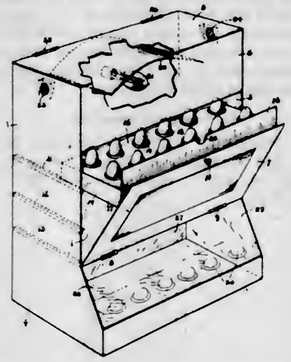
depressed and a plurality of spaced radial ribs extending from the pston head, whereby when said piston is in position to admit fuel to the cylinder the ribs will aline with the intact parts between the inlet ports and the spaces between the ribs will aline with said inlet ports so that the fuel will enter the said cylinder in substantially parallel streams without the formation of eddies.

1,374,574. COLLAPSIBLE RIM FOR WHEELS. EUGENE A. JONES, Los Angeles, Calif. Filed June 21, 1919. Serial No. 305,938. 2 Claims. (Cl. 301—33.)



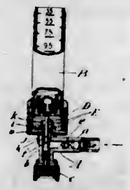
1. In mechanism of the class described, a pair of abutting rim sections, a lever on the under side of the rim overlapping the line of severance between said rim sections, a block rising from the middle portion of said lever reinforcing said lever and affording a pivotal connection between said lever and the end of one of the rim sections, means attaching one end of said lever to the other rim section at a point remote from said line or severance, positioning lugs on said lever at opposite sides of said block entering recesses in the respective rim sections, and means for securing the other end of the lever to the rim section to which it is pivoted at the center.

1,374,575. SECTIONAL HEATER. JOHN JUNGERS, Grafton, Wis. Filed Aug. 10, 1917. Serial No. 185,468. 1 Claim. (Cl. 122—225.)



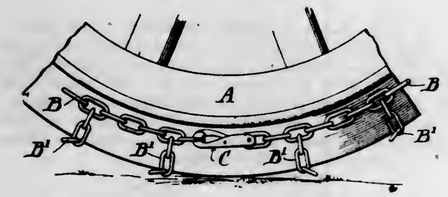
In a sectional water heater, the combination of hollow front, back and intermediate sections secured together to form a water jacket inclosing a narrow, deep central fuel chamber having a charging opening at its upper end, each of said sections having a water jacket space at their sides and top, the front section having a water jacket extending across the front thereof, the rear section having a water jacket extending across the rear thereof, upper and lower flues in the sides of each of the sections communicating at their forward ends through a passage in the front section, the upper flues communicating at their rear ends with the upper portion of the fuel chamber, a smoke box extending across the rear section and covering the rear side of the water jacket space of this section, said smoke box having a valve-controlled passage communicating with the fuel chamber, openings in its sides communicating with the rear ends of the lower flues, and an intermediate discharge opening, and a baffle plate in said smoke box below said discharge openings to direct the gases from the flues to the sides of said smoke box.

1,374,576. LAMP-SHADE HOLDER. HERBERT J. KEITH, Freeport, Ill., assignor to Ulfers Manufacturing Company, Freeport, Ill., a Copartnership. Filed Mar. 3, 1919. Serial No. 280,238. 4 Claims. (Cl. 240—115.)



1. A holder for lamp shades comprising a substantially flat sheet metal disk adapted to be centrally supported upon the upper end of the lamp with its supporting rim extending beneath the upper portion of the shade, said disk having a series of elongated fingers extending inwardly from its supporting rim and adapted to be bent upwardly and adjusted to snugly fit within the neck of the shade, substantially as described.

1,374,577. EGG-TESTER. JOHN O. KELLER, Cincinnati, Ohio, assignor of one-half to Fred W. Keller, Covington, Ky. Filed July 17, 1919. Serial No. 311,568. 1 Claim. (Cl. 99—6.)

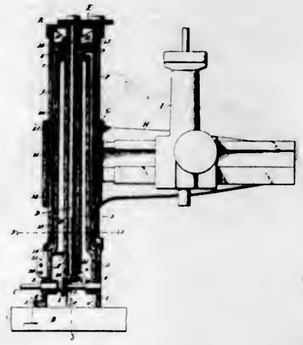


An egg tester comprising a cabinet having a drawer containing compartment, a series of drawer slides in the drawer-containing compartment, adapted to receive one or more drawers, a series of bottomless skeleton drawers having notched fronts, adapted to occupy the slides, the fronts substantially closing the drawer containing compartment, a lamp containing compartment above the drawer containing compartment, a reflector above the lamp in the lamp containing compartment, doors closing the lamp-containing and drawer-containing compartments, and a reflecting compartment beneath the drawer-containing compartment, said reflecting compartment having a reflecting surface on each of its inner walls and having an open front rendering each reflecting surface visible at a distance from the tester.

1,374,578. GAGE AND PUMP CONNECTION. HENRY P. KRAFT, Ridgewood, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 3, 1919. Serial No. 287,180. 4 Claims. (Cl. 152—11.5.)

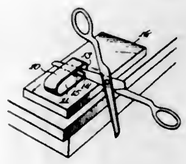
1. The combination with a pump connection, of a gage connection comprising a cuplike structure adapted to receive the base portion of a tire gage, and having a contracted portion adapted to fit upon the pump connection and means for clamping it thereto.

1,374,579. CHAIN-FASTENER. AMOS LEA KELTNER, Eldorado, Kans. Filed Aug. 19, 1920. Serial No. 404,555. 3 Claims. (Cl. 24—69.)



1. A fastening device for chains, comprising a frame consisting of two members held a suitable distance apart, to one end of which a chain is permanently connected and the other end of which is formed with a hook or recess, and a locking lever formed with a hook or recess, adapted to register with the hook or recess of the frame and having a curved handle, the outer end of which is adapted to enter the frame between the sides thereof and between the upper and lower ends of the frame being thus housed and protected against accidental opening.

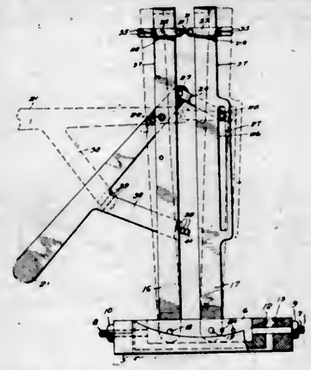
1,374,580. WOODEN PANEL. EDWARD K. KEPLEY, Boonton, and CHARLES A. COLE, Jersey City, N. J. Filed Aug. 20, 1920. Serial No. 404,790. 5 Claims. (Cl. 20—15.)



1. A panel consisting of front and rear boards and wooden spacing strips secured to both boards along each longitudinal and transverse edge of the panel but otherwise unconnected to each other, there being spaces between the end portions of said strips for the purposes specified.

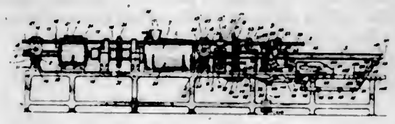
1,374,581. RADIAL DRILL. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 8, 1919. Serial No. 316,048. 8 Claims. (Cl. 77—28.)

1. A radial drill combining a base; an arm extending horizontally therewith; an upright post carried by said base and arranged to support one end of said arm, said post being formed of nested tubular portions integrally connected by radial vanes; and means for effecting a relative adjustment between said arm and said base.



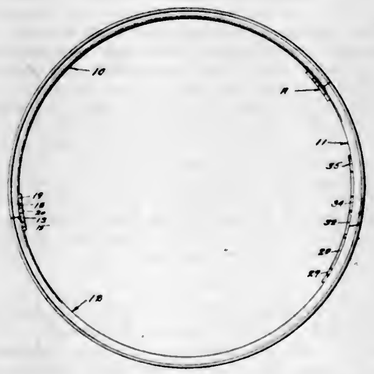
1,374,582. TOOL-SHARPENING GAGE. BENJAMIN KLEIN, Chicago, Ill. Filed June 18, 1920. Serial No. 389,822. 5 Claims. (Cl. 51—220.)

1. A tool sharpening gage comprising a single piece of metal bent to provide a pair of tool holding jaws and a flat surface for sliding along and engaging only the top of an abrading surface and of sufficient area to invariably maintain a fixed angle between the jaws and the abrading surface regardless of the extent of wear of the tool during the sharpening process.



1,374,583. DEVICE FOR FACILITATING THE LUBRICATION OF VEHICLE-SPRINGS. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Oct. 27, 1920. Serial No. 419,786. 8 Claims. (Cl. 81—3.)

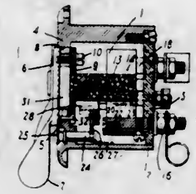
1. A device of the character described comprising a ground engaging base, a pair of confronting standards pivotally connected at their lower ends to the base and supported in a substantially upright position thereby, manually operable means for moving the standards toward each other and wedge like spring engaging teeth mounted upon



the upper ends of the standards adapted to enter between the leaves of a spring to force the same apart.

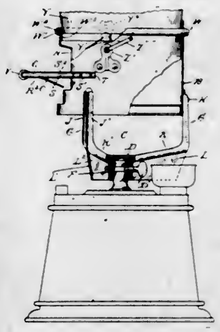
1,374,584. APPARATUS FOR MAKING RUBBER PRODUCTS. HARLEY C. KNECHT, Akron, Ohio. Filed May 7, 1918. Serial No. 233,046. 24 Claims. (Cl. 18—14.)

1. In apparatus for making inner tubes, the combination of a suitable frame; driving means; a forming pole; means for conveying the latter along said frame; means for receiving pieces of rubber from the mills or mixers and progressively feeding and compressing the same longitudinally of said pole; and means providing moving surfaces between which said pole is conveyed, a space being provided intermediately said pole and said moving surfaces, said rubber being compressed into said space and molded upon said pole.



1,374,585. DEMOUNTABLE AUTOMOBILE-RIM. MIKE KOHL, North Milwaukee, and WILLIAM RENNER, Milwaukee, Wis.; said Renner assignor to Kohl. Filed July 22, 1920. Serial No. 398,163. 2 Claims. (Cl. 301—33.)

1. A rim including relatively movable sections, each of said sections having a slot formed therein, a lever pivoted to one of said sections, an arm connecting said lever and the other of said sections, and a plate on said lever and engageable in said slots when the lever is at its limit of pivotal movement in one direction.

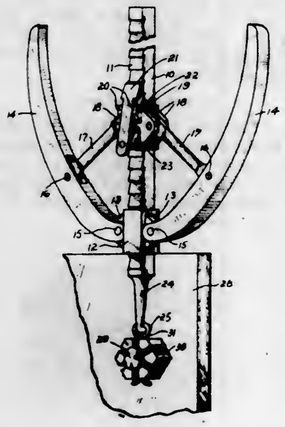


2. A rim including a plurality of sections, a plate rigid with one section, a lug on said plate engageable in an opening in the other section, and a pin on said plate coacting with said lug to maintain the sections relatively connected by said plate.

1,374,586. ELECTRICAL SYSTEM FOR AUTOMOBILES. BAYARD D. KUNKLE, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1915, Serial No. 20,758. Renewed Sept. 9, 1920. Serial No. 409,287. 9 Claims. (Cl. 290—35.)

9. An electrical system comprising a dynamo-electric machine, a storage battery, an ignition circuit, switching mechanism for connecting the storage battery and the ignition circuit to the dynamo-electric machine, means for connecting the ignition circuit for energization independently of the dynamo-electric machine, and interlocking means for preventing simultaneous operation of the switching mechanism and the said means to respectively perform their aforesaid functions.

1,374,587. FIREPOT. CHARLES R. LAMBERT, Detroit, Mich., assignor to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 4, 1918. Serial No. 232,445. 14 Claims. (Cl. 126—236.)

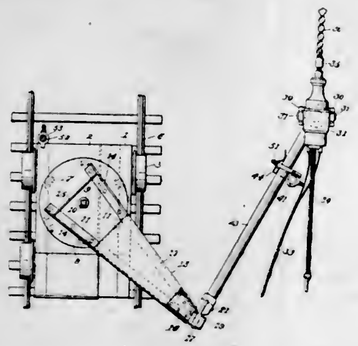


3. In a fire pot, the combination with a main body portion and a tank or other supporting member, of a sheet metal standard mounted on said tank and having integral upwardly extending arms secured to said body portion, said body portion being provided with a shield and a sheet metal support for said shield, said support being bent to form a central cylindrical portion connected to the channel shaped arms.

1,374,588. EXTRACTING-TOOL. GEORGE E. LEGENDRE, Bridgeport, Conn. Filed May 3, 1920. Serial No. 378,621. 6 Claims. (Cl. 29—86.1.)

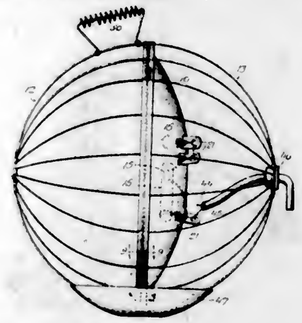
1. An extracting tool of the character described, comprising a guide block and a slide block, a ratchet bar

carried by said blocks, gripping levers pivotally secured to the guide block and having operative connection with



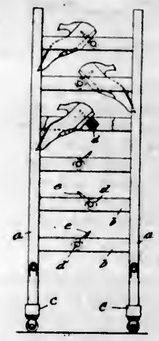
the slide block, and means carried by the slide block and adapted to engage the ratchet bar.

1,374,589. PROCESS OF TREATING FATTY ACIDS AND GLYCERIDS THEREOF. HAROLD A. LEVEY, New Orleans, La. Filed Sept. 19, 1916. Serial No. 121,016. 7 Claims. (Cl. 87—12.)



1. The process of dehydrogenating fatty oils which consists in subjecting the oil to the action of gas in the presence of a catalytic material intimately mingled with the oil under treatment and at a temperature in excess of that at which hydrogenation is affected under the same conditions by passage of hydrogen.

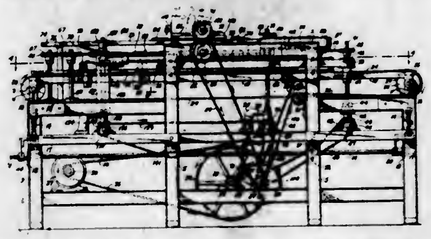
1,374,590. DRILLING-MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 7, 1917. Serial No. 160,517. 5 Claims. (Cl. 255—51.)



1. The combination of a truck, an arm mounted upon said truck rigid against vertical movement relative thereto and adapted to pivotal movement about a vertical axis thereon, an extension arm universally pivotally mounted at the free end of said horizontal arm, and a drill universally pivotally mounted at the free end of said extension arm.

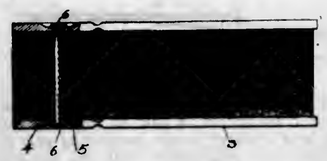
1,374,591. ELECTRIC HEATER. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 9, 1920. Serial No. 350,384. 20 Claims. (Cl. 219—34.)

13. An electric heater comprising a resistance element, a support therefor, a protecting cage within which the resistance element is positioned, and a weighted curved base for the cage whereby the cage is restored to normal position if accidentally tipped to one side or the other.



1,374,592. SHOE-RACK. CHARLES E. LOCKE, Haverhill, Mass. Filed Apr. 23, 1920. Serial No. 376,101. 1 Claim. (Cl. 211—14.)

A rack for supporting shoes while on the last comprising a pair of upright end supports, a series of horizontally disposed bars mounted in said supports and arranged in vertically spaced relation alternately at opposite sides of the middle vertical plane of the end supports, and a single series of equally spaced, parallel, last-supporting pins mounted in each bar, the pins of each series being somewhat inclined from the vertical toward the opposite side of the rack from that to which the bar thereof is nearer, so that each pin of one bar is extended in a line which passes adjacent and beneath the bar next above it, each pin being constructed to enter the jack-pin receiving aperture of a last and being located at a distance from the next adjacent pin sufficient to hold the shoes on the lasts out of contact, in close proximity and in a downwardly inclined, inverted position.

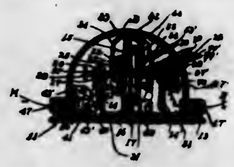


1,374,593. MACHINE FOR CLOSING AND SEALING ENVELOPS. TRUED B. LUNDIN, Philadelphia, Pa., assignor to American Machinery Co., Inc., Philadelphia, Pa., a Corporation of Delaware. Filed June 8, 1920. Serial No. 387,363. 37 Claims. (Cl. 120—6.)

37. The combination of a main frame, a supplemental frame, means operative to raise and lower the supplemental frame relatively to the main frame, means to receive and advance an envelop having an open end and a closing flap therefor, means carried by the main frame to fold said flap downwardly and inwardly to close the open top of the envelop during the travel thereof, the second named means including a belt to receive the bottom of the envelop and to support the same during the travel thereof, means carried by the supplemental frame for supporting and guiding said belt, two oppositely disposed belts arranged in spaced relation to each other to receive

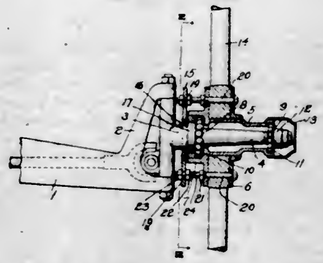
and guide said envelop and the contents thereof between them, means carried by the supplemental frame for supporting and guiding said belts, two oppositely disposed belts adapted to receive said envelop between them above the contents of the envelop and to advance the same, means carried by the main frame for supporting and guiding the last named belts, actuating means for said belts, and two fixed bars carried by the main frame above said belts for receiving and guiding the open end portion of said envelop during the travel thereof.

1,374,594. PAPER-BINDER. CHARLES F. MCBEE, Athens, Ohio. Filed June 4, 1917. Serial No. 172,677. 1 Claim. (Cl. 281—25.)



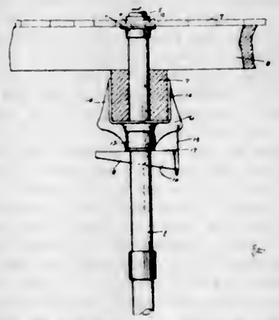
In a paper binder, a binder post formed in two longitudinally divided sections having flat abutting axial faces provided with interengaging teeth for holding the post sections together, each section having its inner end formed with a V-terminal and its outer end with a thin headed terminal overhanging the companion section, said post being of uniform diameter throughout the interengagement of said post sections.

1,374,595. TOWEL-HOLDER. HOWARD C. MCDONALD, Buffalo, N. Y. Filed Sept. 11, 1919. Serial No. 323,119. 8 Claims. (Cl. 45—32.)



1. A towel holder comprising a support, a clamp for securing a plurality of towels together, and locking means which lock the towels in said clamp and also lock said clamp on said support while permitting said clamp to move to different positions on said support, whereby unauthorized removal of the towels is prevented.

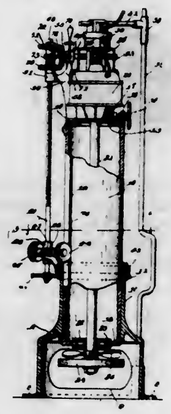
1,374,596. THERMAL CIRCUIT-CLOSER. ROBERT L. MCELROY, New York, N. Y. Filed Feb. 19, 1918. Serial No. 218,137. 15 Claims. (Cl. 200—140.)



1. In an apparatus of the class described, the combination of a pair of sensitive means differently susceptible to pressure; and a movable means unequally and oppositely influenced by said sensitive means to open one circuit and close another.

1,374,597. FRONT HUB AND SPINDLE CONSTRUCTION FOR AUTOMOBILES. BURTON MCPHILLIAMY, Vandergrift, Pa. Filed May 29, 1919. Serial No. 300,595. 3 Claims. (Cl. 301—111.)

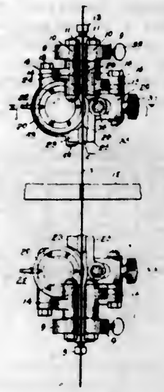
1. The combination with a spindle having a flange thereon between its ends, of a wheel on one end of the spindle having annular plates at its hubs, bolts passing through said plates, and nuts on the bolts serving to hold the plates in position, and an apertured plate carried at the ends of said bolts and surrounding the other end of the spindle, whereby the flange is positioned between said plate and the wheel.



1,374,598. CONCRETE SALVAGE JACK-HEAD. CHARLES M. MARKHAM, Milwaukee, Wis. Filed Nov. 15, 1919. Serial No. 338,411. 3 Claims. (Cl. 248—2.)

3. A concrete salvage jack head, comprising a standard having a slot, a wedge shaped key entering said slot, a

head member carried on said tubular standard member and resting on said key, and a pair of threaded flanged caps for connecting additional standard members to the upper extremity of said standard.

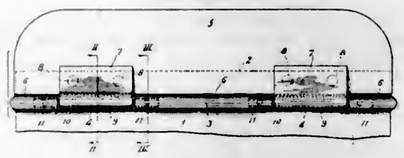


1,374,599. MACHINE CONSTRUCTION. VERNON B. MOORE, Asheville, N. C. Filed Oct. 24, 1919. Serial No. 332,989. 5 Claims. (Cl. 51—43.)

3. A machine construction comprising a support having an upstanding cylindrical portion, an annular gear surrounding and fixed to said cylindrical portion, a cylindrical body arranged to be translated and turned about its axis in said cylindrical portion of the support and having a vertical groove in its outer side and a rack in said groove, a ring mounted to turn about the cylindrical portion of the support and having a bracket, a shaft turning in the bracket and having a spur gear intermeshed with said annular gear and also having a worm, a shaft turning in the bracket and having a worm gear intermeshed with said worm and also having a spur gear that enters the groove in the cylindrical body and engages the rack, a motor supported on and movable with the cylindrical body and having a shaft extending downwardly in the body, said motor and its shaft being laterally adjustable, means to adjustably fix the motor and shaft, and a driving connection between the motor and the first-named shaft.

4. A machine construction comprising a support having an upstanding cylindrical portion, an annular gear surrounding and fixed to said cylindrical portion, a cylindrical body arranged to be translated and turned about its axis in said cylindrical portion of the support and having a vertical groove in its outer side and a rack in said grove, a ring mounted to turn about the cylindrical portion of the support and having a bracket, a shaft mounted in the bracket and having a spur gear intermeshed with said annular gear and also having a worm, a shaft turning in the bracket and having a worm gear intermeshed with said worm and also having a spur gear that enters the groove in the cylindrical body and engages the rack, an electric motor supported on and movable with the cylindrical body and also movable laterally of said body, means to adjustably fix the motor relatively to the body; the armature shaft of the motor extending downwardly and upwardly therefrom, a worm on the upper portion thereof, current collecting means above the motor and movable vertically with the same, a bearing on the cylindrical body, and loosely receiving the first-named shaft, miter gears spaced apart and connected together and splined on the first-named shaft, means to adjust and adjustably fix said miter gears, and a shaft having a worm gear intermeshed with the worm on the armature shaft and also having a miter gear adapted to be alternately engaged by the first-named miter gears.

1,374,600. BAND-SAW GUIDE. EDGAR NEWELL, Irwin, Pa. Filed Aug. 8, 1918. Serial No. 248,973. 5 Claims. (Cl. 143—160.)

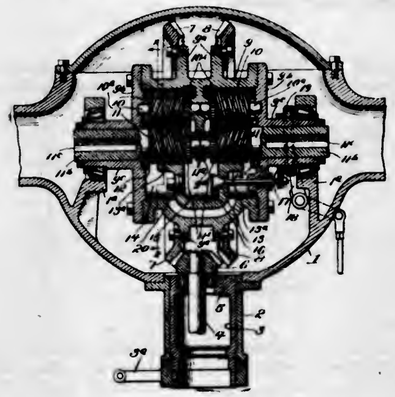


1. In a saw guide, a pair of crossed arms pivoted to swing in planes at right angles to the path of movement of the saw, two pairs of saw embracing jaws carried by said arm, and a guide disk for the back of said saw extending between said pairs of jaws.

1,374,601. GUN-MAGAZINE ATTACHMENT. WILLIAM OSBORNE, Auburn, Nebr. Filed Sept. 25, 1920. Serial No. 412,831. 6 Claims. (Cl. 42—49.)

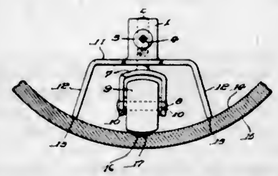
1. In an attachment for a gun magazine having a tubular form in cross-section, a pair of tubes for containing cartridges, and resilient means connecting said tubes for pressing them into engagement with the magazine when disposed upon the opposed sides thereof.

1,374,602. HINGE CONSTRUCTION. EMIL PANEK, Cleveland, Ohio, assignor to The Globe Machine & Stamping Co., Cleveland, Ohio. Filed Feb. 27, 1919. Serial No. 279,503. 1 Claim. (Cl. 16—11.)



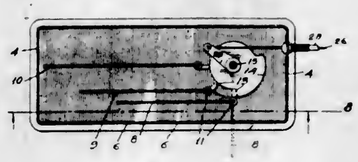
A hinge construction comprising a pair of members one fashioned with concavo-convex beads alined along and spaced from one edge also separated from each other by a slot and the other with a hollow extremity conforming in shape to said beads, and adapted to be accommodated by said slot for securing said members in such position.

1,374,603. FLUID-DIFFERENTIAL. CHARLES H. PATTEN, Allentown, Pa. Filed Nov. 20, 1919. Serial No. 339,333. 10 Claims. (Cl. 74—99.)



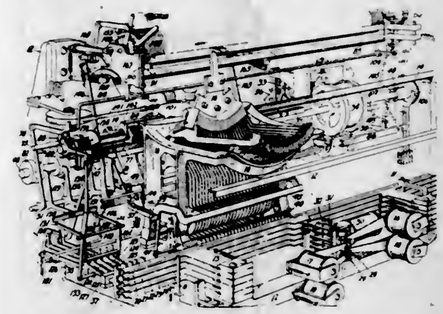
1. In a device for transmitting motion, a fluid-tight casing or body mounted for rotation having two fluid

chambers therein, a pair of intermeshing screw pump members carried within said body and adapted to pump



liquid from one chamber to the other, one of said members being coaxial with said casing and the other arranged off center.

1,374,604. SMOOTHING-TOOL. KARL R. PETERS, Philadelphia, Pa. Filed June 19, 1920. Serial No. 390,282. 5 Claims. (Cl. 80—1.)

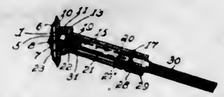


2. In a tool adapted for use in repairing cylinder walls of engines, the combination of means for compressing and packing repairing material in place in the cylinder wall, means for adjustably supporting said first mentioned means in operative position, means connected to said supporting means and provided with guide members adapted to contact with the surface of the cylinder wall at independent points, said first mentioned means being adjustable to contact at another point whereby said points of contact lie in the circle of curvature of said surface and a handle on said supporting means.

1,374,605. VEHICLE DIRECTION-INDICATOR. JULES PEYRÉ, San Francisco, Calif. Filed Nov. 25, 1919. Serial No. 340,677. 5 Claims. (Cl. 116—53.)

1. A vehicle direction indicator comprising a housing mounted upon one side of a vehicle; a plurality of signals pivotally mounted within the housing in longitudinally parallel position; a cam mounted within said housing and adapted to successively extend said signals laterally to displayed position, succeeding signals being arranged to superpose the preceding signals; and means for operating said cam from the dash of the vehicle.

1,374,606. PRINTING TELEGRAPHY. HARRY PFANNENSTIEHL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 8, 1917. Serial No. 173,546. 51 Claims. (Cl. 178—27.)



1. In a line printing telegraph receiver the combination of a stationary platen, a type basket comprising a plurality of type bars movable transversely with respect to said platen, and permutation means selectively controlled by line current impulses for controlling the operation of the type bars for line printing.

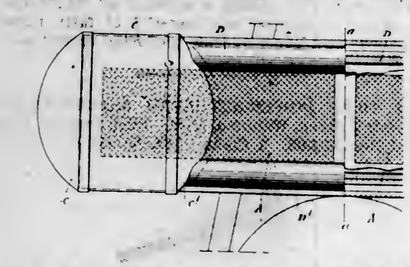
1,374,607. SULFATED OIL. FRANK L. RANDEL, New York, N. Y. Filed Dec. 11, 1919. Serial No. 344,136. 2 Claims. (Cl. 87—6.)

1. The process of making a sulfated oil which comprises mixing a fatty or oily material of fatty nature with sulfuric acid under vacuum producing conditions.

1,374,608. POWER-ACTUATED SAFETY-RAZOR. WILLIAM T. ROSE, Waterloo, Iowa. Filed June 19, 1919. Serial No. 305,305. 1 Claim. (Cl. 30—12.)

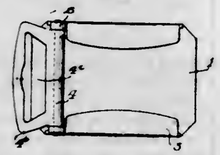
In a device of the character described, a double-edged blade, a holder therefor comprising bodies between which the blade is removably mounted for limited reciprocation with both cutting edges exposed, one body having a hollow shank with a widened head provided with a rectangular hollow bearing, said blade having a vertically slotted rectangular shank removably mounted thereon and mounted to reciprocate in and being of less length than the widened hollow of said head, a shaft mounted rotatably and removably in said hollow shank and having a removable head provided with a crank-pin, the latter seated movably in the slot in the blade-shank, and a flexible rotatable operating shaft detachably connected to said first-mentioned shaft and adapted to be rotated by power-driven means.

1,374,609. CLOTHESLINE-POLE. DAYTON I. SCHELL, Jackson, Mich. Filed Mar. 15, 1920. Serial No. 365,827. 2 Claims. (Cl. 68—12.)



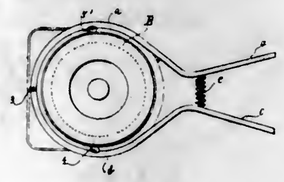
1. A clothes-line support comprising an inner tube having a longitudinal rib, an outer tube slidably fitted upon the inner tube and having an offset conforming to and engaging the rib on the inner tube, a bracket secured upon the offset of the outer tube and comprising a base member bearing against said offset, wings extending laterally from the said base member and conforming to and bearing against the outer tube and the offset thereon, and lugs projecting outwardly from the lower portion of the base

member, a latch carried by said lugs and adapted to engage in the tubes to prevent relative endwise movement of the



same, and line-engaging members carried by the upper end of the outer tube.

1,374,610. APPARATUS FOR REGULATING THE EFFECTIVE SURFACE OF THE RADIATORS OF AEROPLANE-ENGINES. JEAN JULES MARIE ANTOINE EUGÈNE SCHNEIDER, Paris, France. Filed Feb. 28, 1920. Serial No. 362,122. 5 Claims. (Cl. 244—31.)

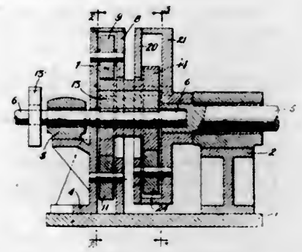


1. In an apparatus for regulating the effective surface of the radiators of aeroplane engines, the combination of a radiator body, a guide thereon, a stream-lined sheath slidably mounted on said guide to inclose the radiator body, and means for actuating said sheath in either direction on said guide to inclose the radiator body more or less.

1,374,611. BELT-BUCKLE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 9, 1920. Serial No. 409,103. 1 Claim. (Cl. 24—191.)

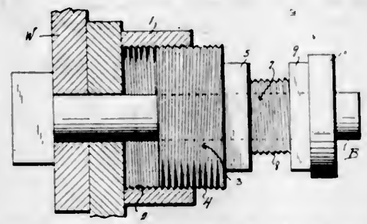
A belt buckle comprising a front plate, side flanges having inwardly turned portions and also portions extending rearwardly beyond said inwardly turned portion at one end of each of said inwardly turned portions, said rearwardly extending portions having arch shaped inwardly turned flanges, the ends of the latter nearest the side flanges merging into said side flanges, a pivot pin connecting said rearwardly extending portions, and a pivoted clamp supported on said pin and abutting said arch shaped inwardly turned flanges.

1,374,612. FRUIT-JAR OPENER. CHARLES F. STANDISH, Greene, N. Y. Filed Apr. 12, 1920. Serial No. 373,429. 1 Claim. (Cl. 81—8.1.)



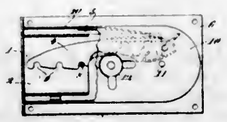
A jar opener comprising a pair of semi-circular shaped jaws pivoted to each other at one end, the other end of each jaw terminating in a handle, pointed opening members integrally formed with the jaw members and projecting inwardly, the said pointed opening members being substantially diametrically opposed, and a spring member mounted between the handles and normally separating the same.

1,374,613. PLATFORM. WILLIAM STUEBING, Jr., Cincinnati, Ohio. Filed Nov. 5, 1920. Serial No. 421,995. 2 Claims. (Cl. 248—41.)



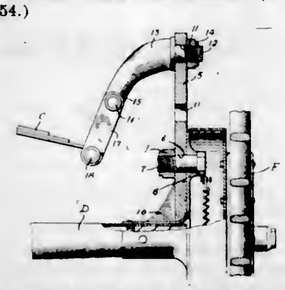
2. In a platform of the character described, a multiplicity of channel iron plates arranged to form compartments and making a face for said platform, a steel binding for each side edge of said channel irons, supports for holding the platform face elevated, arranged at each side edge thereof, and bolt and nut connections for holding said supports, said channel irons and said binding strips together and in alinement to form a rigid construction.

1,374,614. SPEED-CHANGE DEVICE. THOMAS R. STURGEON, New York, N. Y. Filed Oct. 2, 1919. Serial No. 327,991. 12 Claims. (Cl. 74—35.)



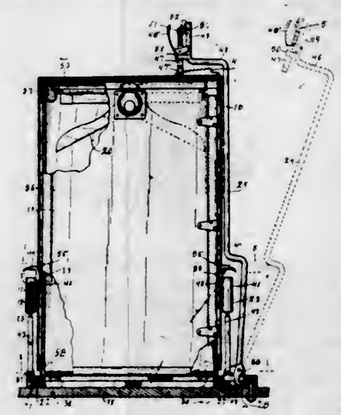
1. In a speed change device, the combination of a driving member, a double cam having projections in the form of substantial arcs of circles on each end thereof and operated by said member, a plurality of stationary rollers engaged by one end of said cam and a plurality of rollers on a driven member operated by the other end of said cam.

1,374,615. BOLT. JAMES J. TALTY, Harriman, Pa. Filed Aug. 11, 1920. Serial No. 402,757. 5 Claims. (Cl. 85—1.)



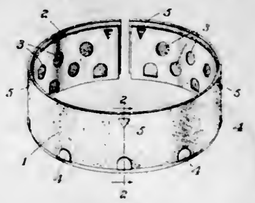
1. A holding-on bolt of the character described comprising a tubular member, a second tubular member threaded therein, a third tubular member threaded in the second tubular member, the threaded connection between the second tubular member and the first tubular member and with the third tubular member being reversed, a shank insertible through the assembled tubular members, and a holding plate adapted to engage an extended end portion of the shank.

1,374,616. LOCK. ANDOR TARJAN, Vienna, Austria. Filed July 14, 1920. Serial No. 396,327. 3 Claims. (Cl. 70—75.)



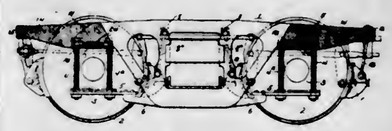
1. In a lock the combination of tumblers, a hollow bolt inclosing the tumblers, the outer portion of which bolt being formed by bending a sheet metal piece so as to constitute a casing which is completely closed except at its inner end, and means for stiffening the hollow casing at such open end, said means serving also as a fence for cooperation with the tumblers to lock the bolt in position at each revolution of the key.

1,374,617. EXTENSION-PERCH FOR SPRINGS. CYRUS W. VAN BRUNT and LORIN EDWARDS, Durand, Wis. Filed June 3, 1920. Serial No. 386,317. 4 Claims. (Cl. 267—54.)



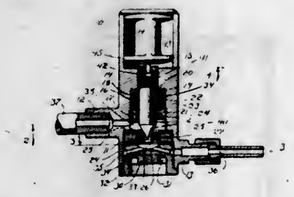
4. The combination with a vehicle including a body, a supporting spring therefor, and a brake casing, the casing having an opening formed therein, of an extension perch for the spring comprising an elongated vertically disposed plate, a removable bolt arranged to extend through the opening formed in the brake housing, and an opening formed in the plate, said plate extending above the brake housing and having a plurality of openings formed therein, an arcuately curved horn, a reduced shank formed on said horn and arranged to detachably fit in either one of said openings, a transversely extending apertured boss formed on the inner end of said horn, a shackle pivotally secured to said boss, and means pivotally connecting the inner end of said shackle to the spring.

1,374,618. AUTOMOBILE TRUNK-HOLDER. GEORGE HENRY WHEARY, Racine, Wis. Filed Nov. 11, 1916. Serial No. 130,709. 7 Claims. (Cl. 224—29.)



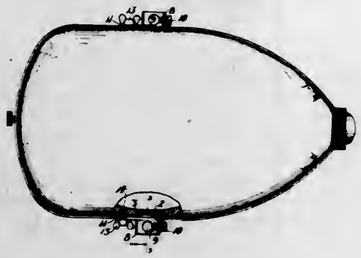
2. An automobile trunk holder, comprising a base member having means for attachment to the running board of an automobile, a trunk holding member pivotally connected to the base member, a trunk positioned on the holding member in upright position, a top cover mounted on the trunk and provided with a lock engaging means, and an upstanding locking member carried by the holding member and lockingly engaging the lock engaging means of the cover and the base member.

1,374,619. KINDLER-HOLDER. FRED E. WHITE, Gardner, Mass., assignor to Central Oil & Gas Stove Co., Gardner, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1920. Serial No. 374,173. 2 Claims. (Cl. 67—69.)



1. In combination, a kindler of sheet form within an oil bowl, and means secured to the kindler and engaging the bottom of the oil bowl for spacing the kindler from the bottom of said oil bowl.

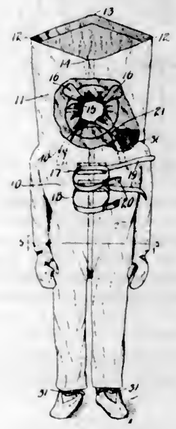
1,374,620. CAR-TRUCK. JOHN C. WHITRIDGE, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Feb. 3, 1920. Serial No. 355,920. 5 Claims. (Cl. 188—209.)



1. The combination with a truck side frame and a journal box, of a brake-shoe hanger bracket mounted on said side frame and provided at its free end with a lateral arm to receive a brake-shoe hanger, and journal box bolts securing said bracket to the side frame.

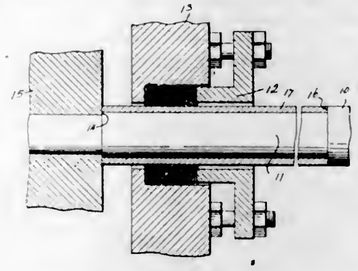
1,374,621. LOCK-CONTROLLED FUEL-FEED FOR CARBURETERS. ADELBERT R. WICKER, Denver, Colo., assignor, by mesne assignments, to Joseph Hermann, Cincinnati, Ohio. Filed Feb. 28, 1919. Serial No. 279,787. 8 Claims. (Cl. 251—6.)

1. A valve mechanism of the character described, comprising a casing partitioned by a transverse wall, provided with a threaded bore, said wall separating said casing into an upper and a lower housing, the lower housing comprising a partially threaded packing compartment, a valve seating compartment and an intermediate fluid holding compartment, an apertured guide member threaded to engage the screw threads of said packing compartment and forming both an adjustable lower gland for said packing compartment, and a top closure for said fluid compartment, packing material mounted above said gland, a ported valve seat closing the outer end of said fluid compartment, an inlet for said fluid compatrment above said valve seat, and an outlet leading from said casing below said valve seat, a valve stem extending through said gland and said packing and having a screw threaded head engaging with said threaded wall bore, a plug valve carried by said valve stem coacting with said valve seat, and means operable from said upper housing for rotating said valve stem and thereby moving said valve toward or away from its seat, substantially as described.



1,374,622. HEADLIGHT-MOUNTING. WILLIAM G. WOOD, Berkeley, Calif., assignor to Berkeley Light Corporation, San Francisco, Calif, a Corporation of Nevada. Continuation of application Serial No. 248,303, filed Aug. 5, 1918. This application filed Oct. 2, 1919. Serial No. 327,908. 4 Claims. (Cl. 240—57.)

1. The combination with the casing of a headlight and a fork by which it is supported, of a pivotal mounting on each side of the casing by which the casing is supported and upon which the casing is turnably mounted, a perforated lug on each supporting member for the reception of the fork, a radially extending arm on each member exteriorly of the casing, a segmental slot formed in the outer end of each arm, and a clamping screw extending through each segmental slot and carried by the casing.

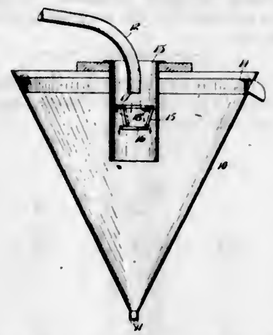


1,374,623. LIFE-PRESERVER. OSCAR A. YOUNGREN and JAMES A. WATT, New York, N. Y., assignors to National Life Preserver Company, New York, N. Y., a Corporation of Wyoming. Filed June 14, 1918. Serial No. 239,966. 3 Claims. (Cl. 9—20.)

1. A one-piece garment of water-proof material for use as a life-preserver formed with an extended cape-like portion surrounding its upper end having an opening through which entrance to and exit from said garment may made, said cape-like portion also embodying in its rear portion an elastic neck-piece with an opening for the passage of the head of the wearer, and straps secured to the

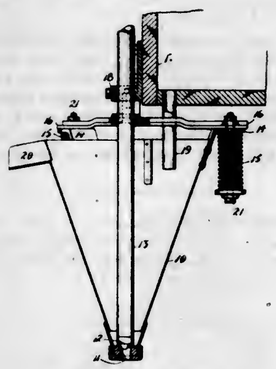
front of the garment below the normal position of the neck-piece and arranged to form loops to surround and secure the folded ends of the cape portion when brought down in front of the wearer and folded together, substantially as set forth.

1,374,624. METHOD OF MAKING AND REPAIRING PISTON-RODS. ALVA E. ZUMWALT, Caney, Kans. Filed Jan. 24, 1920. Serial No. 353,903. 2 Claims. (Cl. 29—156.5.)



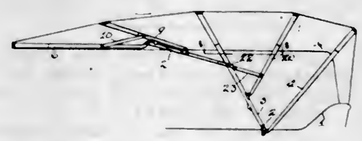
1. A method of repairing worn reciprocating rods passing through bearings consisting in reducing the worn portion of the rod to a diameter less than its normal diameter and placing thereover a bushing of the same length as the reduced portion of the rod and having an exterior diameter the same as the normal exterior diameter of the rod before it is reduced.

1,374,625. FEED-SPOUT BARRIER. CHARLES ALLEN, El Paso, Tex. Filed July 23, 1918. Serial No. 246,366. 1 Claim. (Cl. 210—58.)



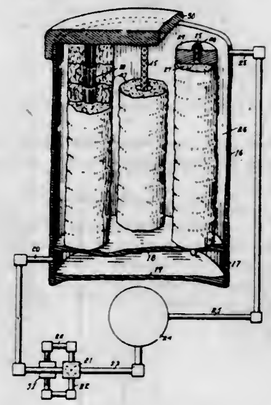
In a separator for solids suspended in liquid, the combination with a settling tank, having an overflow periphery for the lighter product and a discharge orifice at the bottom for the heavier product, an open-ended feed spout centrally disposed at the top of the tank and extended an appreciable distance below the level of the contents of the tank, means for introducing a feed stream into said feed spout, and a barrier arranged in said feed spout

and normally submerged, said barrier comprising a ring and a disk spaced vertically apart, the ring being of



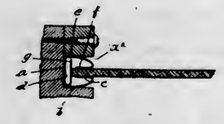
greater diameter than the disk, said ring and baffle being interconnected, and lugs on the interior of the feed spout to removably receive and support the ring.

1,374,626. AUTOMATIC SAND-TRAP. CHARLES ALLEN, El Paso, Tex. Filed Apr. 28, 1920. Serial No. 377,345. 4 Claims. (Cl. 83—82.)



1. An automatic separator of the type mentioned, comprising a tank having an overflow and a bottom discharge orifice, a hanger, springs carried by the hanger at three points, flanges at the sides and top of the tank resting upon said springs to support the tank, a valve carried on a fixed support and normally closing the discharge orifice, whereby the accumulation of solids in the tank causes the latter to be moved downwardly compressing the springs and thereby unseating the valve and means for adjusting said springs to vary the operation of the tank and valve.

1,374,627. VEHICLE-TOP SUPPORT. CHARLES R. ALLEN, Ashtabula, Ohio, assignor to The Ashtabula Bow Socket Company, Ashtabula, Ohio, a Corporation of Ohio. Filed May 9, 1914. Serial No. 837,356. 22 Claims. (Cl. 296—116.)

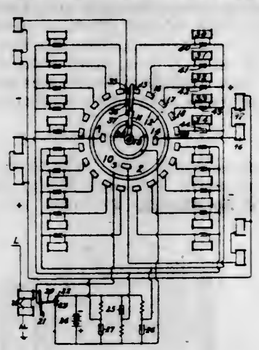


1. In a vehicle top, the combination of a main bow pivotally attached to the vehicle body, the lower end of said bow extending below and to the rear of the point of such attachment in the raised position of the top, a rear bow pivotally attached to such extending end of said main bow, an articulated auxiliary bow pivotally attached to said main bow, and a supplemental bow attached to the rear portion of said auxiliary bow, said auxiliary and supplemental bows being adapted to interengage when said top is in raised position so as to form a rigid truss.

1,374,628. APPARATUS FOR DYEING TOPS, YARN, &c. ASA ASHWORTH, Salamanca, N. Y. Filed Oct. 15, 1920. Serial No. 417,081. 7 Claims. (Cl. 8—19.)

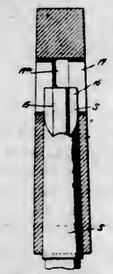
1. An apparatus for dyeing tops and yarn comprising a dyeing vat, a perforate tube vertically mounted in said dyeing vat, means for forcing fluid dye or mordant through said tube, and a series of collectively collapsible tubular yarn spools mounted upon said tube.

1,374,629. WINDOW-GLASS CHANNEL. EDWIN W. M. BAILEY, Amesbury, Mass. Filed May 29, 1920. Serial No. 385,197. 15 Claims. (Cl. 20—52.)



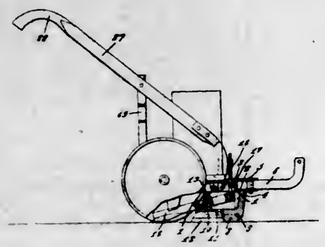
1. In combination with a window casing having a window-glass-receiving groove, guiding means in the groove arranged to engage each side of the glass and comprising a longitudinally extended strip of resilient sheet metal disposed at one side of the groove and transversely extending outwardly from the bottom thereof with its outer portion out of contact with said side to permit said portion to yield toward said side, the outer edge-portion of the strip being reversely extended inwardly in divergent relation to its outwardly extending portion, to provide a yielding guiding and engaging portion for the adjacent surface of the glass.

1,374,630. SELECTING MECHANISM. ERWIN P. BANCROFT, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1917. Serial No. 181,557. 6 Claims. (Cl. 178—33.)



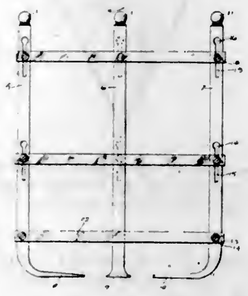
1. Selecting mechanism comprising a current impulse distributer, a plurality of selecting magnets connected thereto, a plurality of condensers of which at least one is

normally charged, a relay for connecting said condensers through said distributer to said selecting magnets to effect



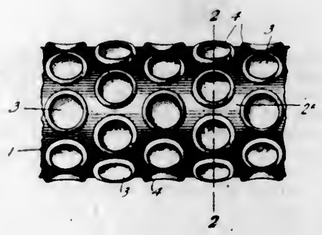
their operation, and a condenser associated with each selecting magnet for prolonging the flow of current therethrough.

1,374,631. DRILL TANG AND SOCKET. SIDNEY MERRITT BELLAIRSR, Baltimore, Md., assignor to Wayne Tool Manufacturing Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1919. Serial No. 346,287. 4 Claims. (Cl. 279—103.)



1. In combination, a conical drill socket having a transverse slot formed therein and grooves formed in the walls of said slot, and a conical drill shank disposed within said socket and including a tang projecting into said slot, said tang comprising a circular portion adapted to fit within said grooves, and arms extending from the circular portion at diametrically opposite points and tapered in width from their point of connection with the circular portion, whereby the arms are permitted to contact with the sides of the slot at points adjacent the circular portion only.

1,374,632. PLANTER. JOHN BLUE, Laurinburg, N. C. Filed Oct. 11, 1918. Serial No. 257,724. 3 Claims. (Cl. 111—85.)

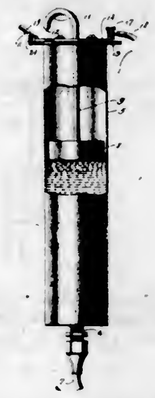


2. In a planter a recessed head, smoothing wings diverging therefrom, a shoe integral with the head and spaced from the wings, arms connecting the rear portion of the shoe with the upper rear portions of the wings, covering blades pivotally connected to the arms, and yielding means carried by the head for pressing the blades against the soil.

1,374,633. CORNER-STAND. JOHN E. BOYLE, Waterbury, Conn. Filed Apr. 24, 1920. Serial No. 376,249. 1 Claim. (Cl. 45—31.)

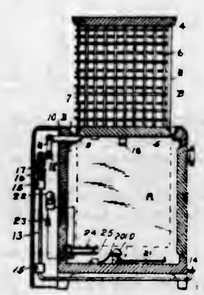
A corner stand comprising three legs provided at their lower ends with supporting feet, said legs each formed with a plurality of vertical slots opening at their upper ends into clearance holes, triangular shelves through which said legs extend, said shelves formed with depending flanges, and screws extending through said flanges and through said slots, and nuts applied to the inner ends of said screws.

1,374,634. TIRE-TUBE. GEORGE G. CARD, Columbus, Ohio, assignor to The Columbus Climax Rubber Company, Columbus, Ohio. Filed Mar. 30, 1918. Serial No. 225,812. 5 Claims. (Cl. 152—13.)



2. An inner tube for pneumatic tires, having inwardly extending hollow nodes, each node being compressible outwardly within the open end portion thereof and against the casing of the tire, during the inflation of the tube, to form a vacuum trough within itself and between the tube and the casing.

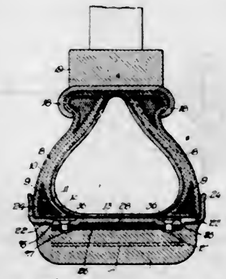
1,374,635. AUTOMATIC CUT-OFF FOR GASOLENE-ENGINES. ARTHUR J. CLEVELAND and CECIL I. CLEVELAND, Salina, Kans. Filed Nov. 18, 1919. Serial No. 338,971. 4 Claims. (Cl. 200—84.)



4. An attachment of the class described comprising a float chamber having means for connecting it with a circulating oil system for maintenance of a supply of oil to the chamber, a float in the chamber, a circuit closer

carried by the float, a contact in position for engagement by the circuit closer in response to its movement with the

float, and permanently located means movable into and out of position to prevent engagement of the circuit closer with the contact at times.

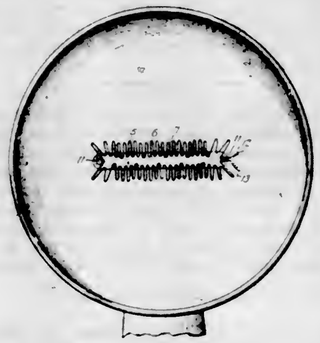


1,374,636. PROTECTIVE MECHANISM. JAMES F. COLLINS, Swissvale borough, Pa. Filed Aug. 30, 1920. Serial No. 407,030. 8 Claims. (Cl. 109—1.)

1. In a protective device for the purposes described, the combination of a safe provided with an opening in its top, a counter board adapted when in its raised position to substantially occupy said opening, a closure for said opening above said counter board and connected to the latter so as to move in unison therewith, means for securing said counter board in its raised position, and means for releasing said securing means whereby said counter board automatically drops by gravity within said safe and said closure seals said opening.

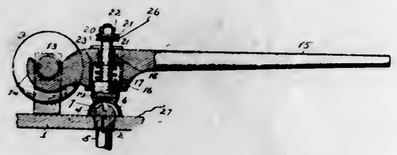
1,374,637. TIRE. DE LEON DAVIS, Richmond, Va., assignor to Unity Tire & Mfg. Co., a Corporation of Delaware. Filed Oct. 5, 1917. Serial No. 194,843. 1 Claim. (Cl. 152—19.)

A tire tread plate adapted to lie crosswise of and upon the periphery of a tire, said plate having its end portions formed to engage beads on the opposite sides respectively of the tire, the plate having a stamped-up projection adapted to interfit with a corresponding recess on the peripheral



surface of the tire, and means for holding the plate upon the tire tread.

1,374,638. HAND POWER-DRIVEN BAND-SAW. CHARLES A. DE CEW and WILLIAM F. HIRST, Cedar Rapids, Iowa. Filed Jan. 6, 1920. Serial No. 349,750. 2 Claims. (Cl. 143—17.)



1. A hand guided power-driven band saw comprising an elongated frame having pulleys rotatably mounted at the opposite ends thereof, an endless saw band passing around said pulleys, a driven shaft rotatably mounted radially of and adjacent to one side of one of said pulleys, a plurality of pinions slidably mounted for longitudinal movement upon said shaft, a plurality of ring gears carried by said side of said one pulley, and means to retain any desired one of said pinions in mesh with one of said ring gears and to retain the remaining pinions out of mesh with the remaining ring gears.

1,374,639. ELECTRIC HEATER. HENRY DICKS, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 3, 1919. Serial No. 335,807. 5 Claims. (Cl. 219—74.)

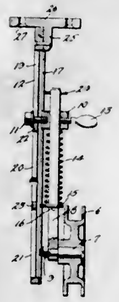
1. An electric heater comprising a transparent insulating base and a resistor mounted thereon.

1,374,640. WELDING. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed July 21, 1920. Serial No. 397,915. 10 Claims. (Cl. 219—4.)

1. Welding means comprising a pressure-applying member, an electromagnetic structure constituting connecting means for said member, and means for including parts to be welded in an electric circuit to effect a welded union of said parts while under pressure of said pressure applying means.

10. The herein described method of welding a cap or closure to a boiler sheet, consisting in placing a cap or closure over an opening in the boiler sheet, connecting pressure means magnetically to the boiler sheet, exerting pressure with said means on the cap or closure and simultaneously including said cap or closure and boiler sheet in an electrical welding circuit.

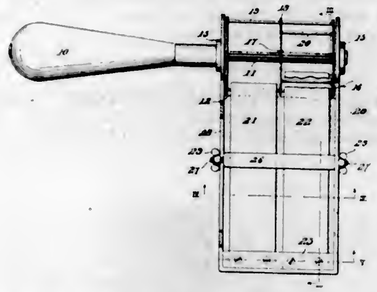
1,374,641. LAWN-EDGE TRIMMER. JOHN EHNE, Milwaukee, Wis., assignor to ARTHUR J. EHNE, Milwaukee, Wis. Filed Jan. 5, 1921. Serial No. 435,178. 1 Claim. (Cl. 97—28.)



A lawn edge trimmer, comprising a cutter having a substantially vertical blade with a forwardly inclined cutting blade with a laterally extending lower edge terminating in a bearing edge, such laterally extending portion forming a cutting edge in continuation of the cutting edge of the vertical blade portion, said bearing edge being adapted to bear against the edge of a cement sidewalk below the surface of the ground, an arched guide extending from the blade and adapted to bear on the sidewalk, the continuous cutting edge of the cutter thus extending from above the sod to the extreme lower part of the cutter at an incline that will tend to lift the trimmer from the ground and continuing along the laterally extending portion and terminating at the bearing edge where the cutter engages the sidewalk below the surface of the ground, and a handle on the cutter for pushing it forwardly and pressing it downwardly.

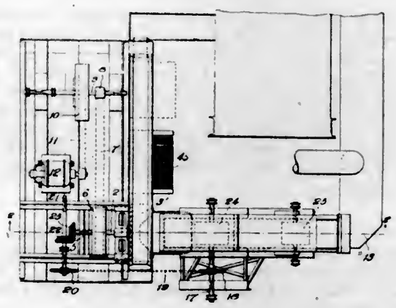
1,374,642. PROCESS OF MAKING CARBONIZING COMPOUNDS. JAMES FARRELL, Cleveland, Ohio. Filed May 5, 1920. Serial No. 378,988. 8 Claims. (Cl. 148—30.)

1. The process of making carbonizing compounds consisting in, removing substantially all the moisture from carbonaceous material by vacuum process and then impregnating the material with an energizing agent under fifty (50) to one hundred and fifty (150) pounds pressure and a temperature of from 100° to 300° Fahrenheit.



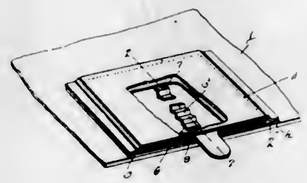
1,374,643. BELT-TIGHTENER. MANY FISCHBACH, New York, N. Y. Filed Mar. 25, 1920. Serial No. 368,736. 4 Claims. (Cl. 64—5.)

1. A belt tightener comprising a slotted standard, a block adapted to engage said standard, a clamping bolt adapted to pass through any of said slots and engage said block for clamping the block to the standard, a sliding



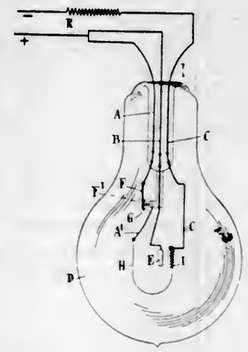
bar carried by said block, a pulley rotatably connected with said bar adjacent one end, and means for locking said bar in any adjusted position in respect to the block.

1,374,644. NOISE-MAKER. MARTIN FOLKUSH, Milwaukee, Wis. Filed Apr. 10, 1920. Serial No. 372,821. 5 Claims. (Cl. 46—46.)



1. A noise maker comprising a shaft, a casing journaled thereon, a frame having spaced end supported posts around the sides theerof and rigidly secured to said shaft, one half of said frame being provided with double the number of posts that the other half has and separate sounding boards for the halves of the frame carried by said casing.

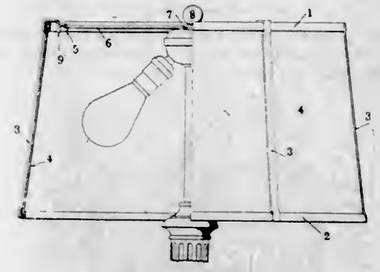
1,374,645. TAILING-SEPARATOR. EMLEN A. FRANKLIN, Fort Collins, Colo. Filed Apr. 10, 1919. Serial No. 289,174. 11 Claims. (Cl. 83—82.)



1. In a separator for separating vegetable tailings including roots, leaves, grass, and earthy material, a laterally extending substantially closed casing, means within and at one side of said casing to project such vegetable tailings toward the opposite side of said casing, and means associated with said casing to project a water screen penetrable by relatively heavy particles across the path of said tailings to remove from said path material which is comparatively light, such as leaves and grass.

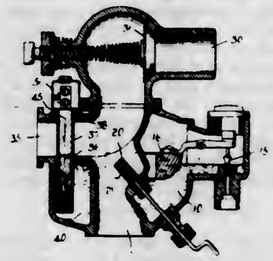
1,374,646. MEMORANDUM ATTACHMENT FOR ALBUMS. ULYSSES VICTORIA GARRED, Lexington, Ky. Filed Mar. 24, 1920. Serial No. 368,452. 5 Claims. (Cl. 40—18.)

1. A device of the type described, including a pad adapted to be connected to a photograph-album or like instrumentality along opposite edges thereof, a memorandum tablet, a picture element, and means for manipulating said memorandum tablet, and means of connection between said memorandum tablet and said first-referred to element, said pad and picture element being adapted to incase the other elements.



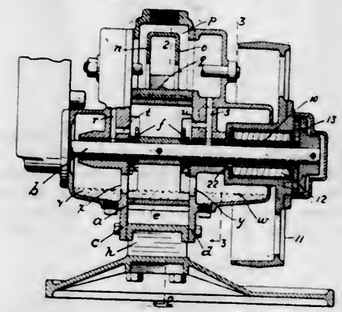
1,374,647. ARC INCANDESCENT ELECTRIC LAMP. EDWARD ALFRED GIMINGHAM, London, England. Filed Oct. 15, 1915. Serial No. 56,016. 6 Claims. (Cl. 176—1.)

1. In an electric arc incandescent lamp a bulb containing an inert gas, a heater adapted to ionize the gas, an electrode in parallel with one end of the heater, and a second electrode surrounding a portion of the heater.



1,374,648. LAMP-SHADE. EDWIN F. GUTH, St. Louis, Mo., assignor to St. Louis Brass Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 14, 1919. Serial No. 337,966. 1 Claim. (Cl. 240—108.)

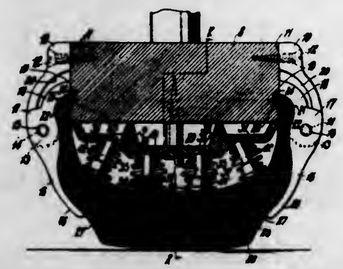
A light shade comprising upper and lower members connected by spaced strips, the upper ends of the strips being bent inward to form shade supports, said shade



support portions having additional bends to form two spaced downwardly turned projections.

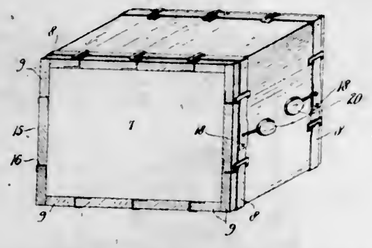
1,374,649. CARBURETER. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y., assignor to The Cutler-Hammer Mfg. Co., a Corporation of Wisconsin. Filed Oct. 23, 1913. Serial No. 796,761. 20 Claims. (Cl. 219—38.)

6. A carbureter comprising a mixing chamber, a wick arranged to transfer liquid fuel by capillary action to said chamber and means acting directly upon the wick for accelerating the vaporization of the fuel in the mixing chamber.



1,374,650. VACUUM-PUMP. SELDEN H. HALL, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 3, 1920. Serial No. 355,999. 4 Claims. (Cl. 230—30.)

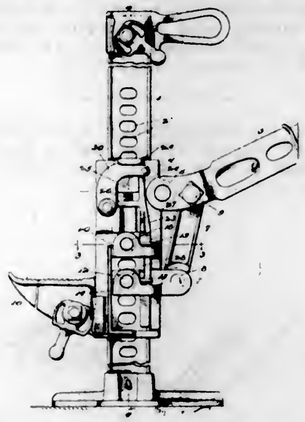
1. In a vacuum pump of the sliding vane type designed for producing a specific degree of exhaustion, the combination with a rotor and sliding vanes, of a body having a discharge port extending through such arc of the body as



to be opened by a vane passing over it at substantially the time that the pressures on the two sides of the vane are equal.

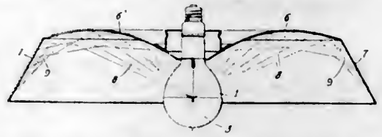
1,374,651. RESILIENT VEHICLE-WHEEL. JAMES B. HANLEY, Philadelphia, Pa. Filed Feb. 27, 1920. Serial No. 361,855. 6 Claims. (Cl. 152—8.)

5. The combination in a wheel of a felly; a tire shoe having beads extending adjacent the opposite sides of the felly; latches being pivotally mounted between their ends providing fingers for engagement with the outer portions of said beads of the tire shoe; arms for engagement with the side portions of the tire shoe between the beads and the tread; a rim on said felly within said tire shoe; and spring-pressed plungers slidably connected to said rim and adapted to bear against the inner surface of said tire shoe, certain of said plungers tending to press said tire shoe against the arms of said latches whereby the latter are swung to move the fingers in clamping engagement with the beads of the tire shoe; substantially as described.



1,374,652. MEANS FOR SECURING AND SEALING PACKING-CASES AND THE LIKE. THOMAS HENRY HANSEN, South Yarra, near Melbourne, Victoria, Australia, assignor of one-half to John Davey, Murrumbeena, Victoria, Australia. Filed Dec. 2, 1919. Serial No. 342,000. 4 Claims. (Cl. 217—66.)

1. A merchandise case protective unit comprising an L-shaped metallic member the arms of which are flat, one of said arms being adapted to be driven edgewise into a case, the other arm having an opening for the reception of a securing device such as a nail or the like and also having a slot for the reception of a case encompassing band.



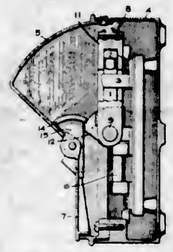
1,374,653. LIFTING-JACK. PHILIP J. HARRAH, Bloomfield, Ind. Filed Oct. 4, 1920. Serial No. 414,458. 3 Claims. (Cl. 254—114.)

1. A lifting jack comprising a standard having a plurality of perforations extending therethrough, a pair of runners movable on said standard, the upper runner substantially inclosing and forming a bearing for the lower runner, a pin carried by each of said runners for alternately entering said perforations to constitute a fixed

stop while the other runner is advancing, a lever fulcrumed to one of said runners, and a pitman connecting said lever with the other runner.

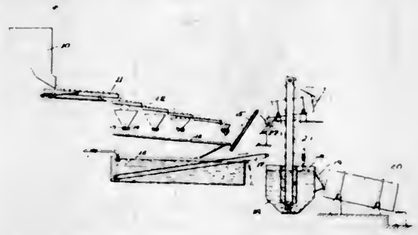
1,374,654. LIGHTING-FIXTURE. WARD HARRISON, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed June 25, 1917. Serial No. 176,698. 6 Claims. (Cl. 240—92.)

1. A lighting fixture comprising a concentrated artificial light source inclosed in a bulb and a reflector disposed below said light source, conforming to and closely engaging the lower portion of said bulb and adapted to project upwardly the light rays below the horizontal, and a larger reflector located above the said source having a main body portion concaved downwardly, and a downwardly extending marginal portion adapted to intercept substantially all of the specular or skin reflection from the main portion and to recover the direct rays issuing from the source within the angle between the outer edge of the said main portion and the upper edge of the lower reflector.



1,374,655. FLUSH-VALVE. WILLIAM L. HARROUN, Ellisburg, N. Y. Filed Mar. 12, 1920. Serial No. 365,200. 2 Claims. (Cl. 4—5.)

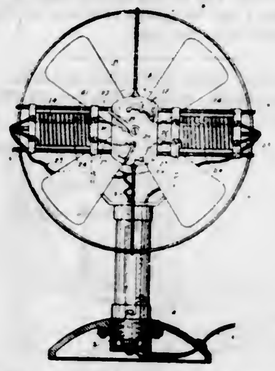
1. The combination with the flush pipe and the hollow flush valve, of a disk having a diameter smaller than the



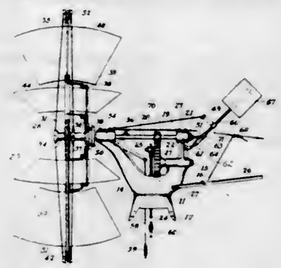
normal bore of the flush pipe, a rod passing through the flush valve, its lower end extending below the flush valve and adjustably secured to said disk, its upper end threaded and extending above the top of the flush valve, and a sleeve mounted on top of the flush valve and receiving the upper end of said rod.

1,374,656. ELECTRIC SWITCH. CHARLES H. HILL, SCHENECTADY, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 5, 1916. Serial No. 95,596. 2 Claims. (Cl. 200—50.)

1. In an apparatus of the class described, a switch, a casing inclosing said switch, a lever adapted to be operated to open and close said switch, a lug mounted to move with said lever and provided with two opposed convexly curved faces, a cover hinged to said casing, and a curved flange on said cover arranged so that one end thereof abuts one of the faces of said lug when the switch is closed to prevent opening said cover, said lug being mounted to move out of abutting engagement when the switch is opened to permit the movement of said flange over the other face of said lug whereby the switch cannot be closed when the cover is open.



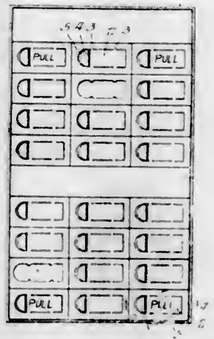
1,374,657. METHOD OF SEPARATING FRUIT-PITS AND THEIR KERNELS. STANLEY HILLER, San Francisco, Calif. Filed Sept. 4, 1919. Serial No. 321,554. 2 Claims. (Cl. 83—85.)



1. A process of separating the kernels and shells of fruit pits and the like, which consists in placing the cracked shells with the kernels in fresh water and thereafter placing the shells and kernels in brine whereby a complete gravity separation of the shells and kernels will be produced.

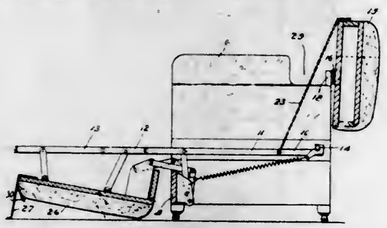
1,374,658. ELECTRIC FAN. GEORGE H. HOHNSBEEN, Minneapolis, Minn., assignor of three-fifths to J. D. Brown, Minneapolis, Minn. Filed Feb. 24, 1919. Serial No. 278,747. 7 Claims. (Cl. 219—42.)

1. The combination, with an electric fan and a guard for the blades thereof and a standard adapted for mounting on a base or for wall or ceiling use, of rods mounted in parallel relation on said guard and extending across the same from side to side, blocks of insulating material supported by said rods on each side of the center of said guard, resistance wires wound on said blocks and in circuit with the fan motor, and a switch for controlling the circuit through said wires.



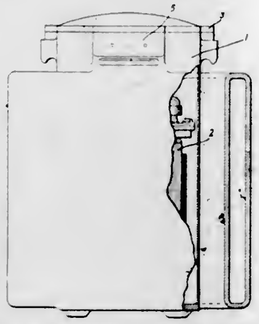
1,374,659. WINDMILL. DAVID R. HOLMES and NERA H. CAMPBELL, Hutchinson, Kans. Filed Sept. 10, 1919. Serial No. 322,788. 5 Claims. (Cl. 170—65.)

1. A windmill including a wheel comprising an outer rim, a central hub, spokes connecting the rim and hub, an inner rim between the outer rim and hub and concentric therewith, the inner rim consisting of segmental sections having their extremities turned toward the hub and attached in encircling pairs to the spokes respectively, and sails supported from the rims between the spokes.



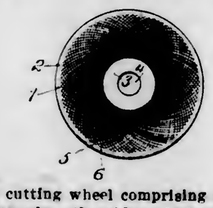
1,374,660. SALES DEVICE. JOSEPH W. HOODWIN, Chicago, Ill. Filed Apr. 9, 1920. Serial No. 372,568. 3 Claims. (Cl. 46—56.)

1. A sales device comprising a card, sections of said card being defined by cut lines extending through the card,



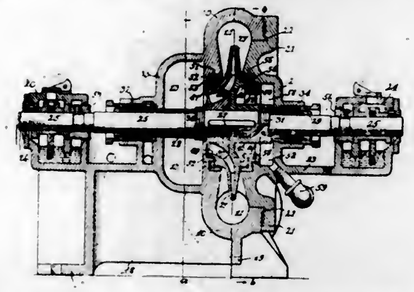
upcut sections of the card attaching the section to the card, each section being transversely scored to form a ridge at the back so the end of the section may be swung upwardly to form a tab by means of which the section can be readily pulled from the card.

1,374,661. BACK FOR BED-DAVENPORTS. FRANCIS A. HUBBERT, Seattle, Wash. Filed Oct. 23, 1920. Serial No. 418,925. 2 Claims. (Cl. 5—51.)



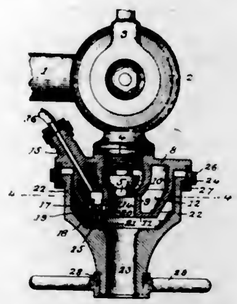
1. A bed davenport comprising two side arms supported in relatively rigid spaced apart relation, a sectional bed-frame pivoted at one end to said side arms and arranged to fold therebetween, a reversible back member having each end hinged at substantially midway between its two edges to said side arms, and a flexible tie member connecting said bed frame with the lower edge of said back member for moving said back member when said bed frame is folded.

1,374,662. TANK FOR ELECTRIC APPARATUS. SVEND E. JOHANNESEN, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 30, 1919. Serial No. 293,775. 2 Claims. (Cl. 257—191.)



1. A tank for electrical apparatus comprising a body portion and a hollow horizontally arcuate receptacle partially enveloping the body portion and connected therewith, arranged to open into said body portion at the ends of the arc.

1,374,663. PIPE-CUTTING WHEEL. WALTER P. JOYCE and HENNING A. FELDT, Kansas City, Mo. Filed Jan. 17, 1920. Serial No. 352,171. 3 Claims. (Cl. 81—187.)



1. A pipe cutting wheel comprising a circular disk having a cutting edge, the sides of the disk being provided with two sets of file teeth, which cross each other and face in opposite directions and which terminate inside the periphery of the disk.

1,374,664. CENTRIFUGAL PUMP. CHARLES V. KERR, Aurora, Ill., assignor to The American Well Works, Aurora, Ill., a Corporation of Illinois. Original application filed Sept. 10, 1917, Serial No. 190,524. Divided and this application filed Dec. 22, 1919. Serial No. 346,610. 5 Claims. (Cl. 253—200.)

1. In a centrifugal pump, the combination with a casing, of a rotary impeller having annular flanges at each end, said casing having cylindrical shoulders spaced from said impeller flanges, and floating annular members coacting with said flanges and peripherally shouldered to coact with said shoulders on said casing, as specified.

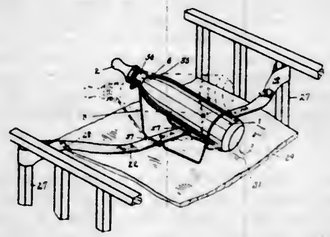
1,374,665. MEASURING-FAUCET. STANLEY H. KNIGHT, Chicago, Ill. Filed May 14, 1920. Serial No. 381,266. 6 Claims. (Cl. 225—26.)

1. In a dispensing faucet, the combination of a main supply controlling faucet, a measuring chamber associated with said faucet, a secondary valve controlling the inlet to and the outlet from said measuring chamber, and a receiving hopper having limited independent movement in relation to said faucet and measuring chamber, said hopper having operative engagement with said secondary valve.

1,374,666. PROCESS FOR THE ACETYLATION OF HYDROCARBONS AND SUBSEQUENT RECOVERY OF THE PRODUCTS OF THE REACTION. GEORGE T. KOCH and ALBERT L. STALLKAMP, Homer, Ohio, assignors to The Ohio Fuel Supply Company, Pittsburgh, Pa., a Corporation of Ohio. Filed Nov. 4, 1920. Serial No. 426,165. 9 Claims. (Cl. 23—24.)

1. The herein described method of esterifying chlor-hydrocarbons of the paraffin series, which consists in heating the chlor-hydrocarbons with an alkali acetate in the presence of activated carbon as a catalyzing material,

whereby the decomposition of amyl chlorid is prevented, and the yield of amyl acetate increased.



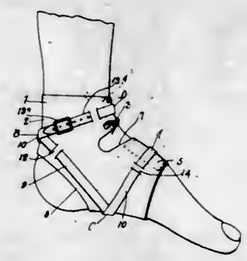
2. The herein described method of esterifying chlor-hydrocarbons of the paraffin series, which consists in heating the chlor-hydrocarbons with an alkali acetate, in the presence of batchite.

3. The herein described method of esterifying chlor-hydrocarbons of the paraffin series, which consists in heating the chlor-hydrocarbons with an alkali acetate, and with lower cuts from a previous esterification, in the presence of activated carbon.

4. The herein described method of esterifying chlor-hydrocarbons of the paraffin series, which consists in heating the chlor-hydrocarbons to from 250° to 450° F., with an alkali acetate, in the presence of batchite as a catalyzer.

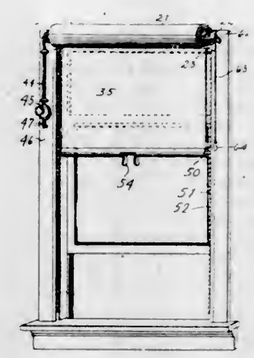
5. The herein described method of esterifying chlor-hydrocarbons of the paraffin series which consists in heating the chlor-hydrocarbons to from 250° to 450° F., with an alkali acetate, in the presence of batchite as a catalyzer, and maintaining a pressure of from 200 to 225 pounds per square inch.

1,374,667. FRAME FOR NURSING-BOTTLES. LOUIE T. LA PAUGH, Utica, N. Y., assignor of one-fourth to Joseph W. Shea and one-fourth to Elisabeth C. Shea, Utica, N. Y. Filed Mar. 22, 1920. Serial No. 367,664. 1 Claim. (Cl. 248—20.)



In a frame for nursing bottles, a yielding neck portion adapted to detachably engage the neck of a bottle, a circular portion for supporting the body of said bottle, horizontal portions for holding said bottle elevated, guideways formed in said horizontal portions for the insertion of a tape, and adapted to form a fulcrum, whereby the bottle will tilt automatically into such position as will keep the nipple of the bottle elevated.

1,374,668. CORD FABRIC. GEORGE W. LINDLEY, Philadelphia, Pa. Filed Jan. 20, 1920. Serial No. 352,655. 2 Claims. (Cl. 66—4.)

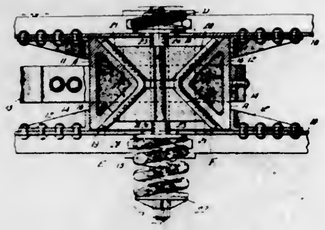


1. A non-elastic cord fabric suitable for use in the manufacture of pneumatic tires, said fabric being of closely and evenly spaced longitudinally running warps consisting of parallel cords held parallel to each other and incorporated into a fabric by transversely running threads relatively widely spaced apart and each knitted into a series of enchained loops, each of which loops is thrown around and firmly grips a cord.

1,374,669. FOOT-SUPPORTER. HARRY H. MCCLELLAN, Dayton, Ohio. Filed Feb. 7, 1920. Serial No. 356,872. 8 Claims. (Cl. 128—166.)

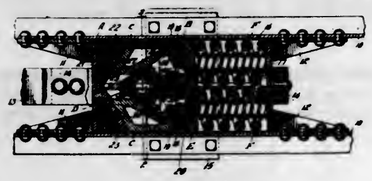
1. In a foot support, the combination with a jacket adapted to fit closely a portion of the foot, of a plurality of bands coöperating with said jacket, secured relative to each other above the instep and wound about the foot in opposite directions, said bands intersecting at places and adjustable at their ends relative to each other, whereby variable pressure may be exerted on the foot from different directions at said points of intersection.

1,374,670. ELECTRIC METALLIC WINDOW-CURTAIN. CLARENCE R. MAXWELL, Los Angeles, Calif. Filed Aug. 30, 1920. Serial No. 407,005. 9 Claims. (Cl. 189—56.)



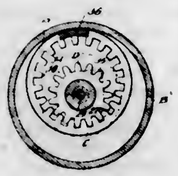
1. In a fireproof window curtain, the combination with a porcelain housing and hangers, of a shade roller journaled in the hangers, and an asbestos curtain fixed to the roller.

1,374,671. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 30, 1919. Serial No. 334,569. 3 Claims. (Cl. 213—64.)



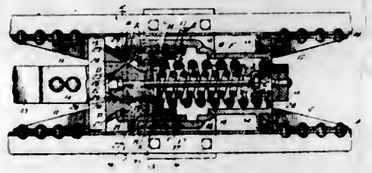
1. In a friction shock absorbing mechanism, the combination with a friction element having a pair of diverging faces, of wearing inserts having portions extending along both of said diverging faces and thereby held against movement lengthwise of either of said faces, other friction elements having faces inclined to correspond with the diverging faces of said first named friction element, said inclined faces engaging said inserts, and spring means for yieldingly resisting relative movement between

said friction elements, each of said inserts being in the form of a bent bar and the opposed faces of the friction



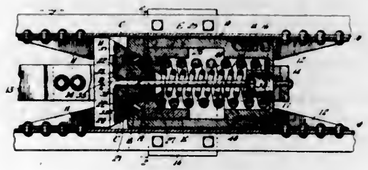
elements between which said inserts are interposed having a series of parallelly extending grooves to conform to the cross sections of and receive the bars.

1,374,672. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Nov. 6, 1919. Serial No. 336,054. 3 Claims. (Cl. 213—64.)



1. In a friction shock absorbing mechanism, the combination with a friction shell having outwardly diverging friction surfaces, of a member opposed to said shell and movable relatively toward and from the same, said member having diverging friction surfaces extending in the opposite direction to those of the shell, a pair of friction shoes having inclined end friction surfaces coöperable with said friction surfaces of the shell and member, said shoes being forced inwardly toward each other upon the relative approach of said shell and member, said shoes having also inner wedge surfaces normally disposed outwardly beyond the shell and facing toward the latter, a wedge also normally disposed outwardly beyond the shell and interposed between and coöperating with said wedge surfaces of the shoes, a spring resistance on the opposite side of said shell to that on which said wedge is located, and means for transmitting pressure from said wedge to said spring resistance.

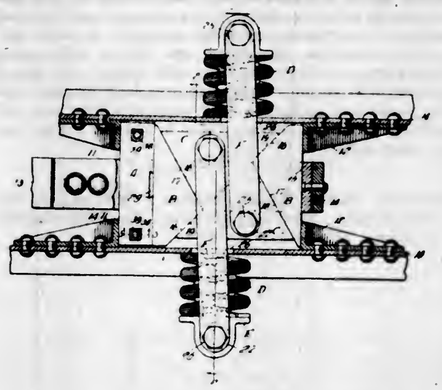
1,374,673. SAFETY DEVICE FOR CAR-DOOR-OPERATING MECHANISMS. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Nov. 6, 1919. Serial No. 336,055. 3 Claims. (Cl. 105—311.)



1. In a safety device for door operating mechanism, the combination with two relatively rotatable clutch members, one of which is adapted to be directly operated and the other is adapted to rotate simultaneously with a shaft of the mechanism, of an internal gear loosely rotatably mounted between said clutch members and having a lug rigid therewith, a coöperating lug on one of said clutch members, said lugs limiting the amount of relative rotation between said internal gear and the clutch member carrying the lug, and a pinion coöperable with said internal gear and rigidly mounted on the other of said clutch members.

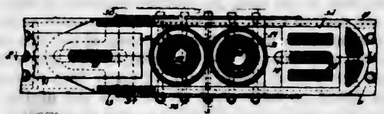
1,374,674. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Nov. 15, 1919. Serial No. 338,182. 8 Claims. (Cl. 213—64.)

1. In a friction shock absorbing mechanism, the combination with a friction shell and a spring resistance; of a set of friction shoes directly coöperable with said shell; a second set of friction shoes directly coöperable with said first set of shoes, said sets of shoes having coöperating friction surfaces extending parallel to the axis of the shell, both sets being located at the same end of the shell; and spreader means directly coöperable with both sets of shoes to force them outwardly against the shell.



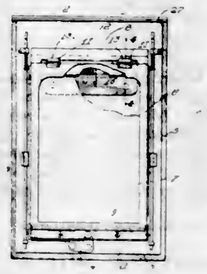
1,374,675. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Nov. 28, 1919. Serial No. 341,011. 4 Claims. (Cl. 213—64.)

4. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces at its outer end; of a pair of laterally spaced friction elements coöperable with said friction surfaces; an intermediate friction element coöperable with said first named friction elements, means for yieldingly resisting movement of all of said friction elements inwardly of the shell; and a retaining element connected at one of its ends to the inner end of the shell and having means at its other end for directly engaging all of said friction elements and limiting the outward movements thereof with respect to the friction shell.



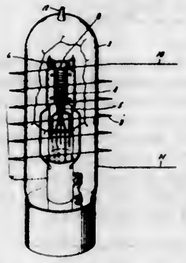
1,374,676. RAILWAY DRAFT-RIGGING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Feb. 4, 1920. Serial No. 356,344. 3 Claims. (Cl. 213—64.)

1. In a railway draft rigging, the combination with draft sills; of laterally arranged springs on the exterior of said sills, said springs having fixed supports at their inner ends; friction devices located between the sills; members bearing against the outer ends of said springs; and connections extending from some of the elements of



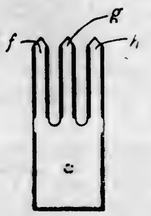
the friction devices to said members, said elements of the friction devices moving laterally away from the respective remote spring as the friction devices are actuated.

1,374,677. FRICTION DRAFT-RIGGING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Feb. 4, 1920. Serial No. 356,345. 9 Claims. (Cl. 213—64.)



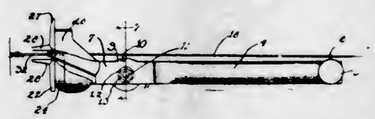
1. In a railway draft rigging, the combination with draft sills; of spring means disposed between the sills; friction devices entirely located outside of the sills and all the elements of which are longitudinally movable; and means operatively interposed between said friction devices and spring means so arranged that the spring means afford a yielding resistance for said friction devices.

1,374,678. PHOTOGRAPHIC CAMERA. WILLIAM A. PETERS, Chicago, Ill., assignor to International Patent Licensing Corporation, Chicago, Ill., a Corporation of Delaware. Substitute for application Serial No. 34,978, filed June 19, 1915. This application filed Oct. 13, 1919. Serial No. 330,680. 2 Claims. (Cl. 95—49.)



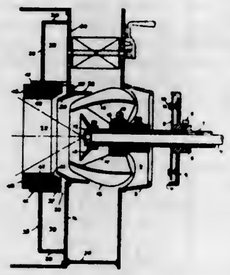
1. In a camera, the combination with a casing having a rear opening and a door pivoted to the casing and normally closing said opening, of a ground glass disposed within the casing and normally presenting a smooth forward surface substantially in the focal plane of the camera, links connecting the upper end of said ground glass with the casing: means connecting the lower end of the ground glass plate to the door movable in unison with the links for maintaining the glass parallel to its original position, and stop means associated with the door for limiting the opening movement thereof: said connecting means, links and stop means relatively so disposed that the opening of the door to its said limiting position will move the ground glass to present the roughened surface thereof substantially in the focal plane of the camera.

1,374,679. DEGASIFYING PROCESS. JOHN B. PRATT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1920. Serial No. 365,837. 4 Claims. (Cl. 250—27.)



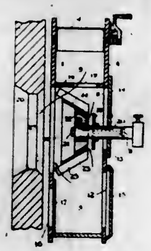
2. The method of removing gas from conducting bodies inclosed within an envelop which consists in subjecting said bodies to a high frequency variable magnetic field of sufficient strength to heat said bodies sufficiently to eliminate said gas.

1,374,680. FASTENING DEVICE. GRACE DAILEY PRESTON, Lakeside, Ohio, assignor of two-fifths to Arthur G. Smith, Elyria, Ohio. Filed July 30, 1919. Serial No. 314,292. 8 Claims. (Cl. 24—83.)



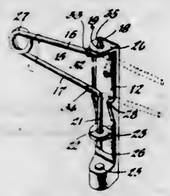
5. In fasteners for flexible material, a metal clasp consisting of overlapping wings joined together at one end, a plurality of serrations on the edges of said wings adapted to clasp the edge of said material therebetween, and a snap fastener on one wing of said clasp.

1,374,681. COMBINATION-TOOL. WILLIAM L. RAY, Oregon, Ill., assignor to Hattie H. Cartwright, Oregon, Ill. Filed Mar. 8, 1920. Serial No. 364,072. 11 Claims. (Cl. 140—123.6.)



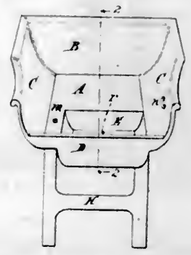
9. A wire splicer comprising a shank, a lug projecting from one end of the shank and adapted to receive a wire loop thereon, wire tightening means mounted on said shank intermediate its ends, and a slot in said lug arranged to allow a wire to pass through said loop.

1,374,682. OIL-BURNING-FURNACE FRONT. JOHN REID, New York, N. Y. Filed Mar. 8, 1920. Serial No. 364,342. 6 Claims. (Cl. 158—1.5.)



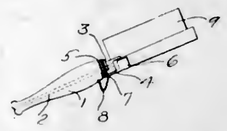
1. In a furnace front of the forced draft type having front and back plates distanced by intermediate walls and forming an air pocket having front and rear openings, a furnace lining attached to the back plate and forming air chambers having inlets through said back plate from said pocket and outlets leading to the firebox, and a burner suitably shut in from the outside to said air pocket and connected to a suitable oil feed and emitting a flame crossing the path of the air delivery.

1,374,683. OIL-BURNING-FURNACE FRONT. JOHN REID, New York, N. Y. Filed Apr. 17, 1920. Serial No. 374,770. 7 Claims. (Cl. 158—1.5.)



1. In an oil burning furnace front having front and back plates forming an air pocket, a closure for the front opening to said pocket, a burner supported from said closure and an air director in cone shell form flaring toward the flame opening and having outer and inner vanes forming passages in the direction of the outlet to the flame situated at the extremity of said shell.

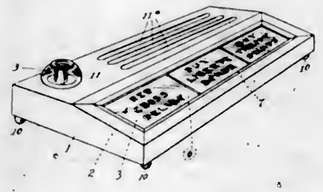
1,374,684. BURGLAR-ALARM. JOHN C. RIECK, Buffalo, N. Y. Filed Mar. 17, 1920. Serial No. 366,557. 2 Claims. (Cl. 116—87.)



1. An alarm comprising a base, a trip-member hinged to said base to swing transversely thereof and consisting of an upper arm having a pintle, a lower trigger-arm movable toward and from said upper arm, and a spring-coil connecting the free ends of said arms, a holder for a detonating device arranged on said base, means on said base for holding said trigger-arm in its strained and retracted position, a perforated guide-lug arranged between said holding means and said holder and having a fastening screw passing through said base, said trigger-arm having an integral extension arranged substantially parallel with said pintle and guided in said perforated lug and said extension forming a hammer which is movable toward and from said holder.

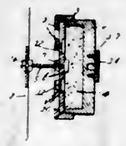
1,374,685. BATH-CHAIR. GEORGE F. STEINKAMP, Cincinnati, Ohio. Filed July 10, 1919. Serial No. 309,925. 1 Claim. (Cl. 4—27.)

A bath-chair or bathing-seat comprising a horizontal body-portion or seat-proper having a shallow water cavity or basin at its fore end, an upright guard or water-shed at the rear end of the seat, an overflow-opening in said seat above the desired water-line, upright side guards or water-sheds extending forwardly from the ends of the rear guard at the opposite sides of the seat and having concaved or recessed arm-pits at their outer or upper fore corners, a shallow guard or water-shed at the fore end of the seat adjacent the said water cavity and with its opposite ends closed or making joint with the outer ends of said side guards below said arm-pits, and an independent open frame having legs adapted to support the bathing-seat above the floor so that the lower limbs and feet of the bather may be disposed outside the bathing-cabinet from the knee-pits down, substantially as shown and described.



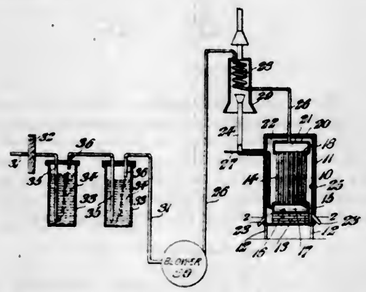
1,374,686. CIGARETTE HOLDER AND MOUTHPIECE. NEAL H. STEVENS, Katalla, Alaska. Filed May 21, 1920. Serial No. 383,220. 5 Claims. (Cl. 131—10.)

4. A cigarette holder and mouthpiece comprising a stem with a longitudinal vent therethrough, the forward end of the stem being cut down so as to leave an annular shoulder; means for releasably securing the cigarette paper to the forward end of the stem; a paper engaging ring slidingly mounted over the forward end of the stem; and means for permanently retaining said paper engaging ring upon the stem.



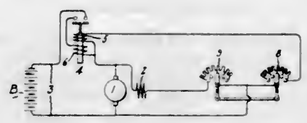
1,374,687. ADVERTISING NOVELTY. STEPHEN A. STILWELL, Lebanon, Ohio. Filed Nov. 13, 1918. Serial No. 262,382. 1 Claim. (Cl. 40—63.)

As an improved article of manufacture, an advertising novelty and writer's companion for desk use and display, comprising a rectangular shallow slab having a flat bottom and short corner-supporting ball-projections, a partially horizontal flat top or upper surface having a forwardly and downwardly inclined upper surface, an ink-well sunk in an orifice or cavity at one rear corner of said horizontal upper surface of the slab, a series of multiple of parallel longitudinal grooves or elongated shallow cavities provided in said horizontal upper surface to one side of said ink-well and adapted to contain pens and pencils, an elongated sight or opening provided in said inclined



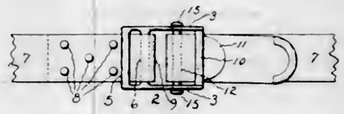
upper surface and adapted to accommodate one or more show-cards, and a removable sheet of glass in said sight to cover the said show-cards free for exchange-removal when desired, the whole being adapted for varied use on a flat-top table or desk, to display said show-cards and to serve the otherwise useful purpose of conveniently holding ink and pens for the occupant of the desk, substantially as herein shown and described.

1,374,688. TRANSMITTER. FRANK E. SUMMERS, Memphis, Mo. Filed May 12, 1919. Serial No. 296,530. 4 Claims. (Cl. 179—124.)



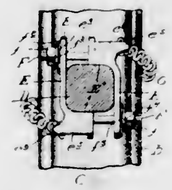
1. In a transmitter, the combination of a diaphragm, an insulating disk having connection with the diaphragm, a cap attached to the disk, a variable resistance substance carried within the cap, the cap having means for attachment to a second disk, and electrodes carried by the said disk, whereby a plurality of caps and disks may be assembled in tandem with the diaphragm.

1,374,689. AIR-CONDITIONING PROCESS AND APPARATUS. ANTHONY P. TORREY, North Glenside, Pa. Filed Apr. 27, 1920. Serial No. 376,980. 8 Claims. (Cl. 219—39.)



1. The process of conditioning air which consists in passing a body of air through a liquid, then subjecting said air to pressure, heating the compressed air at a relatively high temperature, and utilizing the air in its heated condition.

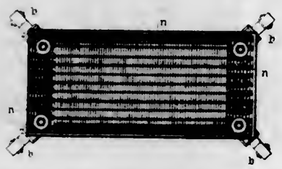
1,374,690. BATTERY-CHARGING SYSTEM. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 12, 1920. Serial No. 380,844. 4 Claims. (Cl. 171—314.)



3. In combination, a battery charging circuit, a generator adapted to supply energy to said circuit, a switch controlling the connection between said generator and said circuit and having a coil connected across the terminals of said generator, a resistance in the circuit of said coil, a resistance in the field circuit of generator, and means for simultaneously adjusting said resistances to vary the voltage of said generator without substantially varying the current through said coil.

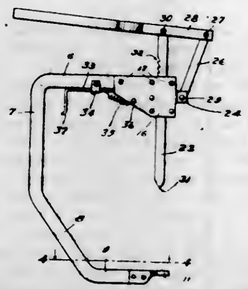
1,374,691. BUCKLE. GEORGE W. TROOP, New Britain, Conn., assignor to The North & Judd Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 14, 1919. Serial No. 337,986. 1 Claim. (Cl. 24—196.)

A buckle comprising opposite parallel side members having transversely-registering longitudinally extending slots, a rear transverse bar rigid with the side members and the under surface of which is spaced from the lower surfaces of said side members and against which an end portion of a strap may fit, a second transverse bar connecting the side members, above the other transverse bar, and around which said strap-end portion may be looped, a front transverse bar connecting the side members and below the front ends of said registering slots, and a cylindrical roller to removably receive a loop at the opposite end portion of said strap, the terminal portions of the roller being located in said slots, the roller being bodily movable back of the front transverse bar and when the strap is pulled from its front end being adapted to press the free end of the strap against the rear edge of said front transverse bar.



1,374,692. ANTISKIDDING DEVICE FOR TIRES. IRA ULFERS, Freeport, Ill. Continuation in part of application Serial No. 264,921, filed Dec. 2, 1918. This application filed May 24, 1919. Serial No. 299,599. 9 Claims. (Cl. 152—14.)

5. An anti-skidding device for tires comprising a clamp adapted to be detachably secured to a wheel spoke, said clamp having arms extending in opposite directions cir-

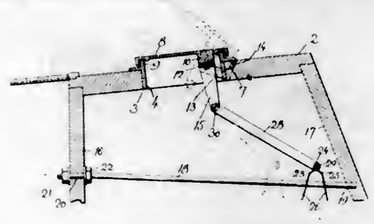


cumferentially from the wheel spoke, and oppositely facing, transversely and radially disposed hooks on said arms, said hooks having terminal open bills extending inwardly and radially toward the bases of the hooks and adapted to detachably engage the ends of a tire chain.

1,374,693. ELECTRIC HEATER HAVING HEATING FABRICS. FRANÇOIS EMILIEN BÉNÉDICT VERNET, Paris, France, assignor to Compagnie Generale de Travaux D'Eclairage et de Force (Anciens Etablissements Clémançon.) Paris, France, a Corporation of the French Republic. Filed May 11, 1920. Serial No. 380,562. 4 Claims. (Cl. 219—34.)

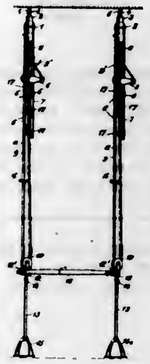
1. An electric heater, comprising heating fabrics arranged horizontally one above the other, a sheet metal casing inclosing said heating fabrics, means for putting into circuit an adjustable number of said heating fabrics, and means permitting the circulation of air upward successively through said heating fabrics.

1,374,694. VALVE-SPRING-COMPRESSING CLAMP. GEORGE P. WEBSTER, Seattle, Wash. Filed Jan. 2, 1920. Serial No. 348,865. Renewed Jan. 27, 1921. Serial No. 440,537. 3 Claims. (Cl. 29—86.3.)



1. A valve spring compressing clamp comprising an open clamp frame having a straight top side, a forked foot on the lower extremity of said clamp frame, guiding means at the upper extremity of said clamp frame, a clamp bar guided by said guiding means for movement toward and away from said foot, said clamp bar having ratchet teeth formed in the rear edge thereof, a spring pressed pawl guided for movement along the lower edge of said straight top frame portion and arranged to yieldingly engage said teeth to prevent movement of said bar away from said foot member, a downwardly projecting finger hold on the outer end of said pawl and devices for moving said clamp bar within said clamp frame.

1,374,695. CATALYTIC OXIDATION OF FLUORENE. JOHN M. WEISS, New York, N. Y., and CHARLES R. DOWNS, Cliffside, N. J., assignors to The Barrett Company, a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,698. 2 Claims. (Cl. 23—24.)

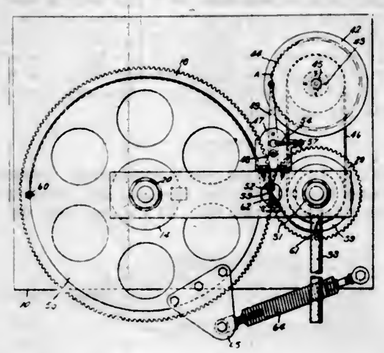


1. The method of producing fluorenone which comprises oxidizing fluorene in the vapor phase at a temperature from about 300° C. to 700° C. with an oxygen containing gas in the presence of a metallic oxid as a catalyst.

1,374,696. COWL-VENTILATOR FOR MOTOR-VEHICLES. GEORGE W. WELLS, Amesbury, Mass., assignor to Walker Wells Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Aug. 5, 1920. Serial No. 401,364. 3 Claims. (Cl. 268—17.)

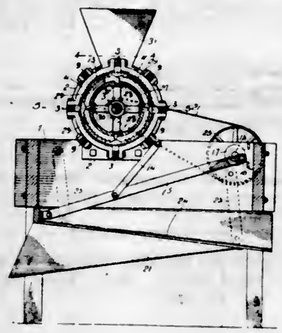
1. In a cowl ventilator for motor vehicles, a cowl having a ventilating opening in the top thereof, a hinged cover for said opening, a stationary rod, a spring clamp bent centrally to provide an upper eye and having diverging spring branches provided with perforations engaging said rod, and adjustable along and automatically gripping said rod, a shaft carried in said eye, and an operating connection between said shaft and said cover to raise and lower the cover upon adjustment of the clamp and to support the cover in raised position.

1,374,697. EXERCISING APPARATUS. HEINRICH WERNDLI, Zurich, Switzerland. Filed Nov. 1, 1919. Serial No. 335,043. 8 Claims. (Cl. 46—69.)



1. In an exercising apparatus, a pulley block arranged for overhead suspension, a strap connected at one end to said block and passing over the pulley of said block and provided with a stirrup-like handle on its free end and forming a loop, a pulley block suspended in said loop and stirrup like foot supports connected to the pulley block in said loop for supporting the person exercising.

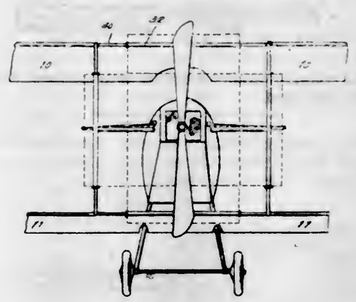
1,374,698. APPARATUS FOR TESTING GEAR-WHEELS. JAMES WILKINSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 16, 1919. Serial No. 330,954. 7 Claims. (Cl. 73—51.)



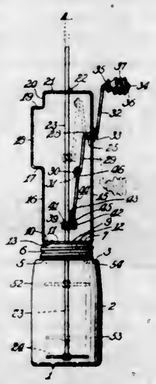
1. In a gearing indicator, means for supporting the gears to be tested in mesh, a wire, means comprising

pulleys over which the wire runs, said pulleys being arranged to turn with the gears, and means controlled by

the wire for indicating variations in the tension of said wire.



1,374,699. FEED-GRINDING MACHINE. JOSEPH H. WILLIAMS, North Kansas City, Mo. Filed Dec. 16, 1919. Serial No. 345,187. 6 Claims. (Cl. 83—6.)



1. In a feed grinding machine, a plurality of circularly arranged grinding members, another set of grinding members similarly arranged in alternate order between the first named grinding members, the teeth of the grinding members of each of said sets being obliquely disposed on the inner sides of said grinding members, the teeth of one set of grinding members being laterally inclined in one direction, the teeth of the other set of grinding members being laterally inclined in the opposite direction, means for obtaining relative oscillation between grinding members of said two sets, a rotary support encircled by said grinding members, and grinding members arranged circularly on the periphery of said rotary support and revoluble therewith and having peripheral teeth adjacent to but spaced apart from the first named grinding members.

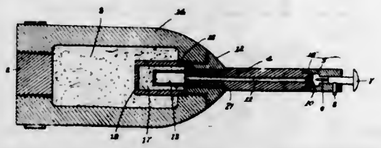
1,374,700. AEROPLANE STRUCTURE. THOMAS N. WILSON, Clarinda, Iowa. Filed Oct. 24, 1919. Serial No. 333,084. 2 Claims. (Cl. 244—25.)

1. In an aeroplane, the combination of a fuselage, an airfoil at the forward portion thereof, a propeller in front of the airfoil, means for jointly moving the propeller shaft and the airfoil to position approaching a right angle vertically relative to the rear portion of the fuselage, a series of stabilizing planes arranged in the path of the air currents set up by the propeller, and a single controlling means for said stabilizing planes, said controlling means being so arranged that when a stabilizing plane on one side is moved to position where it will receive considerable impact from the air current from the propeller, the corresponding stabilizing plane on the opposite side will be so moved that it will not present so great resistance to the air current from the propeller, for the purposes stated.

1,374,701. CHURNING, BEATING, OR MIXING APPARATUS. JOHN A. WILDE, Indianapolis, Ind. Filed Mar. 31, 1919. Serial No. 286,414. 1 Claim. (Cl. 74—14.)

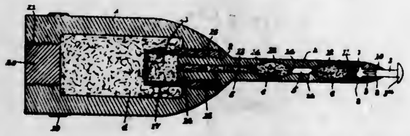
In a churning, beating or mixing apparatus, the combination of a foundation plate having a central guide-opening, two base members rigidly secured upon the foundation plate, two standards rigid on said members respectively, one of said standards being straight, the remaining one of the standards having an outwardly extending off-set handle portion adjacent to the upper portion thereof, a tie-bar connected to the tops of said standards and having a guide-opening therein, a rod movably arranged in said guide-opening and extending between said standards, a journal box secured in the straight one of said standards opposite to said handle portion, a crosshead adjustably secured to said rod, a wrist-pin fixed on said crosshead, a short shaft rotatably supported in said journal box and having a crank arm on its inner end that has a crank-pin, a pitman arranged between said rod and the straight one of said standards and connected to said wrist-pin and to said crank-pin, an operating arm rigid on the outer end of said shaft, and a handle on said operating arm.

1,374,702. CAN-OPENER. ROWLAND H. WOLFE, Chicago, Ill. Filed July 3, 1918. Serial No. 243,166. 3 Claims. (Cl. 30—3.)



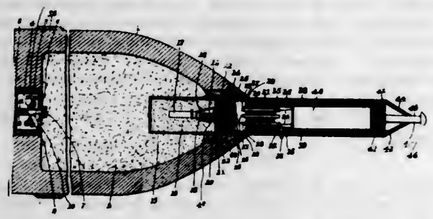
1. A can opener comprising a supporting member, provided with a longitudinal slot; a saddle sliding upon said

supporting member; mounting ears on said saddle projecting through the slot in said supporting member, and



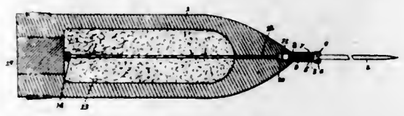
a cutting wheel rotatably mounted between ears, substantially as described.

1,374,703. PROJECTILE. ROBERT LEE WRIGHT, Los Angeles, Calif. Filed July 29, 1919. Serial No. 314,165. 30 Claims. (Cl. 102—29.)



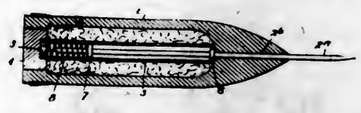
1. A projectile having a suitable cavity within to hold an explosive charge, a plug secured to one end of said projectile, a shell-pointer secured to said plug, said shell-pointer having an aperture therethrough, the rear end of said aperture being enlarged and closed, a firing pin support removably secured in the forward part of said shell-pointer, a firing pin having an enlarged head arranged in advance of said support, a cap, a set screw for holding the firing pin in inactive position and a tube for explosives surrounding the rear end of said shell-pointer.

1,374,704. SHELL AND PROJECTILE. ROBERT LEE WRIGHT, Los Angeles, Calif. Filed Oct. 21, 1920. Serial No. 418,343. 13 Claims. (Cl. 102—29.)



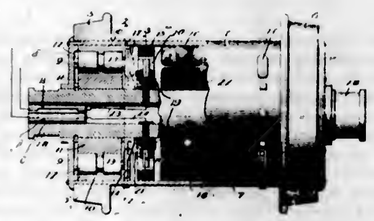
1. An ordnance shell or projectile having a projection secured to the forward end thereof extending axially and formed with a longitudinal bore and a plurality of cavities for explosives in alinement with said bore within said projection, explosives within each of said plurality of cavities, percussion means and a holder for said means secured in the forward part of said projection, the projection extending straight from the forward end of the shell or projectile to near the forward end from which place it slopes to the forward end in a way to form a point on the forward end of the projection and firing pin means for detonating said percussion means secured within the said projection.

1,374,705. PROJECTILE. ROBERT LEE WRIGHT, Los Angeles, Calif. Filed Apr. 17, 1920. Serial No. 374,612. 21 Claims. (Cl. 102—37.)



1. An ordnance projectile having an explosive charge and means for detonating same, said means including an axially arranged projection at the forward end of the projectile, a longitudinal bore within said projection, a detonating charge in alinement with the rear of said bore through said projection and in operative relation to the explosive charge in the projectile, another detonating charge and means for detonating the latter including a combined contact electric switch and firing pin engageable by contact electric switch means and contact percussion cap and fuse.

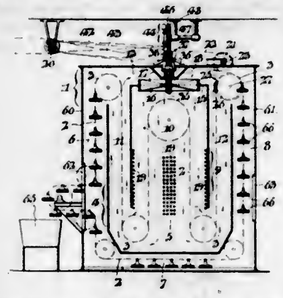
1,374,706. PROJECTILE AND BOMB COMBINED. ROBERT LEE WRIGHT, Los Angeles, Calif. Filed May 20, 1918. Serial No. 235,482. 12 Claims. (Cl. 102—29.)



1. In a projectile, a slender rod extending from the nose, a plurality of bombs mounted on said rod in spaced relation and means for simultaneously igniting said bombs upon engagement with the target.

1,374,707. SHELL AND PROJECTILE. ROBERT LEE WRIGHT, Los Angeles, Calif. Filed Feb. 23, 1918. Serial No. 218,797. 25 Claims. (Cl. 102—29.)

1. An ordnance shell or projectile having a projection on its nose carrying an explosive charge.



1,374,708. TRACTION-MOTOR. GEORGE YATES, Cleveland, Ohio. Filed Mar. 27, 1920. Serial No. 369,227. 7 Claims. (Cl. 105—57.)

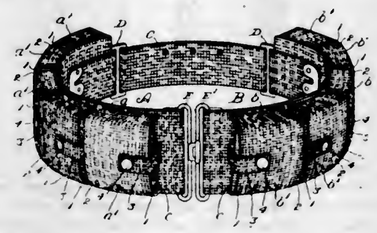
1. A traction motor, consisting of a cylindrical wheel carrying casing, a shaft within the casing, antifriction bearing between the casing and the axle, a motor armature secured to the casing, a commutator also secured to the casing, and brushes carried by the axle and delivering electric current to the commutator.

1,374,709. DRYING-MACHINE. THOMAS ALLSOP and WALTER W. SIBSON, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1919. Serial No. 345,820. 4 Claims. (Cl. 34—12.)

1. In a drying machine, the combination of an inclosure; a rotary fan for circulating the air within the inclosure; a conveyer traversing the inclosure; a common driving system for said conveyer and said fan, including means whereby the movement of the conveyer may be suspended without interfering with the operation of said fan; a reversible driving mechanism for said fan comprising an actuating shaft; driving connections whereby said shaft may be

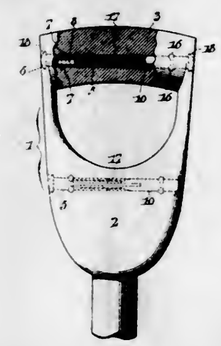
rotated in either direction; and shifting devices subject to the control of said shaft for connecting the latter alternately to said driving connections.

1,374,710. TAPE-NEEDLE. WINCAS ANTANAVICZIUS, Brooklyn, N. Y. Filed Apr. 14, 1920. Serial No. 373,724. 1 Claim. (Cl. 223—38.)



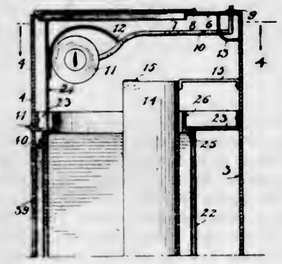
A tool of the character described comprising a shaft, a head part for said shaft provided with a threaded peg at one end, and a flattened part at the other, a central part provided with a threaded socket at one end adapted to be engaged by the peg on said head part, a screw peg at the opposite end, and a handle part provided with a screw socket at one end for engagement by the said peg of said central part at one end and a ring at the opposite end, said flattened part of the head part provided with an elongated hole, and a point projecting into the said hole at the center of its upper end for engagement with the material of an article to be secured to form a tube, substantially as described, and for the purpose set forth.

1,374,711. ARC-WELDING COMPOSITION. JAMES C. ARMOR, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1919. Serial No. 320,924. 5 Claims. (Cl. 219—8.)



5. An arc welding electrode containing a flux comprising titanium as an elementary constituent and fusing at a temperature no higher than the fusing temperature of said electrode.

1,374,712. CARTRIDGE-CARRIER. FRANK R. BATCHELDER, Worcester, Mass., assignor to Mills Belt Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 5, 1918. Serial No. 248,252. 8 Claims. (Cl. 224—23.)

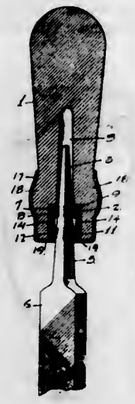


1. A cartridge-carrier constructed to be worn in a horizontal position encircling the waist of the wearer, having a horizontal series of pockets each formed with a vertical mouth adapted for withdrawal of a clip of cartridges from the pocket by a transverse movement.

1,374,713. REINFORCING OR STAY BOLT FOR TOOL-HANDLES. JAMES H. BELL, Philadelphia, Pa., assignor to The Wyoming Shovel Works, Wyoming, Pa., a Corporation of Pennsylvania. Filed May 14, 1919. Serial No. 297,092. 2 Claims. (Cl. 85—4.)

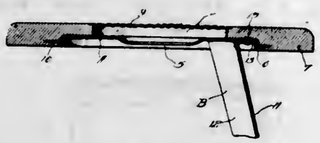
1. A composite reinforcing or stay-bolt for tool handles comprising a socket member and a shank member adapted to be inserted therein; said members having coöperative interlocking means effective to positively interlock the shaft member in the socket member against separation in divers endwise relations of said members and in all angular relations of said members about their common axis, but capable of yielding to permit relative shifting of said members to effect readjustment of the interlock when shrinkage of the tool handle occurs.

1,374,714. DARK-ROOM LANTERN. WALTER A. BELL, New York, N. Y. Filed July 18, 1918. Serial No. 245,440. 7 Claims. (Cl. 240—15.)



3. In a device of the class described, a casing with a source of light mounted therein, a reflector back of said source of light, a reflector in front of said source of light and a pivoted glass holder revoluble about said last named reflector.

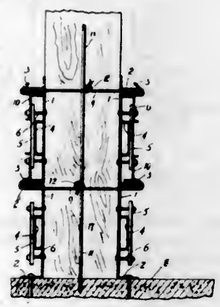
1,374,715. FILE-HANDLE. HENRI BERNAT, San Francisco, Calif., assignor to The Thurston-Bernay Co., San Francisco, Calif., a Corporation of California. Filed Nov. 1, 1919. Serial No. 335,525. 1 Claim. (Cl. 279—99.)



A file handle having a recess in the end thereof, a pair of separate interiorly screw-threaded dies held from rota-

tion in said recess, one of said dies having an extension flange whereby the two screw threaded parts are spaced a distance apart, said dies being adapted to receive and hold the tang of a file twisted into the same, the screw threads of the outer die being of greater diameter than

the screw threads of the inner die, and the interior diameter of said flange extension being greater than the interior diameter of the screw thread in the outer die.

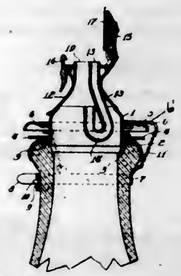


1,374,716. ARTICLE OF FURNITURE. HARRY BLOOM, MAX GERBER, and JOE PITERMAN, Chicago, Ill., assignors to Bloom, Gerber and Piterman, a Partnership consisting of Harry Bloom, Max Gerber, and Joe Piterman. Filed Aug. 14, 1920. Serial No. 403,516. 2 Claims. (Cl. 155—194.)

2. A furniture article comprising, in combination, a wooden seat in which is a central opening covered by a seating material, there being formed on the under side of the seat a recess which lies adjacent the opening, and a support on which the seat is mounted comprising a metal top piece adapted to fit within the recess upon the under side of the seat, means extending through the top piece and into the wooden seat to connect the one to the other, a plurality of metal legs each channeled to provide a center wall from which diverge two side walls, the upper end of each leg being formed with ears extending laterally, one from the center wall and one from each of the side walls, all of the ears lying in a common plane, a connection between each of the ears and the metal top piece, and braces interconnecting the legs below the top piece, substantially as described.

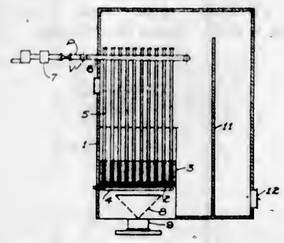
1,374,717. METALLIC MOLD FOR CONCRETE WALLS. GEORGE W. BOLTON, Dallas, Tex. Filed June 29, 1920. Serial No. 392,802. 5 Claims. (Cl. 25—131.)

2. A metallic mold for concrete and plastic walls, said mold consisting of a plurality of oblong plates with their sides bent at right angles to the body thereof and forming a channel, similarly constructed reinforcing members detachably connected to said plates longitudinally and vertically thereof, and cross links between the wall molds and fastened to the right angled sides thereof to sustain



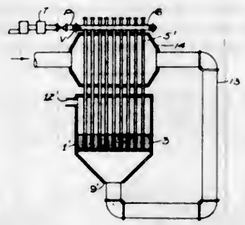
the molds in parallel relationship, said links providing a strengthening means for the concrete wall and a fastening means for outside strips when the molds are removed, and means for providing window and door spaces at designated points in the wall.

1,374,718. MANUFACTURE OF ARTIFICIAL VISCOSE SILK. EMILE BRONNERT, Mulhouse, Alsace-Lorraine, France. Filed Sept. 8, 1920. Serial No. 408,967. 1 Claim. (Cl. 18—54.)



The process of producing artificial viscose silk threads up to 1 denier in fineness, consisting in that raw viscose with alkaline condensation products of phenols and aldehydes are spun in bisulfite baths, the concentration of the baths being inversely proportional to the thread fineness to be produced.

1,374,719. MILK-BOTTLE TOP. ANGELO CUOMO, Astoria, N. Y. Filed July 14, 1920. Serial No. 396,238. 6 Claims. (Cl. 215—79.)

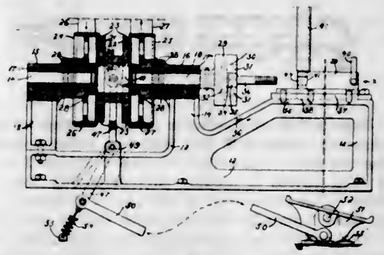


6. A temporary bottle closure comprising a cap piece having a pouring orifice covered by a spring actuated cap, a collar loosely mounted on said cap piece, a spring encircling said cap piece, a bottle neck band and connections therefrom to said loose collar normally holding said spring under compression, and an air inlet tube disposed in the pouring orifice.

1,374,720. PROCESS OF PRODUCING MALEIC ACID. CHARLES R. DOWNS, Cliffside, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Original application filed June 11, 1919, Serial No. 303,337. Divided and this application filed July 3, 1920. Serial No. 393,904. 4 Claims. (Cl. 23—24.)

1. In the manufacture of maleic acid by the partial oxidation of benzene by an oxygen containing gas in the presence of a suitable catalyzer, the step which comprises providing liquid mercury out of contact with the reaction mixture but in heat transferring relationship thereto.

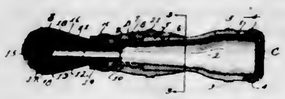
1,374,721. PROCESS OF PRODUCING ANTHRAQUINONE. CHARLES R. DOWNS, Cliffside, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Original application filed June 11, 1919, Serial No. 303,337. Divided and this application filed July 3, 1920. Serial No. 393,905. 4 Claims. (Cl. 23—24.)



1. In the manufacture of anthraquinone by the partial oxidization of anthracene by an oxygen containing gas in the presence of a suitable catalyzer, the step which comprises providing liquid mercury out of contact with the reaction mixture but in heat transferring relationship thereto.

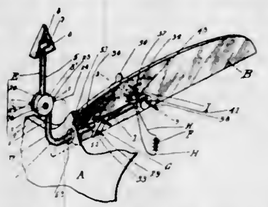
1,374,722. CATALYTIC OXIDATION OF NAPHTHALENE. CHARLES R. DOWNS, Cliffside, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed July 10, 1920. Serial No. 395,353. 6 Claims. (Cl. 23—24.)

1. The method of partially oxidizing naphthalene which comprises subjecting it in the vapor phase to the action of an oxygen containing gas in the presence of aluminium oxid as a catalyst.



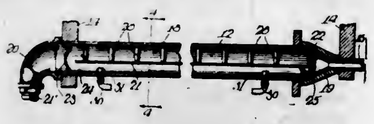
1,374,723. BOLT-RECLAIMING MACHINE. EDMUND LOUIS DUNN, Philadelphia, Pa., assignor of one-third to James P. Salmon and one-third to Edmund D. Fitzpatrick, Philadelphia, Pa. Filed Nov. 29, 1919. Serial No. 341,451. 4 Claims. (Cl. 10—1.)

1. A reclaiming machine for rusty bolts, including a chuck having a cavity adapted to receive and freely hold the head of a bolt; means for optionally rotating said chuck in opposite directions; and a carriage slidably supported to move in opposite directions in alinement with the axis of the bolt within the chuck, said carriage having a socket with a lateral opening and being adapted to hold a nut, inserted therein through said opening, against rotation whereby when the carriage is moved in one direction, the nut will be advanced into engagement with the screw



threaded portion of the bolt throughout its length to strip the same of its coating of rust, said chuck then being rotatable in the opposite direction to move the nut and carriage in a direction away from the head of the bolt; substantially as described.

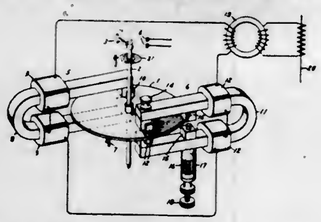
1,374,724. FOUNTAIN SHAVING-BRUSH. JOHN S. EDDY, Los Angeles, Calif. Filed July 6, 1920. Serial No. 394,245. 5 Claims. (Cl. 15—50.)



1. A fountain shaving brush having body and handle members and a brush on said body member, said handle member having a liquid holding chamber therein, telescoping extensions on said handle and body members, said handle extension being open and said body extension being closed at one end, the adjacent end of said handle being adapted to seat on said closure for closing the same and outlet means in said outer extension for discharging the liquid.

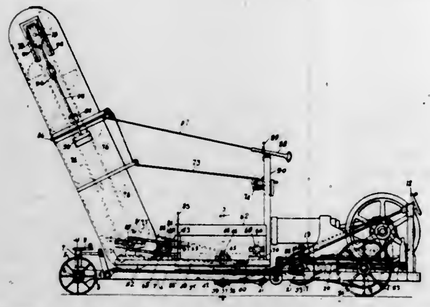
1,374,725. SAFETY DIRECTION-SIGNAL. HOWARD E. EVERETT, St. Paul, Minn. Filed May 27, 1920. Serial No. 384,567. 3 Claims. (Cl. 116—54.)

1. In a signal device of the class described the combination with a swingable semaphore arm and a cable eccentrically connected therewith, of mechanism supported on the car body connected with the cable for pulling in or paying out the latter and for holding it pulled in, said mechanism comprising a supporting member including a plate having a hole in its face, a horizontally disposed longitudinally shiftable rotatable shaft disposed at right angles to said supporting member and having a shoulder engageable with the face of said plate, a handle for turning the shaft, a sheave rigid on the shaft and connected with the cable to windingly receive the latter, a spring for the shaft to yieldingly hold said shoulder against said plate, and a pin extending from said shoulder and projectable into said hole to hold the cable pulled in.



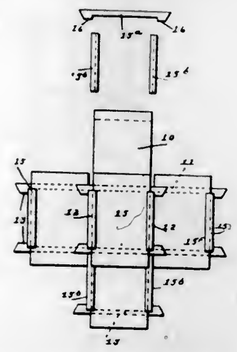
1,374,726. HUMIDIFIER FOR PRINTING-MACHINES OR THE LIKE. GEORGE C. FLINT, Chicago, Ill. Filed Oct. 18, 1917. Serial No. 197,374. 17 Claims. (Cl. 91—44.)

8. A humidifier comprising a casing having an inlet, and means for connecting said inlet to a steam system, in combination with a plurality of nozzles attached to said casing each having a tubular part extending into close proximity to the upper wall of said casing arranged to discharge vapor from adjacent the upper wall of said casing and a plurality of tubular outlets upon said casing each arranged to discharge a vapor from a lower point in said casing.



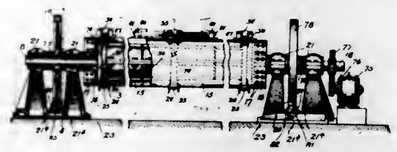
16. An attachment for printing presses, including a steam line, a transverse pipe connected to said line and provided with means for discharging steam against a sheet of paper being unwound from a roll, and a movable nozzle arranged at the end of the roll to project steam against said end and alining at all times with the outer ply of the roll.

1,374,727. PROTECTIVE DEVICE. HENRY G. FRENCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1919. Serial No. 333,248. 10 Claims. (Cl. 175—294.)



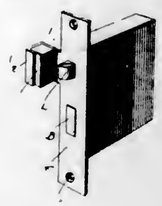
2. A relay device comprising a rotatable armature, contacts controlled thereby, a motor element tending to rotate said armature in contact-controlling direction, a restraining element normally rendering said motor element ineffective, and means adjustable to operate in response to any predetermined value of current for causing said motor element to positively overcome said restraining element and carry said armature through its complete path of travel into contact-controlling position.

1,374,728. ELEVATOR. LEO J. GEIER, St. Henry, Ohio. Filed Mar. 27, 1919. Serial No. 285,528. 6 Claims. (Cl. 193—6.)



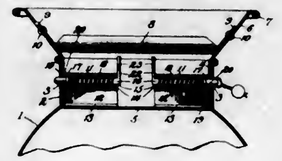
1. In a grain elevator, the combination with a truck supported upon wheels, a turn-table mounted upon the truck, an elevator mounted on the turn-table, a grain hopper mounted on the turn-table and grain feeding connections between the hopper and the elevator, of self-actuating means to propel the truck and also to operate the turn-table, the elevator and the grain feeding connections either together or separately.

1,374,729. PUZZLE. IGNACY GIZA, Deep River, Conn. Filed May 7, 1920. Serial No. 379,433. 1 Claim. (Cl. 46—41.)



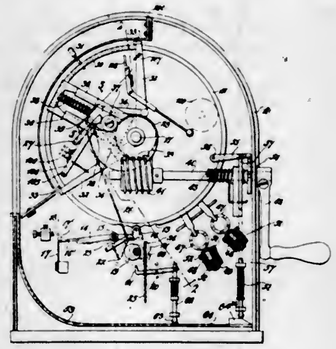
A box puzzle comprising six main wall members extending across one another to form a central compartment, and a series of panels closing the spaces between the ends of said main members, and interlocking therewith and being adapted to be disassembled in a certain sequence, said panels and main members having inturned flanges on their ends whereby they interlock, one of said panels being split longitudinally into two halves to form a key panel.

1,374,730. MACHINE FOR MAKING CONCRETE POLES. JULIUS J. GRUENFELD, Jr., Chicago, Ill. Filed Sept. 22, 1920. Serial No. 412,038. 12 Claims. (Cl. 25—30.)



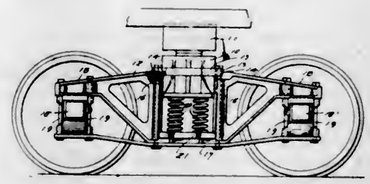
1. In a centrifugal machine for making concrete poles, the combination of a carrier, means adjacent the ends for revolubly supporting the carrier, the carrier being adapted to receive a mold sidewise between said supports, and means for removably securing the mold in the carrier.

1,374,731. DOOR-STOP. LEONELL R. HAGE, Fairfield, Mont. Filed May 1, 1920. Serial No. 378,103. 8 Claims. (Cl. 70—16.)



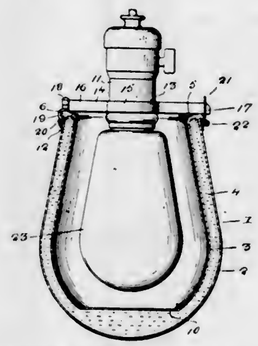
2. In a door stop, the combination with a plate projecting from the free edge of the door, and a bumper in the projecting end of the plate; of a strip having at one end a flange standing in the path of the bumper as the door closes, the strike carried by the door frame, and means for adjustably connecting said strip with the strike.

1,374,732. MILK-CAN COVER. JOHN FLOYD HAMILTON, Minidoka, Idaho. Filed Oct. 25, 1919. Serial No. 333,210. 1 Claim. (Cl. 31—78.)



In a cover fastener for milk cans and the like, the combination with a cover having a cylindrical collar adapted to fit within the neck of a can, said neck having diametrically opposite openings therein, a flange joined to the upper end of the collar, and a handle secured transversely within the flange, of longitudinally alined, spaced apart housings arranged directly beneath the handle and substantially parallel therewith, locking bolts mounted slidably and non-rotatably within the housings, said bolts having their outer ends extending through the walls of the cylindrical collar and adapted to enter the openings provided in the neck of the can, coil springs surrounding the bolts within the housings and normally forcing the same outwardly into locking position, upwardly extending arms carried by the inner ends of each of the bolts in spaced relation to each other, and finger engaging portions at the upper ends of the arms and immediately beneath the handle to be grasped between the middle fingers of the operator to retract the bolts at the same time the handle is grasped to remove the cover, the arms being maintained vertical in all positions of the bolts by the non-rotative mounting of the bolts.

1,374,733. ELECTRICAL TRANSMITTING APPARATUS. HENRY KINGSFORD HARRIS, Westminster, London, England. Filed Oct. 17, 1917. Serial No. 197,065. 7 Claims. (Cl. 177—380.)

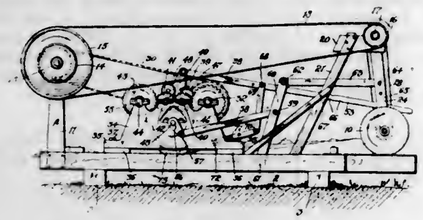


7. A transmitting apparatus for operating a sign telegraph or the like, comprising a movable member, means controlled by the movable member for transmitting a number of the electrical impulses according to the distance through which said member is moved, an index associated with said moving member, adjustable means for determining and limiting the distance through which said member is to move in proceeding from one setting position to the next, said adjustable means comprising an adjustable stop associated with the moving member and adapted to be adjusted with reference to the index and arranged to engage a relatively fixed stop, said adjustable means comprising wheels adapted to receive adjustable stop members on their peripheries opposite predetermined signs on said index, means for subsequently bringing said wheels to a zero position, a locking means adapted to lock all the transmitting members simultaneously, a selective switch, means for operating the selective switch to bring any of the necessary units into circuit, and an indicator for indicating the position into which the locking means has been set.

1,374,734. SIDE FRAME FOR CAR-TRUCKS. WILLIAM HARRIS, Jr., St. Louis, Mo. Filed Mar. 11, 1920. Serial No. 364,930. 2 Claims. (Cl. 105—207.)

1. A side frame for car trucks having a vertical bolster guide of which the jambs together with the convergent compression and tensile members of the frame constitute a single casting, a retaining bar closing the upper end of the guide, a bottom bar coextensive with and extending under the casting in intermediate contact with the bottom of the bolster guide, common tie bolts housed in the jambs of the bolster guide for securing the retaining bar and bottom bar in place, and pairs of vertical spaced guide pins connecting the extremities of the bottom bar with the ends of the castings for positioning the axle boxes.

1,374,735. LAMP-SHADE. EDWARD M. HARVEY, Eugene, Oreg. Filed May 20, 1918. Serial No. 235,506. 1 Claim. (Cl. 240—115.)

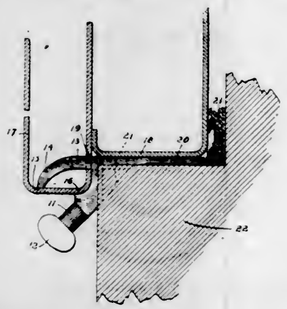


The combination with a shade having a circumferential flange around the neck, of a band surrounding the neck of the shade and engaged under said flange, a finger secured to said band and curved over the edge of said shade, a pivot projecting from said finger, a pair of members having corresponding ends swingingly mounted upon said pivot, means carried by said band for securing the opposite ends of said members together, and said members having intermediate bulged portions for the purpose specified.

1,374,736. WOOD-SAW. BIRD HATLEY, Everson, Wash. Filed Mar. 22, 1920. Serial No. 367,825. 5 Claims. (Cl. 143—46.)

1. In a wood sawing machine, the combination of a rotatable saw, and mechanism for bodily moving the same

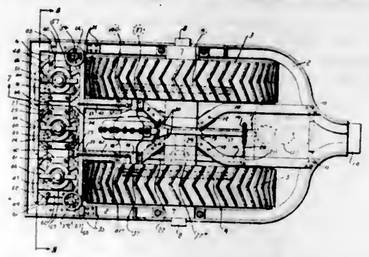
along a curvilinear path, comprising a rotatable crank shaft, connections between said crank shaft and said saw, a friction wheel fast on said crank shaft, a train of gearing, means for rotating said gear train, two friction



disks rotating with said gear train, and two friction pinions disposed between said friction disks and being bodily shiftable to bring either one into frictional contact with the adjacent friction disk and with said friction wheel.

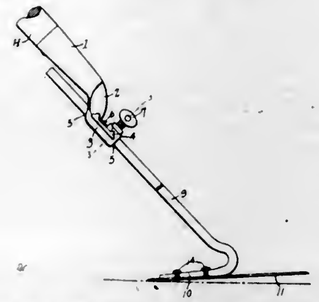
1,374,737. HAT-LINING. BARNETT HOROWITZ, Brooklyn, N. Y. Filed Apr. 1, 1920. Serial No. 370,479. 4 Claims. (Cl. 2—113.)

1. A lining for hats comprising a body having an opening in the crown thereof, a substantially non-stretchable member connected to said body adjacent said opening, a central section overlapping said opening, and hook members extending from said central section pressing against said non-stretchable member for locking the central section to the body.



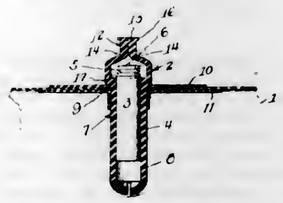
1,374,738. ATTACHMENT-HOOK FOR SAFETY-BELTS. AMSON G. ILLCH, New York, N. Y. Filed Sept. 11, 1920. Serial No. 409,693. 5 Claims. (Cl. 72—108.)

1. In an attachment-hook for safety-belts and window-frames, a window-casing having a perforated staff-molding thereon, means upon the hook for attaching same to and through the staff-molding of the window frame.



1,374,739. TRACTOR ROTARY PLOW. SLEEPER T. INGRAM, St. Louis, Mo., assignor of thirty per cent. to James E. Newell, St. Louis, Mo. Original application filed Nov. 23, 1918, Serial No. 263,866. Divided and this application filed Nov. 8, 1919. Serial No. 336,663. 5 Claims. (Cl. 180—54.)

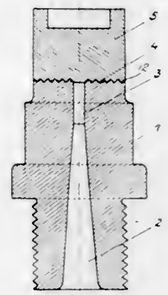
1. In a machine of the character described, the combination of a main frame, a pair of tractor-wheels, an axle shaft journaled in the said main frame, an auxiliary frame within and supported by the said main frame at the ends of the latter, and a central axle support sup-



ported by the said auxiliary frame, the said central support having brackets extending therefrom for attachment to the said auxiliary frame.

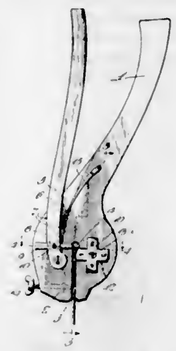
1,374,740. HOE. LEVI JARVIS, Cedar Rapids, Nebr. Filed Sept. 4, 1919. Serial No. 321,511. 1 Claim. (Cl. 306—28.)

In a hoe, a handle holder having a downwardly offset arm merging into a base disposed approximately parallel to the axis of the holder, the base being supplied at its outer end with an eye, and having a bore of common diameter from end to end, the bore being prolonged through the arm and through the eye, there being an opening in the top of the base, between the arm and the eye, the opening communicating with the bore; a shank including a body slidable in the bore and spaced transversely from the holder for free longitudinal sliding movement in spaced relation to the holder; a blade carried by the shank; and a clamping device mounted in the eye and engaging the body, the clamping device constituting the sole means for limiting the longitudinal movement of the body.



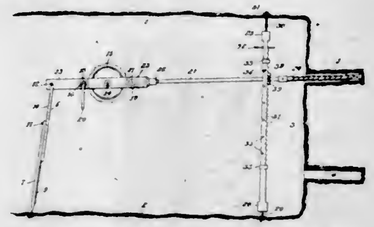
1,374,741. PROTECTED VALVE. CHARLES JOHN JENSEN, North Plainfield, N. J. Filed July 14, 1920. Serial No. 396,247. 1 Claim. (Cl. 46—4.)

In a device such as described, the combination with a bladder and a valve therefor, of a holder for said valve



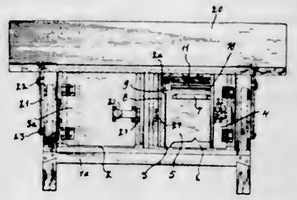
including a tubular member, adapted to receive the valve, flaps formed upon the tubular member and adapted to be attached to the bladder, to hold the tubular member in position, a compressible head formed upon the tubular member exterior of the bladder and concealing the valve, said head having a slot therein, the head having a bead and ribs thereon normally holding the slot closed and being so shaped that upon compression of the opposite sides thereof said slot will be opened and the valve exposed.

1,374,742. HOMOGENIZER FOR CREAM AND OTHER LIQUIDS. OLE PETER JENSEN and ANDERS PETER ANDERSEN, Copenhagen, Denmark. Filed Sept. 28, 1920. Serial No. 413,428. 2 Claims. (Cl. 99—2.)



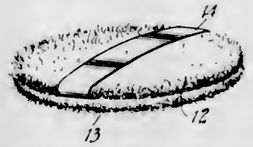
1. A homogenizing valve comprising a pair of coacting members having their confronting end faces formed with a plurality of spaced annular ribs of V-section, the ribs on each member fitting conformably in the spaces between the ribs on the other member.

1,374,743. SAW-SET. CHARLES A. JOHNSON, Clark Fork, Idaho. Filed Apr. 19, 1920. Serial No. 375,079. 3 Claims. (Cl. 76—64.)



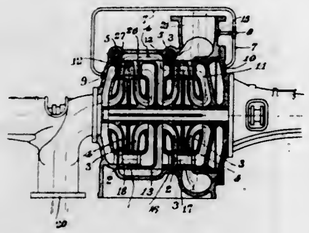
1. A saw set including a handle having a slot at its outer end for reception of the saw, a lever pivoted to said handle adjacent the slot, an anvil carried by the handle and positioned on a side of the slot opposite to that of the pivotal connection of the aforesaid lever, said anvil having a plurality of teeth-bearing-surfaces of varied inclinations, said lever being formed adjacent the pivot with a transverse slot, and a tapered removable and reversible hammer arranged in and held in said slot, being coöperative with the aforesaid teeth-bearing-surfaces.

1,374,744. MINE-DRILL. GEORGE JURESISIN, Wilkes-Barre, Pa. Filed Sept. 19, 1919. Serial No. 324,794. 1 Claim. (Cl. 255—46.)



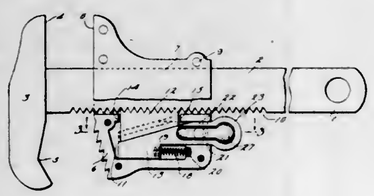
A drill of the type described comprising a mechanism supporting frame, supporting legs for one end thereof, a drill shank extending from the other end of the frame, and an adjustable rack for supporting the forward end of the shank and spaced from the mechanism frame.

1,374,745. BEEHIVE. TEODOR JURIW, East Douglas, Mass. Filed June 12, 1920. Serial No. 388,398. 1 Claim. (Cl. 6—1.)



In a device of the class described, boxes having compartments therein, each of said compartments having horizontal slots in opposite side walls thereof near the top of the compartment, rectangular comb frames adapted to be secured within said compartments, said frames having rigid eaves extending from opposite sides thereof, said eaves being adapted to slidably engage said slots, a door hinged to the front of said box, an opening in the rear of said box near the base thereof for the passage of bees, handles on the tops of said frames, a vertically situated cover at the front of said compartment having an opening in the bottom thereof and a handle rigid upon the outer surface thereof, a rod pivotally and slidably mounted on the floor of said compartment, a handle on the forward end of said rod, a fork on the rear end of said rod adapted to grasp the lower edge of said frames, and means for locking said doors.

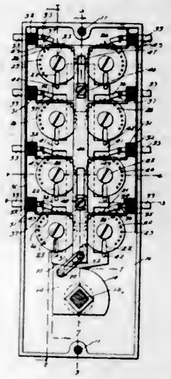
1,374,746. POWDER-PUFF. WILLIAM G. KENDALL, Newark, N. J. Filed Nov. 4, 1920. Serial No. 421,765. 5 Claims. (Cl. 15—72.)



1. As an article of manufacture, a powder puff comprising two superposed rings provided with interlocking members, one of the said rings having points located diametrically opposite each other, two textile body parts stretched over the outer faces of the said rings and having their peripheral portions extending over and between the rings, the said interlocking members clamping the said peripheral portions in place between the rings, and a handle formed of a piece of ribbon attached at its ends to the said ring points and extending across the outer surface of the body part stretched over the ring.

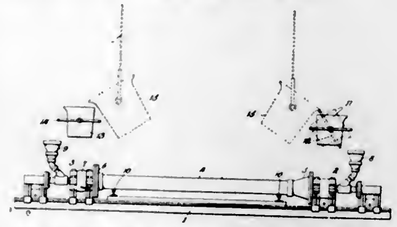
1,374,747. CHANGEABLE CENTRIFUGAL PUMP. ICHIJI KUROISHI, Tokyo, Japan. Filed June 3, 1918. Serial No. 237,991. 3 Claims. (Cl. 103—43.)

1. A changeable centrifugal pump consisting of an outer casing, an inlet leading to the casing, an outlet leading from the casing, inner casings formed in the outer casing, a shaft extending through the casings, passages provided in the outer casing for arranging the inner casings in connection with each other, impellers mounted on the shaft, and coacting stationary disks and shiftable elements mounted in the inner casing and provided with openings for registration with each other and for registration with the passages and the impellers, and manually controlled means in the inner casing for placing the impellers in series or in parallel.



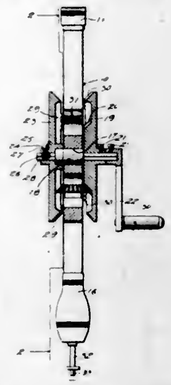
1,374,748. PIPE AND NUT WRENCH. CHARLES MCCARTER, Decatur, Ill. Filed Jan. 6, 1920. Serial No. 349,727. 1 Claim. (Cl. 81—143.)

A wrench of the character described comprising a shank, a stationary jaw arranged on the shank, a sleeve slidingly mounted on said shank formed with a jaw co-acting with the stationary jaw, said sleeve being formed hollow and with an opening facing the shank and an opening in the end arranged parallel with said shank but spaced therefrom, a cam arranged in said sleeve formed with a surface for engaging the shank, and an inclined surface on the opposite side, a shifting cam having a beveled surface engaging said inclined surface, said shifting cam having a hand-hold projecting through the second mentioned opening in said sleeve, said sleeve being provided with a plurality of notches, a pivotally mounted catch arranged in said hand-hold provided with a thumb member and with a projection adapted to fit into one of said notches for locking the shifting cam in any desired position.



1,374,749. LOCK. BARTHOLOMEW F. MCCARTHY, Brooklyn, N. Y. Filed Jan. 10, 1920. Serial No. 350,506. 4 Claims. (Cl. 70—53.)

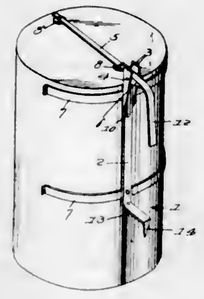
1. In combination with a door knob and its spindle, a permutation lock comprising a housing, a cam member carried by the door knob spindle and lying within the housing, a plurality of notched disks arranged in pairs, a reciprocating member movable longitudinally of the housing and provided with arms lying normally between the notched disks, means carried by the reciprocating member for engagement with the notched disks to prevent movement of the reciprocating member, and means to permit



movement of the reciprocating member upon turning of the knob spindle by means of the cam carried thereby.

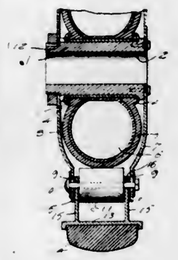
1,374,750. METHOD OF POURING METAL IN THE FORMATION OF CAST-IRON PIPES. JAMES R. MCWANE, Birmingham, Ala. Filed Mar. 23, 1920. Serial No. 368,173. 8 Claims. (Cl. 22—209.)

1. The method of casting iron pipe centrifugally in rotatable flasks, which consists in pouring molten metal into one end of the flask, then pouring molten metal simultaneously into both ends of the flask, then rotating the flask, and then adding molten metal to one end of the flask while still rotating the latter.



1,374,751. COMBINATION-TOOL. GEORGE C. MARTEN, Effingham, Ill. Filed Apr. 12, 1919. Serial No. 289,650. 2 Claims. (Cl. 51—29.)

1. In a device of the class described, a frame having spaced bearings, a shaft journaled for rotation in the frame, a pinion upon the shaft, an operating shaft adapted



to be journaled in the first mentioned bearings, interchangeably, means whereby the last mentioned shaft may be rotated, a gear fixed upon the last mentioned shaft at one side of the same and having concentric series of gear teeth, one series having its teeth arranged in spaced sets and adapted to mesh with the pinion when the shaft is mounted in one of the bearings, and the other series adapted to mesh with the pinion when the shaft is mounted in the other bearing, and a gear removably mounted upon the operating shaft at the other side of the same and having a series of gear teeth arranged in spaced sets and adapted to mesh with the pinion alternately with the sets of the first mentioned series of the first mentioned gear when the operating shaft is mounted as first stated, the last mentioned gear constituting also means for preventing longituding displacement of the operating shaft in the bearing.

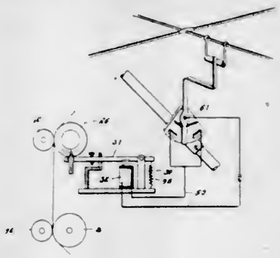
1,374,752. ATTACHMENT FOR CLOSED CANS. BERTELLOW W. MEGQUIER, Butte, Mont. Filed Mar. 21, 1919. Serial No. 284,204. 1 Claim. (Cl. 220—51.)

A new article of manufacture comprising an upright bar, means for securing the same to a can, a lever pivotally mounted at the upper end of the bar, a pair of spaced inverted cupped disks secured to the lever on one side of the pivot, and a spring bearing against the lever and tending to force downward that portion carrying the disks to that the disks may be made to cover spaced perforations formed at the top of the can, that portion of the lever on the opposite side of the pivot from the disks being bent downwardly in he direction of the length of the bar, whereby the act of gripping the can in the hand may serve to raise that end of the lever carrying the disks for the useful purpose specified.

1,374,753. CUSHIONED WHEEL. AUSTIN A. MENDENHALL, Duluth, Minn. Filed Apr. 9, 1920. Serial No. 372,454. 1 Claim. (Cl. 152—42.)

A cushion wheel including a hub having a pneumatic cushioning element and a rim supporting a tire, relatively spaced inwardly extending annular plates formed on said rim, bolts carried by said plates and projecting beyond the same, rollers on said bolts and engaging the cushioning elements, and guard plates secured to the hub on each side of the cushioning element and slidably receiving the annular plates and having openings to receive the ends of the bolts, said openings being of a diameter greater than the diameter of the bolts to permit the hub and rim to have relative movement in relation to each other.

1,374,754. ADJUSTABLE HAND-REAMER. FRANK P. MILLER, Meadville, Pa. Filed Dec. 10, 1918. Serial No. 266,112. 1 Claim. (Cl. 77—72.)

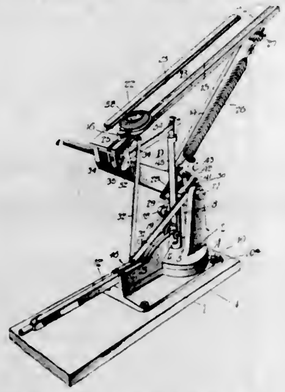


A reamer comprising a cutting head member provided with a relatively long cylindrical shank, the cutting edges of the head member being concentric with said shank, a relatively short guide and bearing sleeve movably mounted on said shank, the periphery of said sleeve also concentric with said cylindrical shank, and means whereby said sleeve may be held rigidly or loosely on the shank at any point between its free end and the said cutting head.

1,374,755. KEROSENE-EMULSION COMPOSITION. DENNIS J. MURPHY, Hog Island, Pa. Filed Aug. 22, 1919. Serial No. 319,157. Renewed Mar. 1, 1921. Serial No. 448,867. 4 Claims. (Cl. 167—6.)

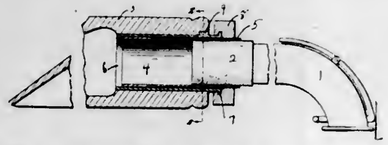
1. A kerosene emulsion containing kerosene emulsified with the reaction products of potassium hydrate, oleic acid and stearic acid, in water, the amount of kerosene being at least several times as much as the combined amounts of the fatty acids and potassium hydrate.

1,374,756. CHANGEABLE EXHIBITOR. WILLIAM Z. MUSGRAVE, Atlanta, Ga. Filed Nov. 28, 1916. Serial No. 133,949. 3 Claims. (Cl. 40—56.)



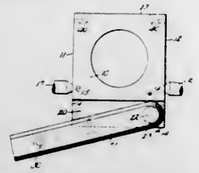
1. In a changeable exhibitor, a casing having a sight opening therein, drums journaled in said casing above and below the sight opening respectively, a tape movable across the sight opening and having the ends thereof secured to said drums and wrapped about the same, a motor, driving connections between the said motor and drums whereby the tape may be moved across the sight opening, means holding said drums normally against rotation, and operable to release the drums so that the latter may be revolved under the action of said motor, brake mechanism and means connecting the drum holding means and brake mechanism for actuating the brake prior to the operation of the drum holding means.

1,374,757. CATAPULT. CHARLES H. NAPIER, Macon, Ga. Filed Apr. 16, 1920. Serial No. 374,452. 13 Claims. (Cl. 124—6.)



1. A device of the class described, comprising a base, a member mounted thereon and adapted to direct the

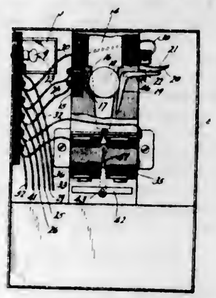
projection of a missile, means movable along said member for projecting the missile, an element rockably mounted on said base and connected to said projecting means, power means connected to rock said element for actuating said projecting means, mechanism connected to said ele-



ment so as to rock the same against the action of said power means for setting said projecting means, a lock for holding said projecting means in its set or retracted position, and means for retracting said lock so as to effect the release of said projecting means.

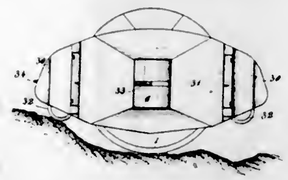
1,374,758. TUNING ATTACHMENT FOR WIND MUSICAL INSTRUMENTS. GEORGE F. NENNEKER, Laporte, Ind. Filed Oct. 11, 1920. Serial No. 416,079. 3 Claims. (Cl. 84—386.)

1. In combination with a mouth piece for a saxophone or like reed instruments, of a tuning device mounted therein.



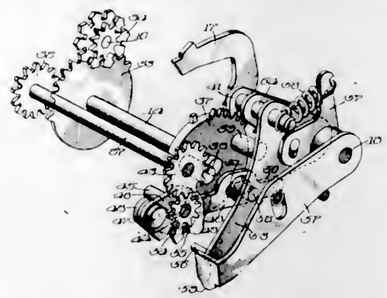
1,374,759. SINE-BAR. HENRY STEWART NODDINGS, Springfield, Mass. Filed Apr. 10, 1920. Serial No. 372,782. 5 Claims. (Cl. 33—93.)

1. A measuring instrument, comprising a supporting block provided at its sides with centering holes adapted to be engaged by supporting centers, the center holes having a common axis parallel with the top and bottom of the block, a measuring bar and a clamping pivot held transversely on the said supporting block, and on which one end of the measuring bar is mounted to swing.



1,374,760. TELEPHONE-COLLECTION-BOX APPARATUS. OSCAR A. PEDERSEN, New York, N. Y. Filed Jan. 25, 1918. Serial No. 213,685. 7 Claims. (Cl. 194—8.)

1. An apparatus as characterized embodying a terminal, a wiper, and a trigger having a terminal normally out of contact with the first terminal, and in position to engage the first terminal, the trigger being spaced from the wiper to permit of the disposal of a coin between the

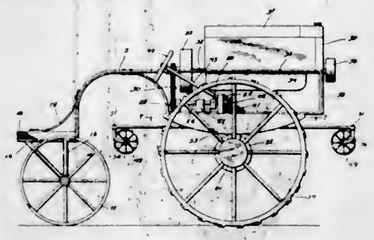


wiper and the trigger, the coin serving to move the trigger so the terminal thereon will be brought into engagement with the first terminal.

1,374,761. MONOCYCLE-VEHICLE. CARLO POMILIO, Rome, Italy. Filed Aug. 8, 1918. Serial No. 249,038. 6 Claims. (Cl. 89—36.)

1. In a monocycle vehicle the combination of an external drum-shaped rolling body, with the rolling surface convex toward the outside in cross section, and central openings in the two side cheeks, a hollow shaft rotatable in the said central openings, turrets outside the drum and carried by the said shaft, a chamber suspended from the said shaft, means of propulsion in said chamber adapted to cause the external drum to rotate and means for inclining the drum on one or the other side.

1,374,762. CALCULATING-MACHINE. ARTHUR F. POOLE, Chicago, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed July 21, 1913. Serial No. 780,408. 29 Claims. (Cl. 235—59.)



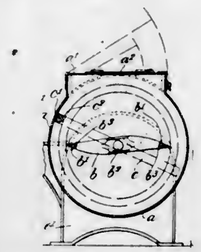
1. In a calculating machine, the combination of a master wheel, a set of numeral keys, each adapted to operate a master wheel an amount corresponding to the value of said key, a reversible totalizer adapted to have numbers inserted therein by said master wheel, the arrangement of the keys, totalizer and master wheel being such

that any of the said keys may determine the number entered by said master wheel in any of the decimal places of said totalizer, and means to automatically insert a unit in said totalizer subsequent to the insertion of a number therein by said keys.

9. In a totalizer a movable pivot and means adapted to actuate the wheels of said totalizer mounted on said pivot.

24. In a calculating machine, the combination of a totalizer, said totalizer including a set of carrying gears and a set of carryable gears, means for the insertion of a unit in said totalizer as an incident of the passing of the highest carrying gear through 0, and means to remove the spiral consequent upon the passing of said highest carrying gear through 0 before the insertion of said unit.

1,374,763. TRACTOR. ANDY R. OLLER, Beaver Dam, Ky. Filed June 7, 1920. Serial No. 387,067. 4 Claims. (Cl. 180—12.)

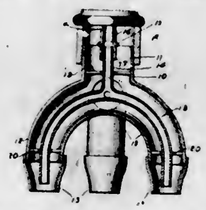


1. A tractor having a fifth wheel comprising relatively stationary and revoluble members of which the latter carries the traction wheels and the former the frame for supporting the engine and its connections, the axle driving shaft being disposed in coaxial relation with the fifth wheel, and movable balance wheels for depression into operative relation with the plane of support of the traction wheels when the latter are disposed in angular relation with the normal direction of progress of the machine.

1,374,764. ORNAMENTAL CARD AND METHOD OF PRODUCING THE SAME. PAUL J. OSBORNE, Hoboken, N. J. Filed Nov. 9, 1920. Serial No. 422,860. 6 Claims. (Cl. 41—34.)

1. An ornamental card or the like, embodying a printed design, and a sheet of mica or similar substance in predetermined outline incorporated with said design, said printed design being applied in part upon said mica.

1,374,765. MIXER FOR DOUGH AND LIKE PLASTIC SUBSTANCES. JOSEPH WILLIAM OWEN, Plymouth, England. Filed Dec. 16, 1920. Serial No. 431,219. 5 Claims. (Cl. 259—109.)



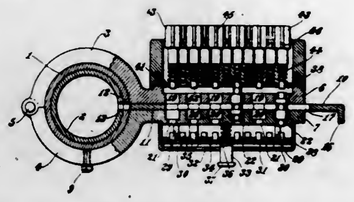
1. In an apparatus for mixing plastic substances, the combination with a mixing chamber, of two coöperating mixing members therein, one of said members having a longitudinally extending arm adapted to lie close to the inner wall of said chamber and a triangular cross-section with the apex of the triangle directed inwardly of the chamber, and the other member having a plurality of longitudinally extending spaced arms adapted to rotate in a path lying within and close to the arm of the first mentioned member, and means for relatively rotating said mixing members.

1,374,766. ELECTRIC INCANDESCENT LAMP. HARUHIKO OZAKI, Yokohama, Japan. Filed Oct. 19, 1918. Serial No. 258,807. 4 Claims. (Cl. 176—39.)

1. In an electric incandescent filament lamp, a support for the filament comprising an arm having a flattened end portion formed in a U-shape with the inside lower surface thereof smooth and curved in opposite directions longitudinally and transversely of the axis of the arm, the transverse curvature being formed on a relatively large curve having its center of curvature outside of the support.

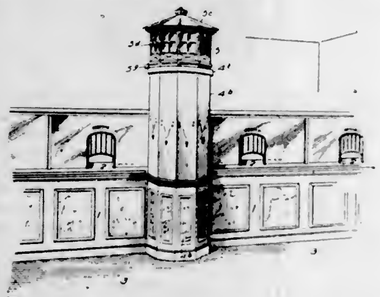
1,374,767. SIX-STREAM DISTRIBUTING ATTACHMENT FOR SODA-WATER DRAFT-ARMS. CHARLES REED RAGSDALE, St. Louis, Mo. Filed Mar. 6, 1919. Serial No. 280,918. 3 Claims. (Cl. 225—23.)

1. The combination with a soda water draft arm having independent coarse and fine stream connections; of a fitting having a neck provided with a plurality of branches, a fine spray pipe axially within the neck and having a series of branches leading into and through the first named branches to the nozzles thereof, and means for effecting the connection of the fine spray pipe with the fine stream connection upon the attachment of the neck with the coarse stream connection.



1,374,768. CUTTING IMPLEMENT. DAVID RUPPERT, Westminster, Md. Filed Sept. 24, 1919. Serial No. 326,025. 2 Claims. (Cl. 30—11.)

1. A device of the class described comprising a yoke-shaped member having spring extremities, a spring band

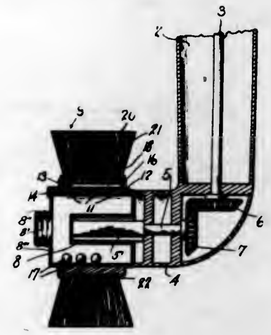


secured to said extremities for engaging the hand, a shank carried by the base of the yoke member, a knife connected with the shank, a second knife pivoted to the first mentioned knife, a sliding member in the yoke member, means for connecting the same with the pivoted knife and a finger engaging part on the sliding member.

1,374,769. COMBINATION-LOCK. JOSEF F. SCHICKE, St. Louis, Mo., assignor to Josef F. Schicke, trustee, St. Louis, Mo. Filed July 19, 1918. Serial No. 245,733. 8 Claims. (Cl. 70—54.)

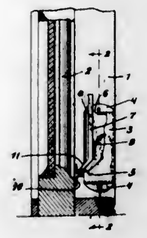
1. In a combination lock, a bolt, a controller plate having a series of enlarged tumbler-receiving recesses connected by restricted channels, and a plurality of invertible tumblers coöperating therewith, adapted to lock said bolt in locking or unlocking position.

1,374,770. GUARD FOR PROTECTION AGAINST HOLDUP-ROBBERS AND THE LIKE. LEO SIMMONS, Washington, D. C. Filed July 8, 1920. Serial No. 394,721. 13 Claims. (Cl. 89—36.)



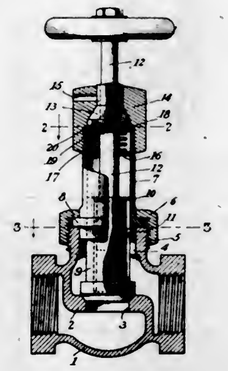
1. A protecting guard embodying a fixed hollow base a guard mounted thereon and consisting of an open-bottom freely horizontally-rotatable cap, a supporting floor secured in said base adjacent the open-bottom of said guard and normally closing the interior of said base from the guard, and means permitting passage through said floor from the base into the guard.

1,374,771. TIRE-CHAIN LOCK AND ELASTIC TAKE-UP. ARTHUR A. SMITH and HARRY W. PAINE, Eagle Grove, Iowa. Continuation of application Serial No. 361,949, filed Feb. 28, 1920. This application filed May 26, 1920. Serial No. 384,456. 3 Claims. (Cl. 267—72.)



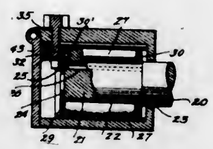
1. A tire chain lock and elastic take-up, comprising oppositely movable bars or slides in face to face engagement, each bar terminating at one end in a loop and at the other end in a lug angularly related to the bar, and a spring surrounding the two bars and holding them in contact and at the ends engaging the respective lugs, the loop of one of the bars being sufficiently open to form a throat to receive a link of the side chain of the tire chain and also the lug of the other bar, said lug entering and substantially closing the open throat of the loop, and the portion of the lug entering the throat end being coactively shaped with reference to the throat whereby to cause the entrance of a link into the throat to automatically force the lug out of the throat in opposition to the tendency of the spring to move the lug into closing relation to the throat.

1,374,772. POLISHING-BRUSH. HENRY SMITH, Hamtramck, Mich. Filed Aug. 23, 1920. Serial No. 405,292. 3 Claims. (Cl. 15—37.)



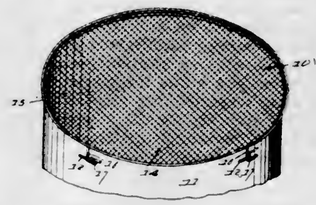
1. In a polishing device, motor operating means, including a shaft, a brush having a hub to which the shaft is secured, said hub being hollow and providing a reservoir for a liquid polish, said hub having peripheral apertures, a slidable valve normally closing the same, the brush comprising sections having head portions which are arranged around the hub and which have their confronting ends contacting, one of said heads having a channel in a line with the apertures of the hub, and having apertures between the bristles and the said channel.

1,374,773. WINDOW-LOCK. THOMAS ALOYSIUS SMITH, Ashley, Pa. Filed Jan. 16, 1920. Serial No. 351,841. 1 Claim. (Cl. 292—228.)



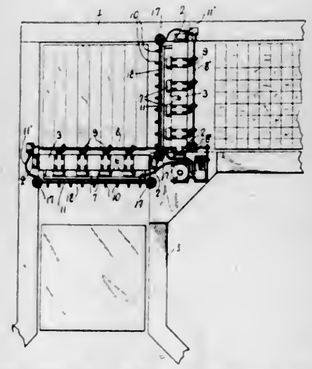
A sash lock comprising a casing having its base provided with end extensions, means for securing said extensions to the window casing, one side and the top end of said casing having openings therein, a lever pivoted in the casing adjacent to the top opening, said lever having a bent lower end passing through the side opening and its upper end passing through the upper opening, a curved spring in said casing having its curved end engaging the lever adjacent the bent end thereof and a lug on the sash for engaging the bent end of the lever.

1,374,774. PACKINGLESS VALVE. RANDOLPH SOLOMON, Alexandria, Va., assignor of one-half to G. Henry Shryock, Herndon, Va. Filed Oct. 27, 1919. Serial No. 333,505. 2 Claims. (Cl. 251—30.)



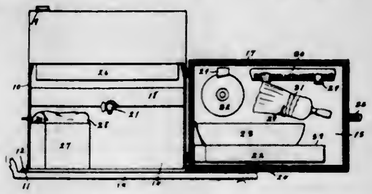
1. A packingless valve comprising in combination a valve casing having a valve seat, a valve adapted to engage said seat and provided with a cylindrical internally threaded portion, a tubular shell adapted to be secured to said valve casing and to inclose the upper portion of said cylindrical part of the valve member, a rod projecting into said shell and threaded at its lower end for engagement with said cylindrical portion and provided intermediate its end with a second threaded portion, a truncated cone shaped bearing member threaded on said intermediate threaded portion of said rod, and a nut inclosing said bearing member and threaded on the end of said shell.

1,374,775. ROLLER-BEARING FOR RAILWAY-TRUCKS. LEO K. STAFFORD, Detroit, Mich., assignor to The Stafford Roller-Bearing Car Truck Corporation, Carlstadt, N. J., a Corporation of New Jersey. Filed Sept. 6, 1919. Serial No. 322,027. 2 Claims. (Cl. 64—62.)



1. In combination with the boxing of the truck of a rolling stock having a round bore provided with a longitudinal groove, of a case hardened steel tube received in the bore, a longitudinal rib on said tube received in said groove, said boxing designed to receive the spindle end of an axle, said spindle having a longitudinal groove, a case hardened steel sleeve having its outer end flanged and provided with an inner longitudinal rib arranged over the spindle and the said rib being received in the groove of the spindle, caged anti-frictional rollers received in the bore, surrounding the spindle and finding a bearing between the sleeve and groove, means for holding the cage against longitudinal movement in both directions, and the means for holding the cage against outward movement being removable.

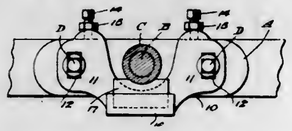
1,374,776. DRAINER. SIDNEY STANLEY, Springfield, Mass. Filed Mar. 1, 1920. Serial No. 362,205. 2 Claims. (Cl. 53—8.)



1. A drainer having a perforated diaphragm and tongues extending perpendicularly from the plane of the diaphragm and having terminal, deflected fingers, in combination with a receptacle provided on its wall with transverse open-ended keepers for the reception of said tongues.

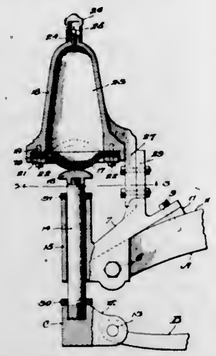
1,374,777. ICE-CUTTING MACHINE. ELMER E. STONER, Stroudsburg, Pa. Filed June 17, 1919. Serial No. 304,757. 5 Claims. (Cl. 143—22.)

1. An ice cutting apparatus comprising a supporting frame built in a body of water from which the ice is to be gathered and formed in the shape of a channel through which the blocks of ice are to be passed, a saw frame pivotally mounted in said frame and extending across the channel, said frame having its pivotal points arranged above the water level so that when the frame is swung into horizontal position it will be above the water level, transversely arranged shafts in said saw frame adjacent each side thereof, pulleys on said shafts, band saws carried by said pulleys, means for driving the shafts of one row and manually operated means for swinging the saw frame on its pivot to move the saws into vertical and operative positions or into horizontal and inoperative positions.



1,374,778. PORTABLE CABINET-LAVATORY. JAMES ARTHUR TERRY, Pocahontas, Iowa. Filed Mar. 20, 1920. Serial No. 367,424. 2 Claims. (Cl. 45—119.)

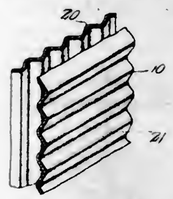
1. A device of the class described, comprising a portable housing formed with a relatively large opening in one side



wall, a door hinged on a vertical axis at one side margin to said housing and adapted to close said opening, a water tank being formed in the upper portion of said housing, said water tank being formed with a drain cock on its lower side, a horizontal shelf fixed to the inner side of said door, and a lavatory basin carried by said shelf and adapted to be moved to a position beneath said drain cock and to be inclosed within the housing when the door is shut and being supported in a position for use outside of said housing when the door is in open position, said basin remaining in horizontal position irrespectve of the position of the door relative to the housing.

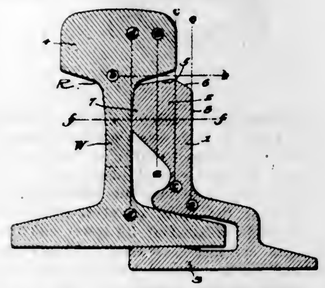
1,374,779. ROCKER-SHAFT BEARING. RALPH F. THACKSTON, Anderson, S. C. Filed May 29, 1920. Serial No. 385,220. 3 Claims. (Cl. 64—10.)

3. In combination with a frame and picker foot of a loom, the bearing device comprising a bracket structure secured against one face of said frame and provided with means whereby to effect vertical adjustment, a pan-like projection formed integrally upon and projecting from one face of said bracket structure, and a block of wood disposed within said pan and engaging the picker foot whereby to form a bearing therefor.



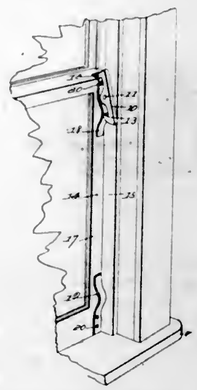
1,374,780. VEHICLE-SPRING. LEWIS IRVINE THOMPSON, Portland, Oreg. Filed Oct. 21, 1919. Serial No. 332,134. 3 Claims. (Cl. 267—65.)

1. In a vehicle, the combination, with a frame member and an axle, of a shoe enveloping an end of and secured to said frame member, a casing containing a compressed-air chamber mounted on said shoe, a continuous sheet-material flexible diaphragm normally exteriorly convex constituting an air-tight closure for said chamber, a guideway coaxial with said diaphragm carried by said shoe, and an element reciprocatory in said guideway connected with said axle.



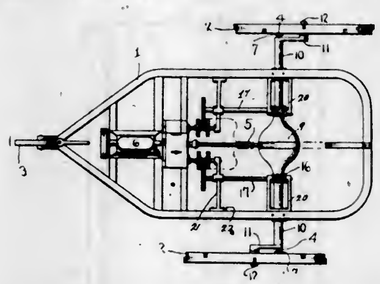
1,374,781. CONDENSER. ROSS EMILE THOMPSON, Deming, N. Mex. Filed Mar. 29, 1920. Serial No. 369,505. 1 Claim. (Cl. 257—245.)

A condenser unit of rectangular form having side walls right angles to those of the other side wall and the corrugated metal, the corrugations of one side wall being at right angles to those of the other side wall and corrugations of each wall paralleling opposite edges of the wall, and intake and outlet pipes opening into the con-



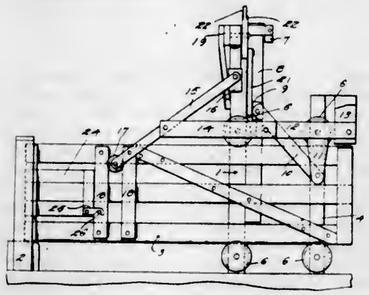
denser at diagonally opposite corners thereof as and for the purpose described.

1,374,782. CONSTRUCTION FOR RAIL-JOINTS. WILLIAM P. THOMSON, New York, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1921. Serial No. 437,898. 11 Claims. (Cl. 238—188.)



1. A rail joint, including the rail, clamping bolts, and a splice bar having clearance from the under side of the rail head, and an inner head projection which has an upwardly sliding bearing contact with the rail above the center line of the bolt hole.

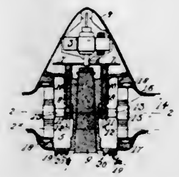
1,374,783. SASH-LOCK. JOHN H. TIENCKEN, Charleston, S. C. Filed Oct. 7, 1920. Serial No. 415,278. 2 Claims. (Cl. 292—116.)



1. A sash locking device consisting of an intermediate fulcrumed rocker mounted for swinging movement in a plane perpendicular to the path of movement of the sash and having oppositely disposed seats or shoulders for respectively engaging the upper and lower edges of the sash and yielding rocker actuating cams carried by the sash for movement in the plane of said rocker.

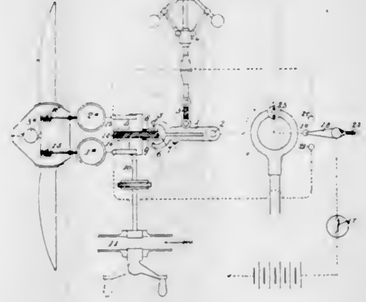
1,374,784. TRACTOR. JESSE TRIMMER, Traverse City, Mich. Filed July 29, 1919. Serial No. 314,037. 1 Claim. (Cl. 180—41.)

A tractor, including a frame having a prime mover mounted thereon, a stationary axle housing carried by said frame and having its end portions independently rotatable and formed with integral crank arms, traction wheels journaled on said integral crank arms, an axle extending through said housing and having its end portions provided with gears beyond the rotatable sections of said housing, internal ring gears carried by said wheels and in mesh with the gears of said axle, and means whereby the arms of said rotatable housing section may be adjusted about the axis of the housing for adjusting the traction wheels vertically, said prime mover being connected to said axle.



1,374,785. GATE. WALTER B. TRUEMAN, Mattoon, Ill. Filed Jan. 16, 1920. Serial No. 351,885. 1 Claim. (Cl. 39—45.)

A gate comprising a pair of connected supporting posts, a gate mounted on said posts for movement in a horizontal path, a vertical actuating bar slidably mounted on one of the posts, oppositely extending operating means connected to said bar, an arm slidably connected to the gate and pivoted to one of the last named posts and normally occupying an upwardly inclined position, a pair of pivotally connected links pivoted to the other post and to the said slidable arm at a point intermediate the ends of the latter, said links normally lying in parallelism with the gate and in the same horizontal plane to prevent opening of the gate by a direct pull thereon, a downwardly extending extension on one of said links, an operating link pivoted to the lower end of the extension and to the vertically slidable actuating bar at a point above the gate for causing operation of the first links by the bar to open and close the gate.

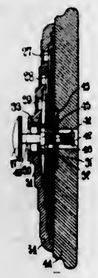


1,374,786. SCREW-PROPELLER. CHARLES BELL WALKER, Moseley, England. Filed July 7, 1920. Serial No. 394,531. 4 Claims. (Cl. 170—163.)

1. Means for altering or reversing the pitch of a screw propeller comprising an electric motor rigidly mounted in the nose of the boss of the propeller and turning as a whole therewith and having its axis disposed in substantially the same direction as the axis of the propeller shaft, a shaft of said motor, a pinion of relatively small diameter on said shaft gearing with a number of pinions of relatively large diameter (one for each propeller blade), shafts

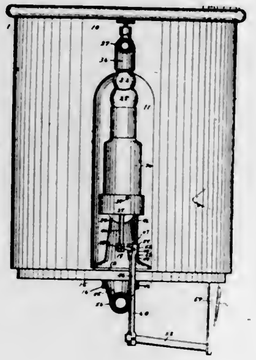
upon which such pinions are mounted, said shafts being parallel to the propeller shaft and turning in bearings which are rigid therewith, and means by which the motion of such shafts is transmitted to the blades of the propeller to turn them in one or other direction to alter the pitch or to cause them to be reversed.

1,374,787. SCREW-PROPELLER. CHARLES BELL WALKER, Moseley, England. Original application filed July 7, 1920, Serial No. 394,531. Divided and this application filed Feb. 18, 1921. Serial No. 446,170. 6 Claims. (Cl. 244—25.)



1. Means by which the blades of a propeller may be varied as to pitch automatically with change of altitude or load, comprising a governor, an arm controlled by said governor, a pair of contact points on said arm, a corresponding pair of independently carried contact plates with one of which alternatively one of the said contact points is adapted to make contact, and electrically controlled means whereby, when one of said contact points on said arm makes contact, the pitch of the blades is caused to be increased, and whereby, when the other of said points makes contact, the pitch of the blades is caused to be decreased, according as the speed of the engine increases or decreases.

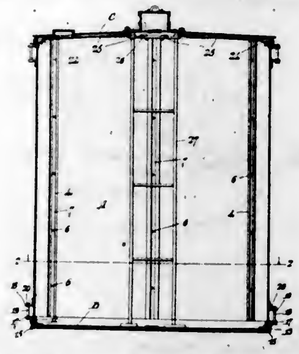
1,374,788. INDICATING APPARATUS. STANLEY WALKER, Kings Lynn, England. Filed Nov. 1, 1920. Serial No. 421,150. 2 Claims. (Cl. 40—71.)



1. In a date reminder or indicator, a plurality of superposed indicating disks rotatable about a common axis, and clutch members carried by the disks and arranged at the centers of the disks adapted to be engaged by clutch mem-

bers on a key in order to rotate the disks to show the desired indication, said disks being provided with centrally

disposed sleeves which carry the clutch members, and the clutch members being spaced apart to permit operation of one disk by the key without operating an adjacent disk.

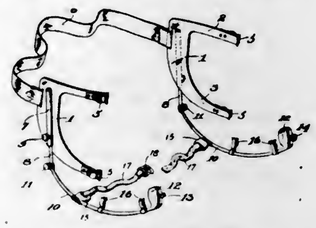


1,374,789. FLUID-PRESSURE FEEDING MECHANISM. GILBERT E. WHITE, Des Moines, Iowa. Original application filed Apr. 15, 1918, Serial No. 228,593. Divided and this application filed Jan. 20, 1919. Serial No. 272,200. 3 Claims. (Cl. 121—117.)

1. In a machine of the class described, a member mounted for rotary travel, a member mounted for reciprocation, a lever pivoted on said reciprocating member, a bell-crank lever suitably fulcrumed, a pawl pivoted on said bell-crank lever and adapted for engagement with said rotary member to cause step by step rotary movement thereof, a link pivotally connecting said lever and bell-crank lever, a rod extending across said lever, a member adapted to be oscillated by said rod, and means on said rod adapted for engagement by said lever to move said rod, such engaging means being so arranged that movement of said rod occurs subsequent to oscillation of said bell-crank lever through said link.

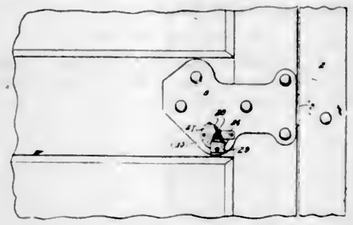
1,374,790. TANK. GAGE WHITMORE, Casper, Wyo. Filed Jan. 17, 1920. Serial No. 351,992. 3 Claims. (Cl. 220—5.)

1. The combination of a tank composed of a plurality of wall and bottom sections, means for connecting the edges thereof together, and angular seaming members connected together and extending around the wall of the tank, the edges of the wall sections adapted to be received between the edges of the angular seaming members and



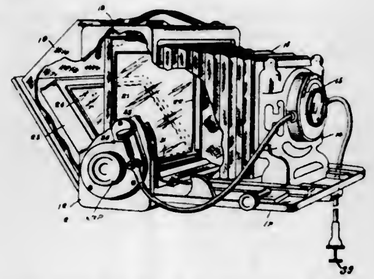
the edges of the bottom sections adapted to be received between the opposite edges of the seaming members for connecting the wall and bottom sections together.

1,374,791. SHEET-DELIVERY FOR PRINTING-MACHINES. CARL WINKLER, Berne, Switzerland. Filed Mar. 18, 1920. Serial No. 366,909. 1 Claim. (Cl. 271—77.)



In combination with the impression cylinder of a printing machine, a sheet delivery device, means to periodically drive said device at the same linear speed as the circumference of said impression cylinder, while the sheet is passing from said cylinder to said device and until it has left said cylinder, means to periodically drive said device at a lower speed, a second sheet transporting device adapted to take the sheets from said first device and consisting of endless tapes, transport rollers carrying the end loops of said tapes, a delivery table adjoining said first sheet delivery device, and means to move said loops backward and forward over, and under, said delivery table, substantially as, and for the purpose, set forth.

1,374,792. DENTAL APPLIANCE. EDGAR ERNEST DU PONT WOISARD, Pittston, Pa. Filed Feb. 1, 1921. Serial No. 441,631. 7 Claims. (Cl. 32—20.)

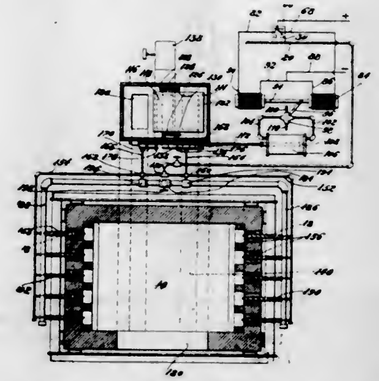


7. A dental appliance including side plates positioned upon opposite sides of the face of the person, tubular members attached to the outer face of said plates and curved bars pivotally and adjustably connected with said tubular members.

1,374,793. LOCK. JOHN WOJCIK, Chicago, Ill. Filed Nov. 12, 1920. Serial No. 423,579. 4 Claims. (Cl. 70—78.)

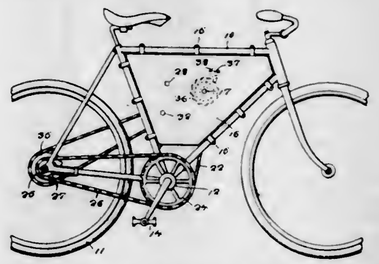
1. A lock of the type described comprising a casing, a gravity sliding bolt mounted therein, said bolt having elongated slots and offset recesses communicating with the slots, transverse bolts carried by the casing for supporting the bolt and extending through said slots, a key for elevating the sliding bolt to position the transverse bolts in the elongated slots, rack teeth formed on the upper edge of said bolt and a rotatable gear carried by said casing adapted for engagement with the bolt rack teeth for shifting the bolt within the casing.

1,374,794. CAMERA. JACOB J. WOLF, Jr., New Orleans, La. Filed July 30, 1920. Serial No. 400,216. 10 Claims. (Cl. 95—42.)



1. In a device of the class described, a focusing glass, means for mounting the latter to swing on a horizontal axis, a mirror mounted to swing rearwardly from the lower portion of said glass, and a film holder mounted in the rear of the mirror and adapted to swing on said horizontal axis.

1,374,795. HOE. JOHN W. WOOD, Covington, Tenn. Filed Dec. 23, 1919. Serial No. 346,895. 3 Claims. (Cl. 55—39.)



1. A double bladed hoe comprising a shank for each blade of the hoe, a handle supported by said shanks, said shanks being spaced to space the blades, apertured lugs carried by said shanks, said lugs being arranged in parallelism and projecting beyond the opposite sides of the respective shanks, and adjustable connecting elements associated with said lugs and arranged at opposite sides of the shanks to reinforce the latter.

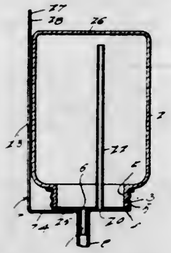
1,374,796. GAS-FURNACE. CARL J. WRIGHT, Toledo, Ohio. Filed June 11, 1919. Serial No. 303,365. 22 Claims. (Cl. 158—7.5.)

1. The combination with a furnace of a pair of heat regenerators adapted to alternately heat the air passing to the furnace and to be heated by the products of combustion from said furnace, means for supplying fuel gas to said furnace, and means controlled by the volume of gas supplied to the furnace for reversing the flow of air through said regenerators.

1,374,797. SPRING-MOTOR FOR BICYCLES. DANIEL ZABORSKY, Chicago, Ill. Filed Oct. 30, 1918. Serial No. 260,415. 1 Claim. (Cl. 208—23.)

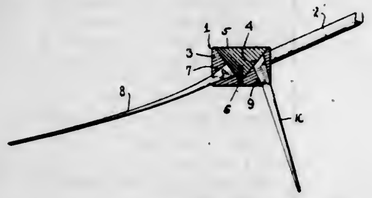
The combination with a bicycle provided with a coaster brake, of a casing secured within the frame of the bicycle, a spring motor housed within the casing, an extra sprocket located upon the crank shaft of the bicycle, a sprocket located upon one side of the casing and connected to the extra sprocket by means of a chain, whereby operation of the crank shaft will wind the motor, an extra sprocket connected to the drive wheel of the bicycle, a second sprocket located upon the outside of the casing and operatively connected to the spring motor and a chain connecting this last mentioned sprocket with the extra sprocket of the drive wheel, whereby operation of the motor will impart movement to the drive wheel.

1,374,798. VEHICLE-WHEEL. WILLIAM N. ALLAN, San Antonio, Tex. Filed June 2, 1920. Serial No. 386,004. 7 Claims. (Cl. 152—8.)



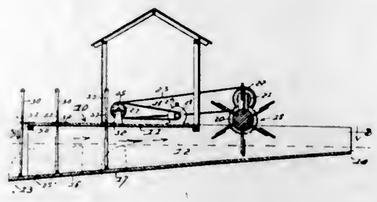
7. In a device of the class specified, a disk having a laterally flanged periphery to serve as a stop means, the

disk also having reversely arranged sockets in alternation therearound and directly formed therein, a tread unit surrounding and spaced from the periphery of the disk, spring units connected to the tread unit and having inner



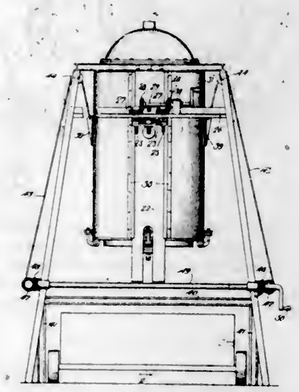
extremities formed with sockets disposed in alternation opposite the sockets of the disk, and antifrictional devices interposed between and engaging the sockets of the spring units and disk.

1,374,799. FOUNTAIN-SYRINGE. APOLLOS P. AMES, Tacoma, Wash. Filed May 16, 1917. Serial No. 169,024. 1 Claim. (Cl. 128—227.)



As a new article of manufacture, a cap having a liquid discharge pipe extended therefrom in one direction and a vent pipe extended in the opposite direction, and a suspending member carried by said cap, whereby the cap may be suspended in inverted position with an inverted conventional liquid container such as a preserve jar secured thereon in inverted position to convert the jar into a fountain syringe, the liquid discharge tube being adapted to receive a flexible nozzle carrying discharge tube.

1,374,800. COMBINED RAKE AND FORK. FRED HOWARD ANDERSON, Camden, N. J. Filed Oct. 25, 1919. Serial No. 333,203. 2 Claims. (Cl. 306—45.)

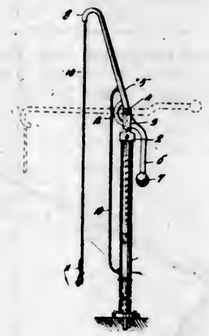


1. A device of the class described comprising a head having a V-shaped recess in its upper face and sockets of tapered shape passing through the head and opening into one side of the recess, teeth having enlarged ends fitting in said socket and a V-shaped cover member fitting in said recess for holding the teeth in position and a handle connected with the head.

1,374,801. CURRENT-MOTOR. WILLIAM J. ANTLEY, Yonges Island, S. C. Filed Feb. 12, 1920. Serial No. 358,262. 3 Claims. (Cl. 170—104.)

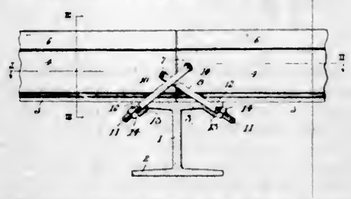
1. A current motor having a chute provided with an upwardly and forwardly inclined bottom wall, and a water wheel arranged for operation by flow through the chute, said chute being provided in its bottom with a plurality of outlet openings and convertible valves and baffles fitted to said openings and adapted for arrangement in obstructing relation to the flow of water through the chute.

1,374,802. ELECTRIC FURNACE. EDWIN APPLEBY, Chicago, Ill. Filed Nov. 19, 1919. Serial No. 339,052. 8 Claims. (Cl. 204—64.)



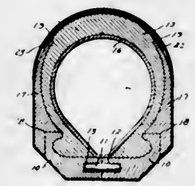
1. In a furnace, the combination of a frame, a vertically disposed crucible mounted on said frame and comprising a pair of relatively shiftable telescoping receptacles, means for heating the contents of said crucible, mechanism for vertically shifting one of said receptacles in said frame, the lower one of said receptacles comprising side walls in combination with a bottom member detachably secured thereto whereby the contents of said lower receptacle may be discharged through the lower end thereof.

1,374,803. AIR-HOSE SUPPORT. STEAD A. ASQUITH, Waterloo, Iowa. Filed Feb. 10, 1920. Serial No. 357,669. 2 Claims. (Cl. 221—73.5.)



1. In combination with an air hose of a support consisting of a vertical hollow post, a collar situated upon the top end of said post, standards diametrically opposed and vertically extending from said collar, a lever pivotally mounted between said standards, said lever provided

with a handle having a weight at its extremity for normally holding the same in a substantially vertical position,

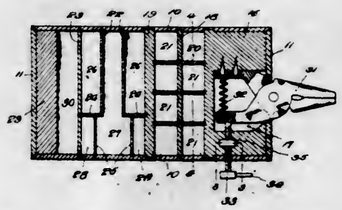


the other end of said lever provided with a hook shaped portion having a slot therein, said hose adapted to extend through said lever.

1,374,804. RAIL-JOINT AND FASTENER THEREFOR. JOSEPH BAKOVICH, Herminie, Pa. Filed Feb. 2, 1921. Serial No. 441,880. 3 Claims. (Cl. 238—151.)

1. A rail joint and fastener comprising meeting rail ends having an aperture in each web portion, V-shaped fastening members passing through said apertures, a supporting tie for the rail ends and means for anchoring the ends of the fastening members to the tie.

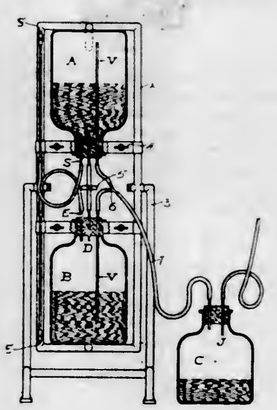
1,374,805. PROCESS OF AND MOLD FOR REBUILDING TIRES. HAROLD G. BALLOU, Los Angeles, Calif. Filed Nov. 18, 1919. Serial No. 338,854. 3 Claims. (Cl. 18—38.)



1. A mold for rebuilding tires comprising a plurality of bead-forming sections, means for retaining said bead-forming sections together, a plurality of side-body-forming sections, and an expansible tread-forming element adapted for interengagement with the side-body-forming elements to secure the latter in operative position with respect to the bead-forming sections and the tire.

1,374,806. METHOD OF WOOD PROTECTION. PAUL BARTSCH, Washington, D. C. Filed Oct. 23, 1920. Serial No. 419,063. 6 Claims. (Cl. 99—12.)

1. The hereindescribed method of protecting wood which consists in the complete dehydration of the wood and subsequent saturation of the wood with poison encapsuled or sealed within the wood by a substance insoluble in water.

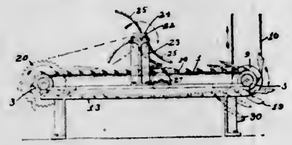


6. The hereindescribed method of protecting wood from destructive organisms, which consists in deresinizing the wood by means of a solvent, removing the solvent and resin, replacing this with a chemical that will not only replace the resin solvent but will, in turn, be replaced by an aqueous solution of arsenic and copper, then chemically dehydrating the wood to cause precipitation of the poisons, then replacing the dehydrant by a paraffin solvent and finally replacing the paraffin solvent by poisoned paraffin.

1,374,807. ANGLER'S CABINET-VISE. WILBUR L. BEATY, South Butte, Mont. Filed Apr. 16, 1919. Serial No. 290,622. 2 Claims. (Cl. 7—15.)

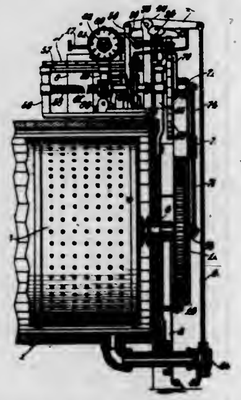
1. A device of the character described including a block having a recess, a vise having crossed pivotally connected jaws extending at their inner end portions into said recess, one of the jaws being secured to the block within the recess, and means mounted upon the block projecting into said recess to coact with the other of said jaws for shifting such jaw toward the first jaw.

1,374,808. SUCTION-PUMP. CHARLES W. BETHUNE, Buffalo, N. Y. Filed Dec. 26, 1917. Serial No. 208,893. 3 Claims. (Cl. 128—276.)



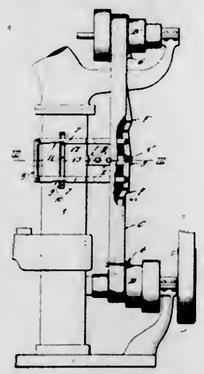
1. A vacuum pump comprising diametrically disposed containers, a tube communicating with the ends of the containers, a tube connecting the inner ends of the containers, and combined seal and relief tubes, one for each container and extending from the inner ends thereof to points adjacent their outer ends respectively.

1,374,809. MACHINE FOR DRYING FEATHERS. JOHN BIASOTTI, New York, N. Y. Filed Jan. 12, 1920. Serial No. 350,990. 7 Claims. (Cl. 34—12.)



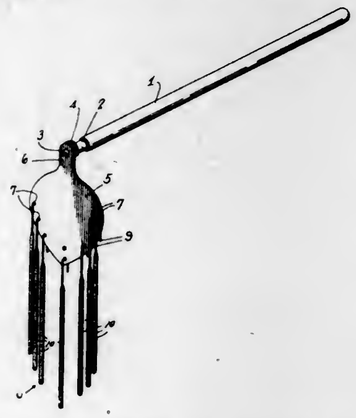
6. In a machine of the class described, a pair of endless belts spaced apart and running over pulleys at both ends, means carried by said belts for holding articles to be dried, a rotatable support and a plurality of flexible flails attached thereto and mounted adjacent said belts whereby said flails are caused to successively beat the articles held thereon as the support and flails are rotated, a mem-

ber positioned in the path of the articles presenting an inclined surface against which the articles are caused to



engage as the same are carried along by said belts, means for driving said belts, and means for rotating said flails.

1,374,810. CONTROLLING MECHANISM FOR LAUNDRY-MACHINES. THEODORE BIRKENMAIER, St. Louis, Mo. Filed June 25, 1917. Serial No. 176,901. 9 Claims. (Cl. 68—18.)

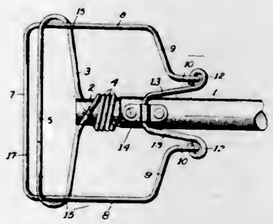


1. A controlling device adapted to be attached to a laundrying mechanism having driving mechanism therefor, said device comprising automatic mechanism, adapted to be connected with and operated by said driving mechanism and operating after a predetermined operation of said laundrying mechanism to definitely stop the operation of said laundrying mechanism, and means for adjusting the connection between said driving mechanism and said automatic mechanism.

1,374,811. BELT-SHIFTING DEVICE. FRANK A. BONROE, Webster Groves, Mo. Filed Nov. 1, 1919. Serial No. 335,159. 2 Claims. (Cl. 64—4.)

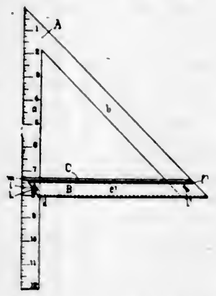
1. A belt shifting device of the character described comprising a pair of pivotally supported belt shifting arms, toothed operating rods for moving said arms, keepers engaged by the teeth on said rods for selectively controlling the movement of the rods, and a handle connecting said rods.

1,374,812. SAFETY-HOLDER FOR SPARKLERS AND THE LIKE. ANNIE M. BOWIE, Washington, D. C. Filed Dec. 4, 1920. Serial No. 428,324. 2 Claims. (Cl. 102—20.)



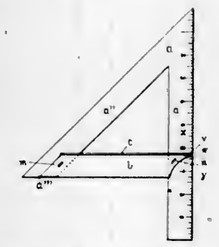
1. A holder for sparklers and analogous fire works, comprising a handle, and a swinging body disposed at one end of and at right angles to the handle and pivotally connected adjacent to one end therewith whereby manipulation of the handle will be attended by swinging of the body about its pivot; the said body being in the form of a plate with an aperture adjacent to its edge for the attachment of a sparkler or analogous fire works.

1,374,813. HALF-TONE SCREEN. CHARLES L. A. BRASSEUR, Orange, N. J. Filed Mar. 26, 1915, Serial No. 17,251. Renewed Sept. 4, 1920. Serial No. 408,309. 6 Claims. (Cl. 95—81.)



1. In a half-tone screen, a support surfaced with irregularly disposed transparent and opaque areas, the transparent areas or units on any one screen being substantially of uniform size.

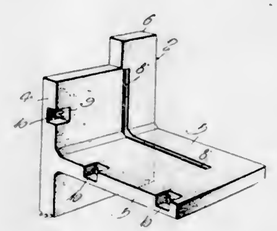
1,374,814. MOP-HOLDER. WILLIAM P. BRENEMAN and HERBERT G. ROWELL, Auburn, Me. Filed Dec. 27, 1920. Serial No. 433,173. 2 Claims. (Cl. 15—56.)



1. A mop holder comprising a handle, a head piece secured to said handle, a single clamp member passing through said head piece and said clamp member comprising two side arms and an outer cross bar, a retaining member on said handle, a bridge piece connecting the side arms of said clamp member, a portion of said bridge piece fitting beneath the said retaining member, the said side arms extending parallel with the handle for a greater portion of their length when said clamp member is in its closed position, and said side arms provided with offset portions near their outer end, passing beneath the outer portion of the headpiece, and again extending upwardly to the cross bar, which cross bar is in a plane above that of the plane of the outer portion of the head piece.

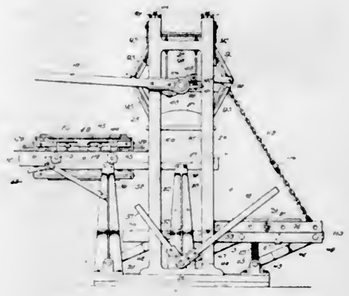
1,374,815. MITER-SQUARE. RICHARD A. BREUL, Bridgeport, Conn. Filed Sept. 5, 1918. Serial No. 252,712. 3 Claims. (Cl. 33—96.)

1. In a miter square comprising a V shaped plate having a miter shank and a longer squaring shank, and a beam U-shaped in cross section having square flanges and being formed from a sheet metal blank, these parts being secured together to form a figure 4, the herein described improved integral beam construction, consisting of a tempered metal plate resting upon and rigidly attached to the squaring flanges of the U beam, the shape of said metal plate conforming to the outline of the beam flanges.



1,374,816. MITER-SQUARE. RICHARD A. BREUL, Bridgeport, Conn. Filed Dec. 16, 1919. Serial No. 345,375. 1 Claim. (Cl. 33—96.)

As an article of manufacture a miter square consisting of a main plate having a miter shank and a graduated shank, of a beam U shaped in cross section and having squaring flanges, said beam connecting said shanks, and a loose sheet metal cover engaging and surrounding said squaring flanges, of the end of the beam engaging the graduating arm having the flanged portions and the cover thereon extended, and the U shaped part connecting the flanges being cut away, as and for the purpose described.

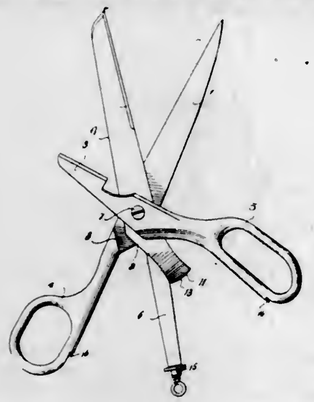


1,374,817. WATER-CHECK FOR DITCHES. EARL F. BRIDGES and CHESTER K. WARD, Lincoln, Nebr. Filed Aug. 6, 1920. Serial No. 401,598. 5 Claims. (Cl. 61—29.)

1. A water check for ditches comprising a unit for transverse disposition in the ditch, including a horizontal splash-member for disposition on the bottom of the ditch, an anchoring leg, and a vertical wall rising from one end of said member, forming a dam, said member and wall

having communicating grooves at their opposite ends, and end plates seated in said grooves, serving to protect the vertical side-walls of the ditch, against which they are placed.

1,374,818. BLOCK-PRESS. WILLIAM C. BURRELL, Kankakee, Ill., and JOHN BELLINGHAM, Masterton, New Zealand, assignors to said Bellingham and William Boyce Chennells, Masterton, New Zealand. Filed Dec. 14, 1917. Serial No. 207,070. 41 Claims. (Cl. 25—45.)



1. In a block press, the combination with a downwardly discharging mold, of a table frame mounted in the press for movement in a constantly horizontal position toward and from the bottom of the mold through an arcuate path, a table glidingly mounted on said table frame, and vertical guides fixed in the press and engaged by the table whereby the table is reciprocated vertically during the movement of the table frame.

41. In a block press, the combination with a main frame, of a downwardly discharging mold trunnioned therein on a horizontal axis and shaped to form in horizontal position and discharge without movement from said position a block which is heavier on one side of the axis than on the other, and a constantly horizontal table vertically reciprocable beneath the mold and movable into contact therewith whereby said block is discharged and carried from the mold in horizontal position.

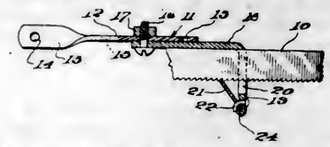
1,374,819. SHEARS. JOHN H. BYER, Orrtanna, Pa. Filed July 16, 1920. Serial No. 396,651. 2 Claims. (Cl. 30—13.)

1. A device of the class described comprising a pair of main blades and a third blade coöperating with the rear edge of one of the other blades, said third blade engaging

the outer face of one of the main blades and this main blade having a straight shank fitting between the handles

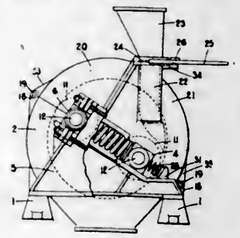
of the other blades, a spring latch on the end of said shank and pins on the handles for engaging said latch.

1,374,820. BRUSH. CASSIUS E. CAZEL and JOHN W. LE CRAW, Cincinnati, Ohio. Filed July 1, 1920. Serial No. 393,249. 1 Claim. (Cl. 15—30.)



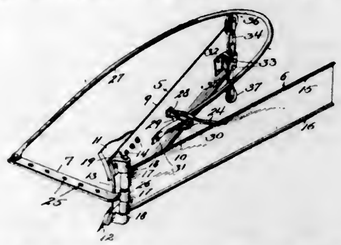
A brush head comprising a member of channel-shaped cross-section, a spacing block disposed in said member and spaced from the inner walls thereof, a piece of wire resting on the inner edge of the block and extending beyond the ends thereof, a plurality of bristles folded over said wire and block, the folds of the bristles being seated in the channel, the opposite ends of the aforesaid wire being bent laterally and then inwardly toward each other around the end-most bristles, thus preventing endwise displacement of the bristles, and fastenings passing through the member and into the block, binding the bristles between the block and member.

1,374,821. FIGURE TOY. BERTHA CLARK, Brooklyn, N. Y. Filed July 14, 1920. Serial No. 396,160. 4 Claims. (Cl. 46—40.)



1. The herein described figure toy comprising a body composed of a clothes pin having a transverse hole through it near its upper end and a socket in the top of its knob, a member having a pin removably fitted in said socket and with the knob simulating a head, a rod rotatively mounted through said hole, and small clothes pins whose bifurcated ends are pivoted to the extremities of said rod to simulate arms.

1,374,822. HOLDER FOR HACKSAW-BLADES. HENRY G. COCHEU, New York, N. Y. Filed Aug. 26, 1919. Serial No. 319,930. 3 Claims. (Cl. 145—35.)

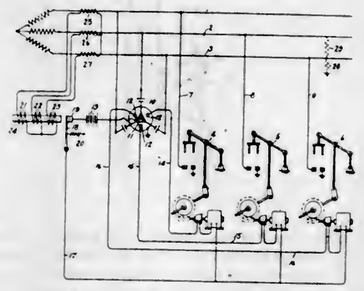


1. The combination with a saw frame including an adjustable member having an attaching pin, of a saw blade holder including a body having an attaching portion arranged to detachably engage said pin and a relatively long flat carrying portion arranged at right angles to the attaching portion, a saw blade carrying bar adjustably connected to the carrying portion and provided with a right angular downturned slotted end arranged at right angles to the saw blade for slidably receiving the saw blade, and a pivoted dog carried by the free end of said downturned end and arranged to project upwardly therefrom for engagement with the teeth of a saw.

1,374,823. CRUSHING-MILL OF THE ROLLER AND RING TYPE. CHARLES MARKHAM CONDER and GODFREY TWYNAM VIVIAN, Camborne, England. Filed Dec. 10, 1920. Serial No. 429,756. 1 Claim. (Cl. 83—45.)

A machine for crushing materials including a frame, an anvil supported by the frame, a pair of shafts, movable bearing blocks supported on the frame in which the shafts operate, crushing rollers mounted on the shafts and adapted to coöperate with the anvil, resilient means disposed between the bearing blocks for normally urging them away from each other, and resilient means normally exerting a pressure on one of the bearing blocks to urge the same toward the opposite bearing block.

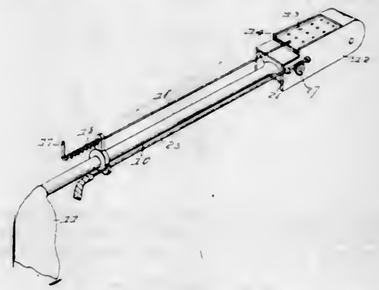
1,374,824. ROAD SCRAPING, GRADING, AND DITCHING MACHINE. GEORGE R. COOK, Carrollton, Ga., assignor of one-half to Alonzo O. Turner and one-half to James B. F. Dial, Carrollton, Ga. Filed Aug. 2, 1919. Serial No. 314,846. 6 Claims. (Cl. 37—5.)



1. A road scraping, grading and ditching machine comprising a mold board provided with upper and lower cutting points at its front end and with a bridge bracket at the inner side of its rear end, a slide hinged at its front end to the similar end of the mold board, the mold board and slide both having upper and lower working edges to render the same reversible, a draft bar connected to the front extremities of the mold board and slide, and a draft rod secured to the outer end of the draft bar and extending around the rear end of the mold board and secured to the said bridge bracket and the mold board in advance of the bracket.

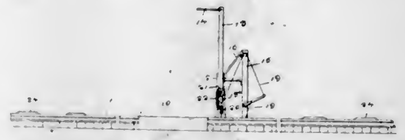
1,374,825. SANITARY MILK-DRIP CATCH-BASIN. WILSON S. CORLIS, Mount Vernon, N. Y. Filed Oct. 25, 1919. Serial No. 333,196. 2 Claims. (Cl. 221—98.)

1. A sanitary cover for milk cans, comprising a funnel having a cylindrical lower portion adapted to be inserted in the mouth of the usual delivery milk can, and an upper flaring or funnel-shape portion concentric with the lower portion and provided with a hinged lid, and a partition member soldered along its bottom and lateral edges to the inner wall of the funnel portion to thereby form a pocket extending within the inclosure of the funnel, whereby any drippings from a dispensing vessel will be caught by said pocket.



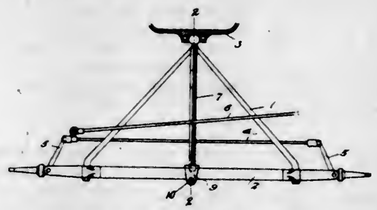
1,374,826. PROTECTIVE DEVICE. ELMER E. F. CREIGHTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 9, 1917. Serial No. 153,751. 9 Claims. (Cl. 175—294.)

1. The combination with an electric transmission line, of an arcing ground suppressor, a control circuit therefor, and means operative in response to an arcing ground accompanied by short circuit conditions between phases to render said control circuit inoperative.



1,374,827. COTTON-PICKER. JAMES P. CRUISE, Carpenter, Miss. Filed June 19, 1919. Serial No. 305,280. 4 Claims. (Cl. 56—32.)

2. A cotton harvesting nozzle having a suction tube and an elongated hollow head in communication therewith and provided with a side inlet opening, the mouth of the suction tube being diagonally disposed with reference to the plane of said inlet opening, cotton picking devices consisting of an endless carrier mounted for movement in the head between said suction mouth and inlet opening and

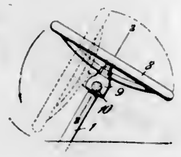


parallel with the plane of the latter and provided with serrated plates or wings, and means for operating said carrier.

1,374,828. RAILROAD-CROSSING GATE. LESTER DAVIDSON, Fisher, Ill. Filed Oct. 4, 1919. Serial No. 328,345. 3 Claims. (Cl. 246—302.)

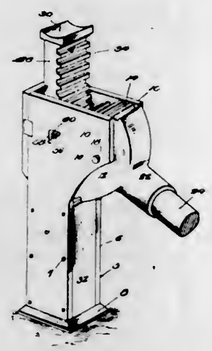
1. The combination with a pivotal counter-balanced crossing gate and clutch mechanism for securing the same in its extended or operative position, of successively operative trip mechanisms flexibly connected respectively with said gate and clutch for operating and releasing the gate, the gate operating trip having a movable shoe, located adjacent to a track rail and pivotal supporting means yieldingly held in normal position for returning the shoe to its operative position, one of said means being constructed to permit depression of the shoe.

1,374,829. RADIUS-ROD BRACE. ALVA G. DAVIS, Center, Ky. Filed Dec. 16, 1919. Serial No. 345,264. 1 Claim. (Cl. 267—66.)



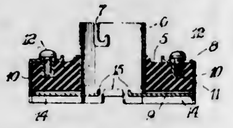
In combination with a front axle and radius rod of an automobile, a brace rod having a forked end for engaging the radius rod at the junction of its two arms, the other end of said brace rod engaging the web of the front axle, a U-shaped bracket slidably mounted on said brace rod and embracing the axle and a bolt passing through the limbs of the bracket for holding the same in place on the axle.

1,374,830. STEERING-WHEEL MOUNTING. ERNEST FOSTER DAVIS, Elmira, N. Y., assignor to Fred J. Lesh and Clarence G. Wood, Muncie, Ind. Filed Oct. 27, 1919. Serial No. 335,046. 3 Claims. (Cl. 74—33.)



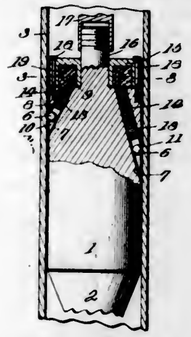
2. In combination with the steering column and the steering wheel, of a sleeve secured to the column, a hous-

ing inclosing the sleeve and pivoted thereto and having an extension for receiving the wheel, means for securing the wheel in place, and a plunger movable in the housing,



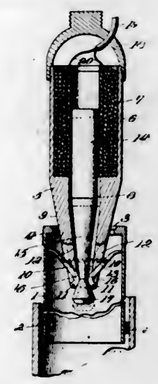
a spring normally pressing the plunger toward the column, and a nut for holding the sleeve in place and having the outer end of its bore plain for engagement by the plunger.

1,374,831. LIFTING-JACK. WILLIAM L. DAY, Williamsport, Pa. Filed June 9, 1920. Serial No. 387,575. 1 Claim. (Cl. 254—115.)



A lifting jack comprising a hollow standard, a lifting bar arranged within said standard and provided with a plurality of inclined locking teeth, a pawl pivoted to said standard, said standard being provided with an L-shaped slot having vertical and horizontal communicating branches, a releasing device in the form of a length of metal having one end portion extended laterally and engaged with said pawl and its other end portion extended laterally in the opposite direction and operating in the vertical and horizontal branches of said L-shaped slot, yieldable means urging the pawl into engagement with the locking teeth on the lifting bar, and means for operating said lifting bar.

1,374,832. VACUUM-TUBE BASE. HAROLD POTTER DONLE, Meriden, Conn., assignor to The Connecticut Telephone & Electric Co., Inc., Meriden, Conn., a Corporation of Connecticut. Filed Sept. 27, 1919. Serial No. 326,914. 7 Claims. (Cl. 250—27.)

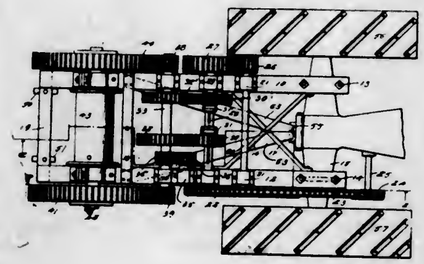


1. In a device of the character described, a base of insulating material having a plurality of studs embedded therein, a terminal strip secured to the base by each stud having an outer terminal portion and bent around the edge of the base and provided with a lower contact portion, and a socket for the tube.

1,374,833. ELECTRICALLY-CONTROLLED PULLER FOR OIL-WELL CASINGS. WILLIAM D. DOOLEY, Dallas, Tex., assignor, by mesne assignments, to L. D. Bowser, Dallas, Tex. Filed Apr. 26, 1920. Serial No. 376,631. 6 Claims. (Cl. 294—96.)

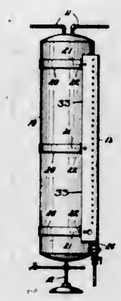
1. A casing puller, comprising a body having a plurality of normally projecting locking members and a plurality of electromagnets for holding the locking members in their unlocked positions.

1,374,834. MAGNETICALLY-OPERATED OIL-WELL FISHING-TOOL. WILLIAM D. DOOLEY, Dallas, Tex., assignor, by mesne assignments, to L. D. Bowser, Dallas, Tex. Filed Apr. 26, 1920. Serial No. 376,632. 6 Claims. (Cl. 294—94.)



1. A fishing tool of the character described, comprising a housing having at its upper end an electric magnet, its lower end tapered and provided with outwardly movable dogs, an armature actuated by the coil and constructed to throw the dogs outward for the purpose described.

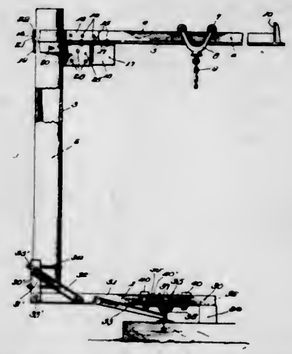
1,374,835. STUMP PULLING AND SKIDDER ATTACHMENT FOR TRACTORS. HENRY AUGUSTAS DORSEY, Enterprise, Ala. Filed Oct. 13, 1920. Serial No. 416,631. 1 Claim. (Cl. 254—166.)



In an attachment for a tractor, a main frame including a plurality of side bars, means for connecting the frame to the axle of the tractor, a shaft mounted in the frame, a sprocket wheel carried by the shaft, means for driving the sprocket wheel, a drum and a shaft for mounting the drum, an intermediate shaft, a gear wheel mounted thereon, a pinion mounted on the shaft first named and of reduced diameter compared with the diameter of the gear wheel, an additional shaft, pinions mounted thereon,

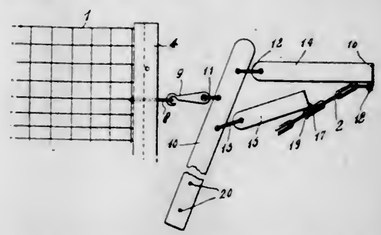
gear wheels of relatively large diameter compared with the pinions last named and mounted on the shaft of the drum, a countershaft, means for transmitting movement

from the intermediate shaft to the additional shaft at a reduced speed, and means for transmitting movement through the countershaft to the additional shaft at approximately the speed of the intermediate shaft.



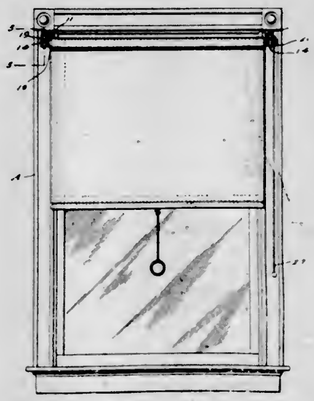
1,374,836. HEATER. JOHN THOMAS DUCKWORTH, Philadelphia, Pa., assignor to Frederick M. Rapp, Philadelphia, Pa. Filed Apr. 3, 1920. Serial No. 371,159. 2 Claims. (Cl. 263—5.)

1. A heater for vertically disposed vessels comprising a trough shaped shield having its upper end closed in and provided along its edges with projecting lugs serving to space the shield from the vessel to which it is assembled, air and lighting apertures in the walls of the trough shaped shield, strap members attached to one of the walls of the shield, buckle members hingedly connected to the opposite wall of the shield, for coöperation with the strap members, and a burner pipe supported within the angular portion of trough shaped shield.



1,374,837. PORTABLE CRANE. JAMES DYKES, Marinette, Wis. Filed Dec. 26, 1919. Serial No. 347,342. 8 Claims. (Cl. 212—63.)

2. In a device of the class described, a mast, a boom, an annular head carried at the inner end of the boom and rotatably fitting the mast, a collar upon the mast supporting the head against downward movement, a bearing member carried by the boom and having a web one edge of which is located contiguous to the mast, the said edge portion of the web being formed with a transverse recess, a bearing element seated in the recess and riding against the mast, and a retaining member having side portions, the said member being disposed to straddle the



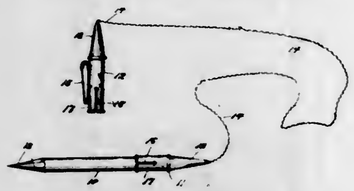
web with its side portions closing the opposite ends of the recess.

1,374,838. WIRE-STRETCHER. LOUIS F. EDWARDS, Noble, La. Filed Aug. 16, 1920. Serial No. 403,893. 3 Claims. (Cl. 254—75.)

1. A wire stretcher comprising a lever, and a pair of claws loosely carried by the lever at opposite sides of its fulcrum point, said claws composed of flat bars bent at substantially right angles and provided with double and spaced teeth extending laterally therefrom, substantially as described.

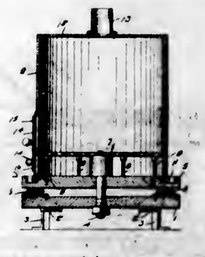
1,374,839. ADJUSTABLE SHADE-ROLLER. PETER ENGLERT, Lock Haven, Pa. Filed Apr. 10, 1920. Serial No. 372,916. 2 Claims. (Cl. 156—27.)

2. The combination with a shade roller having its spring actuated shaft projecting beyond the opposite ends there-



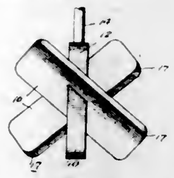
of, of spools carried by the projecting ends of said shaft, flexible elements suspended from the window frame and having their lower corresponding ends secured to said spools, and adapted to be wound and unwiund therefrom with the lowering and raising of the shade, a substantially U-shaped element carried by each end of said shaft and vertically disposed, the limbs of said element being arranged at the opposite ends of the adjacent spool, the cross piece of each element having a slot through which the adjacent flexible element is passed, and constituting a guide for the latter, a disk carried by one end of said shaft and having notches, a pivoted latch element carried by the U-shaped element and having an offset extremity adapted to be received in one of the notches in said disk, to hold said shaft fixed relatively to said roller, means for operating the latch from a remote point, and means for limiting the movement of the latch in one direction.

1,374,840. APPARATUS FOR TEACHING DANCING. SIDNEY E. FEIST, Brooklyn, N. Y. Filed July 22, 1920. Serial No. 398,277. 7 Claims. (Cl. 35—16.)



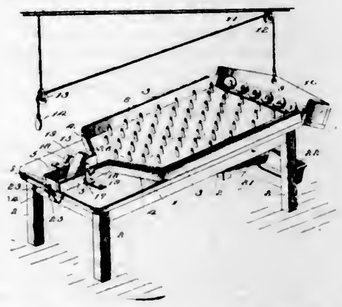
1. An apparatus for teaching dancing comprising a figure, a track and means suspended from said track for supporting the figure so that the figure may swing, rotate and at the same time move in a substantially circular path in a general horizontal direction.

1,374,841. PENCIL-HOLDER. ABRAHAM FINKELSTEIN, Philadelphia, Pa. Filed Aug. 20, 1920. Serial No. 404,724. 1 Claim. (Cl. 24—12.)



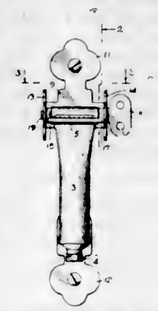
A pencil carrying device comprising a cap adapted for engagement upon the sharpened end of a pencil and including a split cylindrical portion and a conical point projecting portion, a safety pin device carried by said cap whereby to hold the same directly upon a garment, a similar cap frictionally engaged upon the other end of the pencil, and a chain connecting said caps at the extremities of the conical portions, both caps being formed of sheet metal and being resilient.

1,374,842. PORTABLE COOKER. MARTIN FINNEMANN, Kimball, Minn. Filed Oct. 30, 1919. Serial No. 334,402. 4 Claims. (Cl. 126—58.)



1. A portable stove comprising a main base, a vertical pivot member secured centrally of the base, an auxiliary base rotatably mounted on the pivot member and arranged above and in spaced relation to the main base, said pivot member extending above the auxiliary base, a grate rotatably secured to the upper end of the pivot member, a drum inclosing the grate and secured to the auxiliary base and having a doorway extending above and below the grate, and doors arranged one above the other for closing the doorway and one door being arranged above the grate and the other door arranged below the grate, said doors capable of moving independently of each other.

1,374,843. CHURN-DASHER. JAMES E. FLAHERTY, St. Louis, Mo. Filed Oct. 9, 1920. Serial No. 415,720. 2 Claims. (Cl. 259—134.)



1. A churn dasher comprising an upstanding flat central member having rounded lower corners and inclined upper corners, said member being adapted for connection at its upper end with a handle, said member being formed in opposite edges with slots converging downwardly toward the center and oppositely inclined laterally with respect to the flat faces of the member, and a pair of paddle blades disposed within said slots.

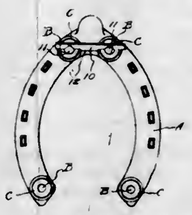
1,374,844. GAME. JOHN L. FLATOW, Washington, D. C. Filed Oct. 22, 1920. Serial No. 418,635. 5 Claims. (Cl. 46—57.)

1. A game apparatus comprising an inclined table, a goal at the lower end of the table, a plurality of rolling objects to travel over the table to the goal, and a gate mounted in the goal for swinging movement in a vertical plane constructed and arranged to be actuated by one of the rolling objects whereby to admit the same to the goal and exclude the remaining objects.

1,374,845. COLLAPSIBLE-TUBE HOLDER. JOHN HENRY GIBBS, West Orange, N. J. Filed Sept. 30, 1919. Serial No. 327,368. 2 Claims. (Cl. 221—60.)

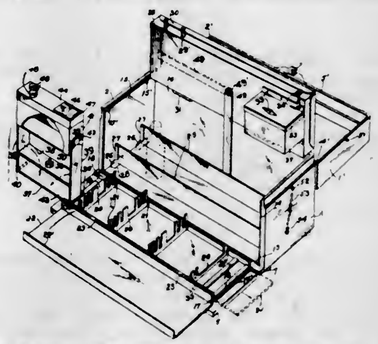
1. A holder for collapsible tubes comprising a body formed with a central tube carrying portion, depressed end sections adapted to receive securing means, a pair of upstanding ears arranged on one of said end sections, and a rotatable collapsing key mounted in said ears and adapted to engage the end of the tube, said tube being arranged on the central tube carrying portion, said key being arranged on a vertical line spaced horizontally away from said tube carrying section by a distance equal to approximately half the thickness of the tube so that upon the rotation of the key, the tube will be collapsed and pressed against said tube carrying portion.

1,374,846. REPAIRING TIRE-CASINGS. FREDERICK D. GOODLAKE, West Palm Beach, Fla. Filed Apr. 25, 1919. Serial No. 292,537. 1 Claim. (Cl. 152—26.)



A repaired rim-cut tire casing comprising the casing side portion from which an area of the outer rubber layer has been removed, a plurality of textile layers straddling said portion, interposed cement layers connecting said textile layers together and to the casing side portion; the inner textile layer being smaller in area than the cut removed portion in the casing side and the other textile layers being increased in area as they recede from the casing side portion to afford feather edges at the ends and side edges of the repair means, an outer leather layer straddling and cemented to the outer textile layer and arranged with its flesh side inwardly and its smooth side outwardly and also arranged flush with the surface of the outer rubber layer of the casing and fully occupying all of the space left by the said removal of a portion of said rubber layer, and rivets extending transversely through and joining the said casing side portion, the textile layers and the leather layer.

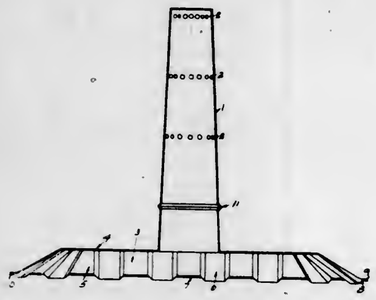
1,374,847. SPARK-PLUG. MORRIS GOTTLIEB, Philadelphia, Pa. Filed Feb. 10, 1919. Serial No. 276,064. 1 Claim. (Cl. 123—169.)



A spark plug comprising an outer metallic body, a body of insulation within said metallic body, an electrode extending centrally through said body of insulation and terminating considerably short of the end of the metallic body, a frusto-conical metallic shell secured to and extending into the open end of the metallic body and having its smaller end closed and formed with a threaded hole and having its peripheral wall apertured, a conical electrode point disposed upon the small end of said frusto-conical shell and carrying a threaded stem screwed into said hole whereby the conical electrode point may be adjusted toward or from the end of said first named electrode, and lock nuts on said stem within the frusto-conical shell whereby to lock the conical point in adjusted position.

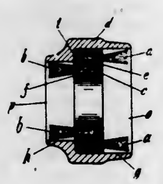
1,374,848. HORSESHOE-CALK. ERNEST T. GOWING, Evans Mills, N. Y., assignor of one-half to Oren S. Pickard, Evans Mills, N. Y. Filed Mar. 20, 1920. Serial No. 367,323. 1 Claim. (Cl. 168—41.)

In combination with a horseshoe having its forward portion provided with spaced holes surrounded by bosses arranged in spaced relation and having tapered sides, of a toe calk formed as an elongated bar wedge-shaped in cross-section and extending transversely of the forward portion of the shoe and having formed thereon spaced tapered shanks having a driving fit within the holes in the shoe, the calk being formed between said shanks with a projection engaging against the under side of the shoe between the bosses, the ends of the projection being inclined and conformingly engaging the bosses at the confronting portions thereof.



1,374,849. SANITARY CASE. CHARLES A. GREENE, New York, N. Y. Filed Apr. 12, 1919. Serial No. 289,535. 3 Claims. (Cl. 190—1.)

1. A sanitary case comprising a box-like structure and including a front hinged at one edge thereof, an instru-



ment case carried by one side of said front, removable instrument racks therefor, a sterilizer and a collapsible sterilizer support therefor hinged at one side of said front, said support including a base member and upwardly projecting standards hinged at each end thereof.

1,374,850. CLOTHES-WASHER. LEO J. GRUBMAN, Erie, Pa., assignor to Erie Metal Products Company, Erie, Pa., a Corporation of Pennsylvania. Filed Feb. 6, 1920. Serial No. 356,634. 3 Claims. (Cl. 68—30.)

1. A clothes washer comprising a percolating tube; and a chamber from which the tube extends, said chamber having depressed projections along its edge forming openings permitting the ingress of water under said edge to the chamber, the edge being provided with an overhanging lip.

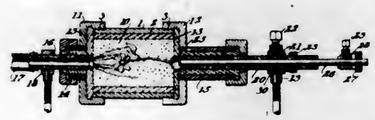
1,374,851. NAIL-BRUSH. CARL ALBERT HIRTH, Stuttgart, Germany. Filed Sept. 19, 1917. Serial No. 192,205. 4 Claims. (Cl. 15—35.)

1. In a nail brush, in combination, a body provided with a passage therethrough, a plurality of substantially annular rows of bristles disposed on said body, and a sleeve-like casing open at both ends surrounding said rows and forming a guide face about each row.

1,374,852. PISTON-RING. JOSEPH A. INGRAM, East Orange, N. J. Filed Sept. 25, 1919. Serial No. 326,159. 5 Claims. (Cl. 74—109.)

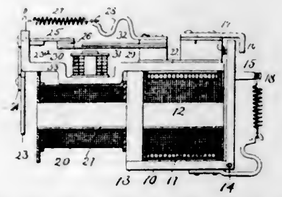
1. In a piston packing, a split ring-member having an annular channel to provide an annular ledge and an annular collar, said collar being cut away adjacent the split portion to provide a recess, a second split ring located in said channel, and an inwardly propecting ledge carried by the last named ring-member arranged for insertion in said recess when said rings are assembled.

1,374,853. PROCESS OF PHOTOGRAPHIC REPRODUCTION. ROBERT JOHN, New York, N. Y., assignor to Iconochrome Company of America, Inc., a Corporation of New York. Original application filed May 6, 1916, Serial No. 95,957. Divided and this application filed July 25, 1919. Serial No. 313,237. 29 Claims. (Cl. 95—5.4.)



1. The process of forming a photographic record of lights and shades capable of use as a transfer printing plate, which comprises hardening portions of emulsion adjacent the light affected sensitive content of a photographic emulsion with an agent adapted to harden said emulsion by reaction with the light affected sensitive content of the emulsion, and with a neutralizing agent for said hardening agent, the relative proportions of said hardening and neutralizing agents being such as to control selectively the effective area of influence of the hardening agent but to an extent less than the complete neutralization of said hardening agent.

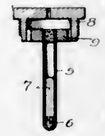
1,374,854. GRENADE-THROWER. STUART P. JOHNSON, Washington, D. C. Filed Mar. 12, 1920. Serial No. 365,333. 2 Claims. (Cl. 42—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In an ordnance device, a discharger having a major missile bore, a cartridge chamber including a neck receiving portion communicating with the bore, the diameter of the neck receiving portion being greater than the outer diameter of the neck of a cartridge.

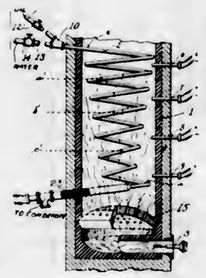
1,374,855. CASTING. SIMON LAKE, Milford, Conn. Filed Dec. 29, 1919. Serial No. 348,074. 7 Claims. (Cl. 22—196.)

1. A method of casting, comprising forming a mold of electrical-conducting material around the article to be reproduced, destroying the article within the mold by the heat of an electric current passing through the mold material, removing the remains of the article, filling the mold cavity thus formed with a plastic substance, and removing the mold material.



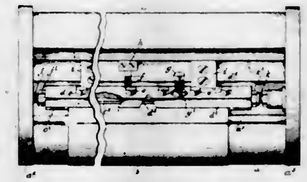
1,374,856. REGULATOR FOR DYNAMO-ELECTRIC MACHINES. BENNETT M. LEECE and HARRY C. BRANCH, Cleveland, Ohio, assignors to The Leece-Neville Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 15, 1917. Serial No. 186,294. 2 Claims. (Cl. 171—229.)

1. In combination with a dynamo electric machine having a field winding, of a regulator for varying the ampere



turns of the field winding, said regulator being in the form of a unit comprising two magnets having windings both connected to the dynamo electric machine but in separate circuits, and a pair of field regulating contacts each influenced by one of said magnets, and one of the contacts being mounted for vibratory movement into and out of engagement with the other.

1,374,857. THERMOSCOPE. CHARLES E. LINEBARGER, Chicago, Ill. Filed Feb. 26, 1919. Serial No. 279,290. 3 Claims. (Cl. 116—118.)

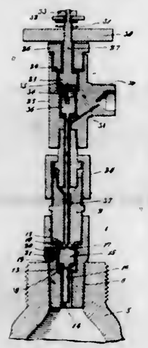


1. A battery temperature indicator comprising a cell vent cap having an annular flange projecting from the lower side thereof, a rubber disk positioned within said flange and spaced from the body of said cap, said disk having two openings therethrough, a transparent container, and two liquids of unlike densities in said container capable of forming a physical mixture at a certain temperature; one end of said container being positioned in one of said openings, whereby when said cap is in place in one of the cells of the battery the container will project into the electrolyte of said cell.

1,374,858. PROCESS OF CONVERTING HIGHER-BOILING-POINT HYDROCARBON OILS INTO LOWER-BOILING-POINT HYDROCARBON OILS. WILLIAM M. MCCOMB, New York, N. Y. Filed July 3, 1920. Serial No. 393,893. 6 Claims. (Cl. 196—25.)

1. A method of converting relatively heavy hydrocarbon oils into hydrocarbon oils of lower boiling points, which consists in passing a mixture of such heavy hydrocarbon oils together with a smaller percentage of steam through a heated tubular vessel or coil of progressively increasing temperatures from its inlet to its outer ends, the temperature of the oil therein at a point adjacent the inlet end of the coil approximating the initial boiling point of the oil under treatment and the temperature of the oil therein at a point near the outlet end approximating the end boiling point of the oil under treatment, the temperature of the intermediate points of the oil in the coil increasing approximately in the same ratio with respect to the total intervening length of the coil under consideration as the boiling point temperatures of the oil increase in ordinary fractional distillation of a sample of the oil under treatment throughout the successive positions of its boiling point range.

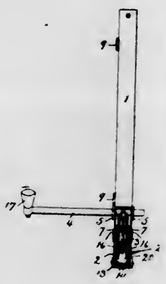
1,374,859. PLATE-REGISTERING MECHANISM FOR PRINTING-MACHINES. FRANK C. MARQUARDT, Brooklyn, N. Y., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed May 18, 1918. Serial No. 235,329. 15 Claims. (Cl. 272.)



1. A plate registering mechanism for printing machines, embodying therein a plate cylinder having oppositely presented bearing surfaces at different points of the periphery thereof, a clamping mechanism movably mounted adjacent each of said bearing surfaces, embodying therein two coacting clamp plates extending from adjacent one end of said bearing surface to adjacent the other end thereof, and means for closing said plates upon the edges of the printing plate, means retaining said clamping mechanisms in relation to said cylinder while permitting oscillatory or rectilineal movement thereof with relation to said surfaces and means whereby said clamping mechanisms may be adjusted pivotally of, or toward and from said bearing surfaces, to vary the position of the plate upon the cylinder.

3. A plate registering mechanism for printing machines embodying therein a plate cylinder having oppositely presented bearing surfaces at different points of the periphery thereof, a clamping mechanism adjacent each of said bearing surfaces, means preventing movement of said clamping mechanisms respectively radially of said cylinder while permitting movement thereof circumferentially and laterally of said cylinder, a plurality of adjustable pivots carried by each of said clamping mechanisms, whereby movement may be imparted to said clamping mechanisms respectively with relation to the adjacent bearing surface, and adjustable means acting upon the opposite ends of said clamping mechanism respectively, whereby said mechanisms may be adjusted laterally of the cylinder.

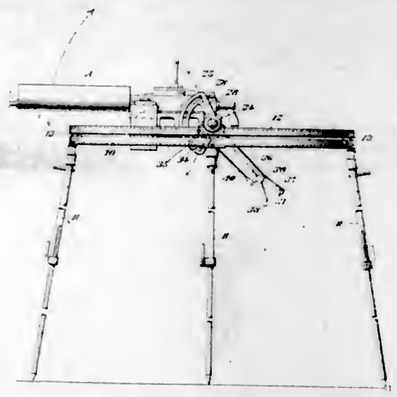
1,374,860. VALVE FOR CONTROLLING THE FLOW OF FLUIDS AND GASES UNDER PRESSURE. JAMES M. MILLER, Jersey City, N. J. Filed Nov. 13, 1919. Serial No. 337,673. 6 Claims. (Cl. 251—156.)



3. Valvular means for controlling the dispensation of fluids or gases under pressure from a container, embodying a valve permanently associated with the container and provided with a valve chamber and inlet and outlet ducts leading to and from the valve chamber, a sealing element positioned within the valve chamber and adapted to normally seal the outlet duct; and removable means for further sealing the outlet duct, said removable means embodying means for allowing of the escape of pressure ac-

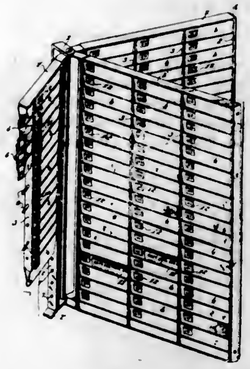
cumulated in the outlet duct through leakage of the sealing element, during the removal of the removable means, in combination with a master service connection provided with an actuating rod, means for coupling the service connection to the valve to bring the actuating rod into coöperative relation with the sealing member of the valve, and means for thereafter manipulating the actuating rod

to move the sealing member into or out of sealing position, whereby the drawing off and delivery of the contents of the container may be carried out.



1,374,861. AUTOMOBILE-SIGNAL. ALBERT E. PAYETTE and EUSEBE TETRAULT, Springfield, Mass. Filed Oct. 8, 1920. Serial No. 415,616. 10 Claims. (Cl. 116—53.)

1. The combination, in an automobile signal, with a sheath, and a plurality of semaphore arms pivotally connected at one terminal with said sheath, of rotatable and longitudinally-movable means for operating said arms individually, according to the position of said means relative to said arms.

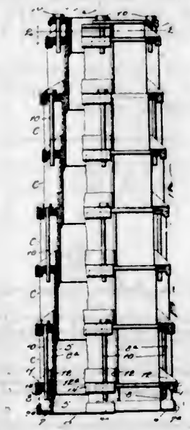


1,374,862. MACHINE-GUN MOUNT. JOHN S. PEOPLES, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Nov. 26, 1918. Serial No. 264,225. 5 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A gun mount, including a circular track, a mounting ring positioned above and in parallel relation to the track, roller bearings between the ring and the track, a shaft journaled on said ring, gun supporting members fixed to the shaft, counter-balancing springs fixed to the shaft and its bearings to normally urge the shaft toward gun elevating position, means for locking the shaft against move-

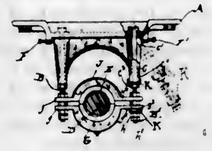
ment under the impulse of the springs and a lever for rocking the shaft and rotating the ring upon the track.

1,374,863. CARD-HOLDER. FREDOLF J. PETERSON, Alliance, Ohio, assignor to The McCaskey Register Company, (Incorporated in 1914,) Alliance, Ohio, a Corporation of Ohio. Filed Sept. 10, 1917. Serial No. 190,496. 2 Claims. (Cl. 40—63.)



1. A card holder including a series of V-shaped receptacles spaced apart in nested arrangement, and means supporting the receptacles at their angles only permitting them to rock laterally with reference to each other on their respective supports.

1,374,864. ADJUSTABLE FORM FOR CONCRETE STRUCTURES. SAMUEL RASHKOVSKY, (now by judicial change of name Samuel Raskin,) St. Louis, Mo., assignor to Metalform Construction Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 20, 1920. Serial No. 352,802. 8 Claims. (Cl. 25—131.)



5. A column form, comprising a number of sections arranged one above the other and each composed of a plurality of parts that can be adjusted relatively to each other to vary the internal diameter of the form, laterally-projecting portions on the parts of said sections which rest upon the upper edge of the section immediately beneath the parts to which said portions are connected, overlapped flanges on the parts of each section that are overlapped by the laterally-projecting portions on the

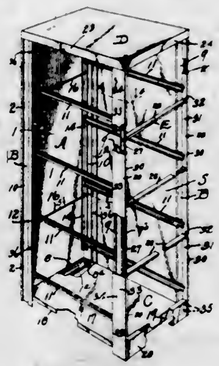
section immediately above, means for preventing said overlapped flanges and laterally-projecting portions from sepa-

rating vertically, and retaining devices passing through said laterally-projecting portions and through the flanges with which they coöperate.

1,374,865. ADJUSTABLE SHAFT-HANGER. CAREY SHERWOOD, Lowell, Mass. Filed Jan. 13, 1921. Serial No. 436,902. 4 Claims. (Cl. 64—14.)

1. The combination of a shaft-hanger, having vertical bolt-holes, bolts arranged in said holes, said hanger being laterally slotted at one side from the adjacent bolt-hole, two yokes each having holes to receive said bolts, and each having a longitudinal slot extending from a bolt hole to the end of the yoke, at the slotted side of said hanger, to allow the corresponding bolts to be swung laterally out of all said slots and the upper of said yokes to be turned on the other of said bolts, to enable said shaft to be passed between said lower yoke, and the lower end of said swinging bolt, and means for preventing said last named bolt from moving in said slots.

1,374,866. ADJUSTABLE FLUE EXTENSION. SAMUEL A. SPENCER, Salt Lake City, Utah. Filed Dec. 15, 1919. Serial No. 345,160. 4 Claims. (Cl. 137—75.)

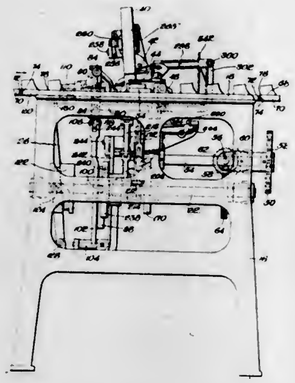


2. An adjustable flue extension comprising four co-acting corner pieces each of which has right-angle side faces; an elongated slot in one of said side faces of each of said corner pieces; portions of the other side face of each corner piece bent upon itself to form a narrow channel; a strap nut secured to one side of said channel; a bolt passed through the said metal transversely across said channel and operable in said strap nut; and a sleeve member riveted on the upper end of all of said corner pieces.

1,374,867. ROTARY BORING-DRILL. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed May 26, 1919. Serial No. 300,004. 20 Claims. (Cl. 255—71.)

1. In a rotary boring tool, the combination with a rotatable drill head of a disk member mounted on an axis transverse to the axis of rotation of the head, and recessed on its outer side to form a cutting edge of less diameter than the inner side thereof, thus conforming to the curvature of the hole being drilled substantially as described.

1,374,868. METAL FURNITURE CONSTRUCTION. HERBERT E. WHITE and HENRY F. PHILIBIN, Youngstown, Ohio, assignors to The General Fireproofing Company, a Corporation of Ohio. Filed July 29, 1919. Serial No. 314,003. 18 Claims. (Cl. 45—2.)



1. A knock-down metal furniture construction including a back section, side sections detachably interlocked at the rear to the side edge portions of the back sections, a front ladder section, and connectors detachably holding the front ladder section interlocked with the front portions of the side sections.

6. In a metal furniture construction, a back wall member provided at its opposite vertical edges with an inturned flange, side wall members each provided at one edge with an outturned flange interfitting within one of the inturned flanges of the back wall, and means disposed between the flanges of the side walls to hold the same interlocked with the flanges of the back wall.

1,374,869. HEEL-BREASTING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 29, 1919. Serial No. 273,845. 36 Claims. (Cl. 12—47.)

1. A machine for operating upon heels having, in combination with a conveyer for advancing the heels, a reciprocating knife disposed at one side of the conveyer, means for transferring heels from the conveyer into position to be operated upon by the knife, means for clamping the heels in said position by engagement with the top and

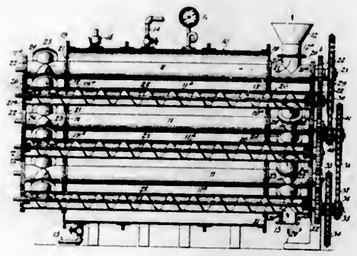
bottom thereof, and means for removing the heels after they have been operated upon and returning them to the conveyer.

13. A heel-breasting machine having, in combination, means for breasting a heel, a fixed support upon which the rear of the heel may rest while being breasted, means for placing a heel upon said support, and a movable support for the breast end of the heel.

34. A machine for breasting heels prior to their attachment to a shoe having, in combination, means for supporting and clamping a heel in position for the breasting operation, a knife for trimming the heel breast, means for reciprocating the knife, and a guideway for the knife adjustable to vary the angle of stroke of the knife and the pitch of the heel breast.

1,374,870. PENHOLDER. BENJAMIN WILLIAM ZIMMERLE, Sutton, Nebr. Filed May 19, 1920. Serial No. 382,616. 2 Claims. (Cl. 120—101.)

1. The combination with a pen staff having a reduced portion, of a pen holder therefor comprising a sleeve carried by the reduced portion, said sleeve being provided with an enlarged threaded portion and a reduced split portion, a second sleeve threaded on the enlarged threaded portion and having its inner periphery spaced from the outer periphery of the reduced portion of the first mentioned sleeve, a pen point limiting flange on the inner periphery of the outer sleeve intermediate its length and a pen point holding and engaging flange on the inner periphery of the outer sleeve and so positioned that it will surround the split end of the reduced portion of the inner sleeve when the outer sleeve is screwed inwardly on the threaded portion of the inner sleeve.



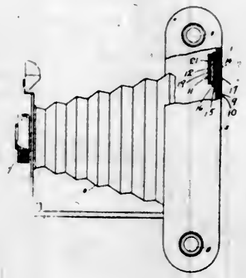
1,374,871. PHOTOSENSITIZING DYE OF THE ISOCYANIN TYPE. ELLIOT Q. ADAMS, Berkeley, Calif., and HERBERT L. HALLER, Cincinnati, Ohio. Filed May 28, 1920. Serial No. 385,061. 7 Claims. (Cl. 8—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. Dyes of the iso-cyanin type produced by the action of strong bases in alcohol solution upon the alkyl halids of lepidin.

1,374,872. PHOTOSENSITIZING DYE EFFECTIVE FOR INFRA-RED RADIATION. ELLIOT Q. ADAMS, Berkeley, Calif., and HERBERT L. HALLER, Cincinnati, Ohio. Filed July 17, 1920. Serial No. 397,114. 8 Claims. (Cl. 8—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

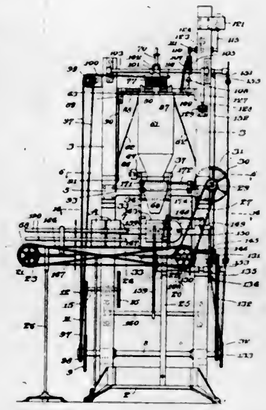
1. Dyes effective for infra-red photographic sensitization produced by the action of strong bases upon the higher alkyl halids of lepidin.

1,374,873. COPRA-COOKER. ARTURO BARRA, Manila, P. I. Filed Sept. 24, 1919. Serial No. 326,097. 3 Claims. (Cl. 87—6.)



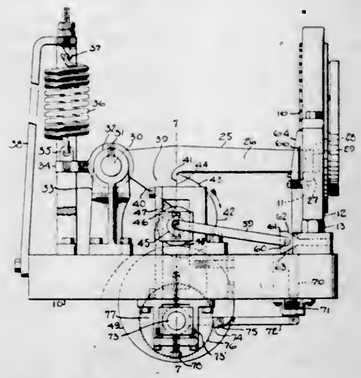
3. A cooker of the class described including a steam box, a plurality of cooking tubes in said box, the first tube affording an inlet for the material to be cooked, and the last tube affording an outlet, and fittings on the ends of the tubes outside of the closed ends of the box, said fittings except those at said inlet and outlet each presenting a member in communication with a cooking tube so that the fitting constitutes an extension of the tube, and adjacent fittings presenting opposed members detachably united to form tubular connections between the extensions alternately at opposite ends of the cooker for the passage of the material to successive tubes.

1,374,874. PROCESS AND APPARATUS FOR DRYING MATERIALS. EDWIN M. BASSLER, Milwaukee, Wis. Filed Mar. 24, 1916, Serial No. 86,368. Renewed June 16, 1919. Serial No. 304,725. 5 Claims. (Cl. 34—12.)



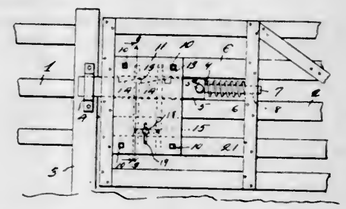
4. In a drying apparatus, the combination of a trunk or casing, a conveyer in said trunk or casing which extends lengthwise thereof and projects therefrom at its discharge end, means for closing the discharge end of said trunk or casing constructed and arranged to permit the passage of the conveyer and conveyed material, driving means for said conveyer, means to create a current of air lengthwise through said trunk or casing in the reverse direction to the direction of movement of said conveyer, partitions within said casing above and below said conveyer constructed and arranged to cause said current of air to pass successively through said conveyer, means whereby the air is initially drawn through the section of said conveyer at the discharge end of said trunk or casing which is outside thereof and which carries the hot dried product and thence forced into said trunk or casing adjacent to its discharge end, and means for heating said current of air before it passes into said trunk or casing, substantially as described.

1,374,875. SENSITIVE-MATERIAL-MARKING DEVICE. JOHN P. BETHKE, Milwaukee, Wis., assignor of one-half to Louis Schlesinger, Milwaukee, Wis. Filed May 10, 1915. Serial No. 27,031. 27 Claims. (Cl. 95—1.1)



1. The combination with a camera, of a sensitive material marking device therefor, comprising a medium positioned adjacent to the sensitive material in the camera and having a writing surface and a luminous portion, said writing surface being interposed between the sensitive material and the luminous portion, and means for controlling the exposure of the sensitive material to the action of rays emanating from the luminous portion of said medium.

1,374,876. AUTOMATIC WEIGHING-MACHINE. CHARLES L. BOND, Philadelphia, Pa. Filed Jan. 28, 1919. Serial No. 273,622. 22 Claims. (Cl. 249—59.)



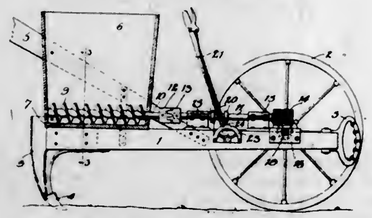
1. The combination of a weighing device adapted to receive a receptacle, said device having a part adapted to be moved by a predetermined weight of material introduced to a receptacle thereon, a conveyer adapted to support and advance a receptacle to a position adjacent to said device, means to actuate the conveyer, a stop to prevent further movement of the receptacle by the conveyer when the receptacle reaches said position, normally idle means to move said receptacle from said position to said device, and means controlled by said part when moved to automatically actuate said normally idle means.

1,374,877. AUTOMATIC PEENING APPARATUS FOR PISTON-RINGS. ARNOLD G. CARLSON, Paterson, N. J. Filed Aug. 14, 1919. Serial No. 317,566. 8 Claims. (Cl. 78—26.)

1. In piston ring peening apparatus, a hammer, a shaft provided with means for moving said hammer, and means operated from said shaft for producing movement of the shaft toward and away from said hammer.

1,374,878. SELF-LATCHING GATE. THOMAS CHILDERS, Zeigler, Ill. Filed Sept. 8, 1920. Serial No. 408,968. 1 Claim. (Cl. 292—150.)

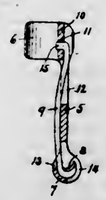
A gate latch comprising a keeper slidably mounted between horizontal rails of a gate and between plates secured to said rails, a spring for normally forcing said keeper outwardly, vertical slidable bolts slidable in guide slots of the plate, lugs carried by the upper ends of said bolts adapted to engage notches in the upper sides of the slidable keeper, inclined surfaces adjacent the keeper notches inclining forwardly and downwardly, said inclined surfaces forming means for guiding the lugs of the vertically slidable bolt into their respective notches in the keeper when said keeper is forced forwardly by the coiled spring and forming means for guiding said lugs into engagement with limiting stops when the keeper is moved rearwardly.



1,374,879. CONCENTRATED COCOANUT-MILK AND PROCESS OF MAKING SAME. WILLIAM STANLEY COOKSON, Taiping, Perak, Straits Settlements, assignor to Lulu Mitchell Smith, Maunawai, Honolulu, Hawaiian Islands. Filed Feb. 25, 1919. Serial No. 279,166. 4 Claims. (Cl. 99—11.)

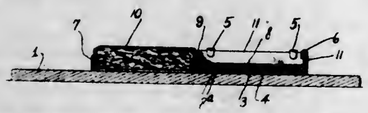
1. The herein described food product, substantially permanent under normal conditions which consists of a concentrated cocoanut milk emulsion which is substantially free from rancidity and which contains substantially 70% pure cocoanut oil, 12% proteid or albuminous matter, 12% sugar and 6% water, the whole having a consistency approximating that of starch paste and being capable of being converted into a thinner emulsion by adding water and stirring.

1,374,880. COCOANUT FOOD PRODUCT. WILLIAM STANLEY COOKSON, Taiping, Perak, Straits Settlements, assignor to Lulu Mitchell Smith, Maunawai, Honolulu, Hawaiian Islands. Filed Feb. 25, 1919. Serial No. 279,168. 3 Claims. (Cl. 99—11.)



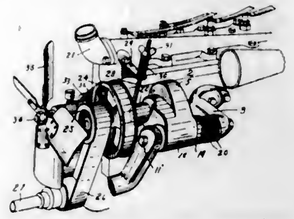
1. The herein described roasted food product which consists of comminuted cocoanut endosperm containing from 15% to 25% of pure neutral oil or fat substantially free from rancidity, the cell walls of the tissue of the endosperm being weak and tender.

1,374,881. FERTILIZER-DEPOSITOR. JAMES P. COPELAND, Vinemont, Ala., assignor of one-half to Walter L. Guthrie, Cullman, Ala. Filed Dec. 8, 1919. Serial No. 343,158. 2 Claims. (Cl. 275—2.)



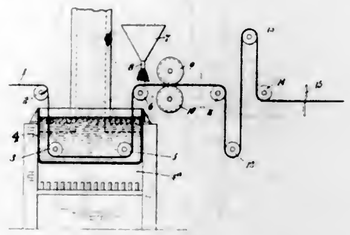
1. In a furrowing depositor, a beam, a depositing hopper on said beam, means within said hopper for feeding material toward its discharge orifice, said beam having a transverse gain in its upper surface, bearing plates on the beam closing the ends of the gain, an axle journaled in the bearing plates, a ground wheel secured to the axle, a gear on the axle operating within the pocket formed by the gain and bearing plates, and transmission mechanism for the hopper contained feeding means operated by the gear.

1,374,882. CLIP. GEORGE V. CURTIS, West Springfield, Mass. Filed Sept. 10, 1920. Serial No. 409,360. 6 Claims. (Cl. 120—84.)



1. As an improved article of manufacture, a clip, of the class described above, comprising a member which is adapted to be attached to an implement and has a part to bear on material interposed between said implement and said part, and is provided with a fixed envelop opener having a crescent-shaped cutting part with the point of such part directed upwardly.

1,374,883. STAMP-INKING DEVICE. JULES A. FROST, Alafia, Fla. Filed Jan. 20, 1920. Serial No. 352,838. 2 Claims. (Cl. 91—54.5.)

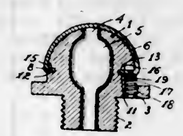


2. A stamp-inking device comprising a base, holder means extending upwardly therefrom supporting means on the base within said holder means, and an ink-pad box including a body, a pad therein, and a flanged lid hinged to the body; said flanged lid being superimposed in inverted position upon said supporting means and within the holding means, so that its flange is engaged by said holding means.

1,374,884. CIRCULATING-PUMP. CARL A. GRASSWICK, Minneapolis, Minn., assignor, by direct and mesne assignments, to Wood-Craft Company, St. Paul, Minn., a Corporation of South Dakota. Filed Aug. 7, 1918. Serial No. 248,740. 12 Claims. (Cl. 123—175.)

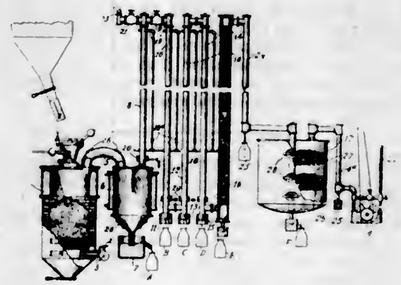
1. The combination, with a cylindrical valve, having a transverse partition therein and ports in its walls upon opposite sides of said partition having means for connection with a cylinder jacket and with a radiator, of a pump cylinder having chambers therein and a wall between said chambers provided with a communicating port, said cylinder mounted for rotary movement on said valve and having ports in the walls of its chambers communicating respectively with the ports of said valve, and a revolving piston mounted in one of said cylinder chambers for establishing a circulation of fluid through said chambers and through said valve, a driving belt for said piston, and yielding means for supporting said pump and maintaining the desired degree of tension on said belt.

1,374,885. PROCESS OF MAKING FIREPROOFING MATERIAL AND HEAT AND COLD RETAINING COVERINGS AND PRODUCT THEREOF. CHESTER S. HATHAWAY, Quincy, Mass., assignor to Joseph A. Locke, Boston, Mass. Filed Mar. 24, 1920. Serial No. 368,282. 24 Claims. (Cl. 91—68.)



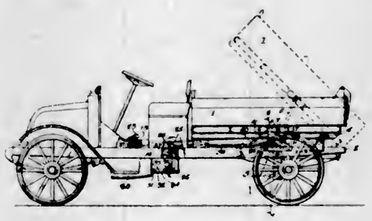
1. The process which comprises impregnating a fabric with an impregnating composition containing a tar and an hydraulic cement.

1,374,886. OIL-HOLE CLOSURE. ALBERT D. RAY, Cleveland, Ohio. Filed Sept. 12, 1919. Serial No. 323,366. 5 Claims. (Cl. 184—91.)



5. In an oil-hole closure, the combination of a spherical body having an opening therein, a cover, the cover consisting of sheet material and conforming to the spherical body for sliding thereover, one side of the cover terminating in an inwardly extending pivot, the other side of the cover terminating in an inwardly extending plate and

pivot, said body being provided with openings for receiving the first mentioned pivot and said plate and pivot, a coiled spring exerting pressure against said plate whereby the cover is retained in closed position over the opening in the

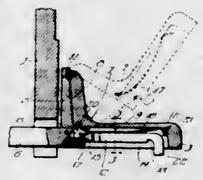


body, and a boss projecting from said plate within the coiled spring for preventing slipping of that end of the spring when the cover is oscillated, substantially as described.

1,374,887. WOOD DISTILLATION. EDMUND M. SAWTELLE, Englewood, N. J., assignor to Julius P. Carter, Greenwich, Conn., and Robert L. Squibb, Lawrenceburg, Ind. Filed Sept. 10, 1918. Serial No. 253,367. 6 Claims. (Cl. 203—6.)

1. The process of destructively distilling wood which consists in maintaining a descending progressively replenished mass of sub-divided wood and a condition of limited, regulated combustion in the lower part of said mass in the absence of introduced steam, withdrawing the combinustion and distilation effluents upwardly through said mass, and conducting the whole of said effluents through a condensing system and therein separating the pyroligneous liquor therefrom.

1,374,888. HYDRO-HOIST. FRANK B. SMIGHT, Milwaukee, Wis., assignor, by mesne assignments, to Hydro-Hoist Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 11, 1917. Serial No. 185,722. Renewed Feb. 12, 1919. Serial No. 276,602. 20 Claims. (Cl. 298—22.)

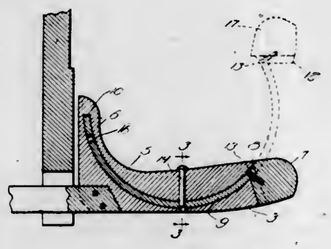


1. In a device of the described class, the combination with a movable vehicle and a single box pivotally connected near its rear end to said vehicle, a pair of cylinders pivotally connected near their upper ends to the frame of said vehicle, a pair of pistons located in said cylinders, a pair of hollow piston rods respectively connected at one end with said pistons and extending therefrom through the upper ends of said cylinders and pivotally connected with said single box, a transmission, a pump, and ducts leading from said pump to said cylinders both above and below said pistons, and means for connecting said motor and pump, whereby said pistons are moved in said cylinders, and whereby said box is adapted to be raised at its front end and its contents discharged.

1,374,889. PROCESS OF DESTRUCTIVELY DECOMPOSING LIQUIDS OF HIGH ORGANIC CONTENT AND PRODUCT OF SUCH PROCESS. ALFRED H. WHITE, Ann Arbor, Mich. Filed July 24, 1919. Serial No. 312,939. 8 Claims. (Cl. 252.)

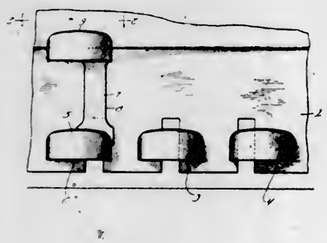
1. The cyclic process of decomposing an aqueous liquid containing a large amount of organic matter and capable of yielding valuable carbon compounds upon destructive distillation, which consists in intimately mixing such aqueous liquid in a concentrated condition with sufficient quick-lime to autogeneously heat up the mass to a temperature at which destructive distillation occurs, then distilling off the volatile carbon compounds while supplying at least the major portion of the heat required for such distillation autogenously from the reaction of the said mixture whereby the non-volatile residue is obtained separately from the volatile constituent, and then calcining the calcium compounds contained in said residue at a sufficient temperature to substantially convert the same into quick-lime for reuse in said process.

1,374,890. PEDAL DEVICE FOR PIANOS AND OTHER PURPOSES. BENJAMIN H. JEFFERSON and WALTER I. KIRK, Chicago, Ill., assignors to Lyon & Healy, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1919. Serial No. 297,379. 7 Claims. (Cl. 74—81.)



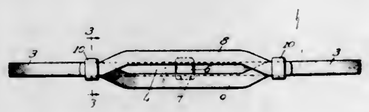
3. A pedal device in the form of a piano pedal, the rear end of which extends upwardly and is pivotally mounted at its upper end so as to permit the front end portion of said pedal to be raised and lowered.

1,374,891. PEDAL DEVICE FOR PIANOS AND OTHER PURPOSES. BENJAMIN H. JEFFERSON and WALTER I. KIRK, Chicago, Ill., assignors to Lyon & Healy, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1919. Serial No. 297,380. 2 Claims. (Cl. 74—81.)



1. A pedal device comprising a pedal member having its toe portion made separable from the body portion of said member, a rod or bar connected with said toe portion and serving to support the same in an elevated position, said rod or bar being arranged to slide in a groove formed in

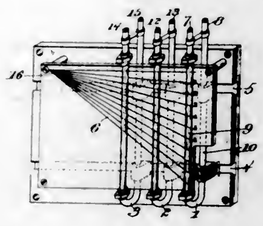
the body portion of said member and to permit said toe portion to be separated from the latter and adjusted to



an elevated position, and means for locking said rod or bar in adjusted position, said rod or bar being circular in form.

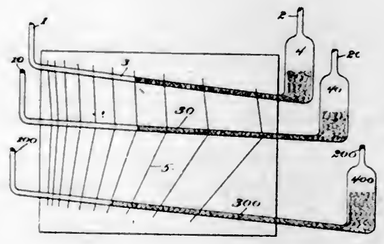
1,374,892. PEDAL DEVICE. BENJAMIN H. JEFFERSON, Chicago, Ill., assignor to Lyon & Healy, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1919. Serial No. 344,912. 2 Claims. (Cl. 84—230.)

2. A pedal device comprising a pedal proper and a supplemental member providing an elevated pressing surface, said pedal proper having its shank provided with longitudinally extending grooves and said supplemental member being provided with clasping members adapted to partially surround said shank and having projections adapted to fit and slide in said grooves, said shank being provided with cut-away portions in the sides of said grooves so as to permit the supplemental member to be separated from said pedal proper.



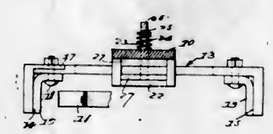
1,374,893. BUMPER. WILLIAM G. PANCOAST and WILLIAM J. GROTENHUIS, Chicago, Ill., assignors, by mesne assignments, to American Chain Company, Inc., a Corporation of New York. Filed June 13, 1919. Serial No. 303,919. 22 Claims. (Cl. 293—55.)

1. A bar bumper comprising a flexible impact member provided with lateral end portions of substantially the vertical width of the bar and having near the middle of the bar a portion of substantially increased impact area.



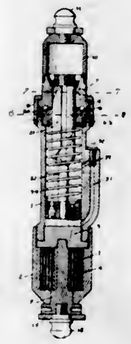
REISSUES.

15,079. PRESSURE-RELATION GAGE. ERVIN G. BAILEY, Newton Highlands, Mass., assignor to Bailey Meter Company, a Corporation of Massachusetts. Filed Mar. 3, 1921. Serial No. 450,032. Original application filed Mar. 21, 1911, Serial No. 616,020. Renewed Aug. 24, 1917, Serial No. 188,067. Original No. 1,257,963, dated Mar. 5, 1918. 5 Claims. (Cl. 73—31.)



1. An instrument comprising two or more pressure gages provided with indicators, and means correlating said gages so that said indicators all indicate the same reading when a desired relation other than the ratio of one to one exists between the various pressures, regardless of the actual intensities of the pressures.

15,080. METHOD OF OBTAINING A READY COMPARISON OF FACTORS IN A POWER PRODUCING OR USING APPARATUS. ERVIN G. BAILEY, Newton Highlands, Mass., assignor to Bailey Meter Company, a Corporation of Massachusetts. Filed Mar. 3, 1921. Serial No. 450,033. Original application filed Feb. 24, 1913, Serial No. 750,069. Renewed Aug. 24, 1917, Serial No. 188,068. Original No. 1,257,964, dated Mar. 5, 1918. 5 Claims. (Cl. 73—31.)



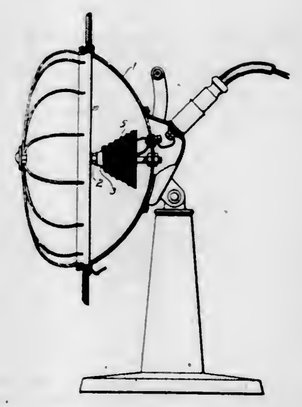
1. The method of obtaining a ready comparison of two or more differently varying active factors in a power producing or using apparatus with the view of adjusting one or more of said factors in order to secure the condition of desired efficiency at all rates of output, which consists in testing said apparatus to make an empirical determination of the relative value of said factors throughout the range of output of the apparatus at the desired efficiency, causing each of said factors to act upon a corresponding movable mechanical element, and associating said elements upon which the factors act and a common standard of comparison according to said empirical determination to make an observable presentation of any departure in the relation of the said factors from that corresponding to the condition of desired efficiency at all rates of output.

15,081. LOOM-CHECK. JOSEPH CARTIER and CHARLES DELCOURT, Fall River, Mass.; said Delcourt assignor, by mesne assignments, of all his right to Joseph E Rochette, Norwich, Conn. Filed Feb. 28, 1921. Serial No. 450,031. Original No. 1,364,710, dated Jan. 4, 1921, Serial No. 327,204, filed Sept. 29, 1919. 3 Claims. (Cl. 139—22.)

3. A loom check comprising a bracket provided with complemental clamping members of which one is formed as a part of the bracket, a slide carried between the clamping elements and formed with upturned ears for disposition on opposite sides of the picker stick of a loom, the inner surfaces of the two ears constituting abutment shoulders for the picker stick and one of said ears being removably secured to the body portion of the slide by a bolt engaging a lap joint, and means to frictionally resist the movement of the slide between the clamping members.

15,082. CHECK-HINGE. EMILE FRANCKAERTS, San Francisco, Calif. Filed Nov. 22, 1919. Serial No. 339,962. Original No. 1,281,774, dated Oct. 15, 1918, Serial No. 187,904, filed Aug. 23, 1917. 4 Claims. (Cl. 16—88.)

1. In a hinge, a casing having a chamber for liquid, a piston movable in the casing and having a check valve for permitting the liquid to flow freely in one direction, said casing having a by-pass for the liquid and means outside the casing for controlling the by-pass, a spring acting normally to move the piston in the said one direction, a rotatable element in connection with the hinge at one end thereof and connected to the piston to move the piston against the resistance of the spring, said piston having a relief valve, spring controlled to yield at a predetermined pressure when the check valve is closed, a rotatable element in connection with the hinge at the other end, and a closing spring in the casing and connected with the casing and the last named rotatable element.



15,083. [WITHDRAWN.]

15,084. NOZZLE CONTROL FOR TURBINES. WILLIAM J. IRWIN, Wilkinsburg, Pa. Filed Jan. 16, 1920. Serial No. 351,982. Original No. 1,254,599, dated Jan. 22, 1918, Serial No. 857,031, filed Aug. 17, 1914. 16 Claims. (Cl. 137—158.)

16. In a turbine a plurality of nozzles and valves for each of said nozzles, at least one of said valves being elongated and having a variable cross sectional area, and a carrier common to all of said valves.

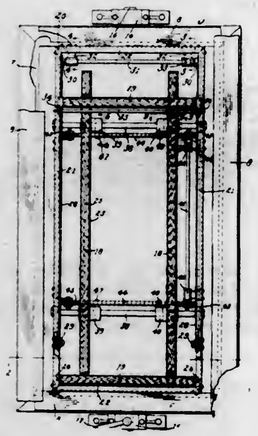
15,085. ELECTRIC HEATER. BERTRAND B. KAHN, Cincinnati, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio. Filed June 21, 1920. Serial No. 390,645. Original No. 1,304,687, dated May 27, 1919, Serial No. 246,663, filed July 25, 1918. 12 Claims. (Cl. 219—34.)

1. An electric heater comprising, a concave reflector, a frusto-conical insulator fixed at the center of the reflector and presenting its smaller end forwardly and provided on its periphery with a helical groove with a low separating land, and a helical coil of resistance wire coiled in such groove, the helical coil having a diameter greater than that of the groove in which it is seated, combined substantially as set forth.

15,086. CURTAIN STRETCHER AND DRIER. ROBERT VALENTINE LYON, Buffalo, N. Y., assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Jan. 5, 1920. Serial No. 349,664. Original No. 1,285,274, dated Nov. 19, 1918, Serial No. 178,183, filed July 2, 1917. 14 Claims. (Cl. 45—24.)

1. Apparatus of the character described, comprising a stationary casing having a top opening, and an inner frame mounted in said casing and provided with a series

of circumferentially spaced walls, each of said walls carrying curtain stretching means, said frame being rota-



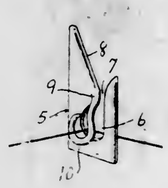


table in said casing to expose any of said curtain stretching means above said opening.

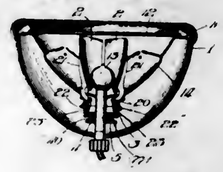
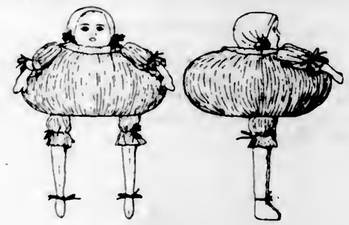


15,087. LOOM-SHUTTLE. NAPOLEON SPENARD, Biddeford, Me., assignor of one-half to Ernest L. Morrill, Biddeford, Me. Filed Oct. 11, 1918. Serial No. 257,797. Original No. 1,242,383, dated Oct. 9, 1917, Serial No. 150,782, filed Feb. 24, 1917. 5 Claims. (Cl. 139—46.)

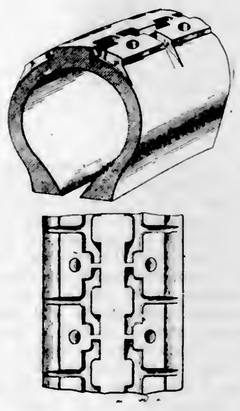
5. In a shuttle having a thread receiving channel, a thread guide at one end of the channel comprising a metallic member extending transversely from one side wall of the channel downward and toward the other side wall, the metallic member being formed to provide a shank circular in cross section, the lower portion of the shank being bent toward the first named side wall and beneath the shank and being formed to provide a single helical coil extending toward the exit end of the channel, the axis of the coil being approximately central to the longitudinal axis of the channel, the extremity of the coil terminating short of a point in longitudinal alinement with the beginning of the coil, the terminal portion of the coil gradually decreasing in diameter to its extremity.

15,088. CONTROLLABLE HEADLIGHT-SCREEN. WILLIAM A. SCHROEDER, Seattle, Wash. Filed Jan. 5, 1920. Serial No. 349,610. Original No. 1,305,498, dated June 3, 1919, Serial No. 209,030, filed Dec. 27, 1917. 10 Claims. (Cl. 240—45.)



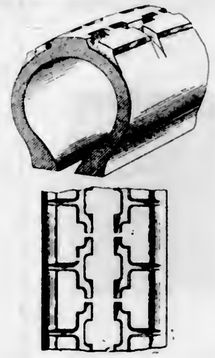
6. In a headlight, the combination of a source of illumination, and a pair of vertically pivoted screens adjustably mounted with respect to the source of illumination, said screens being of dished or concave configuration adapted when in open position to project rays of light forwardly, and adapted when closed to occupy positions

closely contiguous to the source of illumination, and to reflect rays of light laterally, substantially as described.



DESIGNS.

57,489. DOLL. HUGO BAUM, New York, N. Y. Filed Jan. 6, 1921. Serial No. 435,527. Term of patent 3½ years.

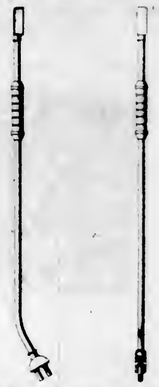


The ornamental design for a doll, as shown.

57,490. TIRE-CASING. RUSSELL DEAN BELDEN, Marion, Ohio. Filed Aug. 20, 1920. Serial No. 404,924. Term of patent 3½ years.

The ornamental design for a tire casing, as shown.

57,491. TIRE-CASING. RUSSELL DEAN BELDEN, Marion, Ohio. Filed Sept. 3, 1920. Serial No. 408,030. Term of patent 3½ years.



The ornamental design for a tire casing, as shown.

57,492. WOVEN FABRIC OR SIMILAR ARTICLE. LOUISE H. BREWSTER, Lexington, Mass. Filed Nov. 23, 1920. Serial No. 426,099. Term of patent 7 years.

The ornamental design for a woven fabric or similar article, as shown.

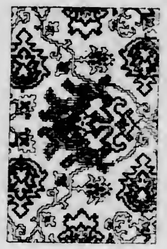
57,493. PYROMETER. HENRY B. BROWN, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Feb. 14, 1921. Serial No. 445,010. Term of patent 14 years.

The ornamental design for a pyrometer, as shown.

57,494. TEXTILE FABRIC. JAMES H. BUNTING, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1920. Serial No. 429,007. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

57,495. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,817. Term of patent 3½ years.

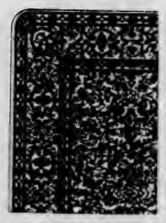


The ornamental design for a floor cloth as shown.

57,496. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,818. Term of patent 3½ years.

The ornamental design for a floor cloth as shown.

57,497. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,819. Term of patent 3½ years.



The ornamental design for a floor cloth as shown.

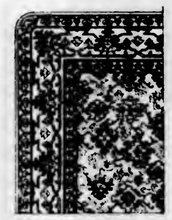
57,498. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Seral No. 429,820. Term of patent 3½ years.

The ornamental design for a floor cloth as shown.

57,499. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10. 1920. Serial No. 429,821. Term of patent 3½ years.

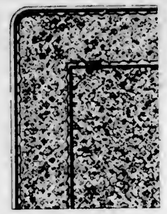
The ornamental design for a floor cloth as shown.

57,500. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,822. Term of patent 3½ years.



The ornamental design for a floor cloth as shown.

57,501. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,823. Term of patent 3½ years.

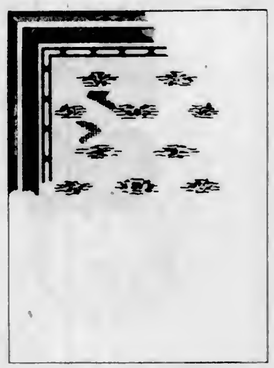


The ornamental design for a floor cloth as shown.

57,502. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,824. Term of patent 3½ years.

The ornamental design for a floor cloth as shown.

57,503. FLOOR-CLOTH. FRANK CARTWRIGHT, Trenton, N. J., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,825. Term of patent 3½ years.



The ornamental design for a floor cloth as shown.

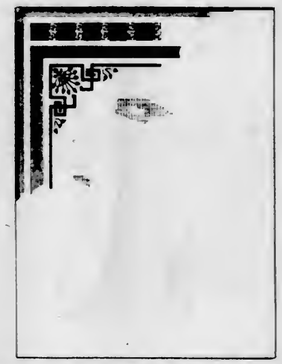
57,504. GRASS MAT. WILLARD T. CASE, New Brunswick, N. J., assignor to Deltox Grass Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Dec. 6, 1920. Serial No. 428,838. Term of patent 7 years.

The ornamental design for a grass mat, as shown.

57,505. GRASS MAT. WILLARD T. CASE, New Brunswick, N. J., assignor to Deltox Grass Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Dec. 6, 1920. Serial No. 428,839. Term of patent 7 years.

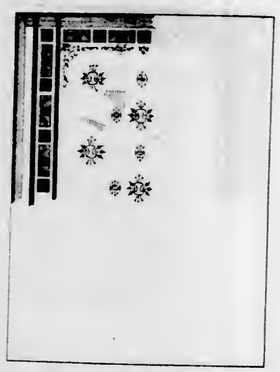
The ornamental design for a grass mat, as shown.

57,506. GRASS MAT. WILLARD T. CASE, New Brunswick, N. J., assignor to Deltox Grass Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Dec. 6, 1920. Serial No. 428,840. Term of patent 7 years.



The ornamental design for a grass mat, as shown.

57,507. GRASS MAT. WILLARD T. CASE, New Brunswick, N. J., assignor to Deltox Grass Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Dec. 6, 1920. Serial No. 428,841. Term of patent 7 years.



The ornamental design for a grass mat, as shown.

57,508. GRASS MAT. WILLARD T. CASE, New Brunswick, N. J., assignor to Deltox Grass Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Dec. 6, 1920. Serial No. 428,842. Term of patent 7 years.

Decided January 22, 1920.

1. REISSUE—DELAY OF MORE THAN THREE YEARS IN FILING APPLICATION—EXCUSE INSUFFICIENT.

Delay of more than three years in filing an application for reissue containing broadened claims may not be excused on the ground that applicant was ignorant of patent matters, particularly the meaning of claims; that an attorney conducted the proceedings to obtain the patent who unduly restricted the claims; that applicant lived in a country remote from any patent lawyer, and that the restricted scope of the claims was not discovered until parties who became interested therein directed attention to the defect, when steps to obtain a reissue were promptly taken.

2. SAME—DELAY IN FILING APPLICATION—RULE NOT RELATED TO INTERVENING RIGHTS.

Applicability of the rule of laches in the filing of an application for reissue is not dependent upon whether there are intervening rights. (*Mahn* v. *Harwood*, 112 U. S., 354.)

3. SAME—INADVERTENCE, ACCIDENT, OR MISTAKE—EFFECT OF CANCELING CLAIMS FROM ORIGINAL APPLICATION.

The fact that claims of substantially the same scope as those sought in a reissue were canceled from the original application after rejection negatives the assertion of inadvertence, accident, or mistake in failing to secure them in the original patent.

[Decision affirmed by the Court of Appeals of the District of Columbia, 285 O. G., 393.]

APPEAL from Examiners-in-Chief.

WIND-SHIELD FOR AUTOMOBILE-RADIATORS.

Messrs. Foster, Freeman, Watson & Coit for the applicant.

NEWTON, *Commissioner:*

This is an appeal from a decision of the Examiners-in-Chief affirming the action of the Primary Examiner in his final rejection of claims 1 to 9, of which 1, 5, and 7 are examples:

1. In the water cooling system of an automobile engine, the combination with a radiator, of means controlled by the temperature of the cooling water for regulating the flow of air through the radiator.

5. In the water cooling system of an automobile engine, the combination with a radiator, of means in front of the radiator to regulate the flow of air through the radiator and a device automatically regulated in its movements by the temperature of the cooling water for operating said means to increase and decrease the flow of air as the temperature rises and falls, respectively.

7. In a wind-shield for automobile radiators, the combination of a frame and means for attaching the frame to the automobile in front of the radiator, of a shutter mounted in the frame and adapted to be opened and closed to regulate the flow of air through the radiator, and automatic means controlled by the temperature of the cooling water for opening the shutter when the temperature of the water rises.

The invention covered by the appealed claims is an internal-combustion-engine-radiator shutter and means for opening and closing the shutter operated by the temperature of the water in the radiator, so as to regulate the amount of air passing through the radiator-coils.

This is a reissue application and was filed more than three years after the issuance of the patent, and the grounds of rejection of the appealed claims have been reduced to (1) insufficient excuse for seeking a reissue for broadened claims in view of the long delay; (2) that claims 1 to 7 are broader than original claim 3, which was deliberately canceled after a rejection by the Office.

Applicant in effect gives as his excuse that he was ignorant as to what the claims allowed in the original patent covered, and since he lived in North Dakota, hundreds of miles from any patent attorney, and had only previously taken out one patent it would be unreasonable to hold him responsible for the mistake of claiming his invention too specifically. Applicant also contends that the patented claims include both automatic and manual means for regulating the shutter, and the patented claims therefore are invalid, since there is no real combination between these two means, as one is operated independently of the other. Indeed, the manually-operated means, since it would have to be positively held in different positions, could not be operative simultaneously with the automatic means.

While the circumstances of this case are somewhat different from those of *in re Otto* (265 O. G., 309; 49 App. D. C., 89) and *in re Schneider* (253 O. G., 513; affirmed by the Court of Appeals of the District of Columbia, 271 O. G., 362; 49 App. D. C., 204,) the controlling principles governing them are the same. In both the Schneider and Otto cases the excuse for the delay was much the same as in the present case—that is to say, the inventors employed attorneys to prosecute their applications and relied upon the attorneys to claim the inventions as broadly as the applicants were entitled to claim, and the inventors being unskilled in patent matters, particularly as to the meaning of the

claims, did not realize the limited scope of the claims of the patents until some one became interested in them and directed the applicants' attention thereto, when the reissue applications were promptly filed.

Applicant has emphasized at length in his brief that he became active as soon as his error was discovered; but that was also true in the Otto and Schneider cases. Furthermore, it is noted that applicant's device is quite a simple one, and the error his attorney made, if, indeed, it was an error, in including both the manual and the automatic means for operating the shutter was one easily discovered. Hence if applicant's ignorance of patent law can be accepted as an excuse for his delay it would open the door to practically every applicant to disregard the two years' time allowed to discover his mistake without holding him to the strict accountability required in *Topliff* v. *Topliff*, (145 U. S., 156; 1892, C. D., 402.)

Applicant also contends in his brief that—

> the question of intervening rights is after all the only material question involved in the matter of diligence in asking for a reissue. If there are no *bona fide* intervening rights, no one will be harmed by the grant of the reissue.

This contention, however, does not square up with the decisions. In the celebrated case of *Mahn* v. *Harwood*, (112 U. S., 354,) where the delay had been three years and ten months after the issue of the original patent, the record did not show or suggest any intervening rights, and yet the reissue was held invalid entirely on the ground of laches in filing the application for reissue to broaden the claims.

In regard to the second ground of rejection—viz., that applicant deliberately canceled original claim 3 and claim 1, presented February 21, 1913, of the patent application after rejection by the Examiner—it also appears that the Examiners-in-Chief were correct in their interpretation of the practice.

The reissue statute only provides for reissue when the original patent is inoperative or invalid and where—

> the error has arisen by inadvertence, accident or mistake.

There was no such inadvertence, accident, or mistake in deliberately canceling a claim as would justify a reissue covering substantially the same subject-matter. (See *Leggett* v. *Avery*, 101 U. S., 256–259; *in re Lacroix*, 133 O. G., 2181; 30 App. D. C., 299; *National Casket Co.* v. *Stoltz*, 197 Fed. Rep., 940; *Robert* v. *Krementz*, 232 Fed. Rep., 876.) It is true the canceled claims were not precisely the same in scope as claims 1 to 7, but they were for substantially the same invention, and having deliberately canceled claims to this subject-matter applicant is not in a position to now assert that there has been any inadvertence, accident, or mistake such as will support a reissue.

There appears to be no error in the decision of the Examiners-in-Chief, and it must be accordingly affirmed.

EX PARTE WEBER, SR.

Decided April 21, 1920.

PATENTS—APPLICATION ABANDONED—"UNAVOIDABLE" DELAY—EFFECT OF RULING OF APPELLATE COURT REVERSING PRIOR PRACTICE.

Where the claims of an application copied from a patent are rejected on the ground of estoppel by reason of delay in copying them for more than one year after the date of the patent and the application, standing under such rejection, is allowed to become abandoned, applicant is not entitled to revive the same after a decision of the Supreme Court in another case holding that the basis of rejection was not warranted, the delay in taking action not being "unavoidable" under section 4894, Revised Statutes.

ON PETITION.

Mr. Frank C. Curtis for the applicant.

WHITEHEAD, *First Assistant Commissioner:*

This is a petition for the revival of the above-entitled application, the last Office action being dated April 20, 1918.

It appears that this rejection was made under the authority of *Rowntree* v. *Sloan* (226 O. G., 744; 45 App. D. C., 207) and *Wintroath* v. *Chapman and Chapman*, (248 O. G., 1004; 47 App. D. C., 428,) it being held that applicant did not make during the prosecution of the application on which his patent now sought to be reissued was granted a claim commensurate in scope with the claims which it is sought to copy from the Wirt *et al.* patent, No. 1,043,380, issued April 5, 1912, within one year from the date of that patent.

In support of the petition it is admitted that at the time the final rejection was made it was in accordance with the practice announced by the Court of Appeals of the District of Columbia in the case of *Wintroath* v. *Chapman and Chapman*, *supra*, but it is pointed out that on March 1, 1920, the United States Supreme Court handed down its decision in the *Wintroath* v. *Chapman and Chapman* case—

> reversing said Court of Appeals of the District of Columbia upon the very point here involved.

It is argued that the applicant's hands were tied by the decision of the court of appeals until it was reversed by the United States Supreme Court and that he could not properly appeal and charge that the Examiner was in error, because the Examiner was right under the law as it then stood, and there was nothing to do but to await the decision of the United States Supreme Court.

Section 4894, Revised Statutes, provides that an application is abandoned where no action is taken within one year from the date of an Office action unless the delay was unavoidable. Obviously the fact that the Office would follow the decision of the court of appeals did not prevent the applicant from taking the appeal. Applicant could himself have carried the case to the court of appeals, and if it were decided against him could have asked the Supreme Court for a writ of certiorari. It does not appear that he knew that a writ of certiorari had been granted in the *Wintroath* v. *Chapman and Chapman* case or that he failed to appeal for any reason but because he thought that he could not

succeed in the appeal under the then ruling of the court of appeals.

If this case can be reopened and the interference declared, it would seem that every case decided on the authority of *Wintroath* v. *Chapman and Chapman* case between the date of the court of appeal's decision and the date of the Supreme Court decision could be reopened, whether the decision had been an *ex parte* rejection or decision on priority in an interference. If applicant's position is right, it would further seem that he would be entitled to revive this application, even though the ruling of the Supreme Court had been made in another case, which was not taken to that Court until after his application became abandoned. Obviously no such holding could be made and it is suggested here merely as an illustration of the length to which the relief asked for by applicant would necessarily have to be carried in other cases. As noted above, the applicant had the same right to request relief from the decision of the court of appeals as had the parties to that case themselves.

It must be held, therefore, that the delay was not unavoidable.

The petition is denied.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

IN RE HOILAND.

Decided February 7, 1921.

REISSUE—DELAY IN FILING APPLICATION—DISCRETIONARY AUTHORITY OF COMMISSIONER.

Determination of the question whether the circumstances are such as to excuse delay in filing an application for reissue seeking to broaden claims is one resting largely within the discretion of the Commissioner of Patents.

Mr. James A. Watson for Hoiland.

Mr. T. A. Hostetler for the Commissioner of Patents.

MEMORANDUM OPINION BY MR. JUSTICE VAN ORSDEL.

This appeal is from the refusal of the Commissioner of patents to grant a reissue application filed more than three years after the issuance of the patent. The invention, as described by the Commissioner, relates to—

> an internal combustion engine radiator shutter and means for opening and closing the shutter operated by the temperature of the water in the radiator, so as to regulate the amount of air passing through the radiator coils.

The claims were denied upon the settled rule that reissue claims which seek to broaden the claims of the original patent will not be allowed except for unusual circumstances which excuse delay. (*In re Starkey*, 21 App. D. C., 519.) The determination of this question is one largely within the discretion of the Commissioner, and will not be disturbed unless manifest error has been committed.

A careful examination of the record fails to disclose any extenuating circumstances which would justify a departure from the rule.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

KIRBY *v.* REPLOGLE.

Decided January 5, 1921.

PATENTS—INTERFERENCE—SENIOR PARTY AWARDED PRIORITY ON TWO COUNTS ON WHICH INTERFERENCE WAS DISSOLVED.

Where the Commissioner of Patents awarded priority of invention to Replogle as to two counts of the interference, but dissolved it as to other counts, holding two of said counts not patentable over the issue of another interference to which Replogle was a party and in which priority of invention was decided against him, *Held* that where both interferences were appealed and Replogle was successful in both cases he was entitled to an award of priority upon said two counts, as well as upon the others.

Mr. H. E. Smith and *Mr. G. E. Tew* for Kirby.

Mr. D. B. Replogle pro se.

VAN ORSDEL, *J.:*

This is a companion case to *Replogle* v. *Noguchi*, No. 1,327, decided this day. The cases were heard together. It is unnecessary to set out the counts of the issue, inasmuch as, with the exception of one point hereafter considered, we approve the disposition of the case made by the Commissioner of Patents. The issue is in six counts. The Commissioner awarded counts 2 and 3 to Replogle, and dissolved the interference as to counts 1, 4, 5, and 6. The Commissioner, however, in his opinion states that—

> counts 5 and 6 are clearly unpatentable over Noguchi and should never have been included in this interference. Kirby has been defeated in an interference with Noguchi and of course cannot be granted these claims, and unless Replogle wins in the *Replogle* v. *Noguchi* interference, he cannot be allowed these claims. This interference therefore is dissolved as to counts 1, 4, 5 and 6.

Inasmuch as we have held in the former case that Replogle is entitled to priority over Noguchi, it follows that he should also be awarded counts 5 and 6.

The decision is affirmed as to counts 1, 2, 3 and 4, and reversed as to counts 5 and 6.

Affirmed as to counts 1, 2, 3 and 4, and reversed as to counts 5 and 6.

Court of Appeals of the District of Columbia.

SNELLING *v.* WHITEHEAD, COMMISSIONER OF PATENTS.

Submitted December 7, 1920; decided January 3, 1921.

[269 Fed. Rep., 712.]

1. PATENTS—CLAIM OF ABANDONMENT CAN BE ADJUDICATED IN INTERFERENCE PROCEEDING.

While the question of patentability will not be considered by the court of appeals in an interference appeal, the question of abandonment by one applicant is always available as affecting his right to priority.

2. INJUNCTION—CONDUCT OF INTERFERENCE PROCEEDING BY COMMISSIONER OF PATENTS CANNOT BE CONTROLLED.

Under Revised Statutes, section 4904, (Comp. St., sec. 9449,) providing for the declaration of an interference by the Commisioner of Patents, and the other statutes and rules having the force of statute, prescribing the procedure on interference, an injunction to restrain the Commissioner of Patents from further proceeding with an interference and to require the striking of certain orders made therein would control actions of an executive officer in matters committed by law to his discretion, and injunction will not issue for that purpose.

3. INJUNCTION—WILL NOT ISSUE WHERE THERE IS ADEQUATE REMEDY BY APPEAL IN INTERFERENCE PROCEEDING.

An injunction to control the Commissioner of Patents in interference proceedings will not issue where plaintiff's claim is based on alleged abandonment by another party to the interference, so that there is an adequate remedy at law by appeal in the interference proceeding.

APPEAL from the Supreme Court of the District of Columbia.

Suit by Walter O. Snelling against Robert F. Whitehead, Commissioner of Patents, for a mandatory injunction. Decree for defendant, and plaintiff appeals. Affirmed.

Mr. F. D. McKenny, *Mr. J. S. Flannery*, and *Mr. G. B. Craighill* for the appellant.

Mr. R. F. Whitehead and *Mr. L. B. Mann* for the Commissioner of Patents.

VAN ORSDEL, *J.*:

Appellant, plaintiff below, filed a bill in equity in the Supreme Court of the District of Columbia against the defendant, as Commissioner of Patents, praying a mandatory injunction to restrain defendant from proceeding further with an interference proceeding pending in the Patent Office, and to require defendant to strike from the files pertaining to said interference certain orders made therein, to discontinue further proceedings in connection with said interference, to reject without further hearing the application for a patent filed May 18, 1915, by one Walter F. Rittman, and for general relief.

Defendant made return to the rule and filed a motion to dismiss the bill for (*a*) want of equity; (*b*) want of jurisdiction to control the action of defendant Commissioner in matters involving the exercise of official judgment and discretion; and (*c*) because plaintiff has an adequate and complete remedy provided by law.

It appears that Rittman filed an applicant for a patent on May 1, 1915, and requested that the patent be granted thereon without requiring the payment of the fee as provided by the act of Congress of March 3, 1883. (22 Stat., 625; Comp. St., sec. 9441.) authorizing the issuance of a patent to any officer of the Government, other than officers and employees of the Patent Office, without the payment of any fee, provided that the applicant state in his application—

that the invention described therein, if patented, may be used by the Government or any of its officers or employees in the prosecution of work for the Government, or by any other person in the United States, without payment to him of any royalty thereon, which stipulation shall be included in the patent.

Thereafter, pursuant to certain correspondence set out in the bill, the fee was paid on March 15, 1915, and the application was filed as of that date. On May 18, 1915, Rittman filed a second application, paid the fees thereon, and made no reference therein to the act of 1883. The interference here sought to be restrained is a tri-party proceeding, in which Brooks, Bacon and Clark, who filed March 26, 1915, were made senior parties; Rittman, the intermediate party, and appellant, who filed November 20, 1916, the junior party. In this situation, Rittman, in view of his application of March 15, 1915, moved to shift the burden of proof with respect to Brooks, Bacon and Clark. The motion was sustained by the Examiner of Interferences, and, on appeal, affirmed by the Commissioner. It may be suggested that it is not apparent just how appellant could be affected by this shift in the burden of proof; since, in any event, he retains his position as the junior party, due to his later filing date.

It is insisted, however, that Rittman, by his attempted dedication of his patent to the Government thereby abandoned it and forfeited any right to continue in the interference. The refusal of the Commissioner of Patents to treat Rittman's application as abandoned does not, as appellant assumes, go to the patentability of the invention in issue. While the question of patentability will not be considered by this court in an interference appeal, the question of abandonment is always available as affecting the right of priority. Hence, there is nothing of which appellant complains that cannot be adjudicated by this court on an appeal in the interference proceeding.

When two or more parties apply for the same invention, provision is made for the declaration of an interference by the Commissioner of Patents. (Rev. Stat., sec. 4904; Comp. St., sec. 9449.) The procedure for taking testimony, trial and appeal through the tribunals of the Patent Office to this court is provided by statute or rules which have the force of statute. It therefore follows that to grant the injunctive relief here sought would amount to controlling the actions of an executive officer in matters committed by law to his discretion. It is settled by an unbroken line of decision that neither injunction nor mandamus will lie for this purpose. Nor can these extraordinary remedies be invoked when, as here, the aggrieved party has an adequate and complete legal remedy.

The decree is affirmed, with costs.

Affirmed.

Changes in Classification.

(ORDER No. 2,647.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 8, 1921.

The following change in the classification of inventions is hereby directed, to take effect immediately:

In class 225, Dispensing Beverages, (Division XLIII,) establish subclass—

Beer apparatus—

44. Faucet-hole covers and guards.

The patents contained in this subclass have been taken for the most part from class 16, Builders' Hardware, subclass 177, Escutcheon-collars.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 920,259.

On March 15, 1921, a decision was rendered that Sidney Hand Browne was not the first inventor of the subject-matter covered by claims 7 and 8 of his Patent No. 920,259, subject, "Call-distributing telephone-exchange system," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,246,694.

On March 18, 1921, a decision was rendered that Frederick L. Wood was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,246,694, subject, "Phonograph-needles," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,269,093.

On February 16, 1921, a decision was rendered that Euclid I. La Chapelle was not the first inventor of the subject-matter covered by claims 82 and 87 of his Patent No. 1,269,093, subject, "Machines for separating shoes and lasts," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,298,208.

On March 14, 1921, a decision was rendered that Max Herskovitz was not the first inventor of the subject-matter covered by claims 3, 7, and 9 of his Patent No. 1,298,208, subject, "Electric-lighting fixtures," and no appeal having been taken within the time allowed such decision has become final.

Notice Relative to Nolan Act.

April 16, 1921.

The following notice, issued on April 13, 1921, is here published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, April 13, 1921.

Privileges conferred by sections 1 and 2 of H. R. 15,662, approved March 3, 1921, known as the Nolan Act, are conditional upon the past, present, or future granting of similar reciprocal privileges by foreign Governments to citizens of the United States. Up to the present time this Office has not been officially advised that any foreign Government has granted, or is granting, such reciprocal privileges.

The State Department has been requested to obtain and transmit to this Office information as to what, if any, foreign countries have granted to citizens of the United States substantially reciprocal privileges.

Until further notice Examiners are directed to advise any applicant seeking the benefit of the Nolan Act, who makes no attempt to prove that the laws of the country of which the applicant is a citizen or subject grant substantially reciprocal privileges to citizens of the United States, that no benefit under the act can be accorded until satisfactory proof of such reciprocal privilege is furnished. Where an attempt is made to approve the applicable foreign law, before action is taken the case shall be submitted to Law Examiner Underwood.

Cases in which it does not appear that the corresponding foreign patent has been granted will be special and will be treated in the usual way. Cases which must rely entirely upon the provisions of the Nolan Act—*i. e.*, those filed more than a year after the filing of a corresponding foreign application upon which a foreign patent has been granted—will receive action only to the extent indicated in the preceding paragraph, no action on the merits being necessary until it is found that they are entitled to the benefit of the act.

Cases relying entirely upon the Nolan Act shall no longer be made special as provided in Rule 63(f).

In order that these cases which do not receive action on the merits at this time may be promptly taken up when the applicable foreign law shall have been proven to the satisfaction of the Office, the files should be kept in a separate case; but the drawing should remain in the usual place for interference search.

Forfeited and abandoned cases which fall within the provisions of section 6 of the act also shall be submitted to Law Examiner Underwood prior to action thereon.

(Signed) THOMAS E. ROBERTSON,
Commissioner.

3. INJUNCTION—WILL NOT ISSUE WHERE THERE IS ADEQUATE REMEDY BY APPEAL IN INTERFERENCE PROCEEDING.

An injunction to control the Commissioner of Patents in interference proceedings will not issue where plaintiff's claim is based on alleged abandonment by another party to the interference, so that there is an adequate remedy at law by appeal in the interference proceeding.

APPEAL from the Supreme Court of the District of Columbia.

Suit by Walter O. Snelling against Robert F. Whitehead, Commissioner of Patents, for a mandatory injunction. Decree for defendant, and plaintiff appeals. Affirmed.

Mr. F. D. McKenny, *Mr. J. S. Flannery*, and *Mr. G. B. Craighill* for the appellant.

Mr. R. F. Whitehead and *Mr. L. B. Mann* for the Commissioner of Patents.

VAN ORSDEL, *J.*:

Appellant, plaintiff below, filed a bill in equity in the Supreme Court of the District of Columbia against the defendant, as Commissioner of Patents, praying a mandatory injunction to restrain defendant from proceeding further with an interference proceeding pending in the Patent Office, and to require defendant to strike from the files pertaining to said interference certain orders made therein, to discontinue further proceedings in connection with said interference, to reject without further hearing the application for a patent filed May 18, 1915, by one Walter F. Rittman, and for general relief.

Defendant made return to the rule and filed a motion to dismiss the bill for (*a*) want of equity; (*b*) want of jurisdiction to control the action of defendant Commissioner in matters involving the exercise of official judgment and discretion; and (*c*) because plaintiff has an adequate and complete remedy provided by law.

It appears that Rittman filed an applicant for a patent on May 1, 1915, and requested that the patent be granted thereon without requiring the payment of the fee as provided by the act of Congress of March 3, 1883. (22 Stat., 625; Comp. St., sec. 9441.) authorizing the issuance of a patent to any officer of the Government, other than officers and employees of the Patent Office, without the payment of any fee, provided that the applicant state in his application—

that the invention described therein, if patented, may be used by the Government or any of its officers or employees in the prosecution of work for the Government, or by any other person in the United States, without payment to him of any royalty thereon, which stipulation shall be included in the patent.

Thereafter, pursuant to certain correspondence set out in the bill, the fee was paid on March 15, 1915, and the application was filed as of that date. On May 18, 1915, Rittman filed a second application, paid the fees thereon, and made no reference therein to the act of 1883. The interference here sought to be restrained is a tri-party proceeding, in which Brooks, Bacon and Clark, who filed March 26, 1915, were made senior parties; Rittman, the intermediate party, and appellant, who filed November 20, 1916, the junior party. In this situation, Rittman, in view of his application of March 15, 1915, moved to shift the burden of proof with respect to Brooks, Bacon and Clark. The motion was sustained by the Examiner of Interferences, and, on appeal, affirmed by the Commissioner. It may be suggested that it is not apparent just how appellant could be affected by this shift in the burden of proof; since, in any event, he retains his position as the junior party, due to his later filing date.

It is insisted, however, that Rittman, by his attempted dedication of his patent to the Government thereby abandoned it and forfeited any right to continue in the interference. The refusal of the Commissioner of Patents to treat Rittman's application as abandoned does not, as appellant assumes, go to the patentability of the invention in issue. While the question of patentability will not be considered by this court in an interference appeal, the question of abandonment is always available as affecting the right of priority. Hence, there is nothing of which appellant complains that cannot be adjudicated by this court on an appeal in the interference proceeding.

When two or more parties apply for the same invention, provision is made for the declaration of an interference by the Commissioner of Patents. (Rev. Stat., sec. 4904; Comp. St., sec. 9449.) The procedure for taking testimony, trial and appeal through the tribunals of the Patent Office to this court is provided by statute or rules which have the force of statute. It therefore follows that to grant the injunctive relief here sought would amount to controlling the actions of an executive officer in matters committed by law to his discretion. It is settled by an unbroken line of decision that neither injunction nor mandamus will lie for this purpose. Nor can these extraordinary remedies be invoked when, as here, the aggrieved party has an adequate and complete legal remedy.

The decree is affirmed, with costs.

Changes in Classification.

(ORDER No. 2,647.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 8, 1921.

The following change in the classification of inventions is hereby directed, to take effect immediately:

In class 225, Dispensing Beverages, (Division XLIII,) establish subclass—

Beer apparatus—

44. Faucet-hole covers and guards.

The patents contained in this subclass have been taken for the most part from class 16, Builders' Hardware, subclass 177, Escutcheon-collars.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT No. 920,259.

On March 15, 1921, a decision was rendered that Sidney Hand Browne was not the first inventor of the subject-matter covered by claims 7 and 8 of his Patent No. 920,259, subject, "Call-distributing telephone-exchange system," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,246,694.

On March 18, 1921, a decision was rendered that Frederick L. Wood was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,246,694, subject, "Phonograph-needles," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,260,093.

On February 16, 1921, a decision was rendered that Euclid I. La Chapelle was not the first inventor of the subject-matter covered by claims 82 and 87 of his Patent No. 1,260,093, subject, "Machines for separating shoes and lasts," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,298,208.

On March 14, 1921, a decision was rendered that Max Herskovitz was not the first inventor of the subject-matter covered by claims 3, 7, and 9 of his Patent No. 1,298,208, subject, "Electric-lighting fixtures," and no appeal having been taken within the time allowed such decision has become final.

Notice Relative to Nolan Act.

April 16, 1921.

The following notice, issued on April 13, 1921, is here published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, April 13, 1921.

Privileges conferred by sections 1 and 2 of H. R. 15,662, approved March 3, 1921, known as the Nolan Act, are conditional upon the past, present, or future granting of similar reciprocal privileges by foreign Governments to citizens of the United States. Up to the present time this Office has not been officially advised that any foreign Government has granted, or is granting, such reciprocal privileges.

The State Department has been requested to obtain and transmit to this Office information as to what, if any, foreign countries have granted to citizens of the United States substantially reciprocal privileges.

Until further notice Examiners are directed to advise any applicant seeking the benefit of the Nolan Act, who makes no attempt to prove that the laws of the country of which the applicant is a citizen or subject grant substantially reciprocal privileges to citizens of the United States, that no benefit under the act can be accorded until satisfactory proof of such reciprocal privilege is furnished. Where an attempt is made to approve the applicable foreign law, before action is taken the case shall be submitted to Law Examiner Underwood.

Cases in which it does not appear that the corresponding foreign patent has been granted will be special and will be treated in the usual way. Cases which must rely entirely upon the provisions of the Nolan Act—*i. e.*, those filed more than a year after the filing of a corresponding foreign application upon which a foreign patent has been granted—will receive action only to the extent indicated in the preceding paragraph, no action on the merits being necessary until it is found that they are entitled to the benefit of the act.

Cases relying entirely upon the Nolan Act shall no longer be made special as provided in Rule 63(*f*).

In order that these cases which do not receive action on the merits at this time may be promptly taken up when the applicable foreign law shall have been proven to the satisfaction of the Office, the files should be kept in a separate case; but the drawing should remain in the usual place for interference search.

Forfeited and abandoned cases which fall within the provisions of section 6 of the act also shall be submitted to Law Examiner Underwood prior to action thereon.

(Signed) THOMAS E. ROBERTSON,
Commissioner.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business April 9, 1921.

Room No	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders....	Nov. 24	Dec. 7	622
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Sept. 3	Oct. 7	1,352
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 4	Aug. 6	676
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	May 27	Jan. 12	1,460
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Aug. 13	Sep. 16	610
315	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Oct. 4	Feb. 2	717
312	7. Games and Toys; Optics; Photography; Velocipedes	Nov. 23	Dec. 22	1,161
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Jan. 22	Mar. 3	512
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Aug. 21	Mar. 5	633
235	10. Land-Vehicles; Land-Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Oct. 1	Jan. 29	987
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Jan. 17	Jan. 24	438
222	12. Machine Elements	Sept. 1	Jan. 19	966
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	June 21	Dec. 30	1,442
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	July 14	Feb. 4	794
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	June 24	Aug. 18	1,520
111	16. Radiant Energy; Telegraphy; Telephony	July 2	Sept. 23	1,393
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Oct. 5	Jan. 6	681
239	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	July 31	Oct. 28	1,392
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	July 14	Nov. 1	751
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Dec. 4	Jan. 4	967
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Sept. 11	Feb. 11	506
249	22. Aeronautics; Firearms; Ordnance Ammunition and Explosive Devices	Nov. 8	Feb. 4	350
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Aug. 11	Jan. 12	805
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Sept. 15	Jan. 8	758
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Feb. 12	Feb. 19	237
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Sept. 2	Nov. 18	780
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Nov. 18	Jan. 14	880
235	28. Internal-Combustion Engines	Sept. 29	Dec. 15	1,063
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Aug. 20	Jan. 20	629
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Sept. 13	Mar. 7	890
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	June 15	Oct. 2	1,769
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	July 1	Jan. 5	1,113
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Oct. 25	Dec. 16	696
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	Mar. 10	Jan. 27	167
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	Mar. 8	Mar. 4	418
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Nov. 13	Oct. 23	1,459
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Oct. 18	Oct. 23	1,518
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Nov. 8	Oct. 21	888
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	June 1	June 5	1,527
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Aug 16	Dec. 11	1,472
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Aug. 28	Jan. 5	817
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	July 30	Oct. 4	1,737
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	July 3	Aug. 10	1,130
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Aug. 9	Jan. 28	454
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Aug. 21	Dec. 6	979
264	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Oct. 25	Dec. 21	617
332	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Aug. 23	Oct. 23	1,039

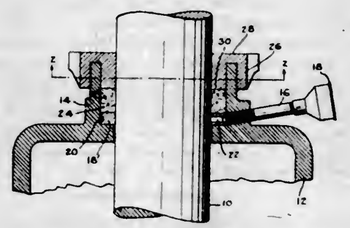
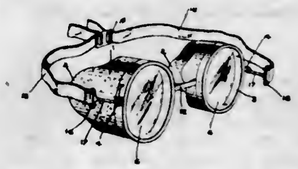
PATENTS



GRANTED APRIL 19, 1921.

1,374,894. HANGER FOR CONCRETE CONSTRUCTION. NILS F. AMBURSEN, Pittsburgh, Pa. Filed June 3, 1919. Serial No. 301,510. 5 Claims. (Cl. 72—101.)

5. A hanger for concrete structures having a part for anchorage in the concrete with which it is to be used and a hanger part comprising a wire arranged in massed relation in position to lie between the mold and the concrete when the latter is poured and to be released and freed from the concrete upon removal of the mold.



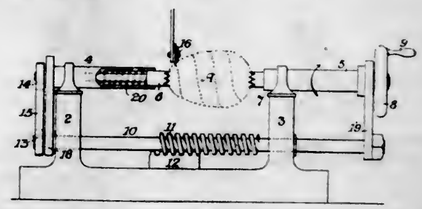
1,374,895. LUBRICATING AND PACKING DEVICE FOR SHAFTS. JOSEPH T. AUGER, Minneapolis, Minn., assignor of three-eighths to E. M. Ferguson, St. Paul, Minn., and three-eighths to E. Du Lac, Minneapolis, Minn. Filed Dec. 16, 1919. Serial No. 345,183. 3 Claims. (Cl. 64—24.)

1. A lubricating and packing device for shafts comprising a box surrounding the shaft and spaced therefrom, a ring at the inner end of said box surrounding said shaft, said ring having a circumferential groove and holes leading therefrom to the inner margin of the ring, means for supplying lubricant to said groove, packing material in contact with the outer side of said ring, and means for holding said packing material under compression.

1,374,896. EYE-PROTECTOR. ARTHUR A. ARNOLD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 24, 1917. Serial No. 203,782. 8 Claims. (Cl. 2—149.)

1. A pair of goggles including eyecups, a lens positioned against the outer end of each eyecup, a second lens arranged in advance of each of the first lenses and rim members attached to the eyecups and engaging the second

lenses to hold the same in place, the second lenses being in such position as to retain the first lenses in position against the eyecups.



1,374,897. TREATMENT OF MINED SULFUR. RAYMOND F. BACON and HAROLD S. DAVIS, Pittsburgh, Pa., assignors to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Oct. 6, 1919. Serial No. 328,934. 6 Claims. (Cl. 23—10.)

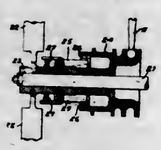
1. The method of improving the free burning quality of mined sulfur containing oil, which comprises carbonizing the oil by maintaining a molten body of the sulfur containing it at a temperature of from 400° C. to 430° C. for a sufficient length of time to effect the desired carbonization of the oil; substantially as described.

1,374,898. TREATMENT OF MINED SULFUR. RAYMOND F. BACON and HAROLD S. DAVIS, Pittsburgh, Pa., assignors to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Oct. 6, 1919. Serial No. 328,935. 6 Claims. (Cl. 23—10.)

1. The method of refining mined sulfur containing oil, which comprises carbonizing the oil by maintaining a molten body of the sulfur containing it at an oil carbonizing temperature until the desired carbonization has been effected, and then cooling the body of sulfur to a temperature above the melting point of sulfur and holding the body of sulfur at this lower temperature for a sufficient length of time to permit the segregating out of the carbon; substantially as described.

1,374,899. PROCESS OF REMOVING COCOANUT-SHELLS. FRANKLIN BAKER, Jr., Philadelphia, Pa. Filed June 29, 1918. Serial No. 242,513. 3 Claims. (Cl. 146—3.)

2. The process of shelling a nut having the form of an ovoid or spheroid, which comprises supporting said nut at



its polar ends, bringing a cutting tool into engagement with the shell of the nut, and imparting longitudinal and rotative movements to said nut and tool relatively to each other whereby a continuous cut is made in the shell of the nut from end to end thereof.

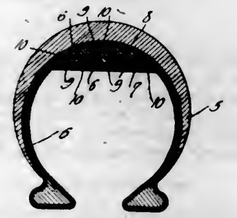
1,374,900. LENS FOR HEADLIGHTS. LOUIS BENZER and HENRY BENZER, Brooklyn, N. Y., assignors to The Benzer Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 12, 1920. Serial No. 350,784. 2 Claims. (Cl. 240—48.4.)

1. A lens for headlights having its upper portion divided into a plurality of prismatic light refracting surfaces, a plurality of transversely concave parallel prismatic surfaces in the lower portion of said lens and triangular convex surfaces interposed between said transversely concave surfaces in the lower portion of the headlight lens, the defining edge of said triangular surfaces lying in a plane below the ends of the transversely concave surfaces to provide a vertical wall for separating the concave and triangular surfaces.

1,374,901. COOLING SYSTEM. GEORGE S. BLANKENHORN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 5, 1917. Serial No. 147,243. 1 Claim. (Cl. 123—171.)

In an engine cooling system, conduit means adjacent the engine providing a passage for cooling water, a radiator connected with said conduit means, a fan for inducing a flow of air past said radiator, a thermostat operable by variations in temperature of the cooling water, a friction clutch operable by said thermostat to vary the speed of said fan, and means for positively connecting said fan to the engine upon attainment of a predetermined speed.

1,374,902. ROCKING SEAT FOR CHILDREN. BOLLING L. BLOCKER, Chattanooga, Tenn. Filed Apr. 8, 1920. Serial No. 372,294. 6 Claims. (Cl. 46—22.)



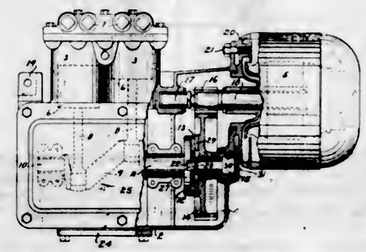
1. A rocking toy comprising an arcuate body, seats arranged in each end of the body, and a pivoted and sliding handle for each seat.

1,374,903. REVERSIBLE POWDER-PUFF. FLORENCE BORNHAUPT, New York, N. Y., assignor to Maurice Levy, New York, N. Y. Filed May 26, 1920. Serial No. 384,496. 2 Claims. (Cl. 15—72.)

1. A device of the class described, including a protector, puff sections normally arranged within said protector, a lining member disposed between the walls of the protector and the puff sections, means for connecting the puff sections to the protector and reinforcing gores connected to the puff sections and portions of the protector as and for the purpose set forth.

1,374,904. TIRE CONSTRUCTION. LEWIS GUST CARILLON, Barberton, Ohio. Filed July 10, 1919. Serial No. 309,811. 1 Claim. (Cl. 152—18.)

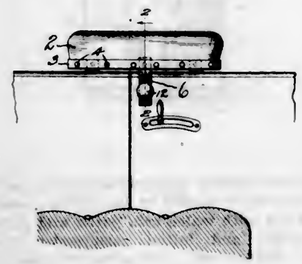
A tire shoe comprising textile layers, one of which is spaced from the other to form, at the tread of the shoe, a pocket the inner wall of which extends from one side of the shoe to the other and is disposed throughout its entire width at right angles to the median plane of the shoe; a circumferential filler in the pocket and conforming closely to the cross sectional contour of the pocket; circumferential metal bands embedded in the filler and inclosed in sheaths, all of the bands being disposed at right angles to the median plane of the shoe, the bands being placed edge to edge in rows, the bands of one row being located in break-joint order with respect to the bands of an adjoining row, the side edges of the bands of the inner row being located close to said other layer, the number of bands in the rows decreasing to a single outer band disposed in the median plane of the shoe.



1,374,905. HOLLOW-WALLED RECEPTACLE. WILLIAM J. CASEY and ARNT HAANES, Detroit, Mich. Filed Sept. 3, 1920. Serial No. 407,908. 4 Claims. (Cl. 220—15.)

1. A hollow walled receptacle, comprising spaced walls joined at their extremities and having a plurality of integral parallel ribs struck from the opposed faces of said walls, the ribs of one wall extending at substantially right angles to the ribs of the opposed wall and interengaging each other at the points of intersection.

4. A hollow walled receptacle comprising spaced wall sections formed with a plurality of parallel integral ribs struck upon the opposed faces thereof and angularly intersecting and engaging each other, and means for interconnecting said sections at their extremities to form an inclosed receptacle.



1,374,906. MOTOR-DRIVEN COMPRESSOR. HERBERT W. CHENEY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 30, 1919. Serial No. 335,215. 14 Claims. (Cl. 230—27.)

1. In combination, a motor having a shaft rotatable at high speed, a compressor having a shaft rotatable at relatively low speed and a driving connection between said shafts, said connection being rotatable at the speed of said compressor shaft permitting relative transverse movement of said shafts.

9. In combination, a compressor having a shaft and a cylinder lying in a common plane, a motor located adjacent said cylinder and having a shaft lying in said plane, gearing associated with said motor shaft, and a driving connection between said gearing and said compressor shaft, said connection permitting motion of said compressor shaft in said plane transversely relative to said motor shaft.

1,374,907. AUTOMOBILE-DRIVER'S ARMREST. PARKER COFRODE, Johnstown, Pa. Filed Aug. 22, 1919. Serial No. 319,256. 3 Claims. (Cl. 296—44.)

3. An arm rest attachment for automobiles including a penetrable base having a cushion applied thereto, a substantially inverted U-shaped bracket rigidly secured to the intermediate portion of the penetrable body and depending therefrom, said bracket including a relatively straight depending arm having a cushion facing applied thereto and a relatively curved arm provided with a threaded opening, and a screw clamping member having a cushion foot portion adapted to operate in said threaded opening of the curved arm to work in opposition to the stratght arm, and cushion means carried by the under side of the said penetrable body.

1,374,908. DOOR-LOCKING DEVICE. ALPHA LEON DAVENPORT and ARTHUR JOHN JAMES, Vancouver, British Columbia, Canada. Filed Dec. 13, 1919. Serial No. 344,700. 5 Claims. (Cl. 70—91.)

2. A door locking device comprising a hollow sleeve forming a handle spindle, a knob secured to one end of said spindle, a hollow knob loosely mounted on the opposite end of the spindle, provided on its inner periphery with notches, a disk secured to the end of the sleeve and rotatable in the hollow knob, a pawl mounted on said disk adapted for engagement with said teeth, and means for raising said pawl out of such engagement.

1,374,909. METHOD OF MAKING GRAPHITE CRUCIBLES. JEAN HUBERT LOUIS DE BATS, Zelienople, Pa., assignor, by mesne assignments, to Lava Crucible Company of Pittsburgh, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 31, 1918, Serial No. 237,503. Renewed Aug. 5, 1920. Serial No. 401,563. 10 Claims. (Cl. 106—10.)

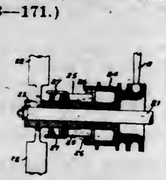
1. The method of making crucibles or pots containing clay, which consists in mixing non-ferrous metal with the material from which the crucible or pot is formed, and forming the crucible or pot therefrom, whereby in the use of the crucible or pot the metal forms a metallic silicate coating on the surface thereof.

1,374,910. METHOD OF MAKING CLAY AND GRAPHITE CRUCIBLES. JEAN HUBERT LOUIS DE BATS, Zelienople, Pa., assignor, by mesne assignments, to Lava Crucible Company of Pittsburgh, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 31, 1918, Serial No. 237,502. Renewed Aug. 5, 1920. Serial No. 401,564. 10 Claims. (Cl. 106—10.)

1. The method of making crucibles or pots containing clay, which consists in mixing metal of the aluminum-magnesium group in a finely divided form with the material from which the crucible or pot is formed, and molding the same, whereby said crucibles or pots may be burned shortly after molding.

1,374,911. AUXILIARY SEAT FOR TRICYCLES. ALFONS DOBROWOLSKI, Racine, Wis. Filed Nov. 25, 1918. Serial No. 263,959. 7 Claims. (Cl. 208—24.)

1. The combination with the rear wheels, fork and axle of a tricycle, sets of axle engaging clamping members, an arm connected with one clamping member of each set, and adapted to engage in front of an associated arm of the rear fork, a post mounted upon one clamping member



its polar ends, bringing a cutting tool into engagement with the shell of the nut, and imparting longitudinal and rotative movements to said nut and tool relatively to each other whereby a continuous cut is made in the shell of the nut from end to end thereof.

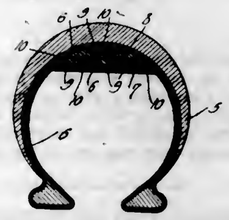
1,374,900. LENS FOR HEADLIGHTS. LOUIS BENZER and HENRY BENZER, Brooklyn, N. Y., assignors to The Benzer Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 12, 1920. Serial No. 350,784. 2 Claims. (Cl. 240—48.4.)

1. A lens for headlights having its upper portion divided into a plurality of prismatic light refracting surfaces, a plurality of transversely concave parallel prismatic surfaces in the lower portion of said lens and triangular convex surfaces interposed between said transversely concave surfaces in the lower portion of the headlight lens, the defining edge of said triangular surfaces lying in a plane below the ends of the transversely concave surfaces to provide a vertical wall for separating the concave and triangular surfaces.

1,374,901. COOLING SYSTEM. GEORGE S. BLANKENHORN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 5, 1917. Serial No. 147,243. 1 Claim. (Cl. 123—171.)

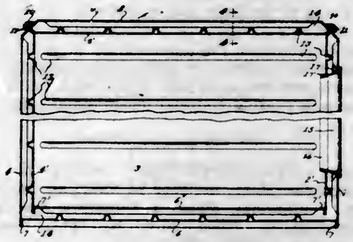
In an engine cooling system, conduit means adjacent the engine providing a passage for cooling water, a radiator connected with said conduit means, a fan for inducing a flow of air past said radiator, a thermostat operable by variations in temperature of the cooling water, a friction clutch operable by said thermostat to vary the speed of said fan, and means for positively connecting said fan to the engine upon attainment of a predetermined speed.

1,374,902. ROCKING SEAT FOR CHILDREN. BOLLING L. BLOCKER, Chattanooga, Tenn. Filed Apr. 8, 1920. Serial No. 372,294. 6 Claims. (Cl. 46—22.)



1. A rocking toy comprising an arcuate body, seats arranged in each end of the body, and a pivoted and sliding handle for each seat.

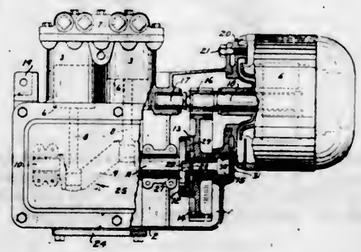
1,374,903. REVERSIBLE POWDER-PUFF. FLORENCE BORNHAUPT, New York, N. Y., assignor to Maurice Levy, New York, N. Y. Filed May 26, 1920. Serial No. 384,496. 2 Claims. (Cl. 15—72.)



1. A device of the class described, including a protector, puff sections normally arranged within said protector, a lining member disposed between the walls of the protector and the puff sections, means for connecting the puff sections to the protector and reinforcing gores connected to the puff sections and portions of the protector as and for the purpose set forth.

1,374,904. TIRE CONSTRUCTION. LEWIS GUST CARILLON, Barberton, Ohio. Filed July 10, 1919. Serial No. 309,811. 1 Claim. (Cl. 152—18.)

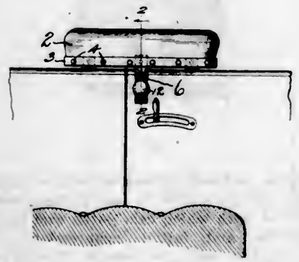
A tire shoe comprising textile layers, one of which is spaced from the other to form, at the tread of the shoe, a pocket the inner wall of which extends from one side of the shoe to the other and is disposed throughout its entire width at right angles to the median plane of the shoe; a circumferential filler in the pocket and conforming closely to the cross sectional contour of the pocket; circumferential metal bands embedded in the filler and inclosed in sheaths, all of the bands being disposed at right angles to the median plane of the shoe, the bands being placed edge to edge in rows, the bands of one row being located in break-joint order with respect to the bands of an adjoining row, the side edges of the bands of the inner row being located close to said other layer, the number of bands in the rows decreasing to a single outer band disposed in the median plane of the shoe.



1,374,905. HOLLOW-WALLED RECEPTACLE. WILLIAM J. CASEY and ARNT HAANES, Detroit, Mich. Filed Sept. 3, 1920. Serial No. 407,908. 4 Claims. (Cl. 220—15.)

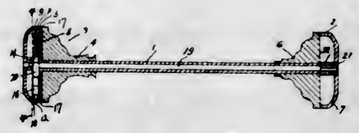
1. A hollow walled receptacle, comprising spaced walls joined at their extremities and having a plurality of integral parallel ribs struck from the opposed faces of said walls, the ribs of one wall extending at substantially right angles to the ribs of the opposed wall and interengaging each other at the points of intersection.

4. A hollow walled receptacle comprising spaced wall sections formed with a plurality of parallel integral ribs struck upon the opposed faces thereof and angularly intersecting and engaging each other, and means for interconnecting said sections at their extremities to form an inclosed receptacle.



1,374,906. MOTOR-DRIVEN COMPRESSOR. HERBERT W. CHENEY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 30, 1919. Serial No. 335,215. 14 Claims. (Cl. 230—27.)

1. In combination, a motor having a shaft rotatable at high speed, a compressor having a shaft rotatable at relatively low speed and a driving connection between said shafts, said connection being rotatable at the speed of said compressor shaft permitting relative transverse movement of said shafts.



9. In combination, a compressor having a shaft and a cylinder lying in a common plane, a motor located adjacent said cylinder and having a shaft lying in said plane, gearing associated with said motor shaft, and a driving connection between said gearing and said compressor shaft, said connection permitting motion of said compressor shaft in said plane transversely relative to said motor shaft.

1,374,907. AUTOMOBILE-DRIVER'S ARMREST. PARKER COFRODE, Johnstown, Pa. Filed Aug. 22, 1919. Serial No. 319,256. 3 Claims. (Cl. 296—44.)

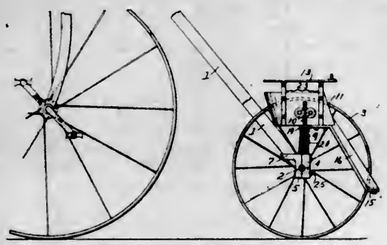
3. An arm rest attachment for automobiles including a penetrable base having a cushion applied thereto, a substantially inverted U-shaped bracket rigidly secured to the intermediate portion of the penetrable body and depending therefrom, said bracket including a relatively straight depending arm having a cushion facing applied thereto and a relatively curved arm provided with a threaded opening, and a screw clamping member having a cushion foot portion adapted to operate in said threaded opening of the curved arm to work in opposition to the straight arm, and cushion means carried by the under side of the said penetrable body.

1,374,908. DOOR-LOCKING DEVICE. ALPHA LEON DAVENPORT and ARTHUR JOHN JAMES, Vancouver, British Columbia, Canada. Filed Dec. 13, 1919. Serial No. 344,700. 5 Claims. (Cl. 70—91.)

2. A door locking device comprising a hollow sleeve forming a handle spindle, a knob secured to one end of said spindle, a hollow knob loosely mounted on the opposite end of the spindle, provided on its inner periphery with notches, a disk secured to the end of the sleeve and rotatable in the hollow knob, a pawl mounted on said disk adapted for engagement with said teeth, and means for raising said pawl out of such engagement.

1,374,909. METHOD OF MAKING GRAPHITE CRUCIBLES. JEAN HUBERT LOUIS DE BATS, Zelienople, Pa., assignor, by mesne assignments, to Lava Crucible Company of Pittsburgh, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 31, 1918, Serial No. 237,503. Renewed Aug. 5, 1920. Serial No. 401,563. 10 Claims. (Cl. 106—10.)

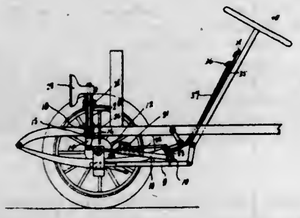
1. The method of making crucibles or pots containing clay, which consists in mixing non-ferrous metal with the material from which the crucible or pot is formed, and forming the crucible or pot therefrom, whereby in the use of the crucible or pot the metal forms a metallic silicate coating on the surface thereof.



1,374,910. METHOD OF MAKING CLAY AND GRAPHITE CRUCIBLES. JEAN HUBERT LOUIS DE BATS, Zelienople, Pa., assignor, by mesne assignments, to Lava Crucible Company of Pittsburgh, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 31, 1918, Serial No. 237,502. Renewed Aug. 5, 1920. Serial No. 401,564. 10 Claims. (Cl. 106—10.)

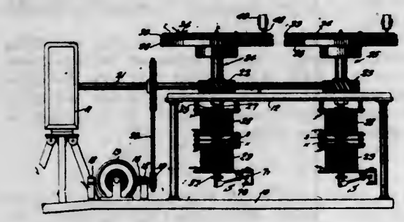
1. The method of making crucibles or pots containing clay, which consists in mixing metal of the aluminum-magnesium group in a finely divided form with the material from which the crucible or pot is formed, and molding the same, whereby said crucibles or pots may be burned shortly after molding.

1,374,911. AUXILIARY SEAT FOR TRICYCLES. ALFONS DOBROWOLSKI, Racine, Wis. Filed Nov. 25, 1918. Serial No. 263,959. 7 Claims. (Cl. 208—24.)



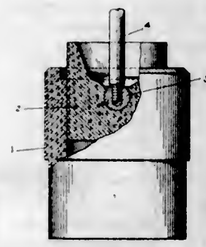
1. The combination with the rear wheels, fork and axle of a tricycle, sets of axle engaging clamping members, an arm connected with one clamping member of each set, and adapted to engage in front of an associated arm of the rear fork, a post mounted upon one clamping member

of each set, springs coiled about said posts, and a seat supported by the springs between the rear wheels, and



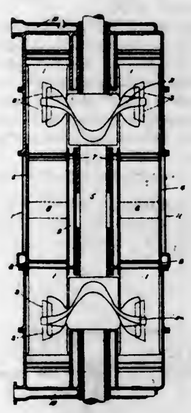
provided with guides to receive the upper end portions of the posts.

1,374,912. AUTOMOBILE HEADLIGHT CONTROL. JOHN EDMUND EAGLES, New Westminster, British Columbia, Canada. Filed Mar. 31, 1920. Serial No. 370,249. 2 Claims. (Cl. 240—62.)



1. A dirigible headlight operating means comprising a pair of slidably engaged members, a pin slidable through one of said members and normally engaged with the other member to restrain said members from relative sliding movement, a lever pivotally connected to the pin and mounted on that member through which the pin extends, a resilient connection between said lever and its supporting member located on one side of the lever pivot, and means connected to said lever on the opposite side of the pivot to move the lever against the resistance of said resilient connection.

1,374,913. SYNCHRONIZED RECORDING AND REPRODUCING APPARATUS FOR VISUAL AND AUDIBLE ACTIONS. CHARLES W. EBELING, Buffalo, N. Y. Filed Dec. 26, 1916. Serial No. 138,817. 6 Claims. (Cl. 88—16.2.)

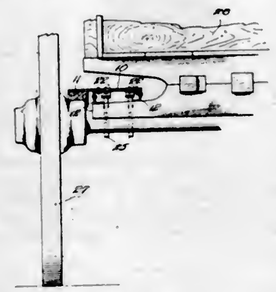


1. In an apparatus of the character described, a moving picture camera, a motor for operating the same, a plurality of sound record mechanisms, electrical means for connecting and disconnecting one of said mechanisms at a time with the motor, an electrical device mounted in the camera and disposed to act upon the film in transit to mark stopping and starting indications upon the film, and electrical circuit controlling means for simultaneously actuating the same and for controlling the selection of the sound record mechanism.

1,374,914. DASHPOT. FRANK ENGEL, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Apr. 8, 1916. Serial No. 89,974. 1 Claim. (Cl. 188—100.)

In combination, a cup comprising bakelite and graphite set together in a hard body, a plunger comprising the same ingredients, movable within said cup and a smooth surfaced ball partially embedded in said plunger.

1,374,915. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. WILLIAM ROBERT FASEY, Snaresbrook, England. Filed July 10, 1918. Serial No. 244,304. 3 Claims. (Cl. 123—51.)

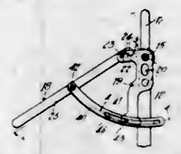


2. A two cycle internal combustion engine comprising opposed pistons, rollers carried by said pistons, cam paths carried by a rotor with which cam paths said pistons cooperate, induction and initial compression chambers formed in the cylinder ends, combustion chambers formed between the oppositely moving pistons, inlet and exhaust ports formed in the cylinder wall, said cam paths having straight portions which correspond to rest periods of the pistons, said straight portions being divided into two parts, whereby at the end of the combustion stroke the exhaust port opens to permit exhaust to atmospheric pressure prior to the opening of the inlet port and inlet port opens prior to the usual closing of the exhaust port.

1,374,916. ELECTROLYTE FOR STORAGE BATTERIES. WILLIAM GARDINER, Chicago, Ill., assignor to Edward W. Wickey, East Chicago, Ind. Filed June 9, 1919. Serial No. 302,719. 6 Claims. (Cl. 204—29.)

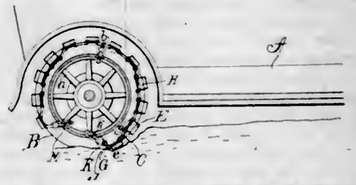
1. An electrolyte for storage batteries consisting of a solution of sulfuric acid, a silicate, and powdered soapstone.

1,374,917. MUD-GUARD. RALPH HASTINGS, Ingraham, Ill. Filed Mar. 28, 1919. Serial No. 285,807. 2 Claims. (Cl. 301—123.)



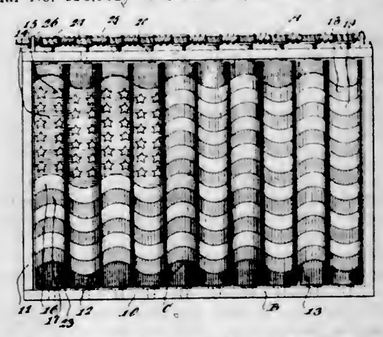
1. A device of the class described including a body plate having a hub engaging pad at one end portion, a pair of extensible brackets depending from the under side of said body plate and being adjustable vertically with respect to the plate for taking up the wear on said hub engaging pad, a pair of arms depending from the under side of said plate at one side of said brackets and comprising pairs of longitudinally adjustable sections, a pair of angle plates secured to the under side of said body plate and adjustable transversely of the same, a second pair of arms hinged to said angle plates and comprising upper and lower sections adjustable with relation to each other, and bowed springs rigidly connected at their upper ends to said angle plates and engaging the lower sections of said second named pairs of arms for urging the same inwardly, the lower portions of said first and second named arms being provided with inwardly extending lugs adapted for engaging an axle.

1,374,918. CURRENT-DENSITY INDICATOR. EDWIN HEIL, Wichita, Kans. Filed Mar. 10, 1919. Serial No. 281,606. 5 Claims. (Cl. 171—95.)



1. A device for indicating the number of amperes per surface unit passing through an electrode which consists of a meter having a direct reading indicator, and means connected thereto for passing current through the meter proportional to a fixed unit of surface.

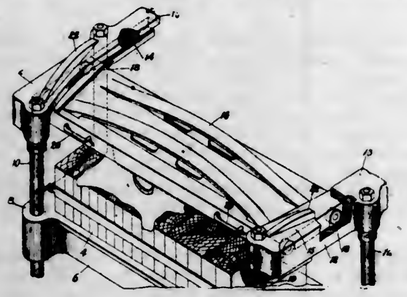
1,374,919. RAIN AND SUN SHIELD. ERNEST C. HILLMAN, Los Angeles, Calif. Filed June 1, 1920. Serial No. 385,723. 15 Claims. (Cl. 296—95.)



8. A rain and sun shield, applicable to the ordinary automobile windshield having side posts, comprising a pair of brackets, each bracket having means whereby the bracket is secured to the windshield side post, a shield member adjustably supported upon and extending between said brackets, said shield member comprising a plurality of substantially rigid panel sections, and means for connecting the sections together permitting relative adjustment of the sections to vary the dimension of the member in the direction of its extent between the two brackets.

1,374,920. EXTRICATOR-TIRE FOR AUTOMOBILES. ERASTUS L. HOTCHKISS, Edinboro, Pa. Filed July 22, 1919. Serial No. 312,469. 1 Claim. (Cl. 152—14.)

In a tractor device for automobile wheels, the combination with a series of spaced blocks arranged side by side, of connectors secured crosswise of the blocks on the under side near the ends of the blocks, the said connectors having hollow, cylindrical terminations, single links arranged between adjacent ends of succeeding blocks and each link having straight ends engaging the hollow cylindrical ends of the connectors whereby the blocks are maintained parallel with each other and against displacement one with respect to another, a predetermined number of blocks at each end of the series of blocks having side guards projecting toward the center of the wheel, and the said connectors and links being secured to the said side guards whereby the said connectors near the ends of the series of blocks follow lines within the peripheral line of the wheel and prevent displacement of the ends of the series of blocks sidewise.

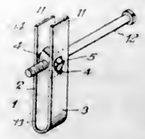


1,374,921. MECHANICALLY-WAVED FLAG. JAMES D. HOUSTON, East Aurora, N. Y. Filed Oct. 11, 1920. Serial No. 416,071. 6 Claims. (Cl. 40—76.)

1. A display apparatus comprising a plurality of rotatable cylindrical rollers arranged side by side having a

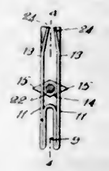
series of superposed obliquely disposed rings of different colors arranged thereon, and means for simultaneously rotating said rollers whereby a wavy motion will be presented.

1,374,922. PRESS. ALBERT E. HUDSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 4, 1919. Serial No. 315,116. 9 Claims. (Cl. 164—23.)



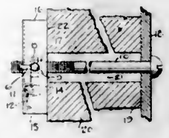
1. In a machine of the class described, a work supporting bed, a presser member movable toward and from said bed and also laterally with respect to the bed, and means for operating the presser member in pressure applying operations comprising vertically reciprocable rods and cross plates connected to said rods and arranged to engage one over each end of the presser member when the latter is in its extreme forward position over the work supporting bed, considerable portions of the plates being arranged to lie on both sides of lines connecting the upper ends of the rods to provide a construction that will insure the application of requisite pressure on the work.

1,374,923. PUMP. DAVID HUNT, Houston, Tex., assignor of one-half to John T. Boyle, Houston, Tex. Filed Mar. 20, 1920. Serial No. 367,517. 2 Claims. (Cl. 103—80.)



1. A pump, including a standing barrel formed of concentrically arranged pipe sections, a valve seat having a plurality of fluid passageways therethrough and formed with a depending outwardly threaded flange, the upper end of the inner pipe section being threaded onto said flange, a discharge pipe, a coupling connecting said discharge pipe with said seat, the upper end of the outer pipe section being threaded into said coupling, valves controlling the passageways through said seat, a spider within said discharge pipe, provided with fluid passageways and spaced above said valve so as to limit the upward movement thereof, a tubular traveling barrel working between the sections of said standing barrel, an inlet valve carried by the lower end of said traveling barrel, and means for reciprocating said traveling barrel.

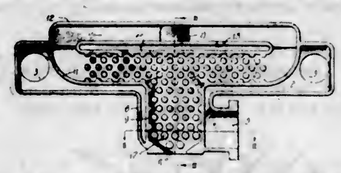
1,374,924. TOGGLE. JOHN KARITZKY, Garwood, N. J., assignor to Garwood Company, a Corporation of New Jersey. Filed Apr. 2, 1919. Serial No. 287,041. 2 Claims. (Cl. 85—3.)



2. In a toggle bolt the combination of a substantially V shaped head having its ends disconnected and said head being provided with seats for a hinge member, a hinge member freely and removably mounted on said seats, and a securing member to secure the spring head to a wall or other support.

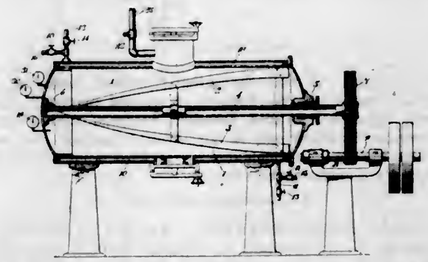
1,374,925. TOGGLE. JOHN KARITZKY, Garwood, N. J. assignor to Garwood Company, a Corporation of New Jersey. Filed Apr. 2, 1919. Serial No. 287,042. 1 Claim. (Cl. 85—3.)

An article of manufacture comprising a head of a toggle bolt stamped from spring sheet metal and provided at one end with a reversed bent or crimped portion to make that end heavier and stronger than the other end.



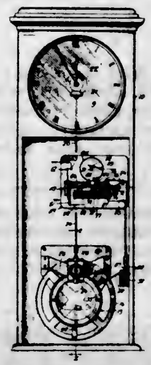
1,374,926. SPRING-TOGGLE. JOHN KARITZKY, Garwood, N. J., assignor to Henry B. Newhall, Jr., Plainfield, N. J., executor of Henry B. Newhall, deceased. Filed Dec. 23, 1919. Serial No. 347,033. 7 Claims. (Cl. 85—3.)

7. The combination in a toggle head provided with bearings for a nut, a nut pivoted in said bearings, a bolt cooperating with the nut, a spring provided with two arms, means to secure the spring and one arm to the toggle head, the other end of the spring coöperating with both the nut and bolt to rock the toggle head at an angle to the bolt.



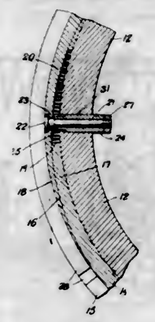
1,374,927. EXHAUST-MANIFOLD. JOSEPH MARION KING, Detroit, Mich. Filed Apr. 7, 1916, Serial No. 89,570. Renewed Aug. 30, 1918. Serial No. 252,129. 3 Claims. (Cl. 257—241.)

1. Fuel heating and mixing means for internal combustion engines comprising a casing with a lateral extension forming an exhaust passage leading from lateral openings symmetrically disposed in relation to the extension, an inner wall concentric with the casing and extension forming a bifurcated fuel conduit from a fuel inlet opening in the extension completely jacketed by the exhaust



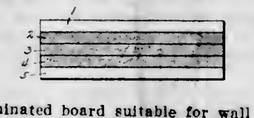
passage, a series of baffles connecting the sides of the fuel conduit throughout the major portion thereof and an exterior wall on the casing forming a return passage leading from the end portions of the conduit branches to a lateral outlet on the extension.

1,374,928. PROCESS FOR CONVERTING CELLULOSE. RUDOLPH A. KOCHER, San Francisco, Calif. Filed Mar. 21, 1917. Serial No. 156,303. 9 Claims. (Cl. 127—10.)



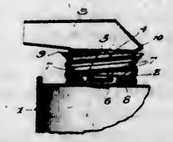
8. The process of treating cellulose which consists in hydrolyzing the cellulose with a halogen acid of 39% strength or over and of critical strength in the presence of halogen acid gas under pressure greater than atmosphere, the amount of water present being less by weight than the dry weight of the material being treated.

1,374,929. SYNCHRONIZER. HENRY I. LARSON, Milwaukee, Wis. Filed Nov. 3, 1919. Serial No. 335,298. 17 Claims. (Cl. 58—24.)



1. In a synchronizing system in which a master clock controls the regular periodic transmission of current impulses to keep time indicators in step therewith, electromagnetic means responsive solely to the restoration of electric power to the system after failure thereof, thereby to transmit rapidly current impulses to bring the indicators into synchronism with the master clock.

1,374,930. ADJUSTABLE RIM. DAVID LAZARUS, New York, N. Y. Filed May 28, 1920. Serial No. 384,873. 5 Claims. (Cl. 301—15.)

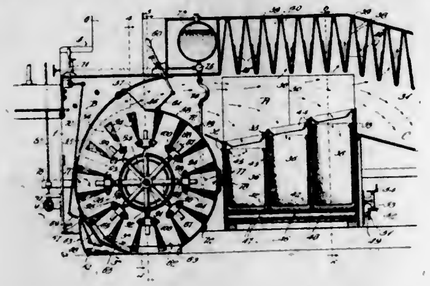


1. An adjustable rim of the class described, said rim being split to form overlapping and tapered end portions, one of said end portions being provided with an elongated aperture, a rack construction in one side wall of said aperture, and a gear device carried by the other end portion of the rim and adapted to coöperate with said rack construction to adjust said first named end portion of the rim longitudinally of the last named end portion.

1,374,931. COMPOSITE SHEET. HARRY S. LEWIS, Beaver Falls, N. Y. Filed Oct. 20, 1919. Serial No. 331,965. 5 Claims. (Cl. 154—45.9.)

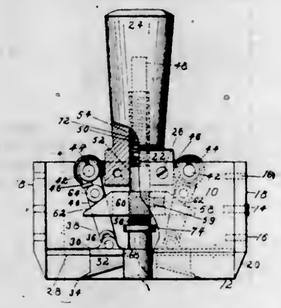
1. A laminated board suitable for wall board or other purposes, the center plies of which include wood pulp manufactured from ground cooked hard wood and the outer plies of which include pulp manufactured from other material.

1,374,932. CAN FOR LIQUIDS. HARVEY B. LINDSAY, Oakland, Calif. Filed June 11, 1920. Serial No. 388,270. 3 Claims. (Cl. 221—22.)



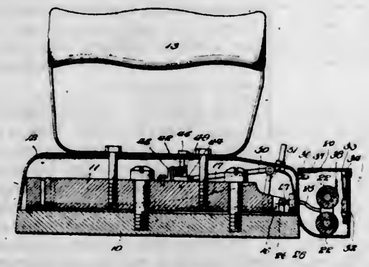
3. An oil can provided with an interiorly threaded nozzle having an opening in its bottom, and a spout provided with a hollow exteriorly threaded plug leading into the spout and having an integral bottom whose central portion acts as a closure to said opening and whose peripheral portion has openings through which the contents of the can may pass when the closure is relaxed.

1,374,933. MOTOR-DRIVEN STREET-SWEEPER. CHARLES WALTER LUND, Willows, Calif. Filed Apr. 11, 1919. Serial No. 289,326. 6 Claims. (Cl. 15—17.)



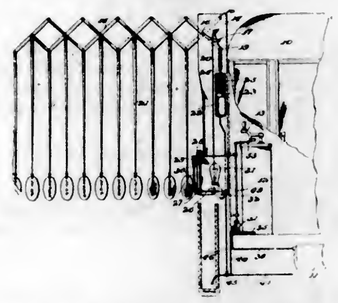
1. A street sweeping machine comprising an elongated wheeled housing, a transverse partition dividing said housing into a front brush compartment and a rear receiving compartment, said partition terminating in spaced relation to the top of the housing, a transverse substantially cylindrical brush casing in said brush compartment having an outlet opening in its top, the portion of the casing behind said outlet opening extending downwardly

to said partition and being hinged to allow vertical swinging of the brush casing within said housing, a combined brush and fan mounted in said brush casing and exposed at the lower side thereof for sweeping the street and blowing the sweepings through said outlet opening into the



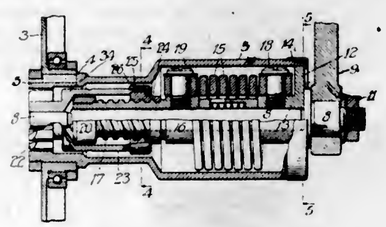
compartment, and a flexible sheet inclined rearwardly from the front edge of the aforesaid outlet opening to the top of the housing to guide the sweepings into the receiving compartment and permit vertical movement of said brush casing.

1,374,934. DIE. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 17, 1918. Serial No. 267,176. 27 Claims. (Cl. 164—29.)



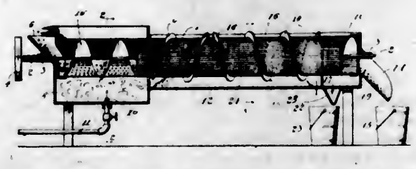
1. A die comprising a carrier member provided with cutting edges, a cutting member movable relatively to the carrier member, and means movable upon the carrier member and effective during the cutting operation by said carrier member for actuating the cutting member.

1,374,935. AUTOMATIC TEMPERATURE-REGULATOR FOR ELECTRICALLY-HEATED DEVICES. DONALD H. MCGOGY, Portland, Oreg. Filed May 3, 1919. Serial No. 294,390. 19 Claims. (Cl. 175—373.)



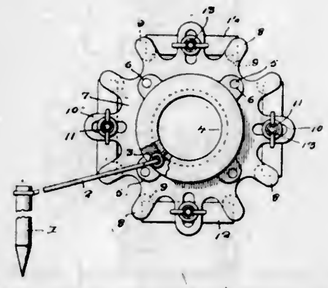
1. A temperature regulator for electrically heated devices including a thermostat, a main current controlling switch, a shunt circuit controlled by said switch, a secondary switch in the shunt circuit, electrically actuated means controlled by the shunt circuit for opening the main switch, means associated with said first mentioned means and normally holding the main switch closed, and means operable by the thermostat for closing the secondary switch.

1,374,936. DANGER-SIGNAL FOR RAILWAY-CARS. DONALD H. MCGOGY, Portland, Oreg. Filed Oct. 3, 1919. Serial No. 328,236. 10 Claims. (Cl. 246—208.)



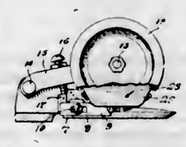
7. A signal of the character described including a lineally extensible arm formed of crossed pivotally connected members, a fluid pressure operated piston connected to the inner end of one of said members for extending the arm, and yieldable means associated with said piston for retracting the arm.

1,374,937. ENGINE-STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Oct. 21, 1919. Serial No. 332,193. 23 Claims. (Cl. 74—7.)



1. An engine starter drive comprising a central support, a sleeve mounted thereon, a concentric cylinder operatively connected with the sleeve, means for rotating the cylinder, and a driving member operatively connected with the sleeve for longitudinal movement thereof and rotary movement therewith.

1,374,938. COATING-MACHINE. DANIEL H. MCNULTY, Jr., Chicago, Ill., assignor of one-half to William Prentiss, Jr., Chicago, Ill. Filed Apr. 30, 1920. Serial No. 377,961. 4 Claims. (Cl. 91—7.)

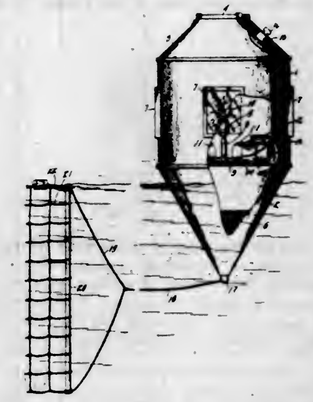


1. A coating machine having a revolving screen arranged approximately horizontally, the screen having an inlet at one end and an outlet at the other, a vaporizing chamber housing one end of the screen for moistening the contents, and a coating container housing the other end of the screen for the purpose described.

1,374,939. AUTOMOBILE-WHEEL ATTACHMENT. JESSE S. MARTIN, Reidsville, N. C. Filed July 20, 1920. Serial No. 397,801. 1 Claim. (Cl. 242—95.)

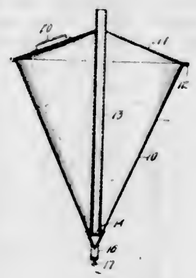
An automobile wheel attachment comprising a drum adapted for use in association with a cable and cable-anchoring means and having at its inner end peripheral ears, an annular carrying body opposed to the inner end of the drum and riveted to the ears thereof and having radial, longitudinally-slotted projections and also having pairs of other radial projections and lateral arms extending at right angles inwardly from the latter and adapted to rest at opposite sides of spokes, threaded bolts extending through the slots of the first-named projections, spoke-clamping plates carried by the said bolts and disposed in a plane inwardly beyond the inner ends of said arms, and nuts mounted on the bolts and opposed to the outer side of the carrying body.

1,374,940. CUTTING ATTACHMENT FOR HOSIERY-LOOPING MACHINES. JUNIUS A. MARTIN and ROBERT L. LEE, Durham, N. C.; said Lee assignor, by mesne assignments, of his right to Carrolina Automatic Machinery Company, Durham, N. C., a Corporation of North Carolina. Filed Dec. 8, 1919. Serial No. 343,262. 11 Claims. (Cl. 112—252.)



10. In a device of the character described, the combination of a supporting element adapted to be secured to a looping machine; a normally fixed blade adjustable toward and from the fabric supporting points of the looping machine; a rotary knife coöperating with the fixed blade; and a brush acting to draw the chain thread, between adjacent stockings, into operative relation with the knife and blade.

1,374,941. METHOD OF AND BATH FOR RETTING FIBROUS STRAW. JAMES M. MASSON, Duluth, Minn. Filed Jan. 12, 1920. Serial No. 350,978. 8 Claims. (Cl. 92—15.)

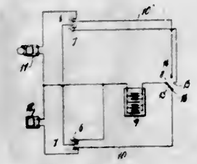


1. The method herein described of retting fibrous straw consisting in submerging and boiling the straw in a solution containing tri-phosphate of soda and sulfonated oils, and subsequently removing and washing the straw.

1,374,942. FISHING-NET BUOY. ODUM T. MELVIN, St. Andrews, Fla. Filed May 6, 1920. Serial No. 379,394. 2 Claims. (Cl. 9—8.3.)

1. A seining buoy comprising a cylindrical water and air-tight housing having tapered ends, a floor for the cylindrical portion, a plurality of transparent panels in the cylindrical portion, an electric light mounted upon the floor, and positioned to shine through the panels, a cell for supplying electricity to the light, a strap carried by the housing for removably securing the cell to the floor, said strap consisting of a flat band hinged at one end to the housing and adapted to be held in position at the other end by means of a turn button, substantially as described.

1,374,943. BUOY. ODUM T. MELVIN, St. Andrews, Fla. Filed June 7, 1920. Serial No. 387,136. 1 Claim. (Cl. 9—8.)



A buoy comprising, a body composed of cones of different taper having their bases secured together producing a single inner chamber, a cylindrical socket closed at one end inserted through the axis of one cone and extending along the axis of the other cone and having its closed end resting upon the inner wall of the other cone, the open end of the socket extending above the apex of the upper cone for receiving a flag staff, substantially as described.

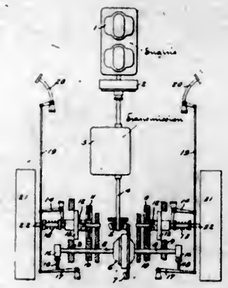
1,374,944. INDICATING-SIGNAL FOR AUTOMOBILES. JOHN D. MULVEHILL, Seattle, Wash. Filed Dec. 17, 1919. Serial No. 345,657. 1 Claim. (Cl. 177—326.)

A direction signaling indicator comprising a pair of lamp fixtures, one upon each side of the vehicle, lamps of two different colors one of each color in each fixture and

visible from both front and rear of the vehicle, an audible electrically operated signal in series with one of said lamps, an audible electrically operated signal of a nature contrasting with said first mentioned signal in series with the lamp on the opposite side of the vehicle from and of

the same color as the lamp in series with which the first mentioned signal is connected, and a switch for selectively operating either lamp of similar color with its cooperating audible signal to indicate the proposed direction of a turn or for operating the two lamps of the other color to indicate a proposed stop.

1,374,945. METHOD OF CONTROLLING SUBTERRANEAN STREAMS. ED MURRAY, Lincoln, Nebr. Filed Apr. 25, 1919. Serial No. 292,531. 2 Claims. (Cl. 61—2.)



1. The method of controlling subterranean streams which consists in erecting a barrier across the path of flow of the stream below the surface of the earth and extending the barrier above the earth's surface, and tapping the barrier near the top thereof to provide a water supply.

1,374,946. DEEP-WELL-DRILLING DEVICE. LORAN E. NEBERGALL, Omaha, Nebr. Filed Apr. 28, 1919. Serial No. 293,313. 1 Claim. (Cl. 255—29.)

In a deep-well auger-stem having a long body-portion, and terminal portions adapted for rigid connection with a bit and other tools of a string, wing-forming members disposed upon the body of the stem in sections, each section of said members having a plurality of parts extending out radially of the stem-body and continued longitudinally thereof, and the radially extending parts being circumferentially interspaced in adjoining sections.

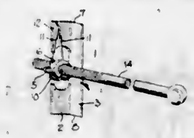
1,374,947. MOTOR-VEHICLE AND METHOD OF DRIVING SAME. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 21, 1916. Serial No. 105,306. 11 Claims. (Cl. 180—17.)

1. In a vehicle, traction members on opposite sides of the vehicle, means for propelling at least one of said members including means whereby the opposite traction member may turn differentially during straight forward movement of the vehicle, and means for insuring, during turning, propulsion of only the outer traction member upon only disconnecting said traction members from each other.

1,374,948. ELECTRICAL INDICATING DEVICE. RODOLPH STUART O'NEIL, London, England. Filed Mar. 1, 1920. Serial No. 362,418. 1 Claim. (Cl. 40—52.)

An electrical indicator comprising a casing having a single display opening, a single illuminating device behind said opening, magnetically operated color screens adapted to be pre-selected for interposition between the illuminating device and the display opening, and electro-magnetically operated indicating disks having indicia and adapted to be pre-selected and interposed between the color screen in operative position and the display opening whereby a pre-selected indication in a pre-selected color is displayed, substantially as specified.

1,374,949. CAMERA-CASE. GEORGE L. OSGOOD, Ayer, Mass. Filed Dec. 26, 1919. Serial No. 347,438. 2 Claims. (Cl. 150—7.)



1. A camera case comprising a pouch of flexible sheet material having a lower end wall, elongated side walls connected by said end wall, and relatively narrow elongated edge walls secured to said lower end wall and side walls, and a rigid adjunct holder, rigidly backing the lower end wall, the lower portions of the side walls and the lower portions of the end walls, and forming the bottom of a camera-receiving space in the upper portion of the pouch, the backed portion of one of said edge walls being

provided with an opening and with a displaceable closure therefor, and the holder being provided with an ad-

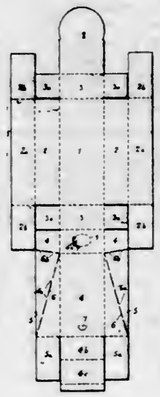
junct-receiving socket, the mouth of which is arranged to be covered by said closure, means being provided for detachably securing the closure to the holder.

1,374,950. SPRING-TOGGLE. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry W. Newhall, Jr., executor of Henry W. Newhall, deceased. Filed Dec. 23, 1919. Serial No. 347,044. 4 Claims. (Cl. 85—3.)

4. A new article of manufacture for use with a toggle comprising a wire spring bent back on itself to form two arms, each of the arms being separated and bent back on itself to form a double U-shaped pocket with parallel sides to receive the nut of a toggle bolt, the two free ends of the wire spring being provided with means to engage a toggle head.

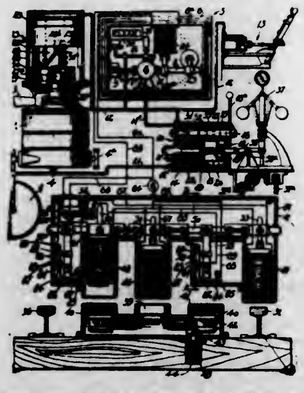
1,374,951. FUNGICIDE AND INSECTICIDE AND METHOD OF PRODUCING THE SAME. DAVID S. PRATT, Pittsburgh, Pa. Filed Oct. 11, 1919. Serial No. 330,130. 4 Claims. (Cl. 167—6.)

1. The method of producing a dry lime-sulfur composition containing a high percentage of active ingredients and of relatively uniform fineness, which comprises spraying a lime-sulfur solution in the form of a fine mist into a heated chamber and withdrawing the vapor formed from the chamber, the solids of the solution being thereby deposited in a condition of fine subdivision; substantially as described.



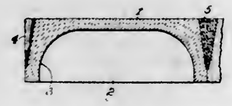
3. A fungicide and insecticide consisting of a dry lime-sulfur composition in the form of particles of practically uniform fineness and of approximately spherical contour requiring no further grinding, containing a high content of active ingredient readily soluble in cold water and a low percentage of insoluble material; substantially as described.

1,374,952. AIR-LIFT APPARATUS. EDWIN M. ROGERS, New York, N. Y. Filed Apr. 5, 1920. Serial No. 371,392. 21 Claims. (Cl. 103—84.)



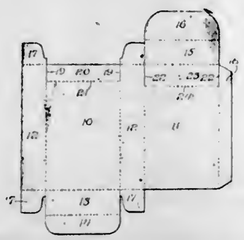
1. A regenerator apparatus for air-lifts comprising, in combination, a casing for connecting a lower uptake-conduit for delivering an aerated liquid column upwardly into the casing and an upper uptake-conduit for receiving re-aerated liquid from the casing, said regenerator having a lower de-aeration zone and an upper re-aeration zone, and intermediate to these two zones having an air-collecting chamber in position and adapted for collecting coalesced air-bubbles from said lower zone, and provided with means for comminuting and then delivering said collected air into said upper zone, and also having a separate passage-way for a continuously moving column of liquid from said de-aeration zone to said re-aeration zone, whereby a column of liquid mixed with relatively large air-bubbles may be regenerated without cessation of upflow, into a column of liquid mixed with relatively small air-bubbles composed of air previously segregated from said column.

1,374,953. RECEPTACLE FOR DISPLAY. BENJAMIN ROSENBERG, Brooklyn, N. Y. Filed Jan. 18, 1917. Serial No. 143,100. 15 Claims. (Cl. 206—44.)



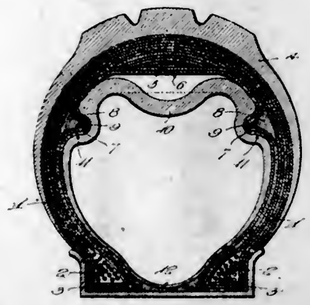
1. A receptacle having a body and a lid hinged thereto, the lid being adapted to be stood up on one end to support the body in display position, and means for holding the lid and the body in the desired relative locations.

1,374,954. ELECTROMAGNETIC TRAIN-CONTROL AND DANGER-INDICATING MEANS AND RECORDING MEANS. ALFRED L. RUTHVEN, Rochester, N. Y., assignor to Simplex Train Control Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 8, 1918. Serial No. 257,336. 10 Claims. (Cl. 246—202.)



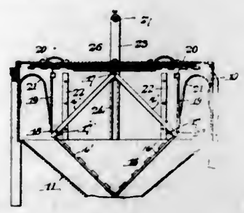
1. Vehicle controlling apparatus embodying a controlling device on the track having alternately movable armatures and a rock shaft with cranks for said armatures to actuate them.

1,374,955. CONCRETE BUILDING-BLOCK. JOHN M. SCHENK, deceased, Waterloo, Iowa, by Ella M. Schenk, administratrix, assignor to Ella M. Schenk, Waterloo, Iowa. Filed Apr. 22, 1920. Serial No. 375,827. 1 Claim. (Cl. 72—41.)



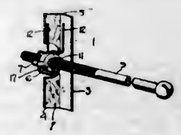
A building-block having in its under face a longitudinal trough with arcuate ends, and having in each outer end wall a recess having its upper end open to the top plane of the block and its lower end closed, said recess being gradually diminished in cross-sectional area longitudinally from its upper toward its lower end to maintain an approximately uniform thickness in that part of the block between it and said longitudinal trough.

1,374,956. END-OPENING CARTON. ANTHONY SCHNEIDER, Whippany, N. J., assignor to American Cigar Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 8, 1919. Serial No. 316,058. 3 Claims. (Cl. 229—17.)



1. A carton having a closure for one end, comprising one short and one long side flap each outwardly foldable on lines below the carton top, the long side flap being sufficiently long to extend over the carton top and down below the fold line of the short side flap, the short flap being of such length that when slightly bent outwardly it serves as a guide to direct the long flap to its closed position between the fold line of the short flap and the carton contents.

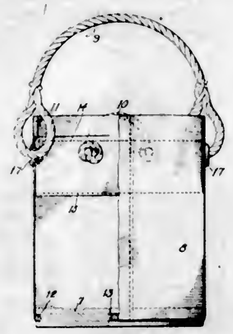
1,374,957. PNEUMATIC TIRE. BENJAMIN C. SEATON, Nashville, Tenn. Filed Feb. 5, 1920. Serial No. 356,427. 7 Claims. (Cl. 152—13.)



6. An inner tube having its tread portion thickened throughout its width and circumference and provided with continuous external shoulders bordering said tread portion for contact with ribs in a casing, said tread portion of the tube being inwardly bowed and having an inherent tendency to retain said bowed formation until inflated.

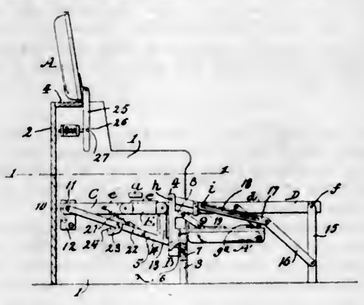
1,374,958. WASHING-MACHINE. JOHN W. SEIFERT, Houston, Tex. Filed Feb. 28, 1920. Serial No. 362,072. 3 Claims. (Cl. 68—37.)

1. In a washing machine, a casing, arms pivoted in spaced relation in said casing, a polygonal basket in said casing, hinge pins connecting the various sides of said basket, certain of the said pins being supported by the free ends of said arms, means normally forcing said arms inwardly, and means for expanding or collapsing said basket.



1,374,959. SPRING-TOGGLE. DANIEL R. SHERWOOD, Plainfield, and JOHN KARITZKY, Garwood, N. J., assignors to Henry B. Newhall, Jr., Plainfield, N. J., executor of Henry B. Newhall, deceased. Filed Dec. 23, 1919. Serial No. 347,039. 9 Claims. (Cl. 85—3.)

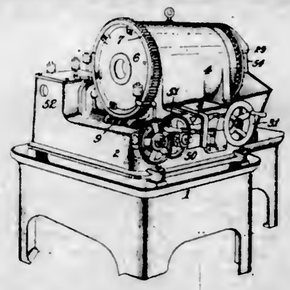
5. In a toggle the combination of a one piece head, having bearings for a nut, a nut mounted on said bearings



and a spring yieldingly embracing the nut, adapted to move with it and adapted to rock the one piece head, said spring having a portion adapted to receive a bolt.

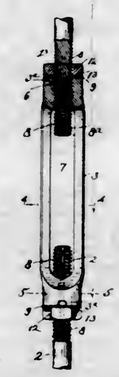
1,374,960. COLLAPSIBLE TOOL-BAG FOR LINEMEN. EMANUEL F. SHIPMAN, Philadelphia, Pa., assignor to Industrial Products Company, a Corporation of Pennsylvania. Filed Apr. 17, 1920. Serial No. 374,525. 1 Claim. (Cl. 150—1.)

A lineman's tool bag comprising a rigid closed bottom, a flexible body portion having an open upper end, a hoop member surrounding the upper end and around which the flexible body portion is lapped, eyelets extending through the body portion in the lapped zone, insulating material covering said eyelets, a handle engaging said eyelets and an additional suspension device carried by said body, substantially as described.



1,374,961. SOFA-BEDSTEAD. SOLMON SHUMSKY, Brooklyn, N. Y. Filed Feb. 7, 1920. Serial No. 357,074. 3 Claims. (Cl. 5—48.)

3. A sofa bedstead comprising a support, and a foldable mattress-carrying frame comprising an inner section having laterally extended pins, an outer section having laterally extending pins, an intermediate section, means pivoting said sections to each other, brackets for supporting said frame, slotted rods swinging from said brackets and engaging the pins of said outer section, connecting rods, and swinging legs, said connecting rods being connected between said slotted rods and swinging legs whereby movement of the outer swinging section operates them, substantially as shown and described.

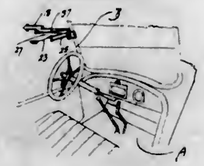


1,374,962. ROTARY MILLING AND SLOTTING MACHINE. OSCAR A. SMITH, Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 9, 1919. Serial No. 309,641. 31 Claims. (Cl. 90—20.)

1. In a milling and slotting machine, the combination of rotary work holding means, a rotary shaft of relatively large diameter carrying said work holding means, a rotary cutter supported at one side of said shaft, means for feeding said work holding shaft sidewise toward and from

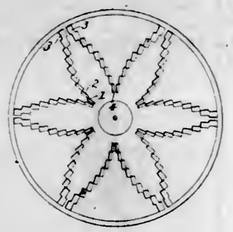
the cutter, and means for rotating the cutter and shaft and including a single belt driven differential speed pulley, the shaft at low speed as compared with the high speed of the cutter.

1,374,963. TURNBUCKLE. RALPH D. STEVENSON, Cleveland, Ohio, assignor to The Safety Nut & Bolt Company, Cleveland, Ohio, a Corporation of Delaware. Filed Mar. 15, 1918. Serial No. 222,572. 4 Claims. (Cl. 85—36.5.)



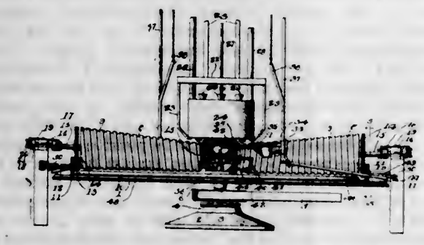
4. The combination with two oppositely disposed threaded members, each of said threaded members being provided with a plurality of grooves extending longitudinally with respect to the threaded portions of said members, an intermediate member having threaded openings which receive the threaded ends of the said threaded members, the ends of said intermediate member being provided with one or more depressions, a washer encircling each of the threaded members, said washer being provided with extensions which engage in the grooves formed in the said threaded members, and a nut upon each of the said threaded members and in position to be turned against a washer to hold the same against the head of the intermediate member, one or more depressions formed in each of said nuts, portions of each of said washers being adapted to be bent to occupy one or more of the depressions in the head of the intermediate member and in an adjacent nut, whereby the parts are locked against relative rotation.

1,374,964. AUTOMOBILE-SIGNAL. GUY J. STREETER and WILLIAM O. LILLEMOEN, Monroe, Wash. Filed June 8, 1920. Serial No. 387,422. 6 Claims. (Cl. 116—47.)



1. In an automobile signal, the combination of a supporting base; an arm oscillatively mounted upon said base; an indicating arrow; a pin pivotally connecting said indicating arrow to the arm, said pin provided with a crank

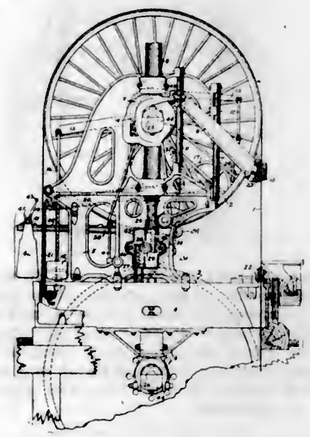
arm projecting beyond a side of the arm; a second pin laterally projecting through said arm near the pivot end of the arm, said pin having a crank arm and projecting beyond a side of the arm; a rod connecting said crank



arms; an operating rod reciprocatingly mounted on the supporting base; one end of said rod being pivotally connected to the second mentioned pin, to rotate the arrow upon torsional movement of the operating rod.

1,374,965. APPARATUS FOR TREATING LIGHT AND SIMILAR RAYS. ALFRED O. TATE, New York, N. Y. Filed Jan. 24, 1920. Serial No. 353,902. 9 Claims. (Cl. 88—1.)

1. Rotary disks for treating light and similar rays provided with series of figures having characteristics as concerns the effect on said rays, different from those of the main body of the disk and arranged along lines which form substantially continuous undulations between the center and circumference of the disk, and having the same intermingling effect in successive circumferential zones when the disk is rotated.



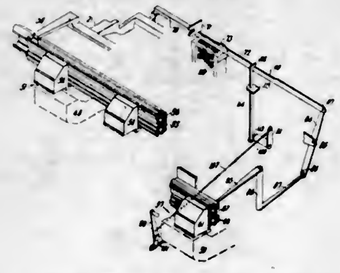
1,374,966. MACHINE FOR MAKING SPHERICAL ARTICLES. GAROLD J. THOMPSON, Clarksburg, W. Va., assignor to Glamar Machine Company, a Corporation of West Virginia. Filed Aug. 25, 1919. Serial No. 319,551. 24 Claims. (Cl. 49—5.)

1. In a machine for making spherical articles from a molten mass, the combination of a turntable having a plurality of convolute shaping channels in its upper face, a roll mounted above said table to rotate on a substantially horizontal axis and having spiral shaping channels registering with the channels in the turntable, means for imparting motion to said turntable and roll, a molten mass container superposed above said table, and feeding means for delivering portions of said mass intermittently to the shaping channels of the turntable.

21. A feeding mechanism for machines for making spherical articles comprising a circular casing, a plurality of cylindrical hoppers spaced within said casing and from the wall thereof, means for delivering material to each of said hoppers, means for introducing a heating medium to said casing, and means for discharging the material in molten state from each of said hoppers.

1,374,967. BAND-MILL. WILLIAM HENRY TROUT, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed May 31, 1917. Serial No. 172,092. 9 Claims. (Cl. 143—27.)

1. In combination, a frame, a band wheel, a band saw engaging said wheel, means for supporting said wheel, a pair of relatively movable racks associated with said frame and with said wheel supporting means respectively, a laterally movable pinion coacting with said racks, and movable means for holding said pinion in operative relation to said racks.



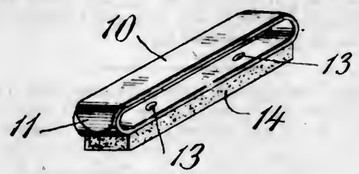
1,374,968. METHOD OF TREATING LIGHT-METAL ALLOYS. WILLIAM R. VEAZEY, Cleveland, Ohio, assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Jan. 21, 1920. Serial No. 353,097. 7 Claims. (Cl. 29—148.)

1. The method of treating a light metal alloy in which magnesium is the predominant constituent, which consists in heating the same to a temperature of from 500° to 700° F., and then forging or similarly working the same.

1,374,969. COMBINED TYPEWRITING AND COMPUTING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1918. Serial No. 264,300. 13 Claims. (Cl. 235—59.)

1. In a combined typewriting and computing machine, the combination of a typewriter carriage, a cross-totalizer, pick-up devices on said carriage, an intermediate member spring-pressed upwardly to enable engagement thereof by said pick-up devices, means whereby said intermediate member when in engagement with one of said pick-up devices will cause the cross-totalizer to be advanced with the carriage, a lever pivoted on the typewriter frame near the front thereof, and means actuated by said lever, including a member having a hook overlying said intermediate member, to withdraw said intermediate member from the path of said pick-up devices.

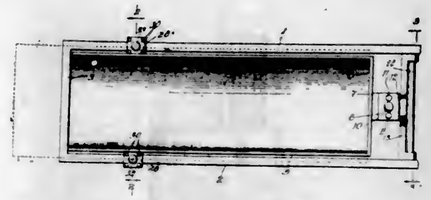
12. In a combined typewriting and computing machine, in combination, a carriage, a column-totalizer to travel therewith, computing mechanism for said column-totalizer, a cross-totalizer, pick-up mechanism to cause said cross-



totalizer to travel with said carriage, means to silence said computing mechanism, and means, controlled by said silencing means, to render said pick-up mechanism ineffective.

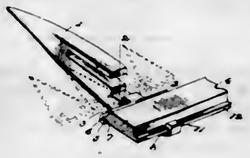
1,374,970. GARMENT MATERIAL. EDITH V. C. WEYAND, New York, N. Y. Filed June 26, 1920. Serial No. 392,140. 5 Claims. (Cl. 41—17.)

1. A garment material composed of a strip of textile fabric bearing thereon or having incorporated therein successively recurring grouped designs or ornamentations, each particular group being composed of various motifs, each motif being characteristic of the particular portion of the completed garment the motif is to occupy.



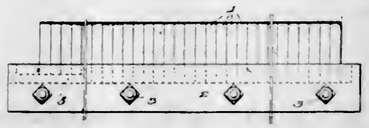
1,374,971. LINGERIE-CLASP. DAVID WIENER, New York, N. Y. Filed Oct. 2, 1919. Serial No. 327,948. 4 Claims. (Cl. 241—12.)

2. In a device for holding in place upon the shoulder of a wearer the strap of an undergarment, the combination of a friction member and means associated therewith for connecting said member to the strap of the undergarment so that the strap will not slip off the shoulder, said means being operable to permit ready application of the friction member to the strap of the undergarment and ready detachment therefrom.



1,374,972. MOUNTING FOR TANKS AND THE LIKE. GEORGE M. WILLIS, Chicago, Ill., and LEONARD V. NEWTON, New York, N. Y., assignors to George M. Willis, Chicago, Ill. Filed Apr. 6, 1920. Serial No. 371,656. 3 Claims. (Cl. 280—5.)

1. In combination, a supporting frame including a pair of longitudinal frame members, a tank carried by the frame, a bracket member mounted to swing longitudinally about an axis extending transversely between the longitudinal frame members of the supporting frame, the mounting of the tank upon the frame including a universal supporting connection between one end of the tank and said longitudinally swinging bracket member, said universal supporting connection together with the longitudi-

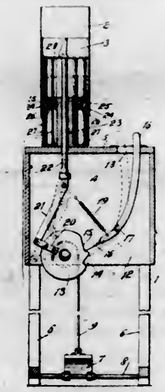


nal swinging of said bracket about the transversely extending axis carrying the same compensating for relatively great distortion, disalinement and weaving between said frame and said tank, and permitting variation in the position of the supporting connection with the frame.

1,374,973. GUARD-FINGER AND FINGER-BAR. THEODORE WITTE, Makoti, N. D. Filed May 1, 1920. Serial No. 378,229. 3 Claims. (Cl. 56—308.)

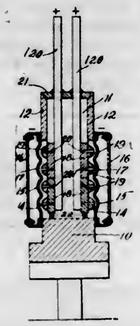
1. The combination of a finger bar having a socket in its under side, a guard finger disposed below the finger bar, a fastening member permanent upon the guard finger and having its front and rear ends in overhanging engagement with the finger bar, and a stud on said fastening member engaging the socket in the finger bar.

1,374,974. METHOD OF MAKING PIANO-HAMMERS. IGNATIUS WROZINA, Bridgeport, Conn., assignor of one-third to Otto J. Diehl and one-third to Martin A. Heanue, Bridgeport, Conn. Filed Aug. 2, 1920. Serial No. 400,770. 4 Claims. (Cl. 84—254.)



1. The method of making piano hammers, consisting in assembling the hammer bodies within a holder, affixing a continuous strip of felt facing to the hammer bodies, toning the entire striking area of the strip by penetrating the same with toning needles, and then separating the hammer bodies and the strip into individual hammers.

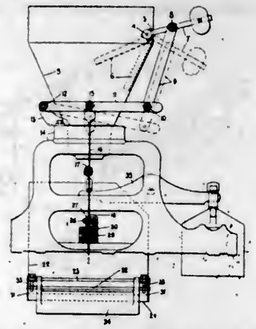
1,374,975. COLLAR-PACKAGING MACHINE. WILLIAM A. ZEIDLER, New York, N. Y. Filed Oct. 3, 1919. Serial No. 328,323. 5 Claims. (Cl. 223—55.)



1. In a machine of the class described, a series of fingers and means for pivotally mounting the same, a disk adapted to move between said fingers and be held at different

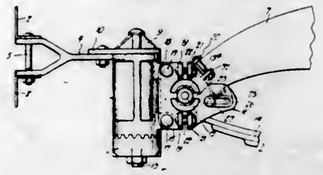
levels, and means for mounting the same so that a tube may be placed over said fingers and the disk raised or

lowered according to the depth of the collar receiving space to be occupied.



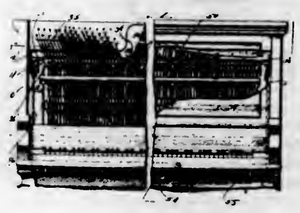
1,374,976. ELECTROLYTIC CELL. HERBERT I. ALLEN and KENT R. FOX, Portland, Me., assignors to Electron Chemical Company, Portland, Me., a Corporation of Maine. Filed June 1, 1920. Serial No. 385,772. 2 Claims. (Cl. 204—5.)

2. In an electrolytic cell for the electrolysis of saline solutions, an anode consisting of one or more flat carbon plates, and spaced parallel carbon ribs thereon, the faces of the ribs and the faces of the plates between the ribs being active.



1,374,977. SCALE FOR AUTOMATICALLY WEIGHING GRANULAR OR LIKE SUBSTANCES. ARTHUR BARRACLOUGH, Birmingham, England, assignor to W. & T. Avery Limited, Birmingham, England. Filed Aug. 26, 1918. Serial No. 251,555. 4 Claims. (Cl. 249—1.)

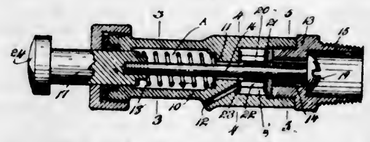
1. The combination with an automatic weighing scale of the kind herein referred to, of a supply hopper, a weigh hopper, a weigh hopper discharge door, and means whereby the amount of material in the supply hopper controls the operation of the weigh hopper discharge door, so that when the supply falls below a predetermined minimum the said discharge door is maintained in the open position and the normal operations of the scale are suspended until



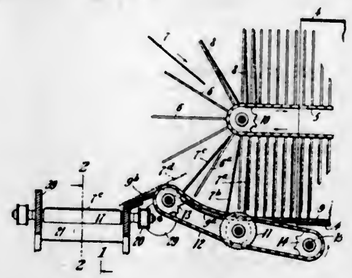
the supply of material has been increased whereupon the operations of the scales are automatically restarted.

1,374,978. AUTOMOBILE-BUMPER. LEROY BAUMGARTL, Chicago, Ill. Filed Feb. 3, 1921. Serial No. 442,045. 14 Claims. (Cl. 293—55.)

5. In a bumper, the combination of an impact bar, a supporting member located forwardly of the end of a vehicle frame member, and attaching members comprising pairs of companion plates adapted to be clamped on opposite sides of the end of said vehicle frame member, each pair of said plates being spaced apart on opposite sides of a pivot bolt passing through the end of said frame member, and provided with lugs adapted to bear against said pivot bolt at diametrically opposed points, and bolts connecting the plates of each pair and arranged on opposite sides of their respective lugs.



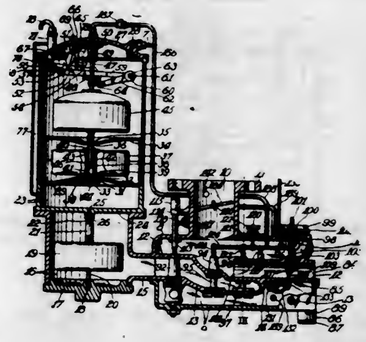
1,374,979. PLECTRUM ATTACHMENT FOR PIANOS. FRANK BINGAMAN, Parkersburg, W. Va. Filed Oct. 23, 1919. Serial No. 332,729. 5 Claims. (Cl. 84—258.)



1. A plectrum attachment for a piano comprising end supports adapted for attachment to the end walls of the interior of the casing of a piano, said supports being vertically slotted, a longitudinal bar having its ends slidable in the slots of the supports, piano-string-picking elements on the said bar arranged to be struck by the hammers of the piano, vertically slidable means on the supports engaging the said bar and a manually operable yoke having its arms operatively engaged with the vertically slidable means for raising and lowering the said bar to dispose the string picking elements in and out of the path of the said hammers.

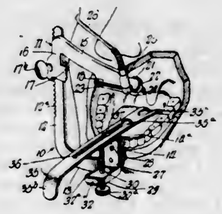
1,374,980. DISPENSING-VALVE. CHARLES P. BOSSERT, Milwaukee, Wis. Filed Dec. 16, 1919. Serial No. 345,418. 7 Claims. (Cl. 221—114.)

1. A valve structure of the class described comprising a storage chamber, a valve chamber in communication with the storage chamber, a valve member reciprocable in the valve chamber, inlet and outlet ports for the valve chamber, a plunger having a stem slidable in the measuring chamber, said valve being slidably mounted on said stem and operable by the flow of liquid upon reciprocation of the plunger to open and close said ports successively.



1,374,981. DELIVERY MECHANISM. MARCUS D. BOUGHTON, Jefferson, N. Y. Filed Dec. 4, 1920. Serial No. 428,310. 10 Claims. (Cl. 271—76.)

4. In sheet delivery mechanism the combination of a traveling conveyer adapted for advancing sheets on edge, a toothed wheel rotated at a peripheral speed in excess of that of the traveling conveyer and adapted to engage the lower edges of successive sheets advanced by said conveyer and lift and advance said sheets away from the engaging portions of said conveyer respectively, an endless chain driven at a speed in excess of that of the traveling conveyer and adapted to engage and advance the lower edges of successive sheets after they are advanced by said wheel, and a plurality of rotating rolls forming a roller table adapted for receiving the sheets from the previous advancing means and further advancing said sheets.

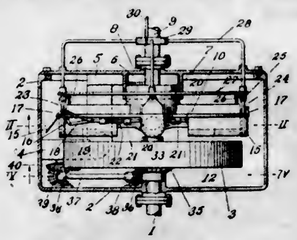


1,374,982. [WITHDRAWN.]

1,374,983. FUEL-CONTROL SYSTEM FOR EXPLOSION-ENGINES. MARTIN C. BRIGHT, Indianapolis, Ind. Filed June 30, 1919. Serial No. 307,730. 19 Claims. (Cl. 158—36.)

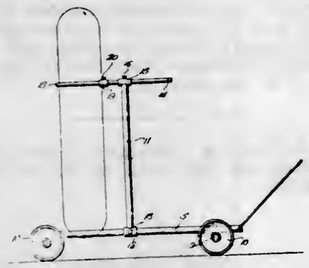
1. An explosion engine fuel-control system including a vacuum tank having two connected chambers therein arranged one above the other, and two floats movable in the chambers respectively and coöperating each with the other to control admission of liquid from the upper to the lower one of the two chambers.

1,374,984. RETRACTOR. WILLIAM J. CAMERON, Chicago, Ill. Filed Sept. 10, 1919. Serial No. 322,911. 9 Claims. (Cl. 128—13.)



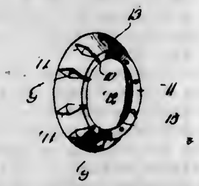
1. A retractor comprising in combination, top and bottom frame members, each including a horizontal arm, said arms terminating in vertically alined, oppositely disposed hooks, means providing a vertical adjustment between said horizontal arms, a tongue depressor associated with the hook on one of said frame members, a supporting member for said depressor connected to said frame member to tilt in a vertical plane, a yielding stud on said supporting member for frictionally holding said depressor, but permitting longitudinal adjustment of said depressor with reference to said supporting member, and a screw carried on said frame member for imparting a vertical tilting adjusting movement to said supporting plate.

1,374,985. FLUID TRANSMISSION AND CLUTCH MECHANISM. RENICK H. CARSON, Kansas City, Mo.; Essie C. Carson administratrix of said Renick H. Carson, deceased. Filed June 27, 1918. Serial No. 242,199. 9 Claims. (Cl. 192—60.)



1. A combined fluid transmission and clutch, comprising a housing, a driving shaft projecting therein, a series of cylinders rotatable together around the same axis as said shaft and having intake ports intermediate their ends for receiving fluid from the housing, manually-controlled valves for said cylinders outward of said ports, valves for said ports, reciprocating pistons in said cylinders actuated by said drive shaft and adapted when moving outward to force fluid through the outer ends of the cyl-

inders when said manually-controlled valves are open and against said valves when the same are partly or wholly



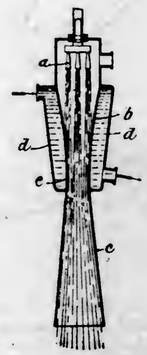
closed, and means for closing the port-controlling valves as the pistons move outward and for opening said valves as the pistons move inward.

1,374,986. TRUCK. FREDERICK ELI CARTER, Yuma, Colo. Filed July 17, 1920. Serial No. 396,951. 5 Claims. (Cl. 280—61.)

1. A truck of the character described comprising a wheeled base consisting of a pair of spaced tubular side members and a pair of telescopic tubular end members, a pair of spaced standards, means for rotatably and adjustably supporting said standards upon the respective side members of said base including a sleeve carried by the lower end of each of said standards and embracing the adjacent side member, and a set screw for each of said sleeves for securing said standards in adjusted position, means carried by the standards for retaining the wheel on the truck including a frame consisting of a pair of spaced longitudinal bars, a pair of spaced telescopic cross bars carried by said longitudinal bars, one of said cross bars being longitudinally adjustable on said longitudinal bar, sleeves carried by the upper ends of said standards and embracing the longitudinal bars of said frame, whereby said longitudinal bars are rotatably and adjustably carried by said standards, and a set screw for each of said last-mentioned sleeves whereby said longitudinal bars may be clamped in adjustable position.

1,374,987. ROLLER-BEARING. LEO S. CHRISTOPHERSON, Spokane, Wash. Filed May 13, 1920. Serial No. 380,963. 1 Claim. (Cl. 64—62.)

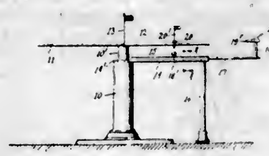
In a roller bearing, the combination with a cup member and a cone member having obliquely disposed complementary grooves, each groove having opposed faces of differing angularity, a cage of resilient material in the form of a truncated cone located between the members and having perforations and edge flanges, and double conical rollers in said cage having end bearing points adapted to be snapped into and retained in openings in said flanges.



1,374,988. BALL-BEARING. ELISHA H. COOPER, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 19, 1920. Serial No. 417,981. 2 Claims. (Cl. 64—36.)

1. In a single row three-point ball bearing of the unitary or assembled type, two bearing rings, one of said rings being formed of two ring-like sections connected by welding, a ball race way groove in one of the rings, two separately spaced ball tracks formed on the two sections of the other ring for engaging a row of balls on opposite sides, a single row of balls between said rings, that part of the two section bearing ring between said ball tracks being out of contact with said balls.

1,374,989. [WITHDRAWN.]

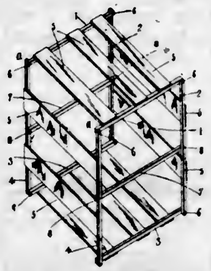


1,374,990. STEAM-EJECTOR. ALBERT DELAS, Paris, France, assignor to Delas Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 31, 1918. Serial No. 260,600½. 5 Claims. (Cl. 230—13.)

1. The process of ejecting a fluid which consists in passing a motive fluid through a diffuser, and condensing that portion of the motive fluid which is in excess of that required to fill the neck portion of said diffuser.

1,374,991. GAME APPARATUS. HANS DRATSCHKE, Brooklyn, N. Y. Filed July 23, 1920. Serial No. 398,525. 6 Claims. (Cl. 46—59.)

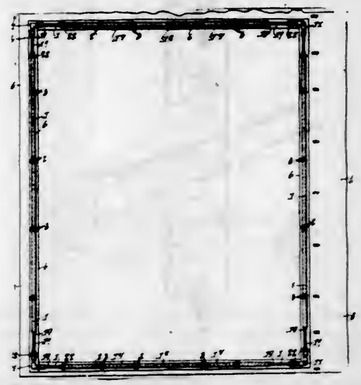
1. A game apparatus comprising a circular board carrying objects to be hit, an aiming device movable relatively to the board around the center thereof and also movable in and out, and a striker movable in unison with said



aiming device circumferentially and radially and also adapted to be moved toward the board to hit objects thereon.

1,374,992. ADHESIVE CEMENT AND PROCESS OF MAKING SAME. THOMAS EDWARDS, Milton, Mass. Filed July 27, 1917. Serial No. 183,111. 4 Claims. (Cl. 87—17.)

1. A cement consisting of rubber, dextrin, a fluid solvent for the rubber, and water as a solvent for the dextrin.

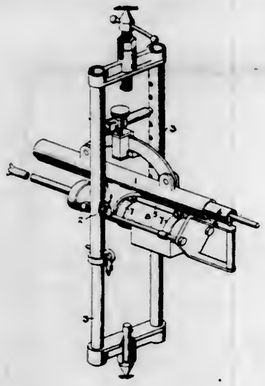


1,374,993. COLLAPSIBLE CRATE, BOX, AND THE LIKE. JAMES ELLIS, London, England. Filed Apr. 10, 1918. Serial No. 227,625. 1 Claim. (Cl. 217—15.)

In a collapsible crate the combination of a frame comprising four rectangular parts forming top, bottom and side portions the top being adapted to serve as a lid or cover for the crate, each rectangular part being formed of two spaced bars connected by slats the extremities of the bars of the top and bottom portions fitting between the extremities of the bars of the side portions; hinges for connecting said portions to each other whereby said portions may be laid in a flat condition or folded upon each other one pair of said hinges being detachable; and detachable end parts formed of spaced bars connected by slats said bars bearing laterally against the bars of the side portions, the lower bars of said end parts bearing on the bars of the bottom portion while the upper bars of said end parts serve as rests for the bars of the top or lid portion when said top or lid portion is in the closed position, the end parts being detachably secured to said frame.

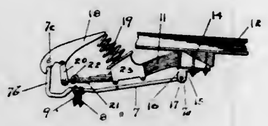
1,374,994. KNOCKED-DOWN OR PORTABLE STRUCTURE. GEORGE ADAM FAIK, Milwaukee, Wis. Filed Aug. 25, 1920. Serial No. 406,001. 10 Claims. (Cl. 135—4.)

8. In a tent structure, a section comprising a rectangular frame and a fabric sheet to which the frame is adapted to be attached, said frame comprising corner fixtures and poles detachably interlocked with said fixtures, each of said poles comprising a series of tube sections and a series of rod sections slidably fitting in the tube sections and flexible joints between the respective rod sections, means securing said tube sections to said fabric sheet against displacement with the opposing ends of adjacent tube sections separated to leave folding places for the fabric, means by which the rod lengths may be slid in the tube as a unit to bring the joints of the rod either



wholly within the tube sections or wholly at the spaces between the ends of the same correspondingly as the rod is in the locked or unlocked position, means for holding the rod sections fast in the locked position, said means comprising a stud on certain rod lengths, certain tube lengths having a bayonet slot and a member for holding said stud in the bayonet slot in the locked position.

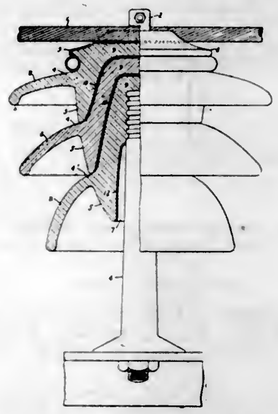
1,374,995. POLE FOR FOLDABLE LADDER AND STRETCHER STRUCTURES. GEORGE ADAM FAIK, Milwaukee, Wis. Filed Sept. 23, 1920. Serial No. 412,173. 6 Claims. (Cl. 228—29.)



5. A ladder comprising poles, each consisting of a series of tubes adapted to be held in endwise alinement with their ends in contact, rod sections slidably fitting within said tubes and linked together, rod and tube interlocking devices whereby to hold the rod sections with their joints inclosed between the ends of the tube sections and to hold the tube sections in end to end contact, rungs extending between corresponding tube sections of opposite poles, and socket members at the top of the ladder into which the poles are removably fitted, substantially as shown and described.

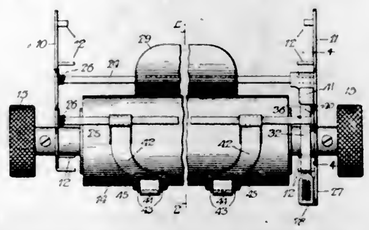
1,374,996. FEED DEVICE FOR ROCK-DRILLS. SEQUIN FISHER, Johannesburg, Transvaal, South Africa. Filed Apr. 4, 1919. Serial No. 287,399. 6 Claims. (Cl. 255—45.)

1. A feed device for a hammer drill, comprising a cradle on which the drill is slidably mounted for feeding movement; a feed spring adapted to move the drill forward a substantial distance; means in connection with the spring enabling the spring to be deformed manually and independently of the drill to cause it to feed the drill; and means for repeatedly anchoring said last-mentioned means to the cradle in its various progressing positions.



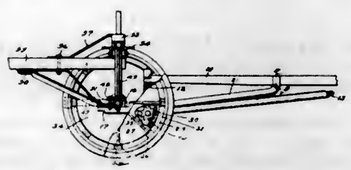
1,374,997. MOUNTING FOR SHOCK-ABSORBERS. CLAUD J. FORD, Portland, Oreg., assignor to S. L. Savidge, Portland, Oreg. Filed Apr. 19, 1919. Serial No. 291,379. 9 Claims. (Cl. 267—17.)

6. A mounting for a shock absorber comprising a plate having an arm extending therefrom, said plate being adapted to be secured to the axle of a vehicle, said arm being inclined upwardly with respect to said plate and provided at its end with a transverse sleeve, said plate having an extension offset oppositely to the inclination of said arm, said extension at its extremity being turned upwardly and constituting means adapted to have attached thereto the plate carrying the lever of a shock absorber, a second plate adapted to be secured to and carried by the vehicle body and having spaced ears embracing said sleeves and a pivot bolt carried by said ears and lying within the sleeve.



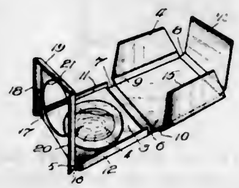
1,374,998. INSULATOR. CHARLES LE G. FORTESCUE, Pittsburgh, and GEORGE I. GILCHREST, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1918. Serial No. 217,221. 20 Claims. (Cl. 173—318.)

7. An insulator for disposition between two members of different potential comprising means for directing the electrostatic field therebetween to have a substantially bowl shape and a plurality of superposed nested insulating members having portions coöperating to form a subdivided



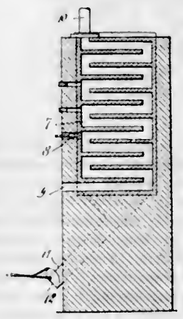
single main body structure substantially conforming to said field of bowl shape, and petticoat portions conforming to equi-potential surfaces in said field.

1,374,999. COMBINED PAPER FEED AND FINGER RELEASING MECHANISM FOR TYPEWRITERS. MAX GARBELL, Chicago, Ill., assignor to Garbell Typewriter Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1919, Serial No. 347,477. Renewed Feb. 24, 1921. Serial No. 447,556. 8 Claims. (Cl. 197—138.)



1. A device of the class described, consisting of a frame, a platen rotatably mounted thereon, paper supporting and feeding means mounted to swing about a common fixed axis located above the platen on said frame and extended under the platen, paper holding means pivotally mounted on the frame at a point above the platen and extended over the same, and means connecting the paper supporting and feeding means and the paper holding means for simultaneously actuating them from the platen.

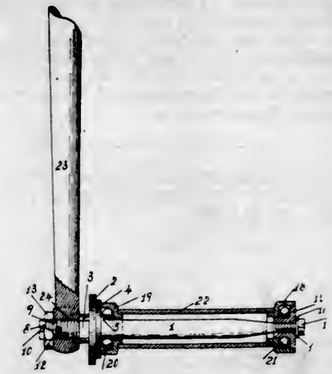
1,375,000. TRUCK AND TRACTOR ATTACHMENT FOR AUTOMOBILES. SAMUEL GLENN, Seattle, Wash. Filed July 21, 1919. Serial No. 312,440. 4 Claims. (Cl. 180—16.)



1. The combination with a motor vehicle attachment which includes a transverse auxiliary axle having wheels on each end and provided adjacent each end with a forwardly projecting bar that is arranged to be connected with the frame of a motor vehicle, of a yoke arranged to span the central portion of said auxiliary axle and pivotally connected therewith at each end whereby said yoke may occupy a substantially vertical position for supporting a load or a substantially horizontal position for pulling a load.

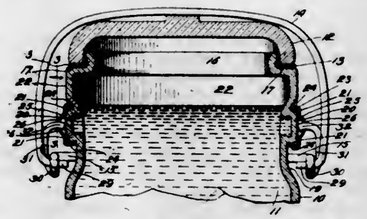
1,375,001. PAINT-PACKAGE. JOHN W. HASBURG, Chicago, Ill. Filed June 14, 1920. Serial No. 388,734. 4 Claims. (Cl. 41—4.)

1. A package comprising a palette, a cover overlying the palette, a blank folded about said palette and its cover to form an inclosing carton therefor, means lying between the marginal portions of the cover and the overlying wall of the carton and pressing the cover against the palette, said cover being provided with three flaps adapted to be folded over the bottom face of the package, and a single wafer for holding said flaps against unfolding.



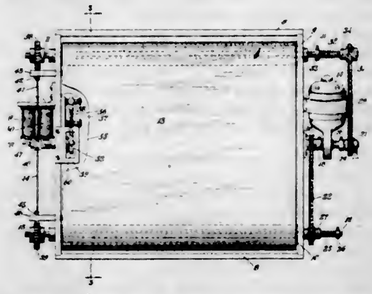
1,375,002. TREATMENT OF ORES. JULES HECTOR HIRT, El Paso, Tex., assignor to Alvarado Mining and Milling Company, New York, N. Y., a Corporation of Maine. Filed Jan. 24, 1920. Serial No. 353,821. 7 Claims. (Cl. 75—17.)

1. The method of chloridizing ores, metallurgical products and the like, which comprises heating a confined body of the same intermediate its ends to a temperature appropriate to the chloridizing, and introducing the chloridizing agent to the heated ore in a gaseous or vapor form.



1,375,003. PEDAL-PIN. JAMES INGELS, Springfield, Ill. Filed Oct. 23, 1920. Serial No. 419,117. 2 Claims. (Cl. 208—70.)

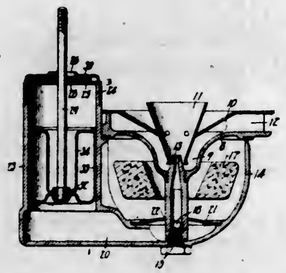
1. A pedal pin comprising a cylindrical body having at its crank end a ball cone; a shoulder member having a circular periphery conformed to the inner surface of relatively large ball cups and a flat face adapted to co-act with the outer rim of medium ball cups; a set off member having a circular periphery conformed to the inner surface of medium ball cups, and a flat surface adapted to co-act with the outer rim of small ball cups; a member having



flat opposite sides to receive a wrench; an inner and an outer screw member; a groove between said screw members; and a reduced screw at the free end of the body.

1,375,004. JAR AND OTHER RECEPTACLE. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y. Filed May 29, 1920. Serial No. 385,131. 2 Claims. (Cl. 215—37.)

1. A jar or other receptacle having on opposite sides of its neck-portion outwardly projecting lugs whose peripheral walls converge inwardly and present undercut surfaces, combined with sheet metal caps conforming to the shape of said lugs and having peripheral flanges which are crimped and converge inwardly and sprung upon and interlocked with said lugs, said caps having in their faces bearing openings to receive the ends of a wire bail.

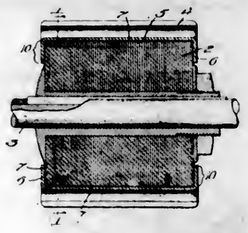


1,375,005. DISPLAY APPARATUS. CHARLES C. JAMES, New York, and GEORGE C. JAMES, Yonkers, N. Y. Filed May 8, 1920. Serial No. 379,697. 17 Claims. (Cl. 40—31.)

1. A display apparatus having in combination two rolls, a display sheet adapted to be wound upon and unwound

from said rolls respectively, a motor for driving both rolls, a yieldable driving connection between each roll and the motor, clutches for connecting the motor with said yieldable driving connections respectively for driving one roll or the other, and positively acting stopping means acting positively on the roll side of the yieldable driving connections for positively stopping the rotation of the rolls responsive to the deënergization of the motor without undue shock on the motor parts.

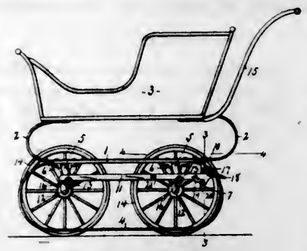
1,375,006. CARBURETER. CHESTER F. JOHNSON, Detroit, Mich. Filed Sept. 7, 1915. Serial No. 49,144. 5 Claims. (Cl. 261—37.)



1. A carbureter comprising in combination, a mixing chamber, a fuel nozzle arranged to discharge fuel into the mixing chamber, a fuel reservoir, a diaphragm dividing the latter into a main portion and an auxiliary portion, said nozzle extending through the main portion and into the auxiliary portion and being in communication with the latter, and a piston arranged to be projected into the auxiliary portion whereby fuel may be rapidly discharged therefrom through the nozzle.

4. A carbureter comprising in combination a mixing chamber, a fuel nozzle arranged to discharge fuel into the mixing chamber, a throttle valve for controlling the flow of mixture through the chamber, a fuel reservoir comprising a main portion and an auxiliary portion, means comprising a valveless port for admitting fuel from the main portion to the auxiliary portion of the reservoir, means for admitting fuel directly to said nozzle from said auxiliary portion only, said last mentioned means offering less resistance to the flow of fuel than does the means for admitting fuel to the auxiliary portion, and manually actuated positive means for increasing the flow of fuel to said nozzle as the throttle valve approaches open position.

5. A carbureter comprising in combination, a mixing chamber, a fuel nozzle arranged to discharge fuel into the mixing chamber, a fuel reservoir comprising a main portion and an auxiliary portion separated by a wall, means comprising a valveless port for admitting fuel to the auxiliary portion, said auxiliary portion only being directly connected to the interior of the nozzle, and means independent of the suction of any engine with which the carbureter may be associated, whereby fuel is expelled from said auxiliary portion into the nozzle.

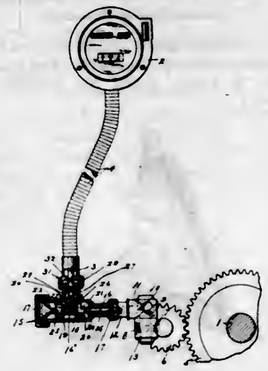


1,375,007. INSULATED SQUIRREL-CAGE WINDING. AUSTIN KIMBLE, Wausau, Wis., assignor to Marathon Electric Mfg. Company, Wausau, Wis., a Corporation of Wisconsin. Filed May 12, 1919. Serial No. 296,648. 2 Claims. (Cl. 172—120.)

1. The method of forming a squirrel cage form of dynamo-electric device, which consists in coating a magnetic core with wax, then applying a coating of conducting material to the core over areas to be occupied by the end rings and bars of the squirrel cage, then applying an electrodeposit of conducting metal to the coated areas, then

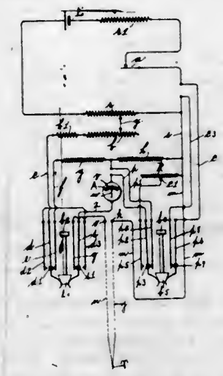
removing the wax, and finally applying insulating material between the core and the electrodeposit, in place of the wax removed.

1,375,008. CONVERTIBLE WHEEL OR SLEIGH VEHICLE. FRANK B. KLOCK, Little Falls, N. Y. Filed Apr. 29, 1919. Serial No. 293,550. 4 Claims. (Cl. 280—11.)



1. In a convertible wheel or sleigh vehicle, the combination of front and rear axles having opposite end and intermediate crank-arms, wheels journaled on the end crank arms, a frame having journal bearings engaging both axles at opposite ends of the intermediate crank arm, and having its rear end provided with a vertical slot, a pair of runners having journal bearings engaging both axles between the intermediate crank arms and the end crank arms, and a shifting bar having journal bearings engaging the intermediate crank arms of both axles, and having its rear end extended through the slot in the rear end of the frame and provided with shoulders in longitudinally spaced relation for engaging the walls of said slot to hold the wheels and runners in different relative positions of adjustment.

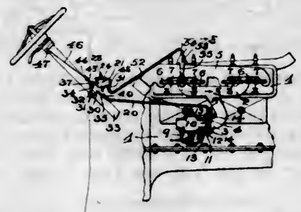
1,375,009. DRIVING MECHANISM FOR SPEEDOMETERS. PALMER NASH, Colfax, N. D. Filed Jan. 6, 1919. Serial No. 269,804. 1 Claim. (Cl. 74—7.)



The combination with a driving member and a driven member adapted to be rotated either forward or backward, of driving connections between said two members including a shaft, a gear, a pair of connected gears loosely mounted on the shaft with freedom for axial movement thereon, a cam surface and a shoulder on the hub of each gear of said pair, said cam surfaces and shoulders being reversely formed, and pins carried by the shaft arranged

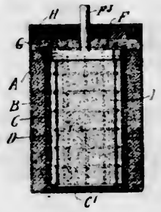
to alternately engage said cam surfaces and alternately move the gears of said pair into and out of mesh with

said gear and also to alternately engage said shoulders to rotate said pair of gears with the shaft.



1,375,010. ELECTRICAL MEASURING APPARATUS. EDWIN F. NORTHRUP, Princeton, N. J., assignor to Pyrolectric Instrument Co., Trenton, N. J., a Corporation of New Jersey. Filed July 15, 1918. Serial No. 244,919. 10 Claims. (Cl. 73—32.)

1. The combination with a resistance, of a deflection instrument and a source of electro-motive-force of unknown value connected in series with each other in a path in parallel to a path including said resistance, means for passing through said resistance a current of magnitude causing therein a fall of potential equal to the unknown electro-motive-force of said source, means for disconnecting said source of electro-motive-force of unknown value and for connecting said deflection instrument in a circuit relation causing said instrument to produce a deflection indicative of the value of the unknown electro-motive-force, means for connecting said source of electro-motive-force of unknown value and said deflection instrument in an independent circuit, and means for adjusting the resistance of said independent circuit to a value at which said deflection instrument will indicate the value of the unknown electro-motive-force of said source.

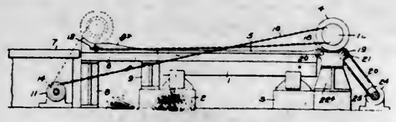


1,375,011. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. EDMUND PELTOWITZ, West Orange, N. J. Filed Apr. 22, 1919. Serial No. 291,869. 11 Claims. (Cl. 123—180.)

1. An attachment for internal combustion engines adapted for use as a primer, fuel-heater, economizer, or vaporizer, comprising a chambered body, a chambered extension located upon the outer side of said body, said chambered extension being provided with an inlet, said body being also provided with an outlet having a valve-seat, a valve-body normally located upon said valve-seat, a clamping means connected with said body for its attachment to the steering-rod casing of a vehicle, and a

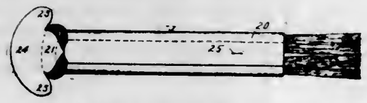
conveying means comprising a tubular conveying duct connected at one end to said outlet, and a gasket at the other end of said duct for attachment between the outlet portion of a carbureter and the inlet-member of the intake-manifold of the engine, said gasket having a conveying duct-portion in communication with the interior of said conveying duct and the said carbureter and manifold-members.

1,375,012. ELECTRIC BATTERY. DAVID PEPPER, Philadelphia, Pa. Filed Nov. 29, 1919. Serial No. 341,499. 3 Claims. (Cl. 204—29.)



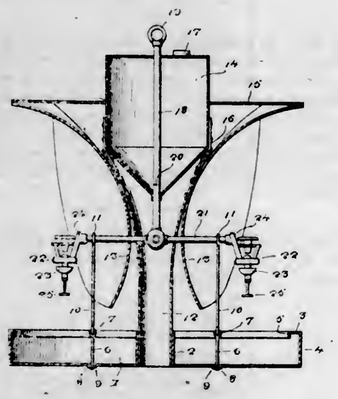
3. A battery comprising a container, active material contacting with the inner wall thereof, a lead grid formed of two sections bent in opposite directions to conform to the shape of the container and united by a cross piece at the top formed with a conducting lug springing from its center, said segments having active material attached to them and constituting the inner electrode of the battery, and absorbent material separating the inner and outer electrodes.

1,375,013. CUTTER-GUARD. MARCEL L. PINETTE, Westbrook, Me. Filed May 22, 1920. Serial No. 383,370. 2 Claims. (Cl. 144—251.)



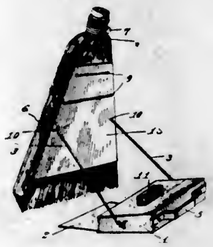
1. In a cutter guard for buzz planers and the like, the combination of a bracket secured to the frame of the machine, a riser hinged to said bracket, a guard plate support secured to the upper end of said riser extending over and resting on the table of the machine, a guard plate secured to said support and extending over the cutter and means for holding said riser in locked position with said bracket when in operative position and in released or hinged position when the device is not in operation.

1,375,014. MACHINE FOR ROLLING PLATE-GLASS. HARRY A. REYNOLDS, Ford City, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 26, 1920. Serial No. 384,461. 7 Claims. (Cl. 49—34.)



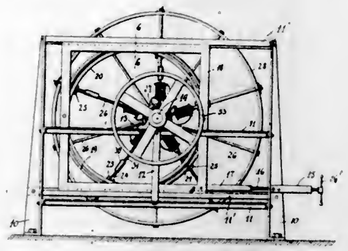
4. In combination in glass rolling mechanism, a table, a roll mounted on the table for movement longitudinally thereof, a pair of roller members extending transversely of the table at its end and adapted to receive the roll and support it for rotation out of contact with the table, and means whereby the roll is turned while in such position.

1,375,015. THREAD PACKAGE OR HOLDER. REGINALD REYNOLDS, Riverside, Conn. Filed Oct. 13, 1919. Serial No. 330,253. 5 Claims. (Cl. 206—64.)



1. A thread package comprising a wrapper having a notch in one longitudinal edge for dividing said wrapper into a body portion and a locking neck, and a bundle of threads folded intermediate its ends and looped around said locking neck with half of said folded bundle passing through said notch, said body portion being folded to inclose a portion of the folded bundle intermediate its ends, the portion of said wrapper adjacent the notch and locking neck being folded on and secured to said body portion.

1,375,016. INSECT ATTRACTING AND EXTERMINATING DEVICE. HOWARD F. RHOADS, Winston-Salem, N. C., assignor of one-third to John A. Powell, Middletown, Ohio. Filed Sept. 27, 1920. Serial No. 412,994. 3 Claims. (Cl. 43—113.)



1. An insect attracting and exterminating device, comprising a tubular standard the upper portion of which is flared or enlarged, a hydrocarbon tank having a lower tapered portion disposed in the upper enlarged portion of said standard, brackets arranged between and connecting the standard and the tank, reflectors grouped about the standard and connected together and to the standard, a hanger extending above and below the tank and having a conduit portion in communication with the lower portion of the tank and also having arms reaching outwardly through the standard and the reflectors, burners carried by the said arms and arranged each in front of a reflector, and a catch-pan suspended from the said arms.

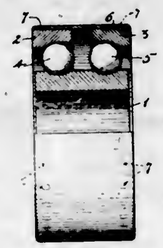
1,375,017. COMBINATION DUST-PAN AND BROOM. WILLIAM HUNTINGTON RUSSELL, New Haven, Conn. Filed Sept. 9, 1920. Serial No. 409,251. 4 Claims. (Cl. 65—62.)

1. A dustpan attached to a broom, consisting of a dustpan which is automatically raised off the floor when not in use by means of elastic supporting members with means of attaching the same to said dustpan and broom, a rest attached to the broom and a means for operating said dustpan by either the foot or hand, substantially as set forth.

1,375,018. MOTOR. CAMILLO SAVINO, New York, N. Y. Filed Aug. 30, 1920. Serial No. 407,053. 10 Claims. (Cl. 172—126.)

1. A motor of the character described, comprising a rotor, weights carried by said rotor and movable toward and from its center, a stationary cam track governing the position of said weights, and means, operating along a portion of said track which approaches the center of the rotor, for shifting said weights inwardly.

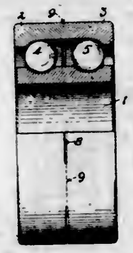
1,375,019. BALL-BEARING. ROLAND W. SELLEW, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 22, 1920. Serial No. 383,523. 6 Claims. (Cl. 64—36.)



5. A ball bearing of the type described, comprising an inner and an outer bearing ring having complementary race tracks therein with balls in said race tracks operating to hold said rings in assembled and operative position, one of said bearing rings being formed of two annular ring sections, each of said sections having a ball bearing surface thereon forming one of said race tracks, and a welded connection at the adjacent edges of said two ring sections operating to permanently unite said sections.

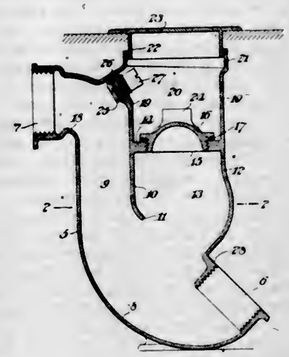
1,375,020. PROCESS OF MANUFACTURING BALL-BEARINGS. ROLAND WINCHESTER SELLEW, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 22, 1920. Serial No. 383,524. 5 Claims. (Cl. 219—10.)

1. The process of forming a ball bearing of the type described and including two bearing rings having complementary race-ways with balls therebetween, said balls operating to hold said rings in operative and adjusted relation to each other, said process comprising making one of said bearing rings of two ring sections each having a ball track thereon and assembling said balls and rings with two edges of the two ring sections of one bearing ring in close relation to each other, then welding said two edges together to integrally unite the said two ring sections to form a unitary bearing ring, said balls acting as spacers for said ring sections during the welding operation.



1,375,021. BALL-BEARING. ROLAND WINCHESTER SELLEW, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 19, 1920. Serial No. 417,946. 7 Claims. (Cl. 64—36.)

6. In a ball bearing, two bearing rings having complementary race-ways therein, one of said rings comprising two ring sections, and a sleeve spanning said two ring sections and welded thereto, and serving to hold said sections spaced apart to form a pocket.

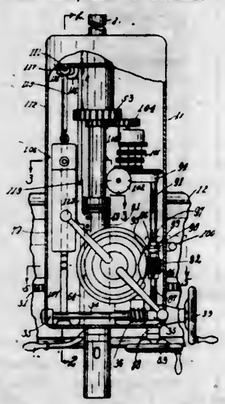


1,375,022. BALL-BEARING. ROLAND WINCHESTER SELLEW, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 19, 1920. Serial No. 417,947. 5 Claims. (Cl. 64—36.)

5. In a ball bearing, an inner bearing ring having a race-way therein, an outer bearing ring having a complementary race-way therein, said outer ring being formed in sections, spacer abutments on said sections, the abutments

on said sections being welded together to form the complete outer bearing ring.

1,375,023. BATH-TRAP. JOSEPH W. SHARP, Jr., Berwyn, Pa., assignor to Haines, Jones & Cadbury Incorporated, a Corporation of Pennsylvania. Filed July 20, 1918. Serial No. 245,855. 3 Claims. (Cl. 182—12.)



1. A bath trap comprising a chambered body having its greater dimension extending vertically, with an intake port at the bottom and an outlet port at the top, a vertically extending partition within the chambered body, near the central portion thereof, forming with the outer wall of the body, adjacent the outlet, a substantially vertical channel delivering to said outlet, and having its lower edge curving inwardly toward a plane through the axis of the body, said lower edge also terminating a substantial distance above the top of the intake port, whereby a partially closed chamber or reservoir is provided entirely above said intake and out of the path of travel from intake to outlet, the outer wall which extends from the intake to said vertical channel, being curved substantially in the arc of a circle, and the intake being so arranged and positioned as to direct the flow in an unobstructed path along said curved wall to said vertical channel.

2. The combination as defined in claim 1, in which the body is provided with an opening at the top, and a cap is provided having a downwardly extending flange loosely fitted in said opening with sufficient play to permit of telescopic and angular movement to allow adjustment with respect to the floor level.

3. The combination as defined in claim 1, in which the margins of the inlet and outlet ports are flanged and provided with especially dressed surfaces in planes at right angles with the axes of the openings as and for the purpose described.

1,375,024. **FEEDING MECHANISM FOR METAL-WORKING MACHINERY.** AUGUSTUS M. SOSA, Cincinnati, Ohio, assignor to The American Tool Works Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 10, 1917. Serial No. 190,655. 3 Claims. (Cl. 77—36.)

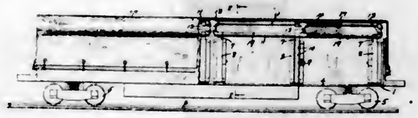
1. In a metal working machine, the combination of a tool-slide, an axially feedable tool-spindle journaled thereon, a counterweight movable in a line substantially parallel with the line of feeding movement of said tool-spindle, a rack for said counterweight substantially parallel with the line of movement of said counterweight, a latch pivoted to said counterweight, means to urge engagement of said latch with said rack, and a supporting connection for said counterweight extending upwardly directly from said latch to exert a pull on said latch in a line substantially parallel with said line of movement of said counterweight, said supporting connection having supporting connection with said tool-spindle.

2. In a drilling machine, the combination with the axially feedable drill-spindle, of counterweighting means therefor comprising a counterweight movable in a line substantially parallel with the line of feeding movement of said drill spindle, a coacting rack therefor, a latch pivoted to said counterweight and provided with a tooth for engagement with the teeth of said rack, a resilient part acting on said latch to urge said tooth into engagement with said rack, the pivot of said latch being located between said resilient part and said rack, and a tension-member supporting said weight having connection with said latch at the same side of its pivot as the side with which said resilient part coacts and extending directly upward from said latch to exert a pull on said latch in a line substantially parallel with the line of movement of said counterweight.

3. In a drilling machine, the combination with the axially feedable drill-spindle, of a counterweight therefor, said counterweight having a bore therethrough, a rack received through said bore, said axially feedable drill-spindle, said bore and said rack being substantially parallel, a spring-pressed plunger, a latch having a pivot on said counterweight, said latch provided below its pivot with a tooth for engagement with said rack, a heel arranged to be pressed by said spring-pressed plunger to urge engagement of said latch with said rack, and a heel arranged to engage said counterweight to prevent overthrow of said latch with relation to said rack, and a tension-member having connection with said latch and extending directly from said latch in a direction substantially parallel with said rack to exert direct pull on said latch in line with the line of movement of said counterweight.

1,375,025. CAR-SEAL. FREDERICK STRAHM, Lawrence, Kans. Filed Sept. 18, 1920. Serial No. 411,298. 1 Claim. (Cl. 292—318.)

A car seal comprising a ribbon having an opening in one end, a pair of struck up tongues in said end outwardly of the opening and extending longitudinally of the strip in overlapping relation, the other end of the ribbon having an opening for the reception of one of said tongues, and a plate bent on its longitudinal median line and

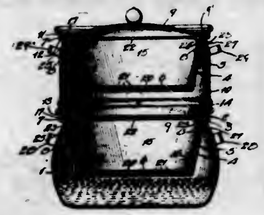


having an opening therein, formed by striking out a pair of tongues which are engaged through the first opening of the ribbon, the longer marginal edges of the plate being crimped together, one wing of the plate having a pressed out recess receiving the ends of the tongues.

1,375,026. DISPLAY-STAND. JULIEN STRANDERS, Brooklyn, N. Y., assignor to Harry B. Kruger, New York, N. Y. Filed Nov. 12, 1920. Serial No. 423,540. 5 Claims. (Cl. 40—126.)

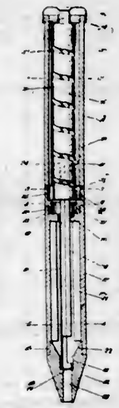
1. A display stand comprising a tubular body capable of collapse, and a support for the body foldably associated with it and being free of the body at the back portion thereof for quick and easy manipulation, the front lower portion of the body departing from the tubular contour and being substantially straight whereby to provide a laterally elongated base to avoid side tilting of the stand.

1,375,027. CONVERTIBLE AND PORTABLE TOP. HERBERT S. THOMPSON, Peekskill, N. Y., assignor to The Standard Textile Products Company, Youngstown, Ohio, a Corporation of Ohio. Filed Sept. 3, 1920. Serial No. 407,896. 6 Claims. (Cl. 105—377.)



2. A portable top for a carrier, comprising side members removably secured to the carrier, interlocking roof members pivotally secured to the said side members, a runway secured to the roof members, and a removable cover supported by said roof members and secured to said carrier.

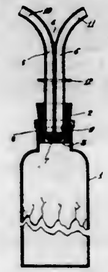
1,375,028. STEAM COOKING DEVICE. OLAF TOLLAGSEN, St. Louis, Mo. Filed Jan. 6, 1919. Serial No. 269,744. 4 Claims. (Cl. 53—2.)



2. In a device of the kind described, two sheet metal vessels adapted to fit one within the other, and having the upper parts of their side walls substantially in contact, coöperating interlocking projections and depressions

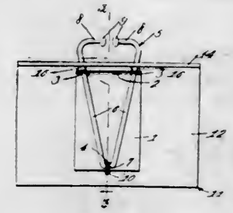
formed in said contacting walls, said side walls being provided with registering holes which are caused to reg-

ister by the engagement of said depressions and projections, and a wire bail having ends passing through said holes.



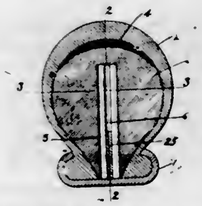
1,375,029. PENCIL-HOLDER. ANDREW VALEGGIA, London, England. Filed Dec. 31, 1919. Serial No. 348,675. 7 Claims. (Cl. 120—18.)

6. A magazine pencil holder comprising a casing, provided with a plurality of radially extending partitions, forming magazine compartments, each adapted for holding a single lead, a central sheath for a single lead, provided with a longitudinal opening, adapted to be brought into register with said magazine compartments in succession by rotation of said sheath, a plunger in said sheath for extruding the lead, a screw in axial alinement with said plunger for advancing the same, coöperating means between said plunger and the casing for preventing rotation of the plunger when the screw is rotated for advancing the plunger, means within the casing for holding the plunger against advancement by the screw, said last named means being rotatable with the plunger step by step in one direction, while holding said plunger against advance movement, means whereby said sheath is rotated simultaneously with the rotation of said plunger, a click detent for holding said plunger and sheath with the opening in said sheath in register with the magazine compartments in succession and means for preventing rotation of said plunger and sheath when said screw is rotated in the opposite direction to retract said plunger from the sheath and thereby permit the entry of the lead from the registering magazine compartment.



1,375,030. BOTTLE-STOPPER. LAURENCE F. WATKINS and GEORGE WILLIAM WILTON, Wellington, New Zealand. Filed June 24, 1919. Serial No. 306,468. 2 Claims. (Cl. 215—74.)

1. In a bottle stopper, the combination with an axially bored cork, of a tube member longitudinally slidable in the bore of the cork, said tube member having unobstructed passage therethrough and oppositely disposed lateral openings adjacent its inner end, and a closure for

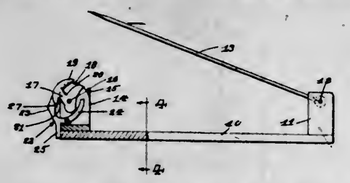


the extreme inner end of such tube, the longitudinal movement of the tube in the cork controlling the discharge through the tube.

1,375,031. WEANER. WALTER R. BARGER, Benkelman, Nebr. Filed Oct. 18, 1920. Serial No. 417,701. 2 Claims. (Cl. 119—132.)

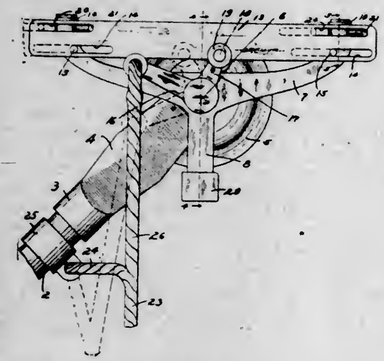
1. A calf weaner including a body; a hanger mounted on the body and including upwardly diverging arms; and a bib comprising a main member of greater area than the body, the main member having projecting top flange overhanging the body and provided with slots prolonged into the main member, the slots diverging downwardly and outwardly, the upper portions of the arms being received loosely in the slots.

1,375,032. INNER TIRE-CUSHION. JOHN W. BURGESS and GEORGE F. BURGESS, Kansas City, Mo. Filed Aug. 9, 1920. Serial No. 402,232. 1 Claim. (Cl. 152—5.)



A tire filler having radial bores extended part way therethrough from the inner edge thereof toward the outer edge thereof, and provided in its median plane with a slit of less width than the bores, the slit intersecting the bores and being of substantially the same depth as the bores.

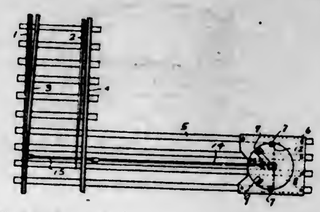
1,375,033. PIN-FASTENER. ANDREW W. KOSKI and THOMAS CASEY, Fitchburg, Mass. Filed Oct. 30, 1920. Serial No. 420,756. 4 Claims. (Cl. 24—157.)



4. In a pin fastener, the combination with a body portion having a pin pivotally connected therewith to swing

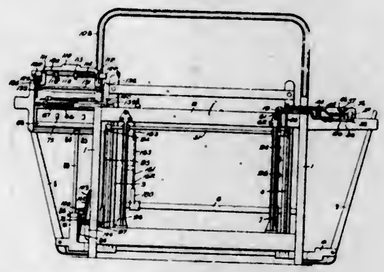
in a given plane, of a pair of spaced ears approximately parallel to and arranged upon opposite sides of the plane of swing of said pin, a plate pivotally mounted intermediate said ears and provided with a slot forming in said plate an overhanging portion and a striking piece causing rotation of said plate and causing said overhanging portion to overlie the free end of the pin and means actuated by the rotation of said plate for positively locking the plate against rotation comprising a second plate

pivotally mounted intermediate and embodying a dog and an operating arm, said first named plate having a notch formed therein and opposed to said slot, a portion of said first named plate engaging said operating arm and causing rotation of said second named plate to bring the dog thereof into engagement with said notch, said dog having a binding engagement with the edges of the first named plate during its movement into and out of engagement with said notch.



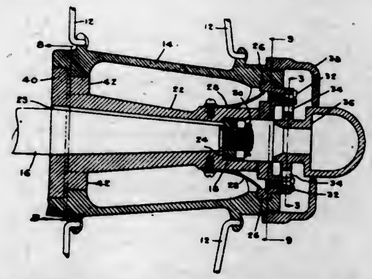
1,375,034. TROLLEY-RETRIEVER. ANTOINETTE A. COHEN, Birmingham, Mich. Filed Aug. 11, 1919. Serial No. 316,558. 5 Claims. (Cl. 191—80.)

1. A device of the class described comprising a frame pivotally mounted on a trolley wheel axle, and arranged wholly on one side of the wheel, arms pivotally mounted on the ends of said frame adapted to swing in a horizontal plane over the trolley wire, and a spring for normally holding the arms over the trolley wire, while allowing said arms to swing laterally away from the wire when struck by one of the connectors of the trolley wire.



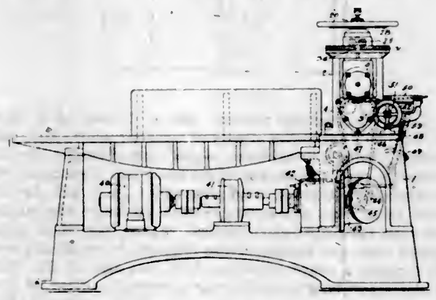
1,375,035. SAFETY SWITCH LEVER AND LOCK. LEE J. COTTON, De Quincy, La. Filed Dec. 3, 1920. Serial No. 428,124. 2 Claims. (Cl. 246—414.)

1. A device of the character described, including the combination with a railway switch of a switch stand fixed relative to the railway track, a table fixed to said stand and provided with marginal notches, a vertical shaft having a bearing in said table, a lateral arm carried by said shaft, a link pivoted at one end to the free end of said arm and at its other end to said switch, a throw arm fixed to said shaft adjacent the table, a lever pivoted to the outer end of said throw arm and adapted to normally rest in either of said notches, a spring lock carried by said lever and provided with means to automatically lock the same in said notch, said lock including a bolt having a recess therein, a safety pin adapted to engage in the



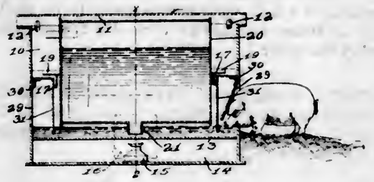
recess and a yieldable cushion whereon the pin is mounted, said pin constituting means for preventing the operation of the lock, when seated in said recess.

1,375,036. REPLENISHING-LOOM. EDWARD A. CUNNIFF, New Bedford, and JOHN V. CUNNIFF, Fall River, Mass., assignors to James K. Lanning, Boston, Mass. Filed Dec. 12, 1912. Serial No. 736,284. 65 Claims. (Cl. 139—85.)



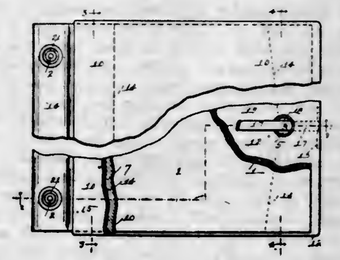
1. Shuttle replenishing mechanism for looms comprising in combination, a lay, a running shuttle-box movable therewith, a member mounted upon the loom frame and adapted to support a spare shuttle, means to elevate the front and back walls of the running shuttle-box away from the bottom wall thereof into inactive position, and means to transfer said spare shuttle from said supporting member to said inactively positioned front and back shuttle box walls.

1,375,037. DEVICE FOR SECURING DEMOUNTABLE WHEELS. ALFRED J. DE LA BARRE, Minneapolis, Minn. Filed Mar. 12, 1920. Serial No. 365,175. 1 Claim. (Cl. 301—9.)



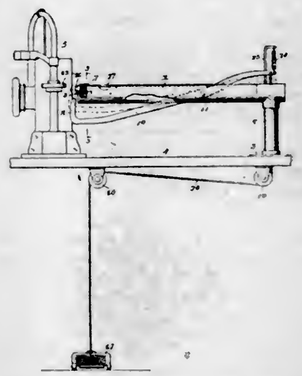
A device for securing demountable wheels comprising a sleeve member having radial slideways in its outer end, detents slidably mounted in said slideways, resilient means tending to hold said detents outwardly, an outer hub member having an annular shoulder with which said detents engage when in outward position to hold said hub member on said sleeve member, projections on said detents, and a rotatable member having cam grooves through which said projections extend whereby said detents may be moved radially inward against the tension of said resilient means to unlock the hub, said detents being so constructed that the hub member may be slid upon said sleeve member and automatically locked by the detents when the latter are in outward position.

1,375,038. MACHINE FOR MAKING LEAF-SPRINGS. THEODORE L. R. D'ORVILLE, Sewickley, Pa., assignor to Standard Steel Spring Company, Coraopolis, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1920. Serial No. 352,747. 3 Claims. (Cl. 153—54.)



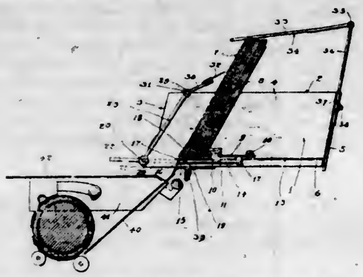
1. A machine for bending leaf springs and the like comprising three parallel and triangularly arranged bending rolls, a slidable block for rotatably supporting one of the said rolls, a shaft in screw-threaded supporting engagement with the said block, means for supporting the said shaft from screw threads of a different pitch from the screw threads on the said shaft, and means for independently turning either the said shaft or the said shaft-support, whereby the said block and the said roll may be given either a rough adjustment or a fine adjustment toward or away from the other two rolls.

1,375,039. STOCK-WATERING TANK. ALBERT N. EATON, Omaha, Nebr. Filed Mar. 15, 1920. Serial No. 365,896. 2 Claims. (Cl. 119—73.)



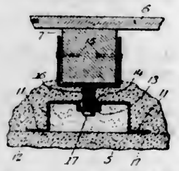
1. An improved stock watering tank comprising a housing adapted to be sunk partially at its lower end in the ground and having openings in its ends situated above the bottom of the housing, automatically closing doors for said openings adapted to be swung inwardly and upwardly by the animal in the act of drinking, a trough extending from end to end of the housing and situated above the bottom thereof yet beneath the lower edges of said openings, said trough having spaces along its sides to allow communication between the portions beneath and above the trough within the housing, hoods extending about said doors being disposed inwardly of the doors to permit swinging of the same, said hoods extending downwardly and partially into said trough and a barrel supported in the housing above said trough and having a filling and discharging neck adapted when in the inverted position to extend beneath the surface level of the liquid in the trough, a hook carried by the interior of the housing, a pair of coöperating eyes situated at angularly spaced distances on the barrel adapted to coöperate with said hook to hold the barrel with its filling and discharging neck in either an upright or an inverted position, an openable top for the housing adapted to give access for filling to the barrel, heating means placed beneath the trough in the lower portion of the housing, said heating means having access to the barrel and upper portion of the housing through the spaces at the sides of the trough, and a door in the lower portion of one side of the housing for giving access in placing and removing the heating means.

1,375,040. COVERING FOR BOOKS. WILLIAM H. EDWARDS, Grand Rapids, Mich. Filed Jan. 21, 1921. Serial No. 438,838. 3 Claims. (Cl. 281—34.)



1. In a device of the character described; a pair of sheaths for the covers respectively of a book into which sheaths the outer edges of said covers respectively are thrustable, one of the sheaths having an opening through its inner wall and the other sheath having a flexible sheet extending from its outer wall and into the first mentioned sheath between its outer wall and the book's cover therein and having a strap portion extending around the outer edge of said cover and through said opening.

1,375,041. FABRIC STRAIGHTENING AND GUIDING DEVICE. HUMPHREY EVANS, Milwaukee, Wis., assignor to Holeproof Hosiery Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 19, 1920. Serial No. 390,250. 12 Claims. (Cl. 112—20.)

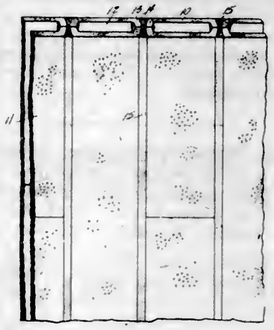


1. In a fabric straightening and guiding device the combination of a support and a brush mounted thereon and adapted by engagement with ribs of a fabric moved over it to straighten and guide the fabric parallel with the ribs thereof.

1,375,042. SHEET-FEEDING DEVICE. ERNEST A FEDDERSEN and RUDOLF F. SCHOTT, San Francisco, Calif. Filed Mar. 9, 1920. Serial No. 364,476. 6 Claims. (Cl. 271—43.)

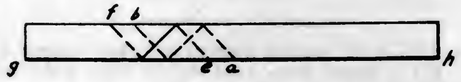
2. A sheet feeding apparatus including a receptacle open at one end and adapted for containing a plurality of sheets positioned therein in stack formation edgewise and at an incline toward the rear of the receptacle, means for forcing the sheets toward the open end of the receptacle, an upstanding member at the lower edge of the open end of the receptacle against which the lower edge of the foremost sheet of the stack is in frictional contact, means at the open end of the receptacle capable of movement to operative position for engaging the foremost sheet of the stack to raise the same free of said upstanding member, and a notched frame overlying the stack of sheets and movable upwardly with said foremost sheet as the same is raised to move the upper edge of the raised sheet forwardly of the next succeeding sheet of the stack to provide an air space between said sheets to permit said raised sheet to fall by gravity free of the open end of the receptacle and over the face of the next succeeding sheet of the stack on the return of the sheet engaging means to normal position.

1,375,043. FLOOR-STRIP HOLDER. MURDO G. FINLAYSON, Chicago, Ill. Filed Aug. 23, 1919. Serial No. 319,320. 5 Claims. (Cl. 20—6.)



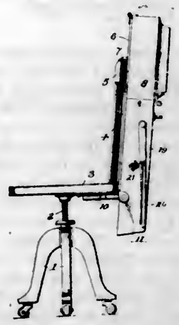
5. A floor strip holder, comprising a base member and a floor strip supporting member, means for securing a floor strip to said floor strip supporting member, and adjustable means positively connecting said members together so as to preclude relative movement therebetween in any adjusted position.

1,375,044. COMBINATION-LOCK. GEORGE W. FOLLICK, Buffalo, N. Y. Filed Sept. 9, 1920. Serial No. 409,077. 4 Claims. (Cl. 70—53.)



1. A combination lock, comprising a lock-body, an operating shaft journaled therein and having a locking recess arranged obliquely to the axis of the shaft, an inclined rotary tumbler-disk arranged to engage edgewise in said recess to lock said shaft against rotation, said disk having a releasing-notch in its edge, and means for turning said tumbler-disk.

1,375,045. BUILDING-SLAB. OSCAR A. HANSZEN, Dallas, Tex. Filed Feb. 11, 1920. Serial No. 357,923. 1 Claim. (Cl. 72—29.)

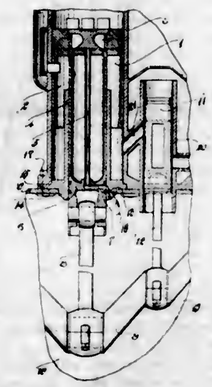


A wall comprising vertical sets of blocks, each block in each set comprising a pair of opposed slabs, each slab being provided at its vertical edges with inwardly directed lateral flanges, the flanges of the two slabs forming an air opening in the block, said flanges of each slab having their outer faces converging toward the outer face of the slab, the flanges at each vertical edge of the block being spaced from the flanges of the adjacent block in the next set forming a space extending from one side of the block to the other, said space having a central contracted portion and diverging in opposite directions toward its free ends, and a column of plastic material molded in said space and having a similar shape in horizontal cross section, said column having its opposite sides terminating substantially flush with the opposite faces of said blocks.

1,375,046. ENDLESS BELT, STRAP, AND OTHER LIKE ARTICLE. ARTHUR MARK HARDY, Bowmanville, Ontario, Canada. Filed May 15, 1920. Serial No. 381,606. 5 Claims. (Cl. 74—63.)

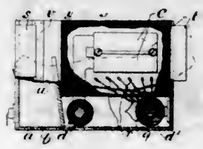
1. A seamless endless belt comprising a single strip of impregnated fabric wound longitudinally on itself a plurality of times, and having each side folded inwardly to overlap the other.

1,375,047. WARDROBE ATTACHMENT FOR CHAIRS. ARCHIBALD CHARLES HEAPHY, New York, N. Y. Filed July 7, 1919. Serial No. 309,002. 7 Claims. (Cl. 155—188.)



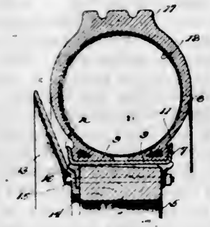
1. In a wardrobe attachment for chairs, the combination of a body member adapted to be secured to a chair back and in rear thereof; and two box-like members associated therewith and adapted when closed against the body member to form compartments in which wearing apparel may be housed.

1,375,048. BONNET. RUTH F. HOUGH, Sierra Madre, Calif. Filed May 27, 1920. Serial No. 384,647. 3 Claims. (Cl. 2—106.)



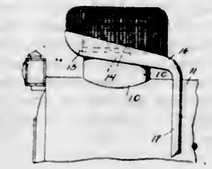
1. A bonnet comprising a band-forming piece, a crown-forming piece connected with the intermediate portion of the band-forming piece, releasable fastening means on the opposite ends of the band-forming piece, and other releasable fastening means on the band-forming piece and marginal portion of the crown-forming piece.

1,375,049. ENGINE CONSTRUCTION. THOMAS A. HUTSELL, Spokane, Wash., assignor to The Hutsell Motor Company, Spokane, Wash. Filed Sept. 24, 1919. Serial No. 326,057. 1 Claim. (Cl. 123—74.)



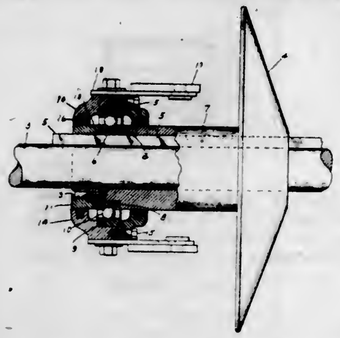
The combination with the crank case and its open top wall and a cylinder having an open lower end, of a concentric sleeve opening into the cylinder and crank case and having an exterior collar at its lower end to close the cylinder and top wall of the crank case, said collar provided with an oil supply passage and an oil pipe, a hollow piston in the cylinder inclosing the sleeve and having a hollow stem in the sleeve, a flange on the collar seated between the flanged end of the cylinder and the top wall of the case and securing means therefor, and said stem having means therein to receive oil from said supply passage.

1,375,050. APPARATUS FOR THE TREATMENT OF RHEUMATISM, GOUT, SCIATICA, NEURALGIA, AND SIMILAR AILMENTS. JOSEPH KRAUER, Heaton Chapel, England. Original application filed May 1, 1916, Serial No. 91,886. Divided and this application filed Apr. 2, 1920. Serial No. 370,863. 5 Claims. (Cl. 174—177.)



1. An apparatus for the treatment of diseases, comprising in combination, a receptacle, to surround the part to be treated, heat producing means within the receptacle and electro-magnetic means within the receptacle.

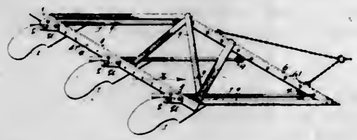
1,375,051. VEHICLE-WHEEL. ROLPH J. LACKNER, New York, N. Y. Filed Dec. 31, 1919. Serial No. 348,582. 1 Claim. (Cl. 301—20.)



A wheel rim comprising an annulus, and a pair of tire receiving flanges formed along the edges of said annulus, one of said flanges being extended outwardly beyond the other flange and constituting an auxiliary supporting member, said auxiliary supporting member being provided with corrugations extending out through its outer side and forming a means for securing a skid chain against circumferential movement with relation to the wheel.

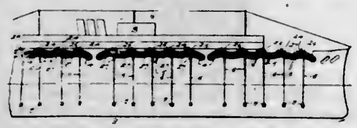
1,375,052. SPARK-ARRESTER. CLARENCE E. LEVAN, Berwick, Pa. Filed May 14, 1918. Serial No. 234,474. 1 Claim. (Cl. 183—72.)

In a spark arrester for smoke stacks, the combination with a screen element including an inverted cone whose apex stands within the stack at its axis and whose walls pass through the mouth of the stack and out of contact therewith, being rolled outward and downward into an encircling skirt; of a sleeve around the stack, arms rising therefrom and bent inward over the upper end of the stack; a ring carried by the upper ends of said arms for supporting said screen element, and an imperforate annular gutter whose inner edge incloses the stack and whose outer edge is connected with said skirt, the bottom of the gutter being curved transversely and standing oblique to the axis of the stack and cone and having a delivery opening at its lowest point.



1,375,053. BEARING FOR VARIABLE-SPEED TRANSMISSION MECHANISM. DARCY E. LEWELLEN, Columbus, Ind., assignor to Lewellen Manufacturing Company, Columbus, Ind., a Corporation of Indiana. Filed Sept. 20, 1920. Serial No. 411,404. 2 Claims. (Cl. 64—8.)

1. The combination with the hub of a variable speed transmission disk, said hub having a shoulder formed thereon, of a bearing surrounding said hub and abutting against said shoulder, anti-friction bearing members arranged in said bearing to receive both radial and lateral thrusts, means for holding the bearing in position on the hub, and a casing surrounding said bearing.

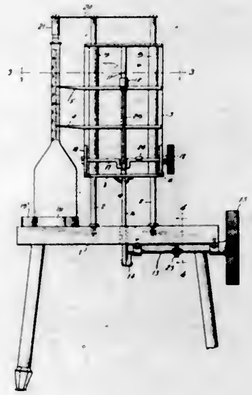


2. In a variable speed transmission mechanism, a shaft, a pulley mounted on said shaft, an elongated hub on said pulley, a combined radial and lateral thrust receiving bearing mounted on said hub and peripherally thereof, a cap for holding said bearing on the hub, and a spline carried by said shaft for causing the pulley to rotate with the shaft, said spline projecting through said cap.

1,375,054. GANG-PLOW. KIEFFER LINDSEY, Rome, Ga. Filed Jan. 15, 1920. Serial No. 351,657. 8 Claims. (Cl. 97—69.)

1. In a plow or like structure, a draft frame including a draft bar and a break pin that connects the plow beam with the draft bar; of a standard fixedly attached to the beam near the plow end, a guide on the rear of the draft frame that has an open end rearwardly extended slot in which the plow standard is held as the plow is being pulled and from which it becomes wholly disconnected, when the pin breaks.

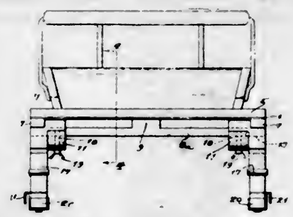
1,375,055. SHIP-SALVAGING DEVICE. JOSEPH LODATO, Ogden, Utah. Filed June 5, 1920. Serial No. 386,675. 8 Claims. (Cl. 114—68.)



1. In a ship salvaging device, the combination with an inflatable bag, of operative means for positively drawing the bag to operative position at the water level, means for inflating the bag, means for deflating the bag, means for hoisting the deflated bag to inoperative position and for wrapping the bag upon itself in compact form.

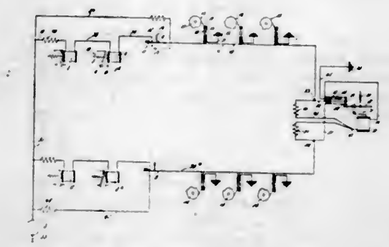
1,375,056. TOW-BAR. EZEKIEL W. MCMINN, Richmond, Va. Filed July 6, 1920. Serial No. 394,042. 1 Claim. (Cl. 213—67.)

A device of the character described comprising a tubular member, coupling means carried by one end of said member, a coupling shank telescopically engaged in the opposite end portion of the tubular member, said tubular member having registering slots adjacent the inner end of the shank, a sleeve slidable on the tubular member, said shank being connected to the sleeeve through the slots, a cap on said end of the tubular member, and a spring surrounding the tubular member and engaging the sleeve and the cap.



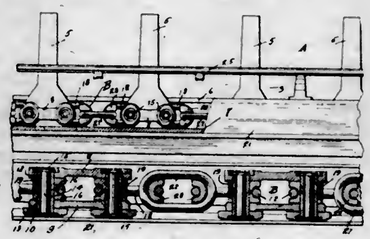
1,375,057. BUTTER-FAT GAGE. JOHN A. MEEKER, Potsdam, N. Y. Filed May 22, 1920. Serial No. 383,561. 3 Claims. (Cl. 73—51.)

1. A gage comprising a support, a guide carried thereby, a member adapted to reciprocate on the said guide, a pointer carried by the said member, a second pointer carried by the said member and adjustable with relation to the first pointer, a crank shaft mounted on the support and a pitman connected to the said member and the crank shaft.



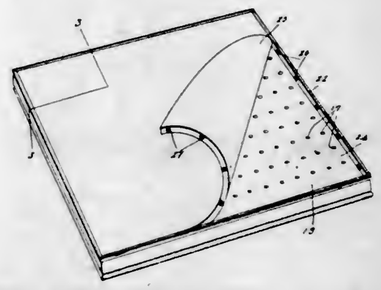
1,375,058. ADJUSTABLE VEHICLE-SEAT. DOSS A. MEREDITH, Prague, Okla. Filed Dec. 22, 1920. Serial No. 432,546. 2 Claims. (Cl. 155—9.)

1. A vehicle seat construction comprising a seat, track hangers carried by the bottom of the seat, a track extending longitudinally of the seat and connected to the hangers, supporting means slidable on said track, said means comprising a pair of supporting members adapted to surround a portion of the track, a portion of each supporting member projecting on each side of the track, said projecting portions being adapted to contact at certain times with the bottom of the seat, each of said supporting members having one end portion thereof reduced to provide a shoulder adapted at certain times to be disposed beneath



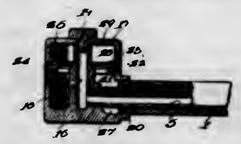
the hangers, springs secured to the lower surface of the supporting members, and means for connecting the springs to the body of the vehicle.

1,375,059. SIGNAL SYSTEM. ALFRED E. MEYER, Cincinnati, Ohio. Filed Feb. 11, 1918. Serial No. 216,561. 6 Claims. (Cl. 177—367.)



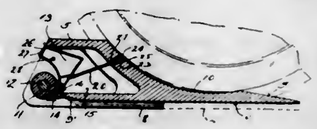
4. In a signal system, comprising a metallic line, a source of current having one pole thereof connecting with the ends of said metallic line and the opposite pole thereof grounded and earth connection for said line for dividing said metallic line into independent circuits, each having an earth return, signal transmitting apparatus for each independent circuit in circuit therewith, receiving apparatus for each independent circuit therewith, and electro-magnetic means having its magnet windings normally in circuit with said independent service lines for cutting out said earth connection and establishing a unitary metallic line.

1,375,060. CONVEYING MECHANISM. NORTON A. NEWDICK, Columbus, Ohio, assignor to James Ellwood Jones, Switchback, W. Va. Filed June 26, 1919. Serial No. 306,954. 3 Claims. (Cl. 193—8.)



1. In a conveyor, the combination with a frame, a pair of spaced and stationary longitudinally extending guide members carried by said frame, of a chain structure located between and movable in parallelism with said members, said structure comprising a plurality of link elements articulately connected at intervals by means of pivot members, flight elements connected with and protruding laterally from said pivot members, and devices mounted to rotate about the lower extremities of said pivot members whereby when said flights are placed under load conditions said devices will be caused to engage with said guide members to facilitate the movement of the chain structure.

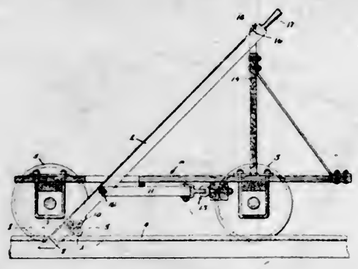
1,375,061. MATTRESS. MARTIN NYHUS, Ashland, Wis. Filed June 4, 1920. Serial No. 386,475. 2 Claims. (Cl. 5—13.)



1. A mattress comprising a spring frame, a covering for said frame, means for connecting the opposed ends of the spring to said covering, rolled edges built up from asid frame, a separable pad reposing upon the frame and lying within the confines of said rolled edges and means for detachably connecting the mattress with said edge.

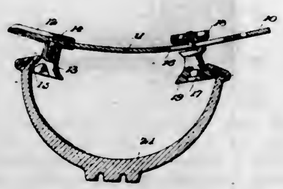
1,375,062. OIL-BURNER. KYLE DERIAS OBENSHAIN, McKinney, Tex. Filed Feb. 9, 1920. Serial No. 357,241. 3 Claims. (Cl. 158—75.)

2. A burner head comprising a substantially cylindrical casing, having an axial tubular member, said tubular member having a lateral nipple for connection with a fuel supply pipe and having lateral openings near its top for permitting the fuel to flow into the casing, a partition extending transversely of the casing between the sections and between the last named openings and the nipple, the casing having a lateral port and the partition having openings at the port, said casing having a ledge below the said openings onto which the openings feed, and means for supplying air to the lower section of the casing.



1,375,063. EMERGENCY-WHEEL SKID. CHARLEY D. OLAND, Centralia, Ill. Filed Aug. 13, 1919. Serial No. 317,173. 8 Claims. (Cl. 104—260.)

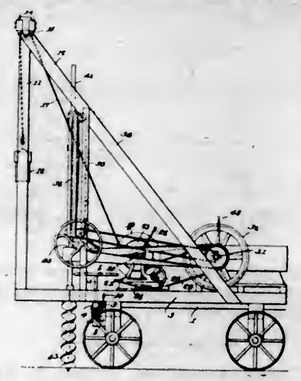
1. A skid of the class described including a rail engaging portion having rail supporting portions on its upper face



spaced longitudinally of the rail engaging portion and disposed to hold the tread of a wheel free from the portion of the skid therebetween.

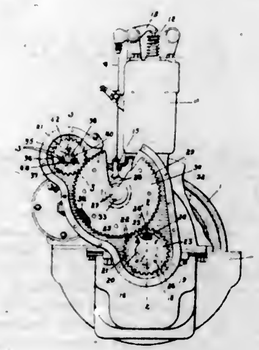
1,375,064. DEVICE FOR CLEANING THE SURFACE SLOTS OF TUNNELS OF UNDERGROUND THIRD-RAIL SYSTEMS. DUNCAN W. PECK, Syracuse, N. Y. Filed Aug. 7, 1920. Serial No. 401,969. 10 Claims. (Cl. 104—280.)

1. A device for cleaning the surface slots of tunnels of underground third rail systems comprising an inclined bar for entering the slot and having fulcrums above the lower end of the bar and arranged to bear on the surfaces of the tunnel on opposite sides of the slot in the rear of the point of contact of the cutter bar with the obstructions in the slot, substantially as and for the purpose described.



1,375,065. TIRE-SPREADER. ERNEST A. RAYNAUD, San Diego, Calif., assignor of one-half to John W. Perkins, San Diego, Calif. Filed Feb. 25, 1920. Serial No. 361,184. 5 Claims. (Cl. 152—27.)

5. A tire spreader including a shank having an angularly disposed portion providing an arm, a roller carried by said arm near the inner end thereof, and a post fixed against rotation upon the arm near its outer end whereby the post and roller may be inserted between the beads of a tire casing and the post engaged with one of said beads to act as a pivot supporting the shank for swinging movement to ride the roller against the other of said beads to a position where the post and roller lie in a plane transversely of the casing for spreading the sides of the casing.

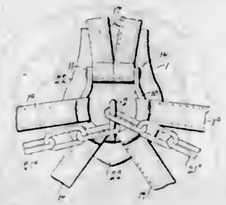


1,375,066. AUGER AND DRIVER. JESSE GRAY ROWE, Jr., Davis, Calif. Filed Apr. 27, 1918. Serial No. 231,242. 4 Claims. (Cl. 61—73.)

1. In a device of the class described, a vehicle; a frame supported on the vehicle; a rotary boring means journaled on the frame; a post-driving means carried by the frame; an engine on the frame; mechanism for coupling the boring means and the post-driving means to the engine selectively at the will of an operator; and means for pivoting the frame to the vehicle for horizontal swinging movement

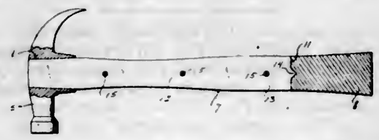
whereby the boring means and the post-driving means may be brought one at a time into a single vertical plane.

1,375,067. HYDROCARBON-MOTOR. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed June 11, 1917. Serial No. 174,168. 4 Claims. (Cl. 123—96.)



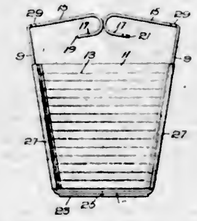
1. In an internal combustion engine, a crank shaft; a valve operating shaft; a gear carried by said crank shaft and comprising a hub portion secured thereto and provided with a recess, a rim portion surrounding said hub portion and provided with a recess adapted to register with the recess in said hub portion, a coil spring located within said recesses and through which one of said gear portions is driven from the other, a pin located within said spring and the ends of which are adapted to engage the end walls of said recesses to thereby limit the extent of relative movement between said hub and rim portions permitted by said spring, and two annular clamping plates secured to said hub portion one upon each side thereof and which clamping plates extend over the recesses aforesaid and the peripheries of which engage the sides of said rim portion to thereby prevent lateral movement thereof; and a second gear carried by said valve operating shaft and with which said first mentioned gear is in mesh.

1,375,068. TRACE-CARRIER. TALY C. THARALSON, Jamestown, N. D. Filed July 20, 1918. Serial No. 245,894. 1 Claim. (Cl. 54—56.)



A trace carrier comprising a body having the form of a segment of an annulus, the ends of said body extending

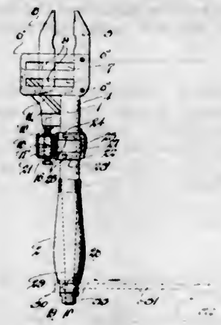
outwardly in spaced parallel relation to each other, a bolt extending through said ends, a spacing sleeve on the bolt, and a hook formed integral with the bight portion of the body diametrically opposite the opening in the body and extending toward said opening, the hook being disposed



in a plane at right angles to the plane of the body, said hook extending from the bight portion of the body in spaced approximately parallel relation thereto, the free end of the hook being bent downward and inward into alinement with the body of the carrier.

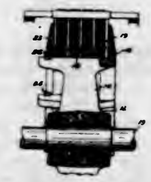
1,375,069. TOOL-HANDLE. JOSEPH ARTHUR TURGEON, Providence, R. I. Filed June 3, 1920. Serial No. 386,271. 1 Claim. (Cl. 145—61.)

The combination with a tool head having an eye, a handle having a longitudinal slot extending through one end of the handle and terminating adjacent the opposite end of the handle, of a reinforcing plate disposed within said slot, a spur projecting from one end face of the plate, said spur being adapted to penetrate the end wall of the slot, the opposite end of the plate and handle being disposed within the eye of the tool head and coacting with the spur to prevent movement of the plate within the slot of the handle.



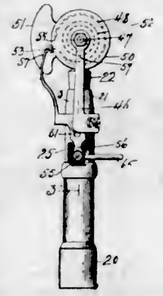
1,375,070. COLLAPSIBLE CONTAINER. WILLIAM M. WHEILDON, Ashland, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Jan. 24, 1917. Serial No. 144,270. 10 Claims. (Cl. 150—48.)

1. A collapsible, unitary, individually portable container comprising a resilient frame substantially of U-shape, a flexible bag extending between the arms thereof, and means to hold said arms abnormally pressed toward one another to provide for fullness of the bag, said means extending across the mouth of the bag and constituting a bail-like handle for the container.



1,375,071. WRENCH. BERNARD V. APFELD, Spokane, Wash. Filed Aug. 10, 1920. Serial No. 402,610. 4 Claims. (Cl. 81—116.)

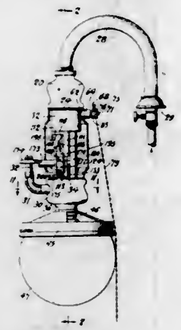
1. The combination with a fixed jaw and its laterally projecting guide frame, of a parallel jaw movable in said frame, a longitudinally movable block guided in the frame and having a cam slot therein, a pivoted shoe on



the movable jaw slidable in said slot, and means for moving said block, for the purpose described.

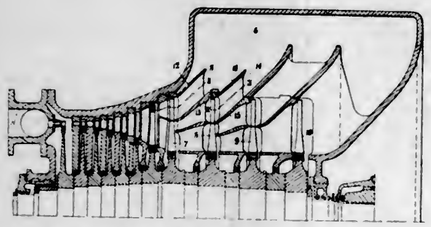
1,375,072. METHOD OF AND MEANS FOR ASSEMBLING CORE LAMINATIONS. CHARLES ATKINS, Cincinnati, Ohio, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 19, 1916. Serial No. 73,261. 14 Claims. (Cl. 171—206.)

7. The method of assembling laminæ in position on a support which comprises compressing said laminæ to their fully assembled condition on said support, disposing a clamping device between said compressed laminæ and a shouldered portion of said support to retain said laminæ in fully assembled condition on said support, and distorting a portion of said clamping device to a position wherein an end one of said laminæ coöperates therewith to prevent removal of said clamping device from said support.



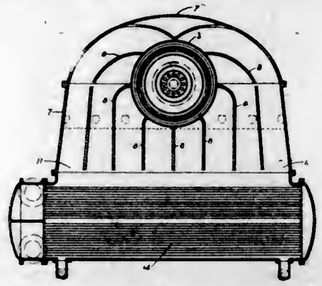
1,375,073. AUTOMATIC VALVE-CLOSER. AURELIO BARCHIESI, Jersey City, N. J., assignor of one-half to Angelo Baratta, Jersey City, N. J. Filed Aug. 5, 1919. Serial No. 315,444. 1 Claim. (Cl. 67—117.)

The combination in a gas burner of a tip end having a chamber extending to the outside thereof, a top wall and a bottom wall for the chamber, a valve spindle extending through to bottom wall, a valve secured to the spindle and



coacting with a valve seat formed in the wall of the tip end, a bypass port formed in the wall of the tip end extending around said chamber, a spring located to be heated by the heat of the light from the gas tip and connections between the said spring and valve.

1,375,074. DOUBLE AUTOMATIC VALVE-CLOSER. AURELIO BARCHIESI, Jersey City, N. J., assignor of one-fifth to Angelo Baratta, Jersey City, N. J., one-fifth to Giovanni Squarcialupi and one fifth to Louis L. Bolline, New York, N. Y. Filed May 29, 1920. Serial No. 385,140. 4 Claims. (Cl. 67—117.)

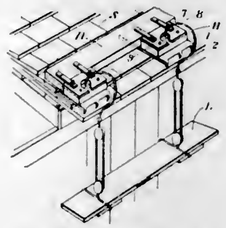


1. In an automatic valve closer the combination of a gas outlet for a light, a valve chamber, a main gas valve for said chamber, a valve spindle for the valve, a cross head connected to the said spindle, a locking heel in the cross head, a starting pin and a supporting spring connected to the cross head, a bracket supporting said chamber and having guides for the cross head, a journal plate connected to the said bracket, a bell crank journaled to said plate and having a locking pin and two other pins extending therefrom, a pair of springs connected to said two other pins, the said springs located in the heat zone of said light, the said locking pin of said bell crank being maintained distant from said locking heel by said springs when cool and locked with said heel when said springs are heated and means to manually raise the cross head and thereby locate the supporting spring on the locking pin of the bell crank.

1,375,075. STEAM-TURBINE. KARL BAUMANN, Urmston, England, assignor to The British Westinghouse Electric and Manufacturing Company, Limited, a Company organized under the laws of Great Britain. Filed Aug. 24, 1917. Serial No. 187,962. 6 Claims. (Cl. 60—64.)

1. In an axial flow steam turbine, a steam receiving chamber adapted to receive the steam passing through the turbine stages upon a plurality of annular, deflecting surfaces, the angle of deflection of each surface varying proportionally with the velocity of the steam received thereupon.

1,375,076. RADIAL-FLOW STEAM-TURBINE. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Sept. 29, 1917. Serial No. 194,056. 7 Claims. (Cl. 60—95.)

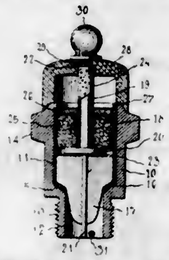


1. The combination with a radial flow turbine, a condenser disposed at one side of the turbine, and a series of disphragms forming exhaust passages opening radially at the periphery of the last row of blading and leading to different points along the condenser whereby steam exhausting from definite points of the periphery is conducted to definite points along the condenser.

1,375,077. HIGHLY-REFRACTORY ARTICLE AND METHOD OF PRODUCING THE SAME. HENRY H. BUCKMAN, Jacksonville, Fla., and GEORGE A. PRITCHARD, New York, N. Y., assignors to Buckman & Pritchard, Inc., Jacksonville, Fla., a Corporation of Florida. Filed Oct. 9, 1919. Serial No. 329,610. 15 Claims. (Cl. 106—11.)

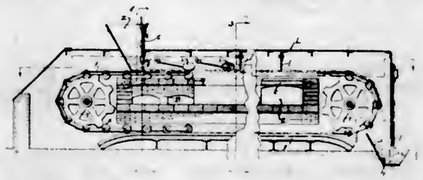
1. In the manufacture of a refractory composition, or material, the step which consists in incorporating zircon into the batch.

1,375,078. SCAFFOLD-BRACKET. CARL BUECHEL, New Glarus, Wis. Filed July 28, 1920. Serial No. 399,551. 1 Claim. (Cl. 304—19.)



As a new article of manufacture, a shingle bracket comprising a metallic base plate whose upper end constitutes a lip for insertion under the shingles of one row and whose lower end is toothed and bent downward for engagement with the shingles of a lower row, a block upon said plate and having a socket in its upper face for the tip of a scaffold supporting hook, a wear plate overlying said face and having an opening surrounding said socket, bolts through the plates and the interposed block, and a pair of tongues pivotally mounted at their lower ends on the upper bolts and adapted to be turned over said plate and block or to be swung into position above said lip.

1,375,079. SPARK-PLUG. ALBERT CHAMPION and ALBERT SCHMIDT, Flint, Mich., assignors to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Sept. 25, 1918. Serial No. 255,582. 11 Claims. (Cl. 123—169.)



1. A spark plug comprising a shell, a central electrode, a porcelain insulator tip supported within the lower

portion of said shell about the sparking end of said electrode, a mica insulator filling the space within said shell above said porcelain insulator and the upper end

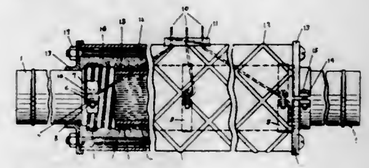
of which lies below the upper end of said shell, and means for retaining place within said insulators and said electrode in said shell.

1,375,080. DRYING FINELY-DIVIDED MATERIALS. HOWARD F. CHAPPELL, New York, N. Y. Filed Nov. 14, 1918. Serial No. 262,450. 10 Claims. (Cl. 263—21.)

1. A drier for finely-divided material, comprising an upper and a lower compartment separated by a movable platform, the lower compartment constituting a flue for the passage of heating gases, an inlet below said platform for admitting the heating gases to the flue and an outlet also below said platform for discharging the gases from the flue, and means for supplying the material to be dried to the upper side of the platform; substantially as described.

1,375,081. ACID-RESISTING ALLOY. ALVAH W. CLEMENT, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Continuation of application Serial No. 182,912, filed July 26, 1917. This application filed July 27, 1918. Serial No. 246,990. 8 Claims. (Cl. 75—1.)

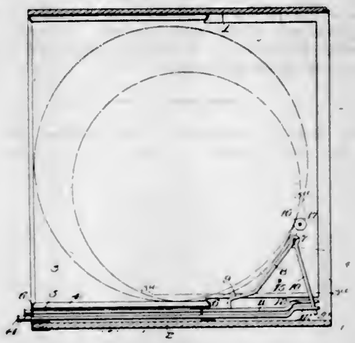
1. An acid resisting alloy containing approximately 40 per cent. of chromium, a metal having the properties of molybdenum, together with iron and carbon.



1,375,082. ALLOY. ALVAH W. CLEMENT, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 15, 1918. Serial No. 249,950. 5 Claims. (Cl. 75—1.)

1. An alloy containing as its principal ingredients molybdenum and a metal having the properties of nickel and cobalt together with an appreciable amount of manganese, the manganese being present in amounts not greater than 4%.

1,375,083. ALLOY. ALVAH W. CLEMENT, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 15, 1918. Serial No. 249,951. 5 Claims. (Cl. 75—1.)

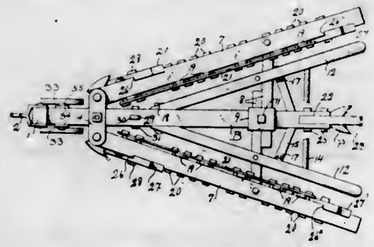


1. An alloy containing as its principal ingredients molybdenum and metal having the properties of nickel and cobalt and iron, the iron being present in quantity not greater than 10 per cent.

1,375,084. ELECTRIC HEATING ELEMENT AND METHOD OF MAKING THE SAME. JOHN W. COX, Erie, Pa., assignor of one-fourth to George R. Metcalf and one-fourth to Edward E. Walker, Erie, Pa. Filed Feb. 3, 1919. Serial No. 274,630. 5 Claims. (Cl. 219—63.)

1. In an electric heating element, the combination of a tubular heat transmitting core; an insulating material arranged thereon; a heating coil wound on the insulating material; a clamping band securing the end of the coil on the insulating material and forming an electric connection therewith; a screw for the clamp forming a terminal for the coil and supplementing the connection through the clamp; and a conductor extending from the screw.

1,375,085. DISK-RECORD CABINET. ARTHUR J. CRIPPEN, Rochester, N. Y., assignor to Crippen Record File Corporation. Filed Jan. 25, 1916. Serial No. 74,106. 2 Claims. (Cl. 211—16.)

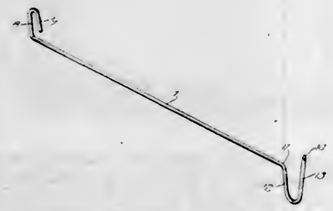


1. In a disk record cabinet, the combination with a record compartment, of an ejecting device comprising a pivoted angle arm which extends downwardly from its pivotal point and includes a forward portion for engagement with the edge of a record and a downwardly projecting rear portion, and an actuating member arranged beneath the ejecting device and provided with an opening in which engages the extremity of the rear portion of said angle arm.

1,375,086. HARROW. JAMES C. FAUBION, Hope, Ark., assignor of one-half to Lewis B. Moore, Hope, Ark. Filed July 3, 1918. Serial No. 243,191. 1 Claim. (Cl. 55—125.)

A harrow comprising a central beam, side beams pivotally connected at one of their ends to the beam, each of said side beams being provided with an adjustable bracing arm which is pivoted at one end thereto, the opposite ends of each of the arms extending toward each other, a relatively broad U-shaped clamp carried by the central beam adjacent the arms, the arms of said clamp having elongated registering slots, said slots extending laterally of the arms and adapted to receive the last mentioned end portions of the arms, said arms being disposed in the slots in parallel relation to each other, the

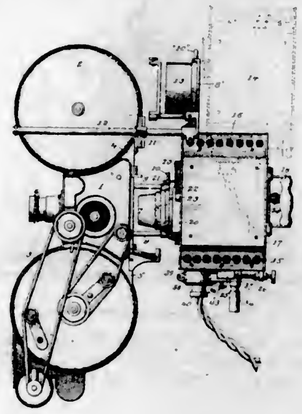
upper surface of each of the last mentioned end portions of the arms engaging the lower surface of the central beam, the bottom surface of each of the last



mentioned portions of the arms engaging the bottom of the slots, and means carried by the clamp for forcing said arms simultaneously into engagement with the beam.

1,375,087. SEPARATION OF MIXED SULFID ORES. CHARLES FAUL, St. Kilda, and HENRY LAVERS, Surrey Hills, Victoria, Australia, assignors, by mesne assignments, to Minerals Separation North American Corporation. Filed Mar. 12, 1915. Serial No. 14,015. 14 Claims. (Cl. 83—85.)

1. A process for the concentration of a mixed sulfid ore which consists in submitting such an ore to froth-flotation separation in the presence of a copper material and a bichromate of an alkaline metal, to obtain a float concentrate relatively rich in certain sulfids and a residue relatively rich in other sulfids.



1,375,088. TOOL. CHARLES H. FRIES, Chicago, Ill. Filed July 29, 1918. Serial No. 247,148. 1 Claim. (Cl. 7—17.)

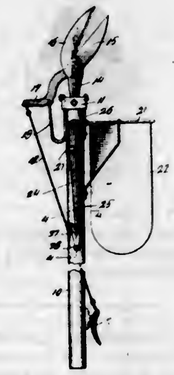
A tool comprising a rod having one end bent into a hook for fitting over the handle of a pet-cock to turn the same and lying in a plane substantially at right angles to the plane of the body of the rod, and having its other end bent into a pet-cock cleaning hook which lies in the plane of the body of the rod at which the plane of the first hook is at right angles, said hooks acting alternately as handles for properly positioning and readily operating the hook at the other end.

1,375,089. OPTICAL PROJECTION APPARATUS. JOSEPH GRANZ, Duluth, Minn. Original application filed Mar. 28, 1919, Serial No. 285,760. Divided and this application filed Feb. 21, 1920. Serial No. 360,529. 6 Claims. (Cl. 88—24.)

1. A motion picture machine and an optical projection apparatus secured in associated relation and each provided with an individual condenser at the rear end, each condenser having an inclosing frame, a single lamp house provided at its forward end with a saddle flange, and interengaging means on said saddle flange and the inclos

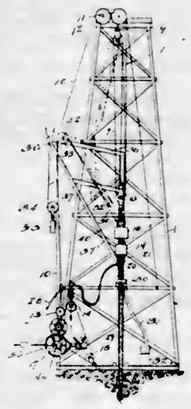
ing frames of said condensers for attaining detachable connection of the lamp house to either of said condensers.

1,375,090. CHAIN-CLASP. RUDOLF G. GRODE, Norwood, R. I. Filed Sept. 23, 1920. Serial No. 412,276. 1 Claim. (Cl. 24—239.)



A chain clasp comprising an elongated flat-sided coupling member bent at one end to form a closed eye adapted to permanently engage one of two chain links to be connected, and bent at its opposite end to form an open hook adapted to separably engage the other of said links; an abutment collar confined on the coupling member by said eye; a tubular slide having at one end a circular orifice formed to permit said collar to slide therein, and at its opposite end a contracted portion forming a spring seat, a flat-sided orifice in said contracted portion, and a keeper at one side of, and in close proximity to, said orifice, and offset inwardly from the perimeter of the slide, the flat sides of the coupling member and of the orifice preventing rotation of the slide on the coupling member, and maintaining the hook in alinement with the keeper; and a spring within the slide, bearing at one end on said contracted portion, and at the opposite end on said collar to normally maintain the keeper in engagement with the hook, the form and arrangement of the keeper being such that the keeper is adapted to coöperate with a hook, the diameter of which is less than that of the slide, such hook and the keeper constituting a member approximating the chain links in size and form.

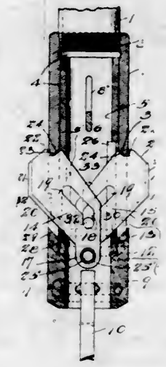
1,375,091. TREE-TRIMMER. JOHN HALICKI, Dunkirk, N. Y. Filed Apr. 29, 1920. Serial No. 377,526. 1 Claim. (Cl. 30—11.)



In a device of the class described, the combination of a staff having a collar at its upper end, of a saw pivotally mounted a spaced distance from the upper end of said staff, said saw provided with a slot adjacent its pivoted end, a bolt passing through the upper end of said staff and through said collar, said bolt extending beyond said

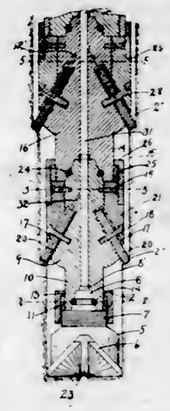
collar so as to engage the slot of said saw when same is in an operative position, a hook pivotally mounted on said

bolt and adapted to engage one edge of said saw so as to hold said slot in engagement with the bolt, and means provided for holding said saw in an inoperative position.



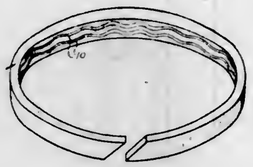
1,375,092. EARTH-BORING MACHINE. GUSTAF W. HANSON, Wichita, Kans. Filed July 24, 1920. Serial No. 398,784. 7 Claims. (Cl. 255—19.)

1. The combination in an earth boring machine with a supporting tower, of a suspended vertically reciprocable power unit, a drill head, drilling tool and well casing supported from said unit, and means for laterally moving said power unit, when the latter is disconnected from said supported elements, to adjusted position for the purpose set forth.



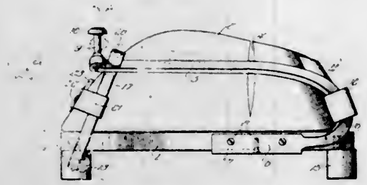
1,375,093. DRILLING-TOOL. GUSTAF W. HANSON, Wichita, Kans. Filed July 24, 1920. Serial No. 398,785. 7 Claims. (Cl. 255—76.)

1. The combination with a slotted inclosing tool-shank, of a complementarily slotted mandrel, a transverse key in the shank in guide slots of the mandrel, a pair of reaming blades pivoted in the mandrel and adapted to be pro-



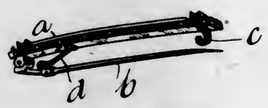
jected through the complementary slots, and means on the blades co-acting with the slotted shanks for locking said blades in projected position.

1,375,094. REAMER. GRANVILLE A. HUMASON, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Jan. 5, 1920. Serial No. 349,644. 11 Claims. (Cl. 255—73.)



1. In a rotary reamer the combination of a head, and two opposite disk-shaped cutters mounted therein on pins inclined from the longitudinal axis of the head, the outer end of said pins supported in detachable plates dovetailed in said head, retaining means therefor comprising a second head adjacent thereto and a locking ring threaded thereon, and an inner longitudinal lug on said dovetailed plate for the purpose described, said plate and lug adapted to contact with the retaining means adjacent thereto.

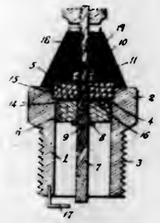
1,375,095. PISTON-RING. PERCY F. HINCKLEY, Meriden, Conn., assignor to Foster, Merriam & Company, a Corporation of Connecticut. Filed Mar. 24, 1920. Serial No. 368,273. 7 Claims. (Cl. 74—109.)



1. A piston ring the inner surface of which is provided with longitudinal, rolled corrugations, said corrugations being deepest at the point opposite the opening in said ring and decreasing in depth toward the ends of said ring.

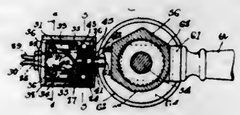
1,375,096. HORSESHOE. JOSEPH HIRSCHENFELD, Oak Park, Ill. Filed Sept. 5, 1919. Serial No. 321,749. 2 Claims. (Cl. 168—22.)

1. A horsesboe comprising a metal sole, an upper of pliable material secured to said sole, yieldable clamping bars mounted on said sole and yieldingly embracing said upper, said sole being provided with detachable heel lugs, and locking bars mounted on said heel lugs and acting to detachably engage said clamping bars.



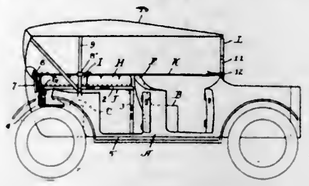
1,375,097. BROOCH. FREDERICK HART HORTON, Birmingham, England. Filed Mar. 31, 1920. Serial No. 370,187. 2 Claims. (Cl. 24—160.)

2. For resiliently supporting the hinged fastening member or pin of brooches and similar articles, a device comprising in combination a clip part of split tubular form adapted to embrace the fastening member or pin, a spring part which projects from that end of the said clip part which is adjacent to the pin hinge when the device is in position, the said spring part being bent back upon itself to form a spring loop *f*, and a resilient blade extending from said loop at an acute angle to said clip part, said blade terminating in a crutch extremity.



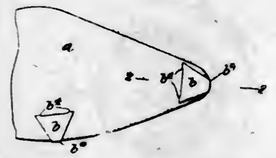
1,375,098. SPARK-PLUG. AUGUSTUS B. KINZEL, New York, N. Y. Filed July 11, 1919. Serial No. 310,081. 3 Claims. (Cl. 123—169.)

1. A spark plug comprising a bushing having an internal annular flange near its upper end, an electrode axially positioned in said bushing, an insulating plug of mica mounted on the electrode within the bushing and engaging the lower end of said flange, and an insulating plug mounted on the electrode engaging the upper side of said flange, means on said electrode and coöperating therewith to clamp the two plugs against the opposite



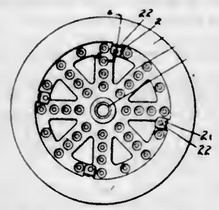
sides of said flange and a relatively soft yielding insulation surrounding said electrode above the insulating plugs having a fabric reinforcement.

1,375,099. COMBINED FAUCET AND SWITCH. WILLIAM G. LINDEMANN, Milwaukee, Wis., assignor to Ozone Company of America, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 15, 1919. Serial No. 277,294. 2 Claims. (Cl. 200—53.)



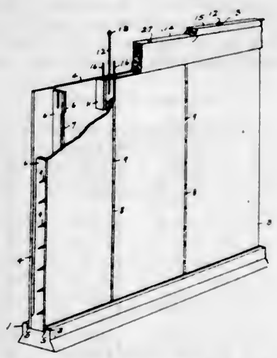
1. In a circuit closer, the combination with a block of insulating material and a pair of contacts mounted thereon, of a member secured to the block and having flanged extensions projecting from one side of the block, and screws for moving the flanges on said extensions into clamping engagement with a support.

1,375,100. BED FOR AUTOMOBILES. WILLIAM C. LUNDSTROM, Minneapolis, Minn. Filed Aug. 7, 1918. Serial No. 248,758. 1 Claim. (Cl. 5—72.)



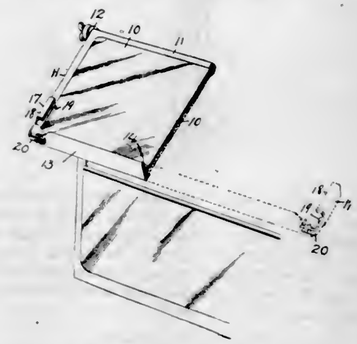
In combination with an automobile body provided with front and back seats having seat backs and removable seat cushions, a flexible bed stretched horizontally substantially the full length of the body lying under the cover in substantially a horizontal plane over the back and front seats and closely over the upper edge of the back of said front seat, means for detachably fastening said bed in said outstretched condition at its ends and sides to parts of said body, and a plurality of unconnected foldable frames each having a front leg adapted to rest on the floor of the body in front of the back seat, a back leg adapted to rest on the back seat and a supporting top member hinged to said legs and supported in substantially horizontal and longitudinal position at a distance below said flexible bed and adapted to sustain the seat cushions closely between the back of the front and back seats with their upper surfaces lying substantially even in height with the top of the back of the front seat and to yieldingly support the flexible bed in said horizontal plane.

1,375,101. PROTECTOR FOR THE TREAD MEMBERS OF SHOES. DAVIS MARINSKY, New York, N. Y. Filed July 9, 1920. Serial No. 394,903. 1 Claim. (Cl. 36—74.)



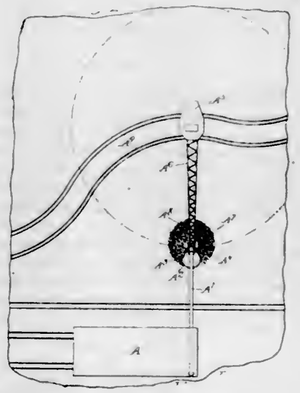
A tread protector of the class described composed of a triangular sheet of metal, one of the corner portions of said sheet being provided with a narrow hook-shaped member adapted to engage the edge portion of that part of the tread member to be protected, and means at the other corner portions of said sheet for securing the same to the bottom face of the tread member.

1,375,102. WASHING AND SCRUBBING BRUSH. JESSE R. MASSER, Three Rivers, Mich., assignor to Turbine Auto Washer Company, Three Rivers, Mich., a Corporation of Michigan. Filed June 26, 1920. Serial No. 391,884. 10 Claims. (Cl. 15—37.)



8. In a device of the class described, the combination of a chambered body having a flange forming a peripheral wall with a series of openings therein, said body having a handle constituting a supply connection, a border brush mounted on said body over said openings, a rotor mounted in said body and having annularly disposed buckets open at the top and bottom, said supply connection delivering to said body above the rotor, a brush mounted on said rotor at the inner side of its buckets, and an annular deflector plate disposed between said brushes and in alinement with and in a spaced relation to the open discharge ends of the buckets.

1,375,103. WALL CONSTRUCTION. EDWARD F. NEEDHAM, Houston, Tex., assignor of one-half to James Donald Hall. Filed Aug. 11, 1920. Serial No. 402,774. 2 Claims. (Cl. 72—16.)

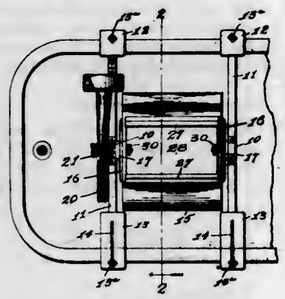


1. A wall construction, including opposing side slabs spaced apart, the edges of said slabs being formed with ribs which extend toward the opposing slabs at approximately right angles thereto, the ribs of the adjacent edges of adjoining slabs fitting together, a cap plate fitted onto the upper edge of the wall, and means for anchoring the same in position thereon, said cap plate having air circulating openings therethrough which communicate with the space between said opposing side slabs.

1,375,104. GUTTER FOR WINDSHIELDS. JOHN PERSON, Netcong, N. J. Filed Oct. 27, 1919. Serial No. 333,524. 3 Claims. (Cl. 296—93.)

2. A gutter for the panes of wind shields comprising an elastic strip with parallel flanges on its top surface so that a groove is formed at the rear of the strip for the bottom edge of the pane, and channeled clips secured to the ends of the strip, said clips being adapted to engage the side edges of the wind shield so that the strip is under a longitudinal tension which holds the clips in place and forces the flanges in close engagement with the faces of the wind shield.

1,375,105. COAL-HANDLING APPARATUS. JOHN H. D. PETERSEN, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1918. Serial No. 249,468. 16 Claims. (Cl. 214—10.)

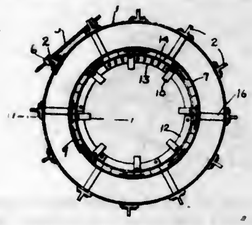


1. An apparatus for handling material comprising a conveyer adapted to carry material in either direction between a distribution point and an intermediate point, a second conveyer adapted to carry such material in either direction between the intermediate point and a storage point and a third conveyer adapted to carry the material from the intermediate point to the adjacent end of the first conveyer.

1,375,106. OIL-WELL WASHER. CHARLES PFEIFFER and FRANK A. WASSON, Milwaukee, Wis. Filed July 6, 1920. Serial No. 394,254. 6 Claims. (Cl. 166—20.)

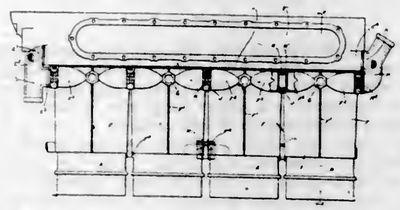
1. In a well washing apparatus, the combination of a flushing nozzle movable to different heights within the well cavity, means for conducting wash liquid to said nozzle from a point above ground, a suction pipe extending into the cavity and forming a guide for said nozzle, and a suction pump connected with said pipe for removing the wash liquid from the cavity.

1,375,107. WASHING-MACHINE. KITTY RAYBURN, St. Louis, Mo. Filed Nov. 2, 1918. Serial No. 260,862. 1 Claim. (Cl. 259—81.)



A washing machine comprising an imperforate cylindrical drum having longitudinal corrugations and having an opening formed in its face, a leak proof closure for said opening transversely curved to conform to the corrugations of the body of the drum, means for holding the closure in position on the drum, shafts extending from each end of the drum, bearings for supporting said shafts, adjustable brackets integrally formed with the lower portion of said bearings, a driven member secured to one of said shafts, a motor mounted upon one of said brackets adjacent said member for operating the same, and means at the ends of said brackets for adjustably securing the same to a means of support.

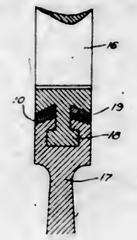
1,375,108. PROCESS OF FORMING TUBES. HERBERT C. REES, San Antonio, Tex. Filed Oct. 20, 1919. Serial No. 332,072. Renewed Feb. 1, 1921. Serial No. 441,658. 5 Claims. (Cl. 93—80.)



3. The process of making a tube of cellular material which consists in wrapping a moistened strip of the material on a large mandrel to form a tubular member, placing said tubular member on a smaller mandrel and bodily compressing the tubular member to conform to the diameter of the smaller mandrel.

1,375,109. CONCRETE-BUILDING MOLD. JAY A. ROSSITER and CURTIS C. SANER, Houston, Tex. Filed June 14, 1920. Serial No. 388,818. 4 Claims. (Cl. 25—124.)

1. A mold for concrete building structures comprising in combination an outer shell formed of a series of reversible tapered plates of uniform construction secured together at their lateral edges by T-bars, said bars being perforated, a tightening bolt fitting in said perforations for securing together two adjacent T-bars, an inner shell of similar tapered plates secured together at their margins by flat attaching plates, hangers on the inner faces of said plate, a retaining ring of angle iron supported on said hangers, removable spacing blocks at the upper ends of said shells, and means to tighten said inner wall in the desired position comprising wedges between said retaining ring and said inner shell.

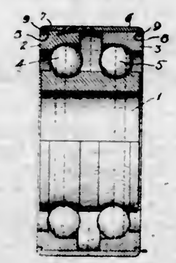


1,375,110. CYLINDER OF INTERNAL-COMBUSTION ENGINES. ARTHUR JOHN ROWLEDGE, London, England, assignor to D. Napier & Son Limited, London, England. Filed Nov. 8, 1918. Serial No. 261,754. 8 Claims. (Cl. 123—173.)

1. In an internal combustion engine the combination of a cylinder having an integral head in which are inlet and exhaust port openings, a water jacket around the body of the cylinder, passages for the flow of water into and out of this jacket, a detachable casting constituting the water jacket for the cylinder head on to which the casting is adapted to fit closely, said water jackets being independent and non-communicating, passages for the flow of water into and out of the casting, inlet and exhaust passages in the head casting coincident with the port openings in the cylinder head, and means for detachably connecting the head casting to the cylinder as set forth.

1,375,111. BLADE-MOUNTING. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1917. Serial No. 158,978. 8 Claims. (Cl. 253—77.)

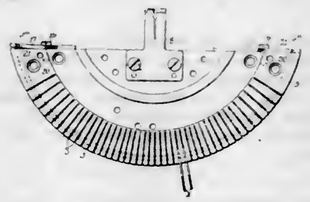
1. In combination, a blade element, a blade mounting element, a T-shaped tongue formed on one of said elements, an undercut groove formed in the other element and adapted to engage the tongue, wedge bearing surfaces on the tongue bearing element extending on each side from and obliquely to the shank of the tongue, opposed wedge bearing surfaces on said grooved element extending from each side of and obliquely to the groove, said wedge bearing surfaces lying in planes diverging toward the center of said elements and wedges disposed between said bearing surfaces adapted to hold said elements against relative lateral displacement.



2. In combination, a blade element, a blade mounting element, an undercut groove formed in one of said elements, a tongue formed on the other element adapted to engage said groove, wedge bearing surfaces formed on the tongue carrying element on opposite sides of the tongue, opposed wedge bearing surfaces formed on the grooved element and extending from each side and obliquely to the engaging surfaces of the groove, and wedges disposed between said bearing surfaces to hold the sides of the grooved element against lateral displacement.

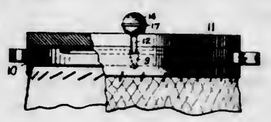
3. The combination with a blade mounting member and a blade member having tongue and groove engagement, the grooved member having a shoulder, and the tongue carrying member being provided with an opposed shoulder spaced from the shoulder of the grooved member so as to form an undercut channel between the shoulders obliquely disposed with respect to the engaging surfaces of the tongue and tongue groove, of a wedge disposed between said shoulders and adapted to hold the members against relative lateral displacement.

4. In combination with a blade element, a blade mounting element, a tongue on one of said elements, a groove in the other element and adapted to engage said tongue, a shoulder formed on the grooved element spaced from the tongue carrying element so as to form a channel between the said shoulder and said tongue carrying element, the inner portion of the channel being of greater width than the outer portion thereof and a wedge disposed in the said groove adapted to hold the said elements against relative lateral displacement.



5. In combination with a blade element, a blade mounting element, a tongue on one of said elements, a groove in the other element adapted to engage said tongue, opposed wedge seats formed on the said elements and extending in planes oblique to the engaging surfaces of the tongue and tongue groove, and wedges bearing between said inclined wedge seats adapted to hold said elements against relative lateral displacement.

1,375,112. BALL-BEARING. RAYMOND R. SEARLES, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 19, 1920. Serial No. 417,942. 6 Claims. (Cl. 64—36.)



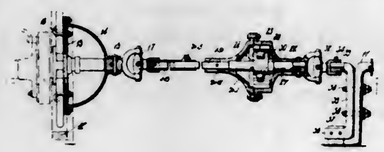
6. In a ball bearing, inner and outer bearing rings having complementary race ways therein, one of said rings being made in sections, each of said sections having a shoulder thereon, a flanged sleeve engaging each of said sections with the flanges abutting said shoulders, said sleeves being welded together to form a complete bearing ring.

1,375,113. TYPEWRITING-MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,385. 6 Claims. (Cl. 197—38.)

1. In a typewriting machine, the combination of a type bar support, type bars, a pivot wire for said type bars, a pivot wire tightener, and an elastic element controlled by said tightener and effective on the end of said pivot wire to press it downward.

1,375,114. FASTENING DEVICE FOR LADIES' HANDBAGS OR VANITY-CASES. SETH W. SHEPARD, Leominster, Mass., assignor to The Howe Comb Company, a Corporation of Massachusetts. Filed Oct. 14, 1920. Serial No. 416,983. 4 Claims. (Cl. 292—63.)

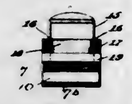
1. The combination with the top of a hand bag and a cover hinged thereto and in contact therewith throughout its top surface, said top having a depression in its edge opposite the hinge, of a pivoted fastening device therefor comprising a freely swinging shank pivoted in said depression in the top, with a smooth surfaced globular holding member mounted thereon, said cover having an open-ended slot having a depression for receiving said holding member.



1,375,115. PROCESS OF PRODUCING FERTILIZER. MARK SHOELD, Chicago, Ill., assignor to Armour Fertilizer Works, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 13, 1920. Serial No. 409,867. 5 Claims. (Cl. 71—7.)

1. The method of drying wet precipitated phosphate in a manner to prevent dusting thereof consisting in drying a mixture having as ingredients the wet precipitated phosphate and a material to prevent dusting thereof, substantially as described.

1,375,116. PRODUCTION OF ALUMINUM CHLORID. MARK SHOELD, Chicago, Ill., assignor to Armour Fertilizer Works, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 5, 1920. Serial No. 421,849. 8 Claims. (Cl. 23—13.)



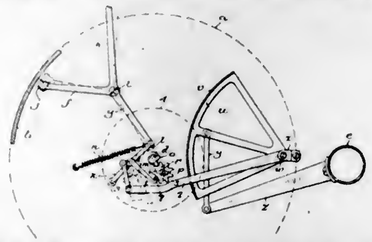
1. The process of producing aluminum chlorid consisting in heating alumina to a temperature of approximately 1600 to 2000 degrees centigrade for a period of time to render it substantially completely anhydrous and then subjecting it in the presence of carbon to the action of chlorin, substantially as described.

1,375,117. CRANKING DEVICE FOR INTERNAL-COMBUSTION ENGINES. BLAINE H. SMITH and JOHN C. WARNER, Tonkawa, Okla. Filed June 29, 1920. Serial No. 392,859. 7 Claims. (Cl. 74—106.)

5. A device of the character described including a ratchet casing, a linearally adjustable drive shaft fixed thereto for rotating the casing, a driven shaft journaled by the casing, a ratchet within the casing forming an operative connection between said shafts, and means for operatively connecting the driven shaft with an engine crank shaft.

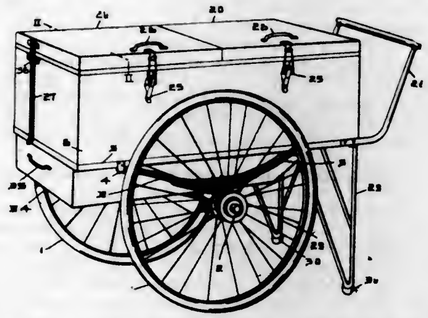
1,375,118. GARMENT-SUPPORTER. MARY STARMER, Newport News, Va. Filed Nov. 22, 1919. Serial No. 339,816. 5 Claims. (Cl. 24—190.)

1. The combination in a hose supporter with a web and end attaching means, of a buckle having a fixed guide plate and secured at the lower end of the web, and a U-shaped pin having guide devices slidable between the buckle and plate.



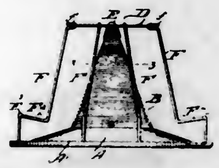
1,375,119. TOW-ROPE AND HITCH. DAVID G. STEPHEN, Monrovia, Calif. Filed Dec. 19, 1919. Serial No. 346,198. 1 Claim. (Cl. 24—129.)

A device for attaching the eye splice of a rope to the main strand thereof, comprising a wire convolved once to form a continuous spring retaining loop, the lapping ends of the loop being so arranged that the main strand of a rope may be forced into the eye thereof, said wire having its respective ends extended in the same plane with open hooks formed at the extremities, the hooks being parallel and facing outwardly away from the loop whereby to engage the opposite sides of the eye splice and press the end thereof into engagement with the main strand of the rope.



1,375,120. AUTOMATIC-STOP FOR GRAMOPHONES. OLE O. STORLE, Tacoma, Wash. Filed Feb. 7, 1919. Serial No. 275,525. 6 Claims. (Cl. 192—116.)

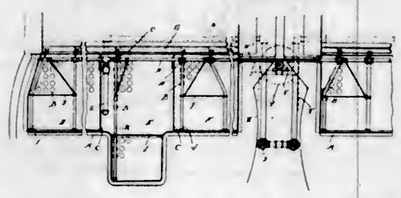
1. In an automatic stop for gramophones, the combination of a segment pinion on the turn table spindle, a gear arranged to mesh with said pinion and having a lateral projection adjacent its periphery, a brake lever, a toggle joint arranged when straigthened to hold the brake in off position, a spring tending to apply the brake; a trip arm pivotally connected with the toggle joint and movable into and out of the path of the lateral projection on said gear, an oscillatory friction member having an actuating connection with the tone arm, and a pivoted drag arm



engaging said friction member and connected with the trip arm, said drag arm being adapted to be alternately swung toward and from the turn table spindle by said friction member and the projection on said gear.

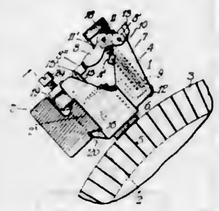
1,375,121. FOOD-CONVEYER. CHARLES E. SWARTZBAUGH, Toledo, Ohio. Filed Jan. 6, 1919. Serial No. 269,877. 6 Claims. (Cl. 296—24.)

1. A container pocket having an opening surrounded by an endless seat, a vessel entering said pocket and having suspending means engaging said seat, a vessel closure having a seat opposing the pocket seat for engaging the vessel suspending means, and a container closure yieldably engaging the vessel closure for maintaining sealing of the vessel.



1,375,122. TOASTER. RUSSELL F. TEALL, Toledo, Ohio, assignor to Charlotte J. Willis, Ann Arbor, Mich. Filed Mar. 15, 1920. Serial No. 366,104. 2 Claims. (Cl. 53—5.)

2. In a toaster, the combination of an annular truncated cone-shaped base, having a marginal upstanding rim, a cone-shaped heater extending upwardly from the base, a sheet metal disk secured to the top of the heater, and a plurality of wires spaced apart and extending from the disk to the cone-shaped base and respectively formed with upwardly inclined stepped portions, the outer end of each stepped portion being bent upwardly to form a stop, the stepped portions and the stops being confined wholly within the diameter of the base and detachably supported

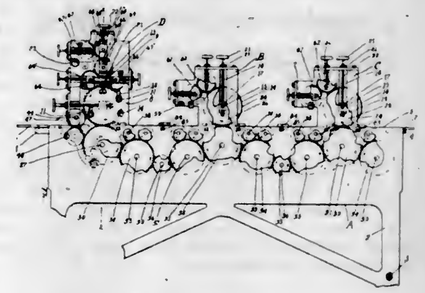


at their lower ends in the joint between the body of the base and the marginal rim thereof, the upper ends of the wires having hooked connections with said metal disk.

1,375,123. BOILER-TUBE CLEANER. HOWARD M. VARIAN, Detroit, Mich. Filed Mar. 15, 1915. Serial No. 14,530. 1 Claim. (Cl. 122—392.)

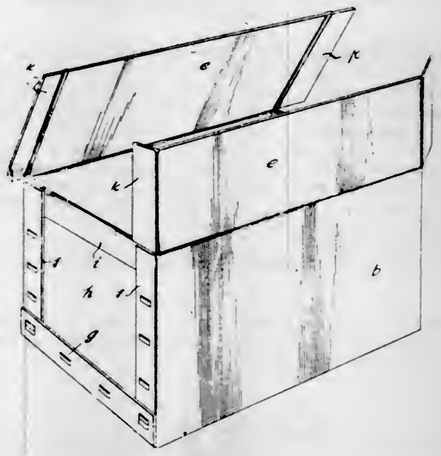
The combination with a battery of boilers each having a smoke box and tubes opening thereinto, of flue cleaners in said smoke boxes having headers in alinement with each other, an operating connection for said headers arranged in the space between boilers and including a rack-bar connecting said headers, an air conduit at the side of the boiler through which said rack-bar passes, and a tubular housing for said rack-bar in said air conduit, to prevent leakage of air.

1,375,124. BRUSH-HOLDER. WALTER J. WARDER, Jr., Chicago, Ill. Filed Jan. 17, 1918. Serial No. 212,220. 2 Claims. (Cl. 171—323.)



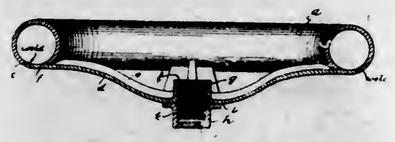
1. In a device of the character described, a brush holder for dynamo-electric machines, a ventilated hollow brush fitting loosely therein, a lever pivoted to the frame of the brush holder, means for urging the lever inwardly toward said brush, and a plunger connected at its outer end to said lever in substantially free and unconstrained swinging relation thereto, said brush having a deep outwardly facing central recess, and said plunger at its inner end being disposed to bear against said brush at the inner end of said recess.

1,375,125. METHOD OF TREATING FIBROUS MATERIALS. WILLIAM WEIMAR, Appleton, Wis. Filed Feb. 5, 1920. Serial No. 356,534. 1 Claim. (Cl. 99—12.)



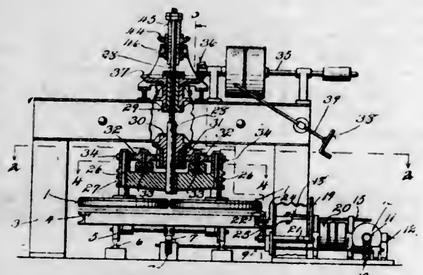
The process of treating fibrous material to render it non-absorbent and to increase its insulating qualities and its texture, which consists in immersing it in a hot solution of sodium carbonate, to drive out resident content from the pores; then removing it from the solution and drying it; then immersing it in a hot hydro-carbon liquid to neutralize the odor produced by the sulfur and to expand the pores; then drying it; then placing it in a solution of sulfur and resin of commerce and maintaining it at temperature sufficient to keep the sulfur in a molten state until the pores of the fibrous material are sufficiently filled, then removing the material from the vat and suddenly cooling it.

1,375,126. PAINTING-MACHINE. THEODOR R. WILLWERSCHEID, St. Paul, Minn. Filed Sept. 25, 1919. Serial No. 326,362. 13 Claims. (Cl. 91—50.)



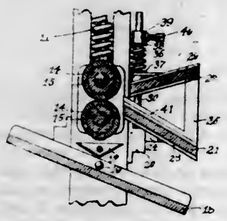
6. A machine of the class described, comprising a frame, an initial rotary paint applying device at one end of the frame, a plurality of spaced secondary rotary paint applying devices spaced from said initial paint applying device, each device including a pair of transversely disposed rotatable rollers adapted to squeeze an automobile tag between them and engage with their circumferential surface when actuated opposite faces of the tag to apply paint on one of them and to advance said tag toward the next succeeding paint applying device, means for actuating said paint applying devices and means actuated by said actuating means for conveying the tag from one paint applying device to the next succeeding paint applying device.

1,375,127. SHIPPING-CASE. HERBERT R. BLISS, Niagara Falls, N. Y. Filed July 17, 1920. Serial No. 396,965. 8 Claims. (Cl. 229—23.)



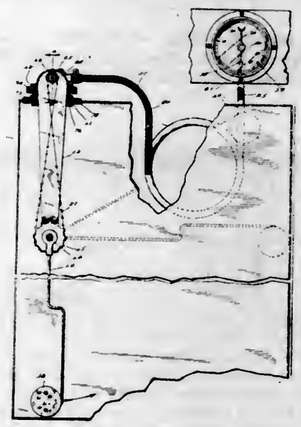
1. A fiber shipping case construction of fiber board or equivalent material, having in combination, a main blank made up of two side walls, a bottom wall and cover wings, each of which is provided with a flap at each end, end blanks comprising each a body portion and a flap, the said blanks being folded and assembled together by inserting the end blanks inside of the flaps of the two side walls and bottom wall when these are folded up into position, fastening these flaps to the body of the end blanks and finally sealing the case by overlapping the cover wings and fastening them along their overlapped portions and then fastening the cover wing flaps to the flaps of the end blanks.

1,375,128. STEERING-WHEEL. HARRY W. BUNDY, Detroit, Mich. Filed Jan. 2, 1920. Serial No. 348,962. 16 Claims. (Cl. 74—33.)



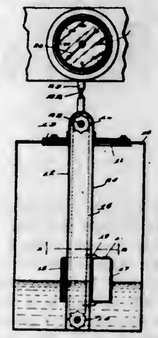
1. A steering wheel spider, comprising a plurality of spider arms, a hub made up of a cylindrical member having a depresssion therein, the said cylindrical member adapted to pass through the center of the steering arms and be secured thereto by pressing the stock of the steering arm into the said depression.

1,375,129. GRINDING AND POLISHING MACHINE. JAMES CARRIE, Newark, N. J., assignor to William D. Sawyer, Milwaukee, Wis. Filed Oct. 27, 1919. Serial No. 333,629. 3 Claims. (Cl. 51—133.)



1. A mechanism of the class described, comprising a gravity controlled grinding and polishing unit, the same including a rotary shaft, a head carried thereby, revoluble abrading shoes journaled in the head, gears connecting the abrading shoes for imparting a planetary motion thereto relative to the shaft, a normally fixed suspension means for the shaft, and adjusting means in gear connection with the suspension means for predeterminately regulating the weight of the grinding and polishing unit, whereby said weight is exerted upon the surface of the work step-by-step from light load to full load during the continuous rotation of the aforesaid grinding and polishing unit.

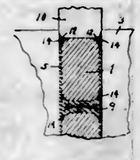
1,375,130. CLOTHES-WRINGER. WALTER J. CONLON, Chicago, Ill. Filed Mar. 25, 1915. Serial No. 16,880. 15 Claims. (Cl. 68—32.)



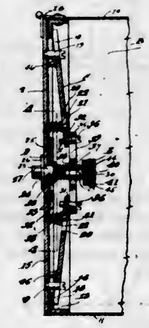
1. In combination, a clothes wringer having a pair of coöperating rollers, and a hopper shaped guard leading to said rollers, one wall of said hopper shaped guard being movable independently of the movement of the rollers to vary the outlet of said hopper at said rollers.

1,375,131. LIQUID-LEVEL GAGE. CLAUDE E. COX, Detroit, Mich. Filed Mar. 24, 1919. Serial No. 284,666. 11 Claims. (Cl. 73—82.)

1. In a gage, a variable-position member, a distant indicator member and a flexible shaft connecting said two members and comprising two opposite-pitch portions connected end to end to compensate temperature-effected angular movements of the shaft portions affecting the indicator.



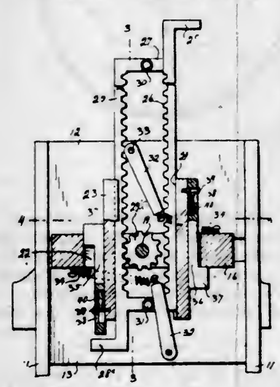
1,375,132. LIQUID-LEVEL GAGE. CLAUDE E. COX, Detroit, Mich. Filed Mar. 24, 1919. Serial No. 284,667. 1 Claim. (Cl. 73—82.)



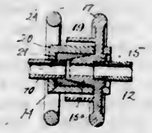
A liquid gage comprising a belt, a pair of wheels supporting said belt, an elongated housing inclosing said belt and wheels and supporting said wheels at opposite ends of the housing, said housing having cross dimensions closely approximating the space occupied by the belt, a buoyant member eccentrically sleeved over the housing and connected to the belt, said buoyant member being counter-balanced, relative to the opening through which the housing passes, to balance the said member relative to the belt, means by which the housing may be attached to a reservoir, and indicating driving means connected to one of the wheels.

1,375,133. ARMATURE INSULATION. JASPER F. CULLIN, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Sept. 16, 1920. Serial No. 410,737. 4 Claims. (Cl. 171—206.)

2. In an armature for electric machines a core having longitudinal grooves, thin sheet insulation lining said grooves, armature windings in the form of superimposed bars in each of said grooves, and a twisted cord of absorbent paper threaded into the several grooves and compressed between the bars in each groove.

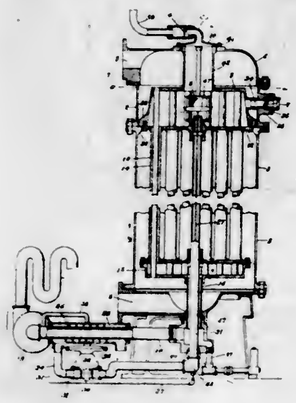


1,375,134. VAULT-LOCK. ALBERT L. DAVIS, Norwalk, Ohio. Filed Nov. 15, 1919. Serial No. 338,176. 9 Claims. (Cl. 292—5.)



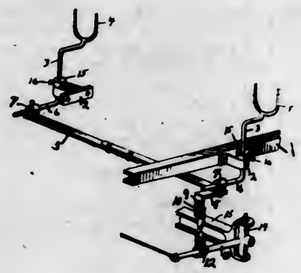
1. The combination with a body having one end thereof opened, and a closure head for said opened end, of locking mechanisms carried by the closure head and including a plurality of radially extending bolts slidably mounted on the head, an actuating element, means carried by the bolts for engaging said element, and means for moving said bolt engaging means out of engagement with said actuating means, when the bolts have been moved into locked position.

1,375,135. PUMP-ACTUATING MECHANISM. ROBERT A. DEAN, Tyler, Tex. Filed Apr. 23, 1919. Serial No. 292,095. 7 Claims. (Cl. 74—27.)



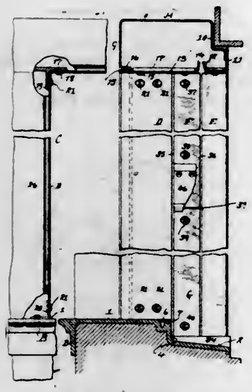
1. A mechanism of the character described comprising a rack having opposed rack teeth, a carrier having a slot through which the rack passes, said carrier being shiftable transversely of the rack, a rotatable pinion mounted on the carrier and engageable with one or the other of the sets of rack teeth, locking members mounted on each side of the rack and urged into position between the ends of the slots and the rack to thereby hold the carrier from return movement after it has been shifted in one direction, means acting upon a predetermined movement of the rack in one direction urging the carrier in one direction and shifting one of the locking members out of its locking position and shifting the other member into locking position, and means acting upon a predetermined movement of the rack in the other direction urging the carrier in a direction opposite to that in which it was first urged and shifting the last named member out of its locking position and shifting the other locking member into operative position.

1,375,136. PIPE OR HOSE COUPLING. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 25, 1920. Serial No. 361,163. 3 Claims. (Cl. 285—175.)



1. The combination of a pipe which carries in its ends a coupling member having in its end a conical recess, a coupling sleeve which loosely embraces said pipe and coupling member and has in its end bayonet slots whose circumferential portions extend spirally, with a second pipe carrying on its ends a coupling cone fitted into said conical recess and having outwardly projecting coupling lugs adapted to enter and slide in said bayonet slots.

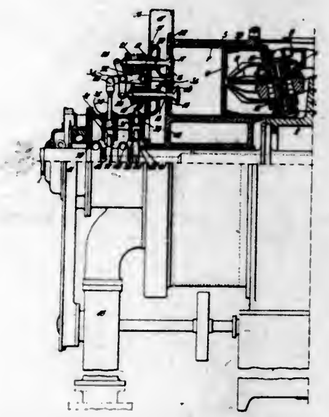
1,375,137. HEATER. HENRY S. DODD, Toronto, Ontario, Canada, assignor of one-half to John O'Neill, Toronto, Ontario Canada. Filed May 14, 1918. Serial No. 234,563. 10 Claims. (Cl. 122—131.)



7. In a heater, the combination of a casing comprising a lower, an intermediate and an upper section, lugs at the upper end of the lower section; a combustion chamber provided with lugs adapted to rest on the lugs aforesaid; an inspection tube extending from the side of the combustion chamber and passing through the side of the intermediate section; and a stuffing box adapted to make a tight joint where the tube passes through said section.

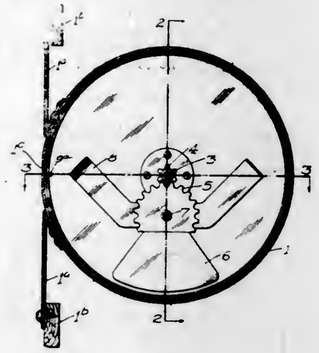
1,375,138. DIRIGIBLE HEADLIGHT. WILLIAM B. DUEAST, Pine Lawn, Mo., assignor of one-half to Felix Wodicka, St. Louis, Mo. Filed Aug. 25, 1920. Serial No. 405,800. 2 Claims. (Cl. 240—62.)

1. In combination, a pair of headlight supporting cranks, an adjustable rod connecting the lower arms of said cranks, an angular bracket depending from said adjustable rod and provided with an elongated slot, a rod twisted so that one portion thereof will be at right angles to the other portion thereof, means attached to one end of the twisted bar so as to slidably engage the slot provided in the bracket, and a sleeve at its other end for engaging a steering arm of a motor vehicle.



1,375,139. METAL WINDOW-FRAME. IRVING H. ELLIOTT, New York, N. Y., assignor to Harry E. Campbell, Mount Vernon, N. Y. Filed July 1, 1919. Serial No. 307,945. 5 Claims. (Cl. 189—76.)

1. A metal window-frame, comprising a hollow jamb having its inner wall formed in three sections with vertical slots between them, the middle section being formed of two separated plates disposed vertically one above the other and laterally adjustable each independently of the other.



1,375,140. INTERNAL-COMBUSTION ENGINE. WILLIAM ROBERT FASEY, Snaresbrook, England. Filed Oct. 14, 1918. Serial No. 258,050. 2 Claims. (Cl. 123—58.)

1. An improved internal combustion engine having a plurality of cylinders arranged annularly, hollow pistons operating in the cylinders, adjustable rollers carried by the piston, a rotor having a shaft mounted centrally of the cylinders and having a cam rib with which the rollers coöperate, the rollers having axes at obtuse angles to the axis of the rotor and so disposed that the thrust of the

rollers upon the cam rib is substantially in line with the axes of the cylinders, inlet and exhaust valves in the cylinder ends and cams common to and centrally of all said valves, said cams being mounted upon the rotor shaft, substantially as specified.
